Introduction

The Encyclopaedia Aethiopica, a state-of-the-art reference work for Ethiopian and Eritrean studies, was launched in 1997. Created by hundreds of scholars from all over the world, whose joint efforts are coordinated by Hamburg University team, the lexicon will contain circa 4,500 articles in its four volumes. The fifth volume will accommodate indices and necessary supplements as well as addenda and corrigenda.

Volume one was presented to the scholarly audience during the 15th International Conference of Ethiopian Studies held in Hamburg during the summer of 2003. Since then it has found its due place in the fields of Ethiopian, African and Oriental studies; the first reviews have already appeared (for example, the review by Joseph Tubiana in *Aethiopica* 7, 2004, 194–211). The publication of the first volume, with nearly 1,000 articles, motivated many more colleagues to collaborate with the project.

Geographically, the Encyclopaedia focuses on the Horn of Africa. Present-day Ethiopia and Eritrea receive the most attention, but issues concerning Djibouti and the border areas of the Sudan and Somalia are also addressed. Thematically, the Encyclopaedia concentrates on the humanities, with history, anthropology, languages and literature, culture, religion and arts forming the core areas. Geographic and biographic entries are also indispensable in a lexicon of the Encyclopaedia Aethiopica's scale.

The Provisional Military Government's rise to power in 1974 creates a temporal caesura for the Encyclopaedia; however, events after this demarcation point are included if they originated before 1974.

The Encyclopaedia articles present basic information in a concise form; to encourage further research, the articles are accompanied by a short list of bibliographic references, which distinguishes between primary and secondary sources. Maps and illustrations offer additional information.

All entries appear alphabetically, and Oriental notations are listed according to their transliterated form. For personal names, pre-positioned particles like *da*, *de*, *van* or similar are ignored for the sake of simplicity – irrespective of traditional names relating to a person's provenance – thus facilitating the search for a name under its main part (e.g., *Andrade, Antonio de*; *Bassano, Francesco Da*; *Esbroek, Michel van*). Somali words are as a rule transcribed in accordance with this work's orthographical rules (s. Transcription and transliteration tables). Articles that for various reasons could not be accommodated in due alphabetical order will appear in volume five.

To make volume two bindable, the block of the articles beginning with letter H had to be divided in two parts; the second part (beginning with *Healers/Healing*) will appear in volume three.

Due to a software error, a portion of text, between pages 809 and 810, was unfortunately omitted in the first volume. We apologize to our readers and the authors of the affected articles, *Coup d'etat 1916* and *Coup d'etat 1960*, and enclose the corrected pages with the present volume. These pages can also be downloaded from the official Encyclopaedia website (*http://www.rrz.uni-hamburg.de/EAE*), and they will be reprinted in volume five.

Acknowledgements

An interdisciplinary project like the *Encyclopaedia Aethiopica* can only be successful if it collaborates with scholars who are willing to research topics lying within their field of competence in addition to investigating new areas. Such scholars must also be able to phrase their results concisely and be willing to allow their research to pass through intensive editorial processing by colleagues and co-authors. Just like the first volume of the Encyclopaedia, the second volume saw numerous contributors face up to this challenge: over 250 authors agreed to collaborate and are herewith presenting the results of their painstaking work. I would like to express my deepest gratitude to them all, especially to the many Ethiopian scholars for their tremendous commitment to the project. The exceptionally active co-operation of young scholars should be particularly emphasized. I owe special thanks to those researchers who participated in the project notwithstanding personal complications of various kinds.

A special circle of colleagues had the difficult task of reading the submitted entries and making suggestions towards their improvement. Their number is in reality higher than that of the official "Field Specialists", whose names are listed on page xi, because many placed themselves at our disposal in certain individual cases. I thank them all for their important help and willingness to respond at short notice.

Several colleagues have agreed to serve the Editorial team as "First Readers" by critically reading through the draft manuscripts, and this under considerable time constraints. In many cases they were able to draw our attention to embarrassing mistakes at the very last minute: for this I am sincerely grateful.

Special thanks go to those Ethiopisants who agreed to participate in the editorial activities of the Research Unit Ethiopian Studies making themselves available and at hand in Hamburg. These were, in most cases, the same scholars who have agreed to become members of the "Advisory Board" and spent long days and weeks in Hamburg – in some cases several trips were made whilst working on this volume. During their stays at the University, they daily – and sometimes nightly – discussed current problems together with members of the Editorial team, checked and counterchecked the articles, tested the coherence between different entries dealing with related topics, suggested alternative phrasing and made important additions. In this connection I must emphasize the collaboration of Gianfranco Fiaccadori who regularly came to Hamburg – for one to two weeks – and took active part in the editorial work.

I owe my most sincere gratitude to the young editorial team that bears the daily workload with me. Their duties and responsibilities are indeed vast, including: writing articles, formatting and laying out the incoming texts, revising articles as necessary – shortening or extending when needed – looking up references and ensuring the necessary contiguity throughout the volume. Additionally, they check the structure of general entries, and perform the numerous processing and editing steps that are necessary for the entries' completion. Whilst performing their work, the team remains in individual correspondence with authors and field specialists and ensures the progress in

scholarly discussion – remaining involved and yet critically distant at the same time. All of these tasks they perform with tremendous dedication, time and energy, and the project would not be possible without their extraordinary effort. I would like to thank them all, and also our student assistants for their technical support.

Various individuals and organizations have provided a number of less visible but often important contributions, and I would like to express my gratitude to them all, even if I can only list them here very briefly. I would also like to mention all those who have placed valuable illustrative material at our disposal and those who have helped us and the authors to translate articles written in languages other than English. My special thanks are owed to the Institute of Ethiopian Studies of Addis Ababa University for its important support, to Matthias Schulz for his detailed maps, to Arthur Irvine for language proof-reading, to Thomas Rave for the lay-out and to Michael Langfeld from Harrassowitz Verlag for invaluable professional technical advice.

The financial support, and thus the necessary material base for the project, came from the Deutsche Forschungsgemeinschaft within the framework of a long-term project, from the German-Israeli Foundation, the Zeit-Stiftung Ebelin und Gerd Bucerius, the Johanna und Fritz Buch Gedächtnisstiftung, and the Stiftung zur Förderung der Äthiopistik. The present volume could only appear thanks to the generosity of the Universität Hamburg, which accommodates and equips the Research Unit, thus ensuring its technical survival, and offers support at the administrative level.

I am particularly grateful to the Deutsche Forschungsgemeinschaft for the subsidy towards the printing costs, which has allowed us to maintain a relatively low price for the volume, particularly relevant for scholars from less economically secure countries.

Last but not least, we cannot forget those Encyclopaedia authors who have passed away since the launch of the project, having sometimes spent the very last weeks of their lives working on their contributions. Among those are Aberra Jembere, Ayele Teklehaymanot, Sevir Chernetsov, Michael van Esbroek, Friedrich Heyer, Thomas Leiper Kane, Otto Meinardus, Caspar Detlef Gustav Müller, Stuart Munro-Hay, Paulos Tzadua and Alexander Sima. To them we owe a debt of gratitude and sincere appreciation.

Siegbert Uhlig

Disclaimer: The majority of boundaries used by the Encyclopedia Aethiopica reflect the situation at the end of the Ḫaylä Śəllase I period. The only exception is the international border between Ethiopia and Eritrea, which reflects the present situation. The borderlines shown on the maps should not be considered official.

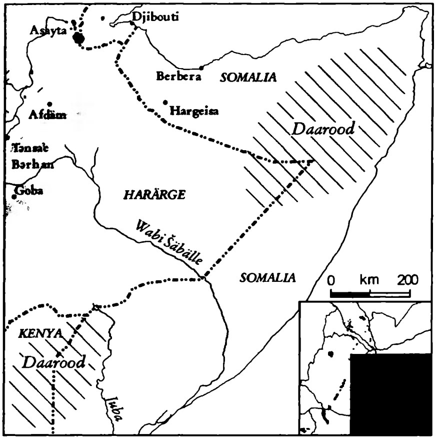
D

Daarood

The Somali clan of D. in its oral tradition refers to the *šayḫ* Ǧabartī b. Ismāʿīl as its founder. He is said to have migrated to Somalia from Arabia sometime prior to the 13th cent. (↗Ǧäbärti). Linguistic evidence places the origin of the ↗Somali in south-western Ethiopia (LewPeople 20ff.). The D., which are divided into the subclans of Mareeḥaan, Kablalaḥ, Yuusuf, Warsangali, Dhulbahante, Mağeerteen and Ogaadeen, quickly spread throughout Somalia. They currently occupy the Bari and Nugal regions and parts of the Lower Juba, Mudug, Sanaag and Tog Dheer regions.



There are also D. populations in eastern Ethiopia and northern Kenya. Those who live in the trans-Juba and in Kenya are largely cattle herders while the others are camel herders. Both engage in agricultural pursuits where conditions permit.

Lit.: MARGARET CASTAGNO, *Historical Dictionary of Somalia*, Metuchen, NJ 1975 (African Historical Dictionaries 6), 41, 141; LewPeople 20–23.

Thomas P. Ofcansky

Đáasanač

Đáasanač language

Genetically, the Đ. ([*ɗáasanač*]) language belongs to the Omo-Tana branch of East ↗Cushitic. With ↗Arbore and Elmolo it forms the Western branch; farther relatives are the Somali dialects, Rendille and ↗Bayso.

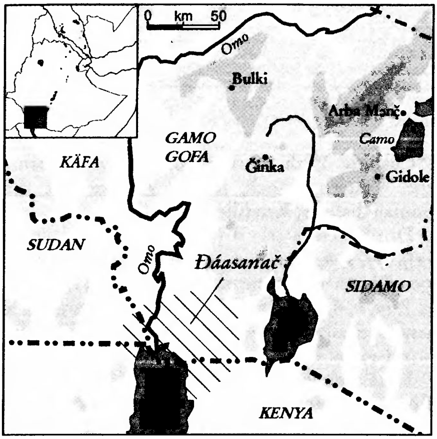
Đ. phonemes are: *ð* (in free alternation with [z]), *s*, *f*, *š*; *b*, *ɓ*, *d*, *t*, *ɗ*, *ʄ* (in a handful of words, possibly an allophone of the following), *č*, *ž*, *g*, *k*, *g*, *ʔ*; *m*, *n*, *ñ*, *ŋ*; *r*, *l*, *w*, *ğ*. A further segment, [*h*], is automatically inserted before any phonologically word-initial vowel in absolute initial position.

Đ. is a pitch-accent language. Accent distinctions are used fairly often in the morphology (e.g., *só*, 'meat', *so*, 'meats, pieces of meat'; *fúr*, 'open!', (*mí*) *fur*, '(he) opened' ["Short Past" form]), less so in the lexicon (e.g., *ʔár*, 'bull', *ʔar*, 'song'; *ʔíl*, 'valley', *ʔil*, 'eye'). A few determiners and sentence markers have a so-called "seesaw" accentual pattern: they bear an accent when preceded or followed by an unaccented word, while they are unaccented when the preceding or following word bears an accent (e.g., *gíl ču*, 'my hand', *gil čú*, 'my hands').

The morphology is very complex, especially for the many allomorphs and irregularities in verbal morphology. Four verbs (*ˀát*, 'to become/say', *káɗe*, 'to come', *ˀás*, 'to kill', *yáal*, 'to stand') are partially prefixal, all other morphology is suffixal.

There are three main positive paradigms: a Past, a Non-Past and a Dependent (also used for an on-going action). Inflectional categories interact in a small number of endings and most distinctions are not expressed on the verb alone. Due to various assimilation and reduction processes, within any paradigm a maximum of two forms are distinguished, expressing number-gender-inclusiveness (for the 1st pers. pl. only). The "A-form" has no exponent, and a paradigmatic vowel (Past *-i*, Non-Past *-a*, Dependent *-u*) directly follows the stem; in the "B-form" either an infix is inserted or various changes in the stem take place. E.g., from the stem *fur-* 'to open', the positive past has the A–form *furi* (for 1st pers. sg., 3rd pers. sg. masc., 1st pers. pl. inclusive) and the B-form *fuɗɗi* (for 2nd pers. sg., 3rd pers. sg. fem., 1st pers. pl. exclusive and 2nd pers. pl.).

There are five series of (partially overlapping) pronominal elements in Đ.: Absolute, Subject,



Verbal, Object and Possessive. An Inclusive and an Exclusive form are distinguished in the 1st pers. pl. For the 3rd pers. a single form is used, irrespective of number and gender. Here only the Absolute and the Subject series are exemplified, in this order: 1st pers. sg.: *yú/yáa*; 2nd pers. sg.: *kúuni/kúo*; 3rd pers.: – /*ʰé*; 1st pers. pl. inclusive: *múuni*/(*ʰé*) *ke* ~ *ki*; 1st pers. exclusive: *ñíini/ñaañi*; 2nd pers. pl.: *ˀitíni/ˀití*.

In demonstratives, a basic opposition is built upon a binary [±NEAR] opposition; e.g.: *máa l=a* 'this man' vs. *máa ti=a* 'that man" (final *=a* is a further determiner).

There are no copula elements in Ð. The nominal predicate is preceded by the Subject pronoun.

Interrogative sentences are marked by a special rising intonation. The interrogatory pronoun is not moved to sentence-initial position.

In negative sentences special negative paradigms are used; the verbal form is further preceded by the negative markers *má* ~ *ma* (with a "seesaw" accentual pattern) and *ʰa* – the latter limited to Jussive and Imperative sentences.

Ð. has an accusative syntax and is on the whole a dependent-marking language. It is Subject-Object-Verb at sentence level and Head-Modifier at clause level, but relatives precede the matrix clause. Phrases are consistently marked at their end by the determinative *ka*.

The lexicon appears to be drawn from different sources and contains many loans. The standard ten-word list for Ð. is: *tákač̣*, 'one', *naama*, 'two', *seddi*, 'three', *šíeti*, 'fire', *bie*, 'water', *ˀáaðu*, 'sun', *guí*, 'moon', *fás*, 'blood', *ˀére*, 'tongue', *kéču*, 'tooth'.

Use of the language is intensive; most Ð. are monolingual or have at best a working knowledge of Amharic. ↗Turkana also plays a role in naming and in cultural activities (singing and story-telling).

Lit.: HANS-JÜRGEN SASSE, "Notes on the Structure of Galab", *BSOAS* 37, 1974, 407–38; ID., "Dasenech", in: *BendNonSLang* 196–221; MAURO TOSCO, *The Dhaasanac Language: Grammar, Texts, Vocabulary of a Cushitic Language of Ethiopia*, Köln 2001.

Mauro Tosco

Ðáasanač ethnography

The Ð. (Dhaasanac) are a pastoral people of south-west Ethiopia and north–west Kenya. They inhabit a plain of approximately 2,300 km², stretching along the lowest course of the Omo river and the northern and north–eastern shores of Lake Turkana. The Ð. are bordered in the north by the ↗Ñaŋatom and in the south and west by the ↗Turkana; to the East their neighbours are the ↗Hamär.

The Ð. are generally called Gäläb by their neighbours; other names found in old sources are Merille and Reshiat. "Šangílla" is used in Kenya.

The 1994 Ethiopian Census numbers Ð. at 32,029, almost all of them in the Kuraz *wäräda* (Southern Omo Zone, Southern Nations, Nationalities and Peoples' Region). A few thousand Ð. live in Kenya. The Ð. belong to the cattle-complex like their neighbouring pastoral peoples, but they also practise agriculture (their main crops being sorghum, followed by maize

Young Ðáasanač man with typical hair dress; photo courtesy of the author and beans) and fishing. The Đ. are divided into eight tribal sections (at least some of them of other origin). The sections are further divided into clans, which are further segmented into "houses" or "families". The same clans are often scattered among different sections and are the primary focus of self-identification.

Other important areal cultural features are the excision of the two lower incisors, an age-group system and the division into two endogamous moieties which regulate marriage and kinship terms. The age-group, or "generation-set", is the central classificatory device of the society. Each person belongs to the alternate generation-set of his or her father. For most sections, alternation is regulated by the division of the generation-sets into two triads.

Däbän Ansa

D.A. (ደበን፡ አንሳ, also ደበናንሳ, *däbänansa*), is a pejorative term for a ↗tanner and/or ↗blacksmith. In Amharic the term *däbän* means 'hair and grease of the fell', and *ansa* is an imperative meaning 'remove, pick up'. Hence *däbänansa* seems to convey the meaning of 'one who scrapes off hair and grease from a fell'.

The term also appears in a few sources as the name of a clan or an ethnic group akin to the ↗Gafat people. Yet, even in such instances, it is not quite clear whether the term is perhaps used pejoratively, referring to a community of Gafat people engaged in traditional tannery or foundry, or as a proper designation for a group of people who provided specific services to the imperial court, such as making and/or managing *däbäna*, 'a kind of royal tent made of woollen fabric' (cp. ↗*Kätäma*). In the latter sense *däbäna ansa*, unlike D.A., may have conveyed the meaning of 'carriers of a royal tent'. D.A. and other offensive terms were commonly used to refer to artisan Gafat communities. This seems to be indicated in their own customary laws which censured such usage of the term with heavy penalties.

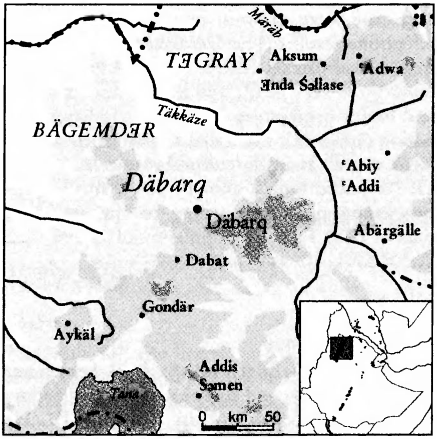
D. (ደባርቅ, 13°09' N, 37°54' E) is a town of about 20,000 inhabitants in north-west Ethiopia, ca. 90 km north-north-east of ↗Gondär. Located on the western foothills of the Səmen mountains, it nowadays serves as a starting point for tourists' hiking tours into the Səmen Mountains National Park.



Historically, D. appears to be first mentioned in the late 17th cent. as a way-station on journeys and campaigns that *aṣe* Iyasu I (r. 1682–1706) undertook from Gondär to the north. However, given D.'s strategic location on the old main trade route that led from ↗Goǧǧam (and beyond) via Gondär and ↗ʿAdwa to the Red Sea, it seems reasonable to assume that a settlement of some size existed in D. sometime earlier. In the mid-19th cent., D. is reported to have been an important toll-post of *däǧǧazmač* ↗Wəbe Ḫaylä Maryam of Təgray, collecting duties of the same scale as ʿAdwa; a ↗*näggadras* used to be installed over the customs and the local market. In the time of Italian occupation (1936–41) D. was made a *Commissariato*. Violent fights occurred around D. between the regular army and the Ethiopian Democratic Union and the Ethiopian Democratic Movement guerrilla. After the Liberation D. became the capital of Səmen *awrağğa* (now within the Amhara *kəlləl*).

Dabat

D. (ዳባት) is a small town located about 50 km north of ↗Gondär on the main Gondär–Asmära road (s. Däbarq map for location). It is the capital of the ↗Wägära *awrağğa*, D. *wäräda*, in north Gondär. Little is known about how the town was established. Its church is devoted to St. George. In the late period of *aṣe* Mənilək II's reign the town grew in importance due to its telephone station. The *Guida* identifies D. as a major local market centre. Much of the Wägära *awrağğa* is very fertile and known for its wheat and barley production. During the Italian occupation (1936–41), the Italians established a large farm, as well as an agricultural research centre in D. They also built a granary and a small food-processing plant. According to the statistical data of 2000, D. had a population of 11,596.

Mulatu Wubneh

Däbbäb Arʾaya

Fitawrari D.A. (ደቡበ፡ አርአያ; d. 24 September 1891) was the second son of *ras* ↗Arʾaya Śəllase Dəmṣu, and a cousin of *aṣe* Yoḥannəs IV. He had an insatiable appetite for political success and an extremely turbulent nature. Frustrated with his low rank of *fitawrari*, he first defected and joined the Egyptians and later sided with the Italians. He was an inveterate enemy of his brother-in-law *ras* ↗Alula Ǝngəda (who married D.A.'s sister Ǝmlasu), against whom he fought several times during 1882–88, whilst being armed by the Egyptians and the Italians. As a ↗*šəfta*, he mostly robbed Alula's caravans and disturbed trade between Asmära and Massawa. Towards the end of Yoḥannəs's reign he submitted and was pardoned, which distressed Alula. When Yoḥannəs summoned Alula to help fight against the Mahdists, D.A. occupied Asmära, killed Alula's deputy *däğğazmač* Ḫaylä Śəllase, and opened its gates for the Italians.

After the death of Yoḥannəs, D.A. once again rebelled, this time against ↗Mängäša Yoḥannəs. In July 1889, Mängäša had to confront D.A., who had been encouraged and assisted with arms, ammunition and finance from Italy. Mängäša along with Alula fortified Mäqälä, awaiting D.A. with his superior resources, but, instead of attacking, D.A. decided to negotiate a truce, with the secret intention of imprisoning Alula and Mängäša. However, his plan failed and D.A. was incarcerated at ↗Amba Sälama. He was soon released, only to rebel once again, fighting *ras* Alula at nearby Abba Gärima on 24 September 1891, where he was defeated and killed.

Däbbäbä Säyfu

D.S. (ደበበ፡ ሰይፉ; b. 12 July 1950?, Yərgaläm, Sidamo, d. 25 April 2000, Addis Abäba) was an important poet and academic teacher. His parents were *ato* Säyfu Antän Yəsṭäñ and *wäyzäro* Maryam Wärq Asfaw. He was educated at the Ras Dästa School in Yərgaläm and at the ↗Ḫaylä Śəllase I Secondary School in Addis Abäba, where he graduated with distinction in 1967. Then he went on to the Ḫaylä Śəllase I University, studying accounting for one year, before transferring to the arts faculty, where he studied Ethiopian languages and literature and obtained his first degree (B.A.) in 1973. For his M.A. he studied English literature and graduated with top marks in 1980.

D.S. was always dedicated to reading. Still in secondary school, he showed a gift for fictional writing, winning a short-story competition, and was from then on encouraged to cultivate his literary talent. He wrote poetry during his university years and steadily improved as a poet until the end of his life. In 1972, he wrote a poem about his home town, playing on the "double meaning" he attached to its name: ይርጋ፡ ዓለም (*Yərga ʿaläm*, 'Let the Land have Peace') and ይርጋ፡ለም (*Yərga läm*, 'Be Peaceful [and] Prosper'), both divisions of the word possible for its usual spelling as one word (ይርጋለም, *Yərgaläm*). He soon showed social concern and used his poetry to point to ways towards progress for Ethiopia. Patriotism and compassion became characteristics of much of his writing.

Thus, he wrote several poems against the indifference of the government during the severe famine in 1973. It was natural for him to see hope for the country with the coming of the ↗Revolution in 1974 and he gave it his support. At this time he took as his slogan "Greater self-awareness and self-realization" (**የራስ፡ ግንዛቤ**, *Yärase gənəzzabe*), and he became involved in the national debate about Marxism. As a linguist, he contributed to the development of a Marxist vocabulary in Amharic, as well as other fields needing new ways of expressing modern ideas.

D.S. was a member of the Ethiopian Writers' Union for many years and held high positions in the union, for several years as chairman, helping other authors to get their work published, and he edited the union's magazine, **ብሌን** (*Bəlen*, 'The Pupil [of the Eye]'). He was also a member of the board of the government-owned ↗Kurraz Publishing House and he became involved in the turmoil over ↗Bäʿalu Gərma's celebrated novel **ኦሮማይ** (*Oromay*, Tgn. 'It is pointless', from Ital. *ormai*, or 'now or never', from *ora o mai*), which was critical of the government (and led to its author's abduction and execution).

D.S. taught in the Department of Ethiopian Languages, Literature and Theatre Arts at the Ḫaylä Śəllase I University (later the Addis Abäba University) up to 1993. At first he taught literature, later (from 1980) he worked in the theatre section. Many of his students have testified to the strong impression he made on them. At this time, he wrote and translated plays and also published a book on acting. Some of his plays were acted only as experimental theatre by his students on the university stage, but others found a wider public. One, **ክፍተት** (*Kəftät*, 'The Gap'), had several showings on Ethiopian television.

When the Marxist regime in Ethiopia ended in May 1991, several academics lost their jobs. D.S. was dismissed from his teaching post at the university in 1993. During his last years he therefore experienced great stress and sorrow, but he also wrote some of his best poetry during this period, e.g., **አይደለም፡ ዘወትር፡ ሞት** (*Aydälläm zäwätər mot*, 'It is not Always Death') and **ለምን፡ ሞተ፡ ቢሉ** (*Lämən motä bilu*, 'If they Ask why he Died'). The latter poem also shows his pessimistic mood at this time: "If they ask why he died, tell all concerned, withholding nothing, that he died sulky and at loggerheads with the world."

Some of his early poems were published in an anthology with poems by 17 contributors, called **ጽጌረዳ፡ ብእር፡ የግጥሞች፡ መድበል** (*Ṣəggeräda bəʾər: yägəṭəmočč mädbäl*, 'A Pen of Roses: a Bunch of Poems'), but most of his poems were published in two volumes, **የብርሃን፡ ፍቅር** (*Yäbərhan fəqər*, 'Love of Light') and **ለራስ፡ የተጻፈ፡ ደብዳቤ** (*Läras yätäṣafä däbdabbe*, 'Letter to Myself', with the subtitle 'Second Volume of Love of Light'), which came out a short time before he died.

D.S. left behind many unpublished plays and essays as well as poems. His poetry is prescribed reading for students of Amharic literature at ↗Addis Abäba University, and he is a highly respected poet in Ethiopia.

Dabbo ↗Bread

Däbo

D. (Amh. **ደቦ**, also known as **ጅጌ**, *ǧəge* or **ወንፈል**, *wänfäl*), a common practice in the rural areas of central and highland Ethiopia, is one of the traditional forms of co-operation and mutual assistance. The communal labour sessions are usually organized during peak agricultural seasons of ploughing, weeding, harvesting and threshing, whereby peasants contribute their labour and agricultural tools to carry out urgent and time-consuming tasks. Besides, a D. can be organized for such tasks as house construction, wood collection and the preparation of large social events (↗Funeral, ↗Wedding etc.).

The D. functions as an informal mutual help agreement. The host is expected to provide ↗food and ↗drink for D. participants which, thus, incurs considerable costs in terms of finance, material and labour.

A D. can be called together by an individual to accomplish an urgent (agricultural) work. If the size of a D. team is large, e.g., 20 to 30 persons, women from the neighbouring households or close relatives take part in the preparation of food and drinks and carry them to the work-site of the D. The type of tools, foods and drinks prepared for the D. vary according to the community, the culture and the nature of work to be done.

D. is also an important occasion for its participants to improvise and perform a variety of work ↗songs (**የሥራ፡ ዘፈን**, *yäśəra zäfän*), heroic recitals (**ቀረርቶ**, *qärärto*, ↗*Fukkära*) praises (**ሙገሳ**, *muggäsa*) and blessings (**ምርቃት**, *mərrəqat*), accompanying them by different gestures and jokes, whispering and boasting freely and openly. Usually, a D. consists of age-mates. Adult men, women of the same age, young boys and girls etc. each form their own D. to tackle various types of social and traditional tasks. During a D. elderly men and women play an important role in motivating and encouraging participants by recalling past reminiscences, improvising amusing and touching songs and making jokes. Above all, they bless the participants, the cattle, the harvest, the season and even the community and the country at large.

Getie Gelaye

Däbr

D. (**ደብር**, pl. *adbar*, *adbarat*) means, literally, 'mount, mountain': e.g., Däbrä Zäyt ('Mount of Olives'), Däbrä Sina ('Mount Sinai'), Däbrä Ṣəyon ('Mount Zion'). Since the late 15th cent., the latter has also been adopted as a personal name known through rare attestations (mainly in the hypocoristic form Däbru), though alluding to the millenarian doctrine of the "Banquet on Mount Zion" (Fiaccadori 1993:332, n. 2; ↗Däbrä Ṣəyon).

D. is traditionally the most common term used, chiefly in composition, for a monastic church and/or the relevant cloister, as well as for the place in which they are located. Only in recent times was D. sometimes usurped for the name of important churches (e.g., Däbrä Ṣəyon of ↗Addis ʿAläm, ↗Däbrä Ṣəge Qəddus Uraʾel of Addis Abäba etc.). While some authors have traced the origin of the ecclesiastical usage of the term to the frequent location of monastic settlements on mountains (LesCDic 121, but cp. ibid. 183; Wondmagegnehu – Motovu 1970:24), it should be noted that sacred places are often depicted as "mountains", regardless of their geographical status: cp. Coptic *tow* and Egyptian Ar. *ǧabal*, meaning both 'mountain' and 'monastery' (Crum 1939:441a). The most famous of Ethiopia's monastic institutions are styled by this term: ↗Däbrä Bizän, ↗Däbrä Damo, ↗Däbrä Ḥayq Əsṭifanos, ↗Däbrä Libanos etc.; the name of Däbrä Fərem ('Monastery of Fəremnaṭos', i.e. of *abunä* ↗Sälama Käśate Bərhan), is attested as early as in the 10th/11th-cent. Aksumite inscriptions of *ḥaṣani* ↗Danəʾel (RIE 193, I–II).

D. also came to indicate a particularly important type of church institution, different from the smaller countryside church, a ↗*gäṭär*. A D. was supposed to have at least three priests serving at time and even more deacons. This was only possible if the monastic community was large enough (cp. ↗*Gädam*) or founded and sponsored by noble patrons – emperors and members of the royal family, local rulers and "kings" providing financial support for the construction of huge buildings, for murals, liturgical vessels, books etc., and granting land possessions. The foundation and endowment of a D. was considered the most pious act, crucial for the salvation of the soul (such churches were frequently supposed to become their patrons' sepulchres). The rising of some famous D. took quite a number of years and resulted in enormous expenses, as for ↗Däbrä Śäḥay Qʷəsqʷam (GuiIyas 89–105). The D.'s wealth and its ties to the royal court attracted many educated clergy (*liqawənt*), so that the place was usually a major centre for religious ↗education. Because of its royal connections the D. tended to be located in or around important political centres: the seat of the ruler's or emperor's court or the capital cities. If a local community wanted a D. to be erected, it needed consent from the emperor in order to secure resources for its clergy, monks and students.

Founding a D. involved land-granting and special ceremonies: after the emperor reached the designated place, horns were blown and drums beaten; he then went around the construction-site and announced the properties given to that church. An appointed scribe immediately registered his words in the "testament of the D.". The emperor could also have service books copied for the D. and inscribed with the list of his donations to the D. (which in some cases included votive ↗crowns used in the church service). In other cases, he merely signed a list of donations and sent it to the D. After the building was finished, its ↗*tabot* was solemnly introduced into the D.

Sometimes the emperor had his word written on parchment and sent it through a messenger to the place where the D. was being constructed. Then the metropolitan or bishop blessed the building-area of the church. The local noblemen and elders, along with the clergy holding a Gospel book and ringing special bells (↗*Qač̣əl*), encircled the area, together with the emperor's messenger. In the churchyard, the words of the emperor were read and, in turn, confirmed by the metropolitan.

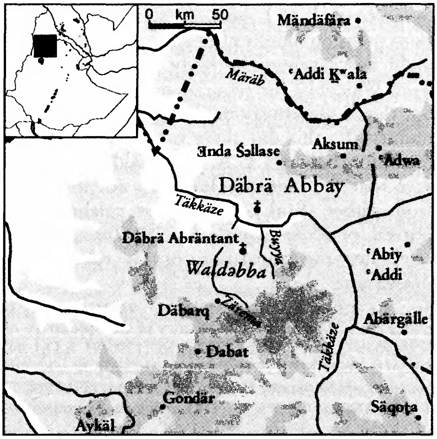
Steven Kaplan – Red.

Däbrä Abbay

D.A. (ደብረ፡ አባይ) is an important monastery connected to the ↗Waldəbba complex. It lies in the Šire *awrağğa* (now North Gondär Zone of the Amhara *kəlləl*) between May Ṣäbri and Ǝnda Abba Guna, close to where the Täkkäze River formed the Təgray–Bägemdər border. The history of the monastery is known mostly from local traditions and legends (for the apparently earliest mention in written sources s. PerZarY 28). It is said to have been founded as a church by ↗Samuʾel of Waldəbba in 1339 A.M. [1347 A.D.] and it was granted a monastic charter much later, in 1380 A.M. [1388 A.D.] during the reign of *aṣe* ↗Dawit II. However, it remained under the administration of Waldəbba for a long time.



D.A. was established with a more liberal rule than other Waldəbba monasteries, it allowed to consume grain and was consequently appropriate for the aged and infirm. The "Golden Gospel" (↗*Wängelä wärq*) of the monastery records that the monks were weakened by eating ↗*qʷarf*, the staple diet. In the time of *abbot* Bäkimos, when the communities of Waldəbba refused to accept land estates, these were granted to D.A. It is claimed that half of the *gʷəlt* (44 or 88 units in total are mentioned) was given by *aṣe* ↗Yəsḥaq (HuntLand 34).

In the second half of the 19th cent., D.A. remained an important monastery. Around 1905 it was richly endowed by *ras* Mäkʷännən Wäldä Mikaʾel, then in 1916 by *ras* Täfäri Mäkʷännən, the future emperor. The ↗*Dərsanä Uraʾel* mentions D.A. along with Däbrä Damo, Däbrä Ḥayq and some other famous monasteries. During the Italian war, D.A. suffered much in the course of the fighting between the Italians and *ras* ↗Ǝmməru Ḫaylä Śəllase. Most of the monks who survived sought refuge in the neighbouring areas. After the liberation, D.A. was restored and became a flourishing community, famous as a centre of traditional education, especially for the certificate in *Mäzgäbä qəddase*, eucharistic liturgy, in which the *mämhərs* of D.A. are considered to be the highest authority. This was confirmed by the demise of the other centre of Sədäd Kula in Goğğam, whose teachers came to D.A.

The community of D.A. claims to preserve the relics of *abba* Samuʾel in the *mäqdäs* of the monastery's Betä Ləḥem church. Certain traditions mention monks of D.A. coming secretly at night and stealing the body of *abba* Samuʾel from Waldəbba for reburial at their monastery, but this is vigorously denied by the D.A. community. To this day there is a tradition of cooperation between D.A. and Waldəbba to ensure that the monastic life does not disappear from either. Both communities celebrate the festival of *abba* Samuʾel on 12 *Taḫśaś*; D.A. celebrates the translation of his relics on 7 *Mäskäräm*.

Joachim Persoon – Denis Nosnitsin

Däbrä Abräntant

D.A. (ደብረ፡ አብረንታንት) is the central monastery of ↗Waldəbba. It is located in a lowland desert area near the Səmen Mountains, straddling the former Təgray–Bägemdər (Gondär) border (s. ↗Däbrä Abbay map for exact location). Waldəbba's borders are marked by the rivers Täkkäze, Zärema, Anṣəya and Buyya. This area is venerated as a sacred place where, as some traditional sources narrate, the Holy Family dwelt during its return from Egypt.

One of the earliest independent sources that explicitly refers to D.A. is possibly a note attached to the Acts of Märqorewos (Conti Rossini 1904:48). Besides, the Chronicle of *aṣe* Iyasu I reports that the Emperor visited the monks of Abräntanti (or Ḫabärtanti) and passed the place twice in 1692 (Guilohan 152f., 165). The local monastic tradition dates the foundation of D.A. to 493 A.D. and attributes it to a group of faithful from ↗Bulga, who, having been admonished by a hermit, set out for Jerusalem. A youth accompanying them revealed himself to be Christ and made a "testament" that the site would be "like Jerusalem". The word *abräntant* in the name of the monastery is traditionally explained as አብረን፡ ተአንተ (*abrän täʾantä*, 'we are together with you [God]'). Later, the local hermits are reported to have been massacred by Queen Gudit (↗Ǝsato) and, as a result, the monastery declined. *Abba* ↗Samuʾel of Waldəbba rebuilt the monastery and is considered its patron; after his death *abunä* Bäkimos, his pupil, became the head of the community. *Aṣe* ↗Dawit II offered D.A. *rəst-* and *g^{w}əlt*-land possession, but the monks refused to accept it (and the land is said to have been transferred to the nearby Däbrä Abbay). However, later, as the tradition claims, land estates were accepted from the Betä Ǝsraʾel leader ↗Gedewon.

The "five fathers" from ↗Däbrä Libanos of Šäwa reportedly came to the monastery in 1397 and found it divided into 44 *däwäl* (lit. 'bells') – groups of hermits, each having its own ↗*tabot*; these were eventually reduced to two "houses", those of *abunä* Minas and those of *abunä* Ṭa^{c}əmä Krəstos, which exist to this day. The monks had fled before the army of ↗Aḥmad b. Ibrāhīm al-Ġāzī; thereafter, the community was threatened by the Rayya and the Azaboo Oromo. The main church of D.A., Kidanä Məḥrät, was established in 1773. *Aṣe* ↗Täklä Häymanot II, who went to Waldəbba and became a monk after his abdication in 1777, is said to have been later buried at D.A.

After this, D.A. retained its importance; in the 1970s it hosted a large community with an elaborate organization, consisting of several settlements with churches of their own, all under the administration of one head (አበ፡ ምኔት, *abä mənet*). The monk grades range from the novices to the "perfect hermits"; the monks are engaged in the production of cereals and bananas (which is the main ingredient for ↗*q^{w}arf*) along with bee-keeping. The monastery is famous due to the austerity of the monks, as well as its masters of ↗*zema*-chanting and ↗exegesis.

D.A. has an important collection of ↗crosses, paintings on wood and manuscripts. Two staff-crosses deserve special attention. One, called the "Jerusalemian" or "Egyptian", is decorated with inlays of gold and silver and seems to be of Coptic origin. The cross cannot be precisely dated, but the inlay-technique connects it with objects of Islamic sumptuous art of ca. 13th–15th cent. The cross has an invocation in the name of "King Gäbrä Mäsqäl" (possibly *aṣe* ↗^{c}Amdä Ṣəyon or ↗Yəsḥaq?) and, on a picture of St. Mary, an inscription which mentions *aṣe* ↗Iyasu II. The second cross, made of bronze, has a shaft decorated with the head of a ram, a very rare feature, shared with the cross from the monastery of Wərrä Mäsqäl, ʿAgamä (attributed by its inscription to Ṭənṭäwədəm; ↗Zagʷe) and the cross from ↗Tädbabä Maryam, Sayənt (which is connected by local traditions with ↗John the Baptist). Two other iron hand-crosses in open-work technique and the imitation of bamboo-knots on the handles are dated to 15th–16th cent.

Two large wooden panels with the ↗Crucifixion scene are high-quality examples of the so-called First Gondärine style. Among the manuscripts there is a Vita of Täklä Haymanot decorated with 187 miniatures in the Second Gondärine style. According to oral tradition, the monastery owns a portrait of St. Mary, painted by St. Luke, which suggests a foreign provenance.

D.A. could be described as the "Mount Athos" of Ethiopia, preserving the essential values and aspirations of the ↗Ethiopian Orthodox Täwaḥədo Church. It was, and still is, a training-ground for future church leaders. The particular life style that has evolved over the centuries involves unique ways of interacting with nature, agricultural methods, architectural style, handicrafts and diet. Above all, D.A. has developed a strictly ascetic and contemplative spirituality.

Däbrä Amin Täklä Haymanot

D.A. (**ደብረ፡ አሚን፡ ተክለ፡ ሃይማኖት**, lit. 'Mount [Monastery] of Faith [dedicated to] Täklä Haymanot') is a church in Addis Abäba, located near Täsämma Abba Qämmaw Road. The corner stone of the church was laid down on 12 July 1898. The *tabot* was blessed by the then Metropolitan *abunä* ↗Matewos, accompanied by *aṣe* Mənilək II, his officials and the surrounding people, before being placed within a small tent. After this, the Emperor proclaimed the commencement of the construction of the church. The stone was brought from the Kotebe area; since the ↗Männagäša forest was rich in timber, there was no problem of wood supply for the construction. The church was designed to be octagonal in shape, like the churches of ↗Əntoṭṭo Raguʾel and Mänbärä Mängəśt Gäbrəʾel.

The main reason for constructing D.A. was the sheer distance between the capital and ↗Däbrä Libanos of Šäwa, which prevented the faithful, including the nobles, high officials and the Emperor, from visiting this monastery, the sanctuary of *abba* ↗Täklä Haymanot. The main feast of this Saint was celebrated on 24 *Näḥase*, during the rainy season, a time when communication between Däbrä Libanos and Addis Abäba became especially difficult. Hence, a church of Täklä Haymanot in the capital was needed.

Although the construction of D.A. was announced by the Emperor and became the concern of many officials, it was a long time in reaching completion. Construction of the principal church started in 1898, and was terminated and inaugurated in the reign of *ətege* Zäwditu. The bell house, also started in 1898, was completed during the second half of the 1930s. The hall, used as an accommodation for the ↗*sänbäte*-meetings, was built in the 1960s. The *mäqdäs* was built in 1983. Construction of the fence started in the 1950s, in co-operation with the city municipality of Addis Abäba and with contributions from the public, finally completed in the second half of the 1970s. The church administration offices were built at different times. However, the church began offering full spiritual services from the very outset, even although it took almost 90 years to build the church complex.

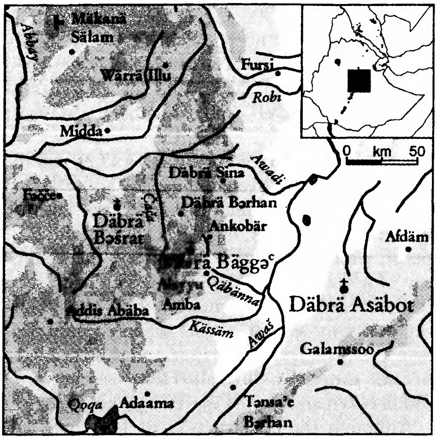
Mersha Alehegne

Däbrä Asäbot

D.A. (**ደብረ፡ አሰቦት**, or Asäbot Śəllase Däbrä Wägäg, 9°17' N, 40°35' E) is a monastery (*gädam*) in eastern Harärge, approximately halfway between Addis Abäba and Dərre Dawa (2,493 m A.S.L.). Mount Asäbot is an extinct volcano. The most important monastery of this area, D.A. was founded by a highly venerated saint, the Šäwan *abba* ↗Samuʾel [of Däbrä Wägäg], perhaps around the second half of the 14th cent., and follows the rule of *abba* ↗Täklä



Haymanot. *Aṣe* ↗Dawit II richly endowed the monastery with *gʷəlt* estates situated between the Awaš and the Mullu. In the 16th cent., the advancing Muslim forces of ↗Aḥmad b. Ibrāhīm al-Ġāzī destroyed it. In 1911 D.A. was re-established under the Empress ↗Zäwditu, only to be destroyed during the Italian period. The Italians took the monks to Mogadishu, where many were to die. It was restored again by *aṣe* ↗Ḫaylä Śəllase I, who ordered a modern church to be built, in the form of a Latin cross with a cupola.

According to the ↗*Dərsanä Uraʾel*, Christ's blood was collected in a shining chalice and sprinkled by an angel in different places that were to become monasteries on account of this action. When the blood fell on D.A. the place was illuminated, hence its name of Däbrä Wägäg (Caquot 1955:77, 87), cp. Amh. **ወገገ፡ አለ**, *wägägg alä*, 'to dawn'. In addition, the name D.A. is also traditionally explained as "mount of the thinkers, or the wise men" (cp. Amh. **አሳቢዎች**, *assabiwočč*, 'thinkers').

In the 1990s the community numbered approximately 50 monks and nuns (excluding novices), following the cenobitic *andənnät* rule. 7 *Ṭərr* and 7 *Ḥamle*, the feasts of the Trinity, to which Samuʾel dedicated the monastery, are among the most celebrated and important moments at the monastery.

D.A.'s strategic location, in an area where Muslim population is predominant, has given it a political, spiritual and cultural relevance. At times, persecuted Christians found refuge there. Other monasteries of the region disappeared, but it was believed that attempts to do away with D.A. were thwarted through divine intervention.

Däbrä ᶜAsbo ↗Däbrä Libanos

Däbrä Bäggəᶜ

D.B. (**ደብረ፡ በግዕ**, lit. 'Mount [Monastery] of the Lamb') is a monastery in the early Christianized district of Ṭära in eastern Šäwa (former Tägulät Bulga *awrağğa*), located in the valley of the Qäbänna, a tributary of the ↗Käsäm River (ca. 39°40' N, 9°25' E; s. map for Däbrä Asäbot). By tradition, it was founded in the 14th cent. by ↗Ḥəṣan Moʾa, who was a cousin of Zena Marqos (both having the same grandfather).

A substantial number of manuscripts from the monastic library, most of them dating to the 18th or 19th cent., have recently been catalogued (s. EMML vols. 6, 10). The monastery possesses a copy of the *Acts of Ḥəṣan Moʾa* (mf. EMML 2353, fol. 3a–35b), judged to have been written in the 18th cent. An inventory of books and church furnishings in the possession of D.B. mentions landholdings given to the monastery during the time of *nəguś* ↗Śahlä Śəllase (EMML 2353, fol. 2a), as well as those donated by *aṣe* Mənilək II, whose father *nəguś* ↗Ḫaylä Mälakot was buried in D.B. (GueCopMen 84), and by *wäyzäro* Bafäna (EMML 2352, fol. 169b; 2353, fol. 89a). Five miniatures from EMML 2349 are judged by Chojnacki to be significant examples of the Šäwan painting style, showing evidence of the impact of Gondärine art on 18th- and 19th-cent. Šäwan art (s. ChojPaint 471f.). Ms. EMML 4380 contains valuable texts in Old Amharic, such as the interpretations of Gəᶜəz letters, ↗*Śənä fəṭrät*, interpretation of the Nicene Creed etc.

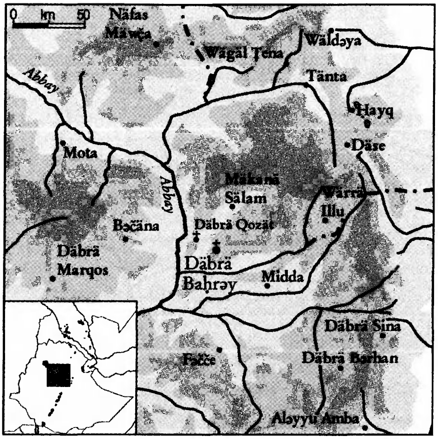
Paul B. Henze

Däbrä Baḥrəy

D.B. (ደብረ፡ ባሕርይ, lit. 'Mount of the Pearl [or, of the Divine Nature]') is a monastery founded by *abba* ↗Giyorgis of Sägla (Gasəč̣č̣a) during the reign of *aṣe* ↗Yəsḥaq, quite close to the grave of *abba* ↗Bäṣälotä Mikaʾel. D.B., more commonly referred to as Gasəč̣č̣a Abba Giyorgis *gädam*, is located on the summit of a precipitous elevation (*amba*; 2,400 m A.S.L.) on the Gasəč̣č̣a plateau, opposite Č̣aqata and south of the River Wäläqa in Wällo. It is only two or three hours walk from Sägla, which is the birthplace of the founder (Wright 1957:12; Derat 1994:25).

The location by Yaqob Beyene (YaqMist I) of Gasəč̣č̣a in Ambassäl and Sägla in Šäwa is, thus, far from certain. Neither can his assumption that Giyorgis of Gasəč̣č̣a and Giyorgis of Sägla were two different people be proved. In addition, the reference in the *Gädlä Iyäsus Moʾa* to Giyorgis of D.B. and of Gasəč̣č̣a as different individuals should not be taken for granted. According to his hagiography and to oral tradition, the Giyorgis who was born in Sägla and the one who founded D.B. in Gasəč̣č̣a was one and the same person; hence, Giyorgis of Sägla, or Gasəč̣č̣a, or D.B. The ↗*Mälkəʾ* of Giyorgis of Sägla, which repeatedly describes him as *baḥrəy* ('pearl'), summarizes everything when it refers to his grave at Gasəč̣č̣a as D.B.: ሰላም፡ ለመቃብረከ፡ ወለኵሉ፡ አድያማ፡/ሰዋስወ፡ ጸሎት፡ ኑኃ፡ ወምዕራግ፡ ስብሓት፡ ግድማ፡/ጊዮርጊስ፡ ማኀፈዳ፡ ወዘኢትንህል፡ ጥቅማ፡ እምኵሎን፡ ከልዓቲሃ፡ ሶበ፡ አፈድፈደት፡ ግርማ፡/ደብረ፡ ባሕርይ፡ ሰመይዋ፡ ስማ, 'Greetings to your grave and its surroundings/ Its length is a ladder for prayer and its breadth a staircase for [raising] glorification/Giyorgis is its tower and its building that will never be destroyed/When its glory was more than the others,/They called its name Däbrä Baḥrəy'.

The monastery has been damaged by fire three times: first by ↗Aḥmad b. Ibrāhīm al-Ġāzī, then by a certain *arämawi* (lit. 'pagan', i.e. Muslim) who reportedly has come from the town of Yädära Adäre (probably the town of Harär) and finally by the Muslims of the surrounding area. Wright (1957:12) observed evidence of burning; there are also some burnt pages of the *Mäṣḥafä* ↗*säʿatat* by Giyorgis that are believed to belong to the original exemplar of this work (the present author examined them during his visit to the monastery in 1997). As a result of these fires, D.B. does not have a particularly rich manuscript collection. A recent inventory reveals only 54 manuscripts on parchment and 45 published books. Nevertheless, it still serves as a major centre of religious instruction for about 18 parish churches.



During the reign of *aṣe* Ḫaylä Śəllase I, the monastery had 50 *gašša* (ca. 2,000 ha) of land; however, it has now lost more than 90 % of this total due to the sweeping land reforms after 1974 by the *Därg*. There are three *tabots* consecrated to St. George of Lydda, the Trinity and St. Mary. A cave-church of ↗Bäṣälotä Mikaʾel, which had fallen into disuse, now also belongs to D.B.

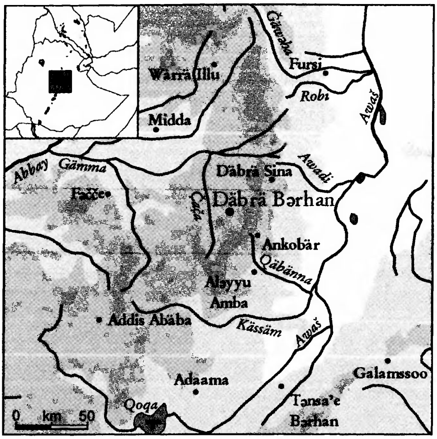
Fisseha Tadesse Feleke

Däbrä Bərhan

D.B. (ደብረ፡ ብርሃን, 'Mount of Light') was one of the earliest, and most important, capitals of Šäwa, and remains to this day a large and flourishing urban centre.

The town was apparently founded in the 15th cent. by *aṣe* ↗Zärʾa Yaʿəqob and figures extensively in his chronicle. This links the establishment of the settlement with a miraculous, Heaven-sent light. This was probably Halley's comet, which



made its appearance in 1456, i.e. in the last third of Zärʾa Yaᶜəqob's reign. D.B., according to the chronicler, became the site of a fine palace, which he describes in considerable detail. The town at this time was visited by numerous priests and countless courtiers from all over the empire, who came to pay allegiance to the mighty Emperor.

D.B. subsequently suffered from a serious epidemic, which Zärʾa Yaᶜəqob reputedly overcame in part by building the town's church of Betä Qirqos and by insisting on the proper burial of the dead. D.B. was, however, later abandoned by Zärʾa Yaᶜəqob's son and successor *aṣe* ↗Bäʾədä Maryam, after which its importance doubtlessly declined. The settlement was nevertheless still in existence in the early 16th cent., during the reign of *aṣe* ↗Ləbnä Dəngəl, when it was occupied by an army he had summoned there from Təgray. The town later fell to *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī, who reportedly destroyed Zärʾa Yaᶜəqob's old palace; and it was at D.B. that the ᶜAdal leader proclaimed: "Abyssinia is conquered".

The revival of D.B., in the late 17th cent., owed much to ↗Nägaśe Krəstos Wärädä Qal, the founder of the later Šäwan dynasty, who made the settlement his capital and rebuilt Zärʾa Yaᶜəqob's former palace. His immediate successors moved, however, to other locations. Two subsequent late 18th- and early 19th-cent. Šäwan rulers, ↗Asfä Wäsän and Wäsän Sägäd, both spent part of their time at D.B. and part at nearby Ankobär. This practice was followed, in the early 19th cent., by *nəguś* Śahlä Śəllase, who, in addition to Ankobär and D.B., also resided for part of the year in the vicinity, at Angoläla. The D.B. area was, however, the locality where he galloped his horses, and held his principal military reviews. The town also had a sizeable market, renowned especially for the sale of mules and horses.

D.B. suffered as a result of *aṣe* ↗Tewodros's occupation of Šäwa in 1855. The then ruler, *nəguś* ↗Ḫaylä Mäläkot, set fire to the town, including the palace, to prevent it falling to Tewodros. The latter nevertheless occupied the town, and placed his tent on the cinders of the former palace.

Mənilək, after his escape from Mäqdäla, occupied D.B. in 1865, but established an entirely new settlement five km to the north-east, at ↗Ləčče, which he made for a time his capital. Later, however, in 1878–79, under pressure from *aṣe* Yoḥannəs IV, he abandoned Ləčče, in favour of old D.B. The latter then reverted to its former status as one of the principal political centres of Šäwa, and the settlement was subsequently largely rebuilt by Mənilək, who restored the town's Śəllase church in 1905.

After the abandonment of Ankobär, in favour of Ǝnṭoṭṭo, and later Addis Abäba, D.B. emerged as the principal settlement of northern Šäwa. Its population was estimated in 1935 at no less than 12,000. After World War II the town's position on the Addis Abäba – Asmära road ensured it considerable urban growth. The town became the capital of a large *awrağğa* consisting of ↗Bulga and ↗Tägulät. The development was accelerated by the establishment of a teacher's training college, a woollen blanket factory, a flour-mill, a tannery, and numerous hotels. The population grew from 14,986 inhabitants in 1970 to 51,446 in 2000. D.B. is twinned with the French town of Blanc-Mesnil, on the outskirts of Paris.

Däbrä Bərhan Śəllase

D.B.Ś. (ደብረ፡ ብርሃን፡ ሥላሴ, lit. 'Mount of Light [dedicated to, i.e. with the *tabot*] of the Trinity', also known as Śəllus Qəddus) is one of the finest churches of ↗Gondär. Situated on elevated land north-west of the city, it was consecrated in January 1694 during the reign of *aṣe*

↗Iyasu I and is ecstatically described in a panegyric to him. This enumerates how Iyasu prescribed that the walls should be four cubits thick and (being round) exactly one hundred cubits from north to south and east to west. The roof was surmounted by a gold *gulləlat*, or roof decoration, and a large gold cross holding gold spheres the size of ostrich eggs, which shone like the sun by day and the moon by night (Conti Rossini 1942:76–81, 108–13). The belfry had two large bells, presented by the Dutch India Company and imported by the Armenian trader *ḫoǧa* ↗Murād. The church was important as a place where the Emperor and his courtiers celebrated the Feast of the Trinity and where not a few prominent figures were buried (BegCron 64). Its original establishment or *särit* involved over 170 clergy supported by grants of land in ↗Dämbəya. This establishment served as a model for many of the churches later founded in Gondär and in other parts of the country (CrumLand 88f.).

The original round church, the external foundations of which are still visible, was destroyed by lightning in 1707, but it was immediately restored and until 1730 frequently used as a royal necropolis. It was replaced by the present rectangular building (Di Salvo 1999:67), reconstructed by order of *liq* Ḫaylä Maryam Ǝšäte (d. 1842), a nobleman from Gondär, probably between 1800 and 1830. His church survived the pillaging of Gondär by the dervishes in 1888. Tradition claims that they were driven away by a swarm of angry bees.

D.B.Ś. is today renowned for its fine murals, which cover the entire interior and include paintings of the church's original founder, Iyasu I, as well as of ↗Ǝgʷalä Ṣəyon, who probably paid for its redecoration. The ceiling, decorated with cherubs, is today a major tourist attraction.

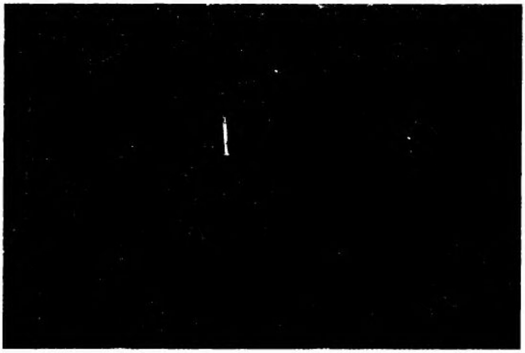
Richard Pankhurst

Paintings in Däbrä Bərhan Śəllase

The detailed description of D.B.Ś. in the Chronicle of *aṣe* ↗Iyasu I and in the Vita of the Emperor allows us to reconstruct it as a round building of tooled stones, with the central part encircled by arcades reposing on twelve pillars with twelve entrances. The walls of the ↗*mäqdäs* and the pillars were entirely covered with paintings. The choice of the scenes and their disposition represent what we now call the classical decoration system of a round church. An exception was made by the pillars decorated in the lower sections with the stories of the Apostles, and in the upper sections, with the figures of twelve archangels. A fragment depicting an angel, still kept in the church in frames, may originate from this ensemble.

The present church is a rectangular hall with a half-circular apse at the east end; it has three entrances from the north, south and west and a divided thatched roof. An ambulatory bound by rectangular pillars is the latest addition. The building is encircled by a high smooth-stone enclosure with a two-storey tower facing west. In the lower part there is the main entrance, the upper part houses the treasury.



Cloth mural painted about 1820; ceiling and north wall: cherubs, mariological scenes and St. George; photo 1993, courtesy of Michael Gervers

The interior of the church is entirely covered with paintings. The decoration of the sanctuary inside the apse is unknown. This part of the church was not entered during the restoration works that UNESCO performed in the 1970s. The technique used is painting on canvas glued to the walls. Stylistically, the painters were followers of the second Gondärine school. The name of one of them, Bäḫaylä Mäsqäl, is mentioned in an inscription. *Aṣe* ↗Ǝgʷalä Ṣəyon, who should be considered the ↗donor of the paintings, is depicted three times: prostrating before *abba* ↗Täklä Haymanot, the Virgin Mary and the Crucified Christ.

The north wall is divided into five rows. The two highest show a Mariological cycle, including the story of the Flight to Egypt based on the ↗*Nägärä Maryam*. The third row has portraits of ten ↗equestrian saints and figures of the most popular Ethiopian and ecumenical saints. The south wall is devoted to the Passion cycle, the Last Judgement, the martyrdom of Peter and Paul and portraits of the Apostles. On the west wall, the main scene represents the Apparition of the Virgin Mary at ↗Däbrä Məṭmaq, surrounded by the portraits of various saints. The east wall, transfixed by two portals leading to the *mäqdäs*, is flanked by figures of St. Michael and St. Gabriel. In the upper part of the wall the ↗Trinity is represented, in the lower part the Crucifixion between the Annunciation and the Nativity of Christ. The whole ceiling is decorated with the heads of cherubs.

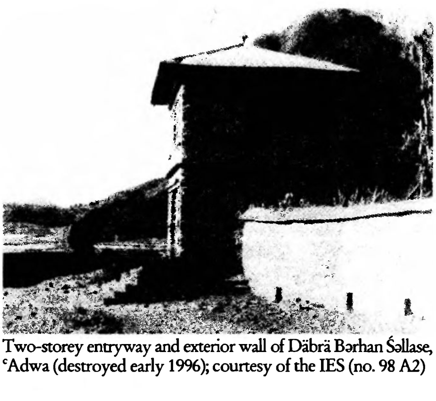
Däbrä Bərhan Śəllase

The church of D.B.Ś. (**ደብረ፡ ብርሃን፡ ሥላሴ**, lit. 'Mount of Light [dedicated to, i.e. with the *tabot*] of the Trinity', also known as Ǝnda Śəllase) was founded by *däǧǧazmač* Kaśa Mərča (*aṣe* ↗Yoḥannəs IV) at ↗ᶜAdwa, as here was the residence of his court. Built upon a "lofty place" where the house of Kaśa's father, *ras* Mikaʾel Səḥul, once stood, it was consecrated by *abunä* ↗Atnatewos on 14 May 1871. Dedicated to the Trinity, it was named D.B.Ś. after the famed church founded in ↗Gondär in 1694 by *aṣe* Iyasu I.

Its structure, with an attractive height and width and a ceiling that was "lofty and decorated with purple color" (BTafY 85, 90–93), along with its secondary buildings, was reduced to ruins during a battle fought at the church in the recent civil war.

A description and photographs of the church were recorded in the report of the ↗Deutsche Aksum-Expedition (DAE III, 57ff., pl. III). The church was a circular building of stone and wood with a double ambulatory and a central, square sanctuary (↗*Mäqdäs*) surmounted by a tambour. It was constructed within a stone enclosure with a circular tower and a square entryway. Its decoration consisted of many carved and incised wood details (the framing of doors and windows, the beams of entablature, the grills of screens) – the work of Italian craftsman Giacomo ↗Naretti. The murals on the exterior



Two-storey entryway and exterior wall of Däbrä Bərhan Śəllase, ᶜAdwa (destroyed early 1996); courtesy of the IES (no. 98 A2) wall of the sanctuary, which survive only in photographs, included a depiction of the arrival of *däǧǧazmač* Kaśa at Aksum for his coronation as Yoḥannəs IV on 21 January 1872, the banquet that followed it, an episode from the ↗Egyptian-Ethiopian war in 1870 and several hunting scenes. According to the *Guida*, most of the murals were painted by *aläqa* ↗Luqas of Goǧǧam. The church owned a large collection of military objects and church paraphernalia.

Däbrä Bəśrat

D.B. (ደብረ፡ ብሥራት, 'Monastery [Mount] of the Annunciation'), known also as Däbrä Zena Marqos, is located on the slopes of a table-mountain in Morät (Šäwa, Tägulät and Bulga *awraǧǧa*) near the church of Däy Giyorgis (s. map for ↗Däbrä Asäbot). The latter was recently rebuilt on the top of this mountain, in the vicinity of the ruins of the ancient Däy Giyorgis church attributed to the 15th-cent. *aṣe* Ḥəzbä Nañ (↗Täklä Maryam).

According to Enrico Cerulli's summary (1962) of the Acts of ↗Zena Marqos, D.B. was founded in the 14th cent. by this saint, a cousin and disciple of *abba* ↗Täklä Haymanot. It was the site where his birth was announced to his father.

After the death of Zena Marqos, in 1375/76 according to his hagiography, *aṣe* ↗Nəwayä Maryam granted lands to the community, which constituted a third of the income of the Emperor (a clear reference to the late tradition concerning the donations of *aṣe* ↗Yəkunno Amlak to Täklä Haymanot).

Zena Marqos was buried in his monastery. According to his Miracles, pilgrims rushed to his burial place. They used to sleep near his tomb, hoping for an apparition of Zena Marqos in their dreams. Pilgrimage to D.B., on the commemoration of the death of the saint, 3 *Taḫśaś*, and generally the third day of each month, is still very popular, rivalling the pilgrimage to ↗Däbrä Libanos of Šäwa.

A miracle added to the Acts of Zena Marqos (EMML 3987, fol. 136a–38b), written by an abbot of D.B. named Qalä ᶜAwadi, in charge during the war of ↗Aḥmad b. Ibrāhīm al-Ġāzī (Grañ), shows that the library of the monastery was very rich. When Qalä ᶜAwadi heard of the coming of Grañ's armies, he dispersed hundreds of manuscripts and the *tabots* and fled to Bägemdər.

D.B. belongs to the Däbrä Libanos movement. For this reason, during the doctrinal quarrel between Unctionists (↗*Qəbat*) and Unionists (↗*Täwaḥədo*) in the 17th and 18th cent., the community followed the Däbrä Libanos party.

Däbrä Bizän

The monastery of D.B. (ደብረ፡ ቢዛን) lies in the Eritrean province of ↗Ḥamasen, near the village of ↗Näfasit, some 25 km east of the capital city Asmära, on a high mountain, on the main road leading to Massawa. The name D.B. could be translated literally as 'Monastery [Mount] of Byzantium', but the true meaning of such an expression is rather obscure. Francisco Alvares's *Verdadera Informaçam*, published in 1540, refers to D.B. as "Monastery of the Vision", certainly because of local traditions narrating that Jesus appeared to the saint and told him to build the convent in the place that he would see a golden stick suspended in mid-air. It seems the place-name Bizän had existed before the foundation of the monastery referring to the great massif dominating Näfasit.

View of Däbrä Bizän; photo 1995, courtesy of Paul B. Henze

At present D.B. is also known as Ǝnda Abunä Filəppos, since it was founded in 1373 or 1374 by the monk ↗Filəppos, a leader of the monastic movement known as *däqiqä Ewosṭatewos* (↗Ewosṭateans). Under Filəppos's abbotship until 1406, D.B. grew so much in importance as to assume the political and religious leadership of the Ewosṭatean monasteries. During the last decade of the 14th cent. the community suffered from repression, culminating, after the resolutions of a council summoned in April 1400 by *aṣe* ↗Dawit II, in the arrest of Filəppos and his internment on the island of Ḥayq, within the monastery of ↗Däbrä Ǝsṭifanos. A few years later, about 1403 or 1404, the same Emperor allowed the ↗Sabbath celebration, i.e., the observance of rest on both Saturday and Sunday. According to the Gəʿəz sources, after the new council of ↗Däbrä Məṭmaq (1450) and the subsequent resolution of the monastic schism with a decision favourable to D.B., the monastery was liberally granted land by *aṣe* ↗Zärʾa Yaʿəqob.

D.B. was founded on the top of a massif the eastern slope of which descends steeply to the lowland, in the direction of Gindaʿ and Dogʿali. In this choice of a strategic position, dominating the route to the sea, one can see a serious attempt to establish a stronghold on the political and cultural boundary separating the Christian Solomonic Kingdom and the Islamic Sultanate of ↗Dahlak, with Massawa as its main coastal centre. The most ancient literary documents informing about D.B. are the hagiographies of the first two abbots of the monastery, the founder Filəppos (1322/23–1406) and his first successor ↗Yoḥannəs (1372/73–1449). These texts reveal the conflict between the monastery and the *nayb* (↗*Nāʾib*), i.e., the deputy of the Dahlak *sulṭān* in Massawa, called *śəyyumä baḥər* ('governor of the sea'). The social and political role played by D.B. in the struggle of the Solomonic rulers to extend their sovereignty over the lowland was a primary one. It is not by chance that the religious doctrine of D.B. was progressively accepted in the days of Dawit II, Yəsḥaq and Zärʾa Yaʿəqob, three emperors deeply engaged in a long-term conflict which brought eventually to the occupation of Massawa (1438). Specifically, Zärʾa Yaʿəqob expressed his acknowledgement of D.B.'s contribution in at least one significant land grant preserved in the ms. BritLib Orient. 481 (fol. 208).

An important source for D.B.'s history in the first half of the 16th cent. is the already-mentioned *Verdadera Informaçam* by Francisco ↗Alvares. According to this report, in 1520 the coast from Ḥərgigo to Massawa was still nominally part of the Solomonic Kingdom, under the direct administration of the ↗*baḥər nägaš*. The monks of D.B. are depicted as the highest religious authorities of the Eritrean regions, playing also a political role as "ambassadors" of the *baḥər nägaš* residing in ↗Dəbarwa. The leading position of D.B. among the monasteries of the Ḥamasen and Säraye regions is confirmed for the 17th and 18th cent. by the reports of Pedro Paez, Charles Poncet and James Bruce.

In the last decades of the 18th cent. (after 1780–81 according to the *Annals* of ʿAddi Näʾammən, s. KolTrad III, 44, 49), a serious devastation affected D.B. The event must have occurred before 1810, because Henry Salt informs about the monastery "deserted and in ruins" (SalTrav 442). Some 15 years later a similar scene appeared to the French travellers Edmond Combes and Maurice Tamisier who undertook their journey in 1837.

Starting from the mid-19th cent., the monastery was rebuilt in its modern shape. Today it includes three churches, a large number of cells plus different small buildings all constructed of uncommonly accurately cut masonry. The rights of D.B. were respected during the Italian occupation, and during the Ethio-Eritrean war the importance of the monastery grew quickly. It is sufficient to recall that after the Eritrean declaration of independence, the abbot of D.B. was invested with the office of Metropolitan of Eritrea. The monastic rule of D.B., tracing back to the same Filəppos, is celebrated for its severity, especially as to the strict prohibition for any female to enter the monastery. The monastery now houses the greatest manuscript collection of all Eritrea, totalling around 572 pieces, according to the local monks. The preservation of this first-rate historical heritage and its environmental context is one of the several challenges facing the Eritrean state.

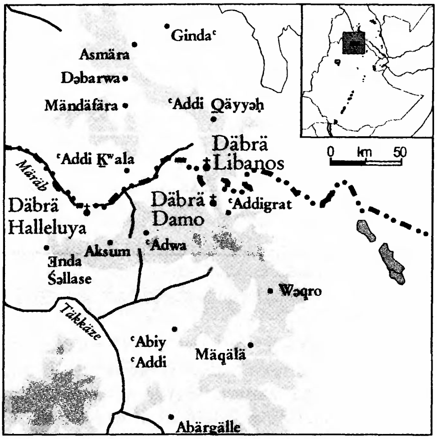
Däbrä Daga Ǝsṭifanos ↗Daga Ǝsṭifanos

Däbrä Damo

D.D. (ደብረ፡ ዳሞ, Däbrä Dammo, also Ǝnda [Abunä] Arägawi) is one of the oldest Ethiopian monasteries. Located on top of a mountain plateau entirely surrounded by steep cliffs in the district of Bizät, eastern Təgray, it can only be reached by climbing. The foot of the ↗*amba* is connected by a dry-weather road to the ᶜAddigrat–ᶜAdwa main highway.

No documents are available on D.D.'s foundation. Hagiographic sources, however, attribute the first monastic settlement there, under the Aksumite kings ↗Tazena and ↗Kaleb Ǝlla Aṣbəha, to *abunä* ↗Zämikaʾel Arägawi, who gave it the name of Däbrä Halleluya (*Gädlä Zämikaʾel Arägawi*, s. Guidi 1894:68); what is now the main or large church was then built by the son and successor of Kaleb, ↗Gäbrä Mäsqäl (ibid., 73), who is credited with a land grant to the monastery (cp. CRAxum 19f., and HuntLand 30, no. 4). At he end of the works, the King was asked by the Saint to remove the scaffold used for construction: *daḥməmo*! (lit. 'demolish it!', cp. LesCDic 127), and henceforth the place was called Däbrä Daḥməmo (Guidi 1895:74) – thus introducing a popular etymology for its name: *Dam(m)o* < *Daḥməmo*. According to local traditions, Gäbrä Mäsqäl was eventually buried in D.D., where his remains are still supposed to be. The monastery was later devastated by a pagan queen, Gʷədit (↗Ǝsato), who destroyed it to ground and built a town in its place (Fiaccadori 1992b:441, 444). Other traditions also have it that by then the *amba* served as a royal confinement, for Gʷədit had all the princes slaughtered (TSTarik I, 384; MahZekr 761).

The monastery lies at ca. 2,216 m A.S.L., the *amba* being ca. 600 m long from the north-east to south-west. The monastic complex includes two churches, compounds of monks' dwellings, some household constructions etc. The main



church of D.D., the importance of which for the history of Ethiopian art has been underlined since its first scholarly description by the ↗Deutsche Aksum-Expedition (DAE II, 168–94; s. also Matthew – Mordini 1959), is dedicated to Zämikaʾel Arägawi. Although rebuilt several times, it still preserves some important features typical of Aksumite ↗architecture. The Aksumite spolia still in situ were used for construction. Laying on a stepped plinth, the building has a simplified basilica plan including the central nave, two aisles, a tripartite sanctuary and a narthex proceeded by a porch of later date. A stairway in the northern part of the low-roofed narthex gives access to the upper chamber. Three monolithic pillars support a wooden coffered ceiling that may come from an earlier building. The carved panels of this ceiling are decorated with geometric and zoomorphic motifs in relief, comparable with those of ↗Ǝnda Maryam in Asmära. The central nave is divided into four bays by Aksumite monolithic columns supporting the lintel beams. A frieze imitating the row of blind windows runs above them and continue around the walls of the central part of the sanctuary. The walls of the nave that rises above the frieze support a timber roof of uncertain date. The aisles, lower than the nave, are surmounted by lofts. The central part of the sanctuary communicates with the nave by a wooden arch and is crowned by a wooden dome. Doors and windows (one with the original wooden tracery) are framed with squared beams projecting at the corners. The recessing and projecting courses of walls are alternatively made of timber and stones set in mud mortar and plastered. They are reinforced by timbers set in intervals and passing through the wall with the ends visible in the outer and inner faces of the wall. Massive dressed stone blocs are at the corners of the building. The age of the church was and still is the subject of debate. The most plausible dating, proposed by Buxton (1947), is 9th/10th cent. It is not excluded that the walls of the church were once decorated with the paintings on canvas. Two such fragments were reported by DAE (III, 50; fig. 149) and later described by Mordini (1952:29–32) who dates them to the 16th cent. One piece representing St. Mary with the Child found its way to the private collection in Italy; the second, with depiction of six monastic leaders is lost (or was probably lost in 1950).

There is a second, lower church, also dedicated to Zämikaʾel Arägawi, and built over the underground cave from which, according to the Acts of the latter, he mysteriously disappeared. The water leaking onto its bottom is supposed to have healing powers. The church is an orientated, rectangular building with central sanctuary surrounded by external walls constructed according to Aksumite principles; its other parts are later additions of different periods, the date of which is presently difficult to establish.

Some of the rock-cut tombs and caves of the hermits, decorated with carvings, that surround the church may be of ancient date.

Some Kuṣāna gold coins of the 2nd cent. A.D. and several ancient Arab coins of the Umayyad and Abbasid period were found in D.D. This implies closer commercial ties of North Ethiopia with the Middle and Far East from the Late Antiquity to the Middle Ages, even though it is unclear how the material reached the monastery (s. Fiaccadori 1992a:56ff. and n. 32). A few Islamic textiles with Arabic inscriptions of the Fāṭimid period discovered in the main church also bear witness to the history of the place and its trade contacts throughout the centuries (Wiet in Matthews – Mordini 1959:58; Mordini in PICES 1, 249–54).

The monastery seems to have been favoured by the Aksumite kings, but neglected in the ↗Zagʷe period, for it was at the forefront of the anti-Zagʷe struggle. In fact, under the "restored" Solomonic dynasty, the abbots of D.D.

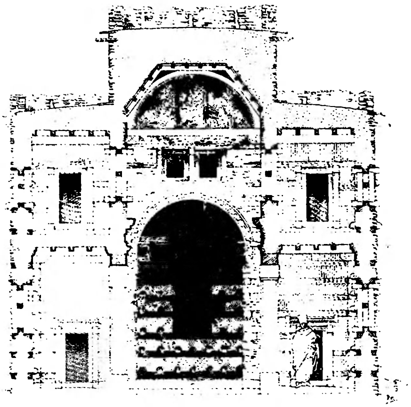
acquired the title of ↗*nəburä əd*, and became most influential in the Ethiopian political system (this being supported by the wide-spread veneration of *abunä* Zämika᾽el Arägawi).

D.D. enjoyed a reputation as a centre of learning. Several prominent religious missionaries and monastic leaders were indeed educated there, among whom *abunä* ↗Iyäsus Mo᾽a and *abunä* ↗Täklä Haymanot of Däbrä Libanos (Šäwa), under the abbot *abba* ↗Yoḥanni. The *Gädlä Zämika᾽el Arägawi* is followed by a brief history of D.D., which lists, though with difficult chronology, only eight heads of D.D. from Zämika᾽el Arägawi till (early 14th cent.?) Zä-Iyäsus (Guidi 1894:78–86). From the later notes, it is clear that the emperors tried to keep the monastery (situated in the region governed by ↗*təgre mäkʷännən*) under their control by nominating its heads: ↗Giyorgis of Gassəča, according to his hagiography, spent some time as *nəburä əd* of D.D. having been appointed by *aṣe* ↗Däwit II (Colin 1987:17, 23). *Nəburä əd* ↗Nob from Däbrä Bəkʷər and Matewos were appointed by *aṣe* ↗Zär᾽a Yaᶜəqob (PerrZarY 12, 109, 149; Matewos was in tenure also under *aṣe* ↗Bä᾽ədä Maryam).

Its inaccessibility allowed D.D. to escape such destructive events as the Muslim invasion of *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī ("Grañ") in the 16th cent. Instead, it served as the refuge of the royal family of *aṣe* ↗Ləbnä Dəngəl, who was also buried at D.D. (BassÉt I, 332; Kropp 1988:11 [SDL §8], 20 [MS §16]). The Portuguese army who came to rescue the Christian state used the monastery as an arsenal and munitions depôt during its successful expedition against Grañ in 1542–43.

In September 1557 Turkish forces from Yemen under ↗Özdemir *paša* seized D.D., burnt the church there and massacred the monks (s. ConzGal 74). The monastery must have partly recovered in the 17th/18th cent., if not already by 1626, when the Jesuit Manoel ↗Barradas wrote his short description (*Tractatus*, II, 37 and 45, s. BecRASO IV, 246, 279ff.; Barradas 1996:132, 158ff.). During the 17th–18th cent., however, D.D. seems to have mostly abstained from large-scale political involvement. At some time the head of D.D. lost his title of *nəburä əd* and was styled as *mamhər* only.

Yet, for the monarchs of the re-united Ethiopian empire, from ↗Yoḥannəs IV at least, it was crucial to count on the loyal support of D.D. as well as of other major monasteries (cp. RubActa III, no. 234). A certain Gäbrä Mäsqäl, representative of D.D., reached Jerusalem in ca. 1807–08 (Mordini 1953:68ff.). In 1830 the monastery was visited by Samuel Gobat (Gobat 1834:314ff.) and in 1843 by Giustino De Jacobis (De Jacobis 2000:552–65), whose notes provide important details (s. Mordini 1953:64). In the 1940s the community was composed of several hundred monks (and small settlement of nuns living at the foot of the *amba*); also, it was in charge of the administration of the neighbouring areas.



Däbrä Damo, main church, transversal section; drawing by Theodor von Lüpke, 1906; from DAE II, Tafel XXV

Because of the antiquity of the monastery, its library contains old Gəᶜəz manuscripts, but the information on that is still scarce (s. Conti Rossini 1940). To this library a few leaves from a rare painter's album or model book of ca. 1700 also belonged. Now kept in the Biblioteca Palatina, Parma (ms. Parm. 3853), they were formerly in the collection of Antonio ↗Mordini, Barga (Lucca), who visited D.D. several times (s. Fiaccadori 2001:282–87, no. 60). A series of archaeological missions – a few of them led by Mordini himself – surveyed the monastery in the 20th cent.; major restoration works were carried out by Derek Matthews in 1948, the financial support being provided by the Society of Antiquaries of London and, above all, the British Council at Addis Ababa through the munificence of *aṣe* ↗Ḫaylä Śəllase I. Until the 1974 Revolution, D.D. was among the greatest beneficiaries of rural land grants and other material endowments. Currently, however, it depends upon the offerings of the congregation and some subsidies from the Ethiopian Orthodox Church. The treasury (↗ʿ*Ǝqä bet*) of D.D. was severely damaged by fire in 1996.

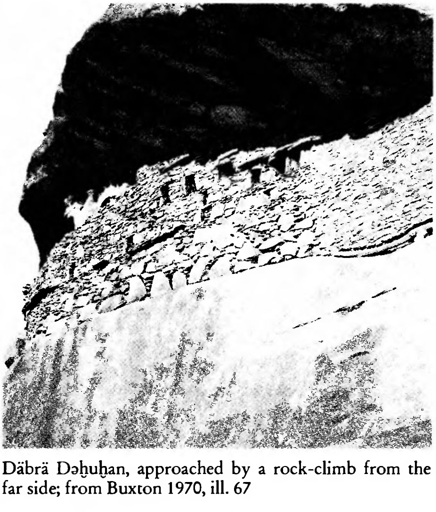
Däbrä Dəḫuḫan

The monastery of D.D. (ደብረ፡ ድኁኃን, also Dəhuḥan, lit. 'Mount [Monastery] of the Hollowed [Rocks]'; s. map for Däbrä Bizän) lies in Éritrea, in the Qʷäḥayn district of Säraye province (*zoba* Däbub in the present Eritrea). It is also known as Ǝnda Abunä Yonas Taḥtay, since it was founded in 1489 by the monk ↗Yonas, a disciple of ↗Ewosṭatewos. It is not to be confused with another monastery established by the same Yonas in 1455, ↗Däbrä Ṣəge, known also as Ǝnda Abunä Yonas Laʿəlay. Nowadays D.D. and Däbrä Ṣəge share a single abbot for both communities. According to the documents, D.D. was granted land by ↗Bəlen Sägädä, head of Säraye, during the reign of *aṣe* ↗Ǝskəndər.



Däbrä Dəḫuḫan, approached by a rock-climb from the far side; from Buxton 1970, ill. 67

Däbrä Dəmaḥ

The monastery of D.D. (ደብረ፡ ድማሕ, lit. 'Mount [Monastery] of the Top') lies in Eritrea, in the Däqqi Täsfa district of ↗Säraye province, north of ᶜArräza, in the historical region of Dämbälas (s. map for Däbrä Bizän). In the modern Eritrean administrative terminology the district (*wäräda*) is called Qʷälla Säraye and the sub-district (*nəʾus wäräda*) Mədri Fälasi. The monastery is also known as Däbrä Märqorewos, because its foundation is attributed to the 14th-cent. monk ↗Märqorewos, a disciple of ↗Ewosṭatewos. According to the 17th-cent. *Gädlä Märqorewos*, D.D. was granted land by *aṣe* Dawit II (1382–1412), while its founder was still alive. However, since the Italian occupation the monastery has lost all of its land rights. Among Eritrean monasteries, D.D. shares with ↗Däbrä Bizän and ↗Däbrä Ǝndrəyas the strict rule forbidding women to enter the monastery.

Däbrä Ǝgziʾabḥer Ab ↗Däbrä Ḫayq Ǝsṭifanos

Däbrä Ǝndrəyas

The monastery of D.Ǝ. (ደብረ፡ እንድርያስ, 'Mount of Ǝndrəyas'; s. map for Däbrä Bizän) lies in Eritrea, in the Säffəʾa district of ↗Säraye province, west of Dəbarwa. Its foundation is attributed to the monk ↗Ǝndrəyas, a lesser known figure of 15th-cent. religious history of this region, whose still unpublished *Gädl* is transmitted in the 20th-cent. manuscript Accademia Nazionale dei Lincei (Rome), Fonds Conti Rossini no. 84. D.Ǝ. is also known in Asmära, where a modern building houses a delegation from the monastery. D.Ǝ. shares with ↗Däbrä Bizän and ↗Däbrä Dəmaḥ the strict rule forbidding women to enter certain parts of the monastery, especially the church.

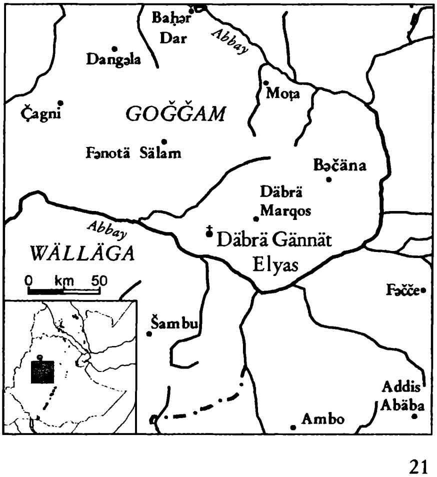
Däbrä Gännät Elyas

D.G.E. (ደብረ፡ ገነት፡ ኤልያስ, lit. 'Mount of Paradise [dedicated to] Elijah') is a church located in East Goǧǧam, ↗Mäčäkkäl *wäräda*, 45 km south-west of the town of Däbrä Marqos. The tradition has it that it was founded in 1468, at the very end of *aṣe* ↗Zärʾa Yaᶜəqob's reign, by a certain Dəl Asäma from Ifat. A high-ranking official of Zärʾa Yaᶜəqob, he was the commander of the ↗*čäwa* ordered by the Emperor to settle there. When he came to the Mäčäkkäl area, he brought with him the *tabot* of Elyas (Elijah). Some oral traditions suggest that Dəl Asäma was Zärʾa Yaᶜəqob's son-in-law through marriage with the Emperor's daughter.

The church came to prominence from 1874 onwards. In this year *aṣe* Yoḥannəs IV was on a military campaign to Goǧǧam. The church is located close to the mountain fortresses of Ǧäbälla and Mutära. *Ras* Adal Täsämma, the governor of Goǧǧam (*däǧǧazmač* ↗Täklä Haymanot), had taken refuge in these mountains when Yoḥannəs came to subdue him. In the course of this confrontation, the Emperor's soldiers looted the church's treasury and the huts of the monks in the compound. In compensation, Yoḥannəs promoted the church to the rank of ↗*däbr* (thus it acquired the name D.G.E.), donated ↗*gʷəlt* lands and instituted a large number of church officials. Since then the title of the head of D.G.E. has been ድማሐ፡ ገነት (*dəmaḥa gännät*).



In the last quarter of the 19th cent. and throughout the first half of the 20th cent. the church was well known for its *qəne bet* and *zema bet* schools. Famous individuals such as the Patriarch *abunä* ↗Tewoflos, the writer ↗Ḥaddis ᶜAlämayyähu, ↗Yoftahe Nəguśe and ↗Mälaku Baggosäw were educated at D.G.E.

Däbrä Halleluya

D.H. (ደብረ፡ ሃሌሉያ, also known as Däbrä Hallelo, Allelo) was an important monastery in the district of ᶜAddi Arbaᶜətä (Torat, Təgray), about 30 km north-west from the city of Aksum, on a hill overlooking the Märäb river (s. map for Däbrä Damo). It is believed to have been founded by *abunä* ↗Samuʾel (d. 1375), a spiritual son of the monk ↗Ǝnṭonəs of Däbrä Tämbuk, some time in the late years of *aṣe* ᶜAmdä Ṣəyon (1314–44) or during the reign of his successor *aṣe* Säyfä Arᶜad. Nothing is exactly known about the initial adherence of D.H. to any religious order or movement of that time, although it was later exposed to the influence of the ↗Ewosṭaṭeans.

As reported in the Acts of Samuʾel, during the office of abbot Zäʾiyäsus, Samuʾel's successor, *aṣe* ↗Dawit II, bestowed on D.H. gold, vestments and land-possessions. His initial intention had been to punish D.H., since one of his officers assumed the monastic habit there against his will. Yet, due to the miraculous intervention of Samuʾel, he changed his mind, made gifts and concluded a "testament" with Zäʾiyäsus. According to a number of sources, at least from the early 15th cent. to the Muslim invasion of ↗Aḥmad b. Ibrāhīm al-Ġāzī (Grañ), D.H. was a big and prosperous monastery. Monks from D.H. stood at the camp of *aṣe* Zärʾa Yaᶜəqob (r. 1434–68), enjoying the privilege of being in the vicinity of the Emperor together with the representatives of other important communities. One of the itineraries recorded by Alessandro ↗Zorzi estimates at 500 the number of D.H.'s monks. Three charters of *aṣe* Ləbnä Dəngəl (r. 1508–40) concerning D.H. are known (all dating shortly before Grañ's invasion), which confirm the old privileges of D.H. Later sources include further details about the pre-Grañ situation, sometimes in an exaggerated way; e.g., Manoel de Almeida speaks of both the impressive ruins of the old church, "90 churches", all once under the authority of D.H., and several hundreds of monks who used to dwell in the monastery.

Monks of D.H. were among the Ethiopian pilgrims to ↗Jerusalem. During the 15th cent. the monastery became known also in Europe due to the false rumours that its monks converted to Catholicism and followed "Dominican rules" (cp. ↗Dominicans), and there was the seat of a bishopric established by the otherwise unknown Italian Dominican Barthelemy of Tivoli, alleged founder of the monastery itself. However important the latter may have been, in 1535 it was brought to an end by Grañ's army, which, on its progress through Təgray, destroyed the monastery, as well as many other communities of the area. D.H. was never properly rebuilt after the invasion; its ruins were inhabited by a few monks alone (they were five in 1625), and at a certain point it disappeared completely from the Ethiopian sources, even though a small monastery or church still existed there as late as the first quarter of the 20th cent.

This monastery of D.H. should not be confused with ↗Däbrä Damo, founded by *abba* Zämikaʾel Arägawi, which is also sometimes called Däbrä Halleluya (cp. CRStor 159; ms. EMML 3987, fol. 113a).

Däbrä Ḫayl Qəddus Raguʾel

D.Ḫ. (ደብረ፡ ኃይል፡ ቅዱስ፡ ራጉኤል, lit. 'Mount of the Power [dedicated to] St. Raguel') became a "twin church" and the continuation, in terms of history, of the well-known ↗Ǝnṭoṭṭo Raguʾel, which was the third church, after those of St. Mary (↗Ǝnṭoṭṭo Maryam) and Uraʾel (↗Däbrä Ṣəge Qəddus Uraʾel), founded by *nəguś* Mənilək on the Ǝnṭoṭṭo mountain.

With the death of Mənilək II and the emergence of other Addis Abäba churches the preeminence of Ǝnṭoṭṭo Raguʾel was over. During the Italian invasion, *ətege* ↗Mänän Asfaw, who was the *gäbäz* of Ǝnṭoṭṭo Raguʾel, made a vow to the Archangel Raguel, just before the campaign of ↗Mayčäw, beseeching the intercession of St. Raguel for the victory of *aṣe* Ḫaylä Śəllase I. After the Mayčäw defeat, on her way into exile, she made another vow to construct a new church for Raguel should he bring her consort to power. In 1941, after Ethiopians' victory over Italian invaders, Mänän returned to Addis Abäba and started to plan the construction, being inspired by the priests' numerous stories about Raguel's miracles during the Italian occupation. She summoned a big council of influential persons related to the church of at Ǝnṭoṭṭo Raguʾel, the agenda being how to construct a new church building within the compound of the old one, by demolishing it. However, all advised her against the demolition of the existing church, and thus this idea was given up. *Ǝtege* Mänän decided to find a place to move the old Raguʾel Church to Addis Abäba, where a large parish would be found, and the first site she chose was on the Kolfe area. But it was soon abandoned in favour of another place, ↗Addis Kätäma, where the church is located today. On 9 May 1953, *aṣe* Ḫaylä Śəllase I and *ətege* Mänän attended the May annual feast of St. Raguel at Ǝnṭoṭṭo. When the celebration was over, the gathering descended to Addis Abäba to attend the consecration. *Abunä* Basəlyos blessed the site; the ceremony was concluded with the Emperor himself laying the foundation stone. The site of the church was very close to ↗Ǧāmiʿ al-Anwār. Thus, Addis Abäba Raguʾel church became the first in the history of the city to be in the immediate neighbourhood of a mosque.

The people entrusted to follow up the construction work were *bäǧərond* (later *fitawrari*) Rätta Gäbrä Amlak, *əndärase* of *ətege* Mänän, Bərhanu Dənqu and Śəyyum Akalä Wäld. Those in charge of the quick demolition of the houses on the site were Wäldä Arägawi, with the close support of two guards, Wäldä Ṣadəq Tägäññä and Kidanä Wäld Mädhən. The construction of the church took two years and cost ca. *bərr* 300,000. On the eve of the inauguration of the new church, which was held in Christmas Hall (now Addis Ababa University), on 11 September 1955, the *tabot* was brought from Ǝnṭoṭṭo Raguʾel to Addis Abäba. The old church of Raguʾel accommodated then the *tabot* of Elyas and was called Däbrä Ḫayl Qəddus Elyas. The move was attended by a large number of people from Addis Abäba, the Emperor and *ətege* Mänän. Although the occasion gave a lot of rejoicing to the Addis Kätäma's local people, the residents of Ǝnṭoṭṭo and the neighbouring Oromo population were greatly disappointed; the aged and women wept bitterly for having lost their *tabot*, which was Mənilək's great monument.

Däbrä Ḥayq Ǝsţifanos

D.Ḥ. (ደብረ፡ ሐይቅ፡ እስጢፋኖስ, also Däbrä Ḥayq or Däbrä Nägʷädgʷad) is a monastery located on the island of Lake ↗Ḥayq in the old Amhara region (Ambassäl, Wällo). According to the Acts of ↗Iyäsus Moʾa (KurMoa 15), two churches were founded at this place, known as a worshipping-area consecrated to a snake's cult before the coming of the Saint. One church, built around the 10th cent. by *aṣe* ↗Dəlnaʿod and Metropolitan *abunä* Sälama (Sälama Zäʾazeb, 'Sälama from the South', or Sälama II, known only from this source), was dedicated to God the Father (therefore named ደብረ፡ እግዚአብሔር፡ አብ, Däbrä Ǝgziʾabəḥer Ab); the other one, founded by "another king" in the 6362nd Year of the Creation of the World (862 A.D.; s. KurMoa iii) and consecrated by the Metropolitan Bənyam, was dedicated to St. Stephan (ደብረ፡ እስጢፋኖስ, Däbrä Ǝsṭifanos). Cerulli (in KurMoa) suggested correcting 6362 to 6662 [1167 A.D.] in order to restore a consistent chronology; but he himself underlined other chronological errors in the same text. The Acts of Iyäsus Moʾa are very incoherent as to dating, because their only objective is to place the foundation of D.Ḥ. before the reign of the ↗Zagʷe dynasty.

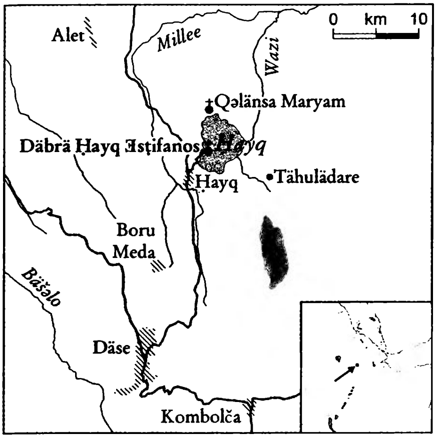
The development of D.Ḥ. began when Iyäsus Moʾa came to the island around 1248. He offered his support to ↗Yəkunno Amlak to seize the throne of the Zagʷe. In exchange, Yəkunno Amlak entered into many "pacts" (*kidan*) with Iyäsus Moʾa. The island was given exclusively to the monks (laymen and women were no longer allowed there) and the title of ↗*ʿaqqabe säʿat* was conferred on the head of the community. The abbot of D.Ḥ. was attended by the አፈ፡ ዓቃቤ፡ ሰዓት (*afä ʿaqqabe säʿat*, 'spokesman of the *ʿaqqabe säʿat*') and the ቄሰ፡ ገበዝ (*qesä gäbäz*, 'administrator').

D.Ḥ. became famous for its monastic school, where the youngsters of the area had to stay a few years to complete their formation. To testify to the influence of D.Ḥ., the author of the Acts of Iyäsus Moʾa enumerates the most famous pupils of the school and the disciples of Iyäsus Moʾa: ↗Giyorgis of Sägla (Gasəčča), ↗Täklä Haymanot, ↗Aron of Däbrä Daret and ↗Ḥirutä Amlak (KurMoa 35).

According to the records preserved in Iyäsus Moʾa's Gospel (ms. EMML 1832), from the reign of Yəkunno Amlak onwards, the community of D.Ḥ. was richly endowed with lands. Though his predecessor Wədəm Räʿad confiscated them, *aṣe* ↗ʿAmdä Ṣəyon, who enjoyed a close relationship to D.Ḥ.'s abbot Krəstos Täsfanä, confirmed these donations and increased them with new lands. Some of these lands were redistributed to ecclesiastics for their support.

The relations between the rulers and the monastery became so close that the *ʿaqqabe säʿat* ↗Amməḥa Ṣəyon stayed permanently at the court of *aṣe* ↗Zärʾa Yaʿəqob in Däbrä Bərhan, forcing his community to elect a new abbot, Gäbrä Krəstos. Afterwards, the role of the *ʿaqqabe säʿat* in the government of the empire became more and more significant, so that Abbot Täsfa Giyorgis belonged to the Regency Council of the young *aṣe* ↗Ǝskəndər. The monastery became also a place of internment from

Däbrä Ḥayq Ǝsṭifanos, western view, photo 2004, courtesy of Wolbert Smidt



1400 to 1404 for ↗Filəp̣p̣os, abbot of Däbrä Bizän and leader of the Sabbath party (↗Ewosṭateans). At this time, abbot ↗Śäräqä Bərhan was a close ally of ↗Dawit II. Another important prisoner was Waray ↗Aḥmad Ḥarb Arᶜad b. ᶜAlī b. Ṣabraddīn, Prince of ᶜAdal, detained in D.Ḥ. during the reign of *aṣe* Ləbnä Dəngəl.

D.Ḥ. was destroyed by the armies of Aḥmad b. Ibrāhīm al-Ġāzī in 1532 (BassHist 326ff. [tr.]). The soldiers seized gold, silver and other riches, but also a number of manuscripts and they captured the *ᶜaqqabe säᶜat* ↗Nägädä Iyäsus and killed him in 1535.

Even after it had been plundered, D.Ḥ. remained a functioning religious centre throughout the 19th and the 20th cent. It is still famous for its rich library. Two manuscripts are particularly well known for their marginal notes: the Gospels of Iyäsus Moʾa (ms. EMML 1832) and Krəstos Täsfanä (Addis Abäba, National Library ms. 28 [olim 5]), the latter being an illustrated manuscript, important for the history of Ethiopian art and one of the oldest dated (s. P̣āwlos Ṣādwā 1952). D.Ḥ. has also a rich collection of hagiographies of such saints as Iyäsus Moʾa, Giyorgis of Sägla, P̣änṭälewon and Aron (most of them microfilmed for the EMML project). The monastery possesses a number of other valuable artefacts and paraphernalia (e.g., ↗*Märäwəh*).

Marie-Laure Derat

Däbrä Kol

The monastery of D.K. (ደብረ፡ ኮል, 'Mount of the Apple') lies in Eritrea, in the Märagʷəz district of ↗Säraye province, south-west of Mändäfära (ᶜAddi Wəgri; s. map for Däbrä Bizän). It is also known as Ǝnda Abunä Buruk Amlak (Ǝnda Abba Buruk), since it was established on the site of the alleged martyrdom of the 14th-cent. monk ↗Buruk Amlak, a pupil of ↗Absadi and a follower of *abunä* Ewosṭatewos's rule. According to written traditions (*Gädlä Buruk Amlak*), after the foundation of ↗Däbrä Maryam (1374), Absadi's monastery in Qʷäḥayn district of Säraye, Buruk Amlak spent the final part of his life in ᶜAd Haywa.

The date of his death, which took place during the reign of *aṣe* Dawit II (r. 1382–1412), is uncertain, as is, consequently, the precise date of D.K.'s foundation. The tomb of the saint is still venerated in the monastery along with a spring of water that, according to local tradition, miraculously began to flow from the site where the saint was murdered.

Däbrä Libanos

D.L. (ደብረ፡ ሊባኖስ), originally known as Däbrä ᶜAsbo and renamed D.L. by *aṣe* ↗Zärʾa Yaᶜəqob in 1445 is a monastery located in Šäwa, ↗Sälale *awrağğa* (the locality formerly known as Gərarya), in the gorge near the river Zega Wädäb. This southern location has to be emphasized: the community was established between the pagan kingdom of ↗Damot and the Muslim sultanate of Šäwa, under the authority of ↗Ifat. According to the *Gädlä Täklä Haymanot*, this monastery was founded by *abunä* ↗Täklä Hay-

Däbrä Libanos of Šäwa: monks' dwellings; photo 1932 by Hans Anstein; courtesy of Basler Mission21

manot at the beginning of the 14th cent. After he had converted the *śəyyum* of Gərarya, Sämen Sägäd, to ↗Christianity, the latter gave him the land of ᶜAsbo, where he built a church dedicated to the Virgin Mary. In the earliest period, the monks probably lived in caves. At the beginning of the 15th cent., the Abbot Tewodros built a new church dedicated to the saint, which became the shrine of Täklä Haymanot and the abbots of the community.

According to the Vita of ↗Anorewos, one of the first disciples of Täklä Haymanot, the daily life was under the jurisdiction of a ↗*mäggabi*. Anorewos (most probably, the first *mäggabi*) decided to separate nuns and monks and to create a new office in the monastery: **ራድእ** (*rädəʾ*, pl. **አርድእት**, *ardəʾət*, lit. 'helper'). These *ardəʾət* (novices) performed domestic tasks in place of nuns to help monks. Anorewos held also the title of **ሊቀ፡ ዲያቆናት** (*liqä diyaqonat*, 'archdeacon'). Later, probably after the 15th cent., the abbot of D.L. received the title of ↗*əč̣č̣äge* and was seen as the head of Ethiopian monasticism.

The economic background of the D.L. community is not well documented. According to the Chronicle of Zärʾa Yaᶜəqob, he granted lands and incomes to the monastery after 1445. However, we do not have any acts proving this, and there is no information concerning the land donations of other rulers. These land donations, as well as the attribution of a new name to the community, were part of a new policy of Zärʾa Yaᶜəqob towards D.L. after 1445. Before this date, it seems that the community was in opposition to royal power. The Vita of ↗Filəp̣p̣os, third abbot of D.L., who lived in the 14th cent., presents this saint as a martyr because of his opposition to *aṣe* ↗ᶜAmdä Ṣəyon I's matrimonial habits. Later, the monastic chronicle *Zena Däbrä Libanos* ('History of D.L.') alludes to a conflict between *aṣe* ↗Dawit II and the abbot ↗Yoḥannəs Käma. Finally, during the reign of *aṣe* Zärʾa Yaᶜəqob, ↗Əndrəyas, the head of the monastery, was put into jail and died there, perhaps because of his disagreement with the Emperor's policy concerning the observance of the ↗Sabbath. After his death, Zärʾa Yaᶜəqob himself named the new abbot of the community, ↗Märḥa (Yəmrəḥannä) Krəstos, and asked that two members of the community be present permanently at the royal court. From this time, relations between D.L. and the emperors changed completely. The abbot of the community became a privileged counsellor of the emperor, and he is named as the monastic head over the different monasteries, founded by the emperors such as ↗Däbrä Məṭmaq or ↗Atronsä Maryam.

The 15th cent. also appears as a period of great activity in the *scriptorium* of D.L. At this time, the *gädlat* of Täklä Haymanot and of Filəp̣p̣os and **መጽሐፈ፡ ፍልሰቱ፡ ለተክለ፡ ሃይማኖት** (*Mäṣḥafä fəlsätu lä-Täklä Haymanot*, 'The Book [of the History] of the Translation [of the Body] of Täklä Haymanot', s. Nosnitsin 2003) were written.

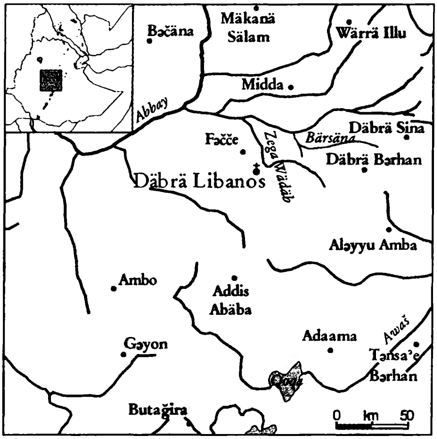
Despite the destruction of the monastery by the armies of ↗Aḥmad b. Ibrāhīm al-Ġāzī in July 1532, the community of D.L. survived. *Əč̣č̣äge* ↗Yoḥannəs lost his life, accompanying *aṣe* ↗Gälawdewos in the battle with ↗Nūr b. Muǧāhid on 23 March 1559, but the time of

Gälawdewos and his successor *aṣe* ↗Śärṣä Dəngəl was a period of relief; attempts were made to elevate D.L. to the position of religious centre of the monarchy (cp. ↗Tädbabä Maryam). However, the situation deteriorated due to the massive migration of the ↗Oromo and increasing isolation of D.L. from the rest of the Empire. During the tenures of *əč̣č̣äge* Zäträ Wängel and *əč̣č̣äge* ↗Abrəham, the community moved to the region near Lake Ṭana (↗Ǝnfraz), following the shift of the political centre of the Empire in the same direction; subsequently, the "house of Täklä Haymanot" was established at Azäzo, in the vicinity of the royal court at Gondär (cp. ↗Azäzo Täklä Haymanot). The monks came back to the site of the old D.L. in the late 18th cent. only, to re-establish it and to re-discover the tomb of Täklä Haymanot.

The monastery's main church was rebuilt several times: in 1812 under ↗Wäsän Sägäd, in 1884 under ↗Yoḥannəs IV and in 1908 under *aṣe* ↗Mənilək II. The late 19th cent. brought for D.L. not only revival and the special attention of the monarchs, but also control on the latter's part and the monastery's involvement in political matters. *Ǝč̣č̣äge* ↗Tewoflos, the partisan of *aṣe* Yoḥannəs IV, was deposed after the latter's death, to be followed by *əč̣č̣äge* ↗Gäbrä Śəllase. He was a confessor of Mənilək II and ↗Bafäna, but his authority decreased, since the important office of ↗*liqä kahənat* of Šäwa was transferred from the see of the *əč̣č̣äge* to the Metropolitan *abunä* ↗Matewos. The next abbot, the energetic ↗Wäldä Giyorgis, actively participated in the deposition of *ləǧ* ↗Iyasu in 1916. In 1930 his successor *əč̣č̣äge* Gäbrä Mänfäs Qəddus, on the special request of *ras* Täfäri Mäkʷännən (the future Emperor ↗Ḫaylä Śəllase I), was consecrated bishop by the Coptic Patriarch John XIX (who personally came to Addis Abäba in December 1929) as *pappas* ↗Säwiros.

The ascension of D.L.'s heads to the top of the ecclesiastical authority was interrupted by the Italian occupation. *Ǝč̣č̣äge* Gäbrä Giyorgis went into exile; however, after the Liberation, in 1951 he was consecrated the first Ethiopian patriarch, *abunä* ↗Basəlyos.

With the establishment of Addis Abäba, the sanctuary of Täklä Haymanot began to be frequented by the nobles. The monastic community is reported to have obtained special regulations from Mənilək II; one of the four telephone stations, established in Sälale before the Italian occupation, was in D.L. During the occupation, D.L. suffered destruction and death: General ↗Graziani ordered the massacre of the monks in May 1937. Thereafter, D.L. remained closed for some time; the treasures of the monastery were reportedly taken to Italy. The monastery was rebuilt by Ḫaylä Śəllase I and the work was completed in 1963.



Despite all the disruptions, the tomb of Täklä Haymanot is regularly visited by great numbers of pilgrims, especially on three of the Saint's annual feasts: 12 *Gənbot* (day of the translation of the body of the Saint), 24 *Taḫśaś* (his birthday) and 24 *Näḥase* (day of his death). Families often try to bury their deceased in the vicinity of the monastery, which is definitely one of the most venerated sacred places of Ethiopia.

Even though the economic base of the monastery suffered greatly in the course of the ↗Revolution of 1974 and subsequent events, D.L. seems to be the largest monastery of the country, counting in 1985/86 about 240 monks and a far larger number of disciples, supplicants etc., engaged in the elaborate monastic household. The compound also houses a nunnery. Following the old tradition, the monastery is run by the *mäggabi* and ↗*ṣäbate*, who preside over a council of twelve representatives delegated from the monks.

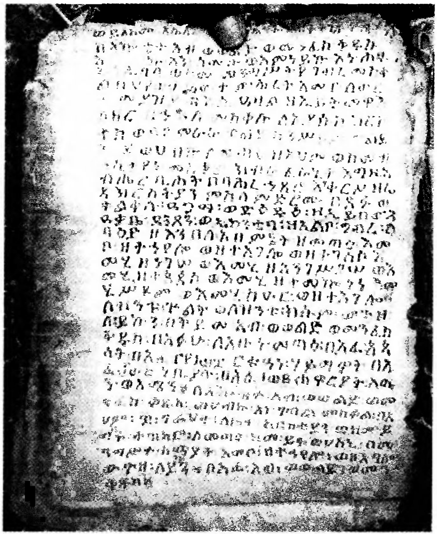
Däbrä Libanos

The monastery of D.L. (ደብረ፡ ሊባኖስ), occasionally known also as Däbrä Wärq, is located in the historical district of Anbäsät Gäläba, Šəmäzana, in the present day southern part of the province of ↗Akkälä Guzay, Eritrea, close to the border with ᶜAgamä, Təgray (s. map for ↗Däbrä Damo). Along with the nearby hamlet of Ham (not: Ḥam), or Aham, it is one of the earliest Christianized sites, if not one of the oldest settlements, in the region. Its foundation probably dates back to the 5th–6th cent. and is attributed to ↗Libanos, or Mäṭaᶜ. One of the saints of the Aksumite period not included with the ↗"Nine Saints", he was chiefly active in Säraye and Akkälä Guzay. According to the different recensions (and mss.) of his *Gädl* (Conti Rossini 1903; Getatchew Haile 1990; Bausi 2003), he is said to have come from Qʷəsṭənṭənya ('Costantinople') during the reign of kings ↗Ǝllä Gäbäz or Zägäbäz(ä Aksum) and/or ↗Gäbrä Mäsqäl. From the latter's, apocryphal "feudal acts" transmitted in the "Golden Gospel" (↗*Wängelä wärq*) of D.L. claim donations (CRDLib 184f., nos. 1–5). In the same "Golden Gospel" the head of D.L. is referred to as *ᶜaqqabe säᶜatä Mäṭaᶜ* (*ibid.* 187–216, nos. 6–8, 10–11, 13–15, 17–18, 20, 22–23, 27, 33).



Document no. 7 from the Golden Gospel of Däbrä Libanos, ed. in CRDLib 189f.; photo courtesy of the author

D.L. is the first monastery for which reliable historical "feudal acts" are extant, its "Golden Gospel" could in turn date back to the 13th cent. (CRDLib; Conti Rossini 1916; cf. now Schneider in PICES 8): *aṣe* ↗Lalibäla and his wife Mäsqäl Kəbra gave privileges to D.L. not any later than the first decades of the 13th cent. (1209 and 1225, cf. CRDLib 187–91, nos. 6–7), while the latest reliable acts are donations by *aṣe* ↗Zärᵓa Yaᶜəqob (1459). Extremely powerful in the 13th and 14th cent., as it appears from the lands and rights it enjoyed (donations by *aṣe* ↗Yəkunno Amlak, by Täsfanä Ǝgziᵓ and ↗Yaᶜəbikä Ǝgziᵓ [1319], heads of Ǝntərta, by Bəlen Saba, the wife of *aṣe* ↗ᶜAmdä Ṣəyon [1322], and by ᶜAmdä Ṣəyon himself [1323 and 1328]), it was still important in the 15th cent., when *aṣe* Zärᵓa Yaᶜəqob drew inspiration from it for his reform of the baptismal ceremony (PerrZarY 43). D.L. was since resisting strong rivalry by the monasteries of the "order" established by *abba* ↗Ewosṭatewos, and progressively losing its influence. A confirmation of this is found in the Miracles of Libanos (Conti Rossini 1903; Bausi 2003), where main episodes that took place during the reigns of *aṣe* Säyfä Arᶜad, Dawit II and Yəsḥaq are reported, while only the latest recension of the text refers to events under *aṣe* Zärᵓa Yaᶜəqob.

The names of several abbots down to the 14th cent. are reported in the "Golden Gospel" (CRDLib 219): Täsfa Ḥəywät or Zena Yoḥannəs, around 1209; Yərdəᵓannä Krəstos or Ṣägga Mäṭaᶜ, already in 1225 and up to 1268; Täkäśtä Bərhan or Śännay Mänfäs, in 1270; Asfəḥa or Efrem, 13th cent. to 1319; ᶜƎqbä Ǝgziᵓ or Krəstos Abuhu; Gäbrä Krəstos or Yərdəᵓannä Ǝgziᵓ, from 1322 to Säyfä Arᶜad's reign.

The old Aksumite church of D.L. (to be distinguished from the church of Ham) has been replaced in 1959/60 by a new one, within which a few elements of the ancient building have been reused (cf. Bausi 1997:13–41, Lit.). The most important relic of D.L. is the "golden" cross said to have belonged to *abba* Libanos himself. The library still houses a considerable number of mss. (84 at least in 1994), with a few illuminated 14th-cent. examples (Bausi 1997). The monastery, with administrative jurisdiction over the district of Anbäsät Gäläba until at least the early 20th cent., is still active as one of the most important religious centres of Akkälä Guzay (data of 1994).

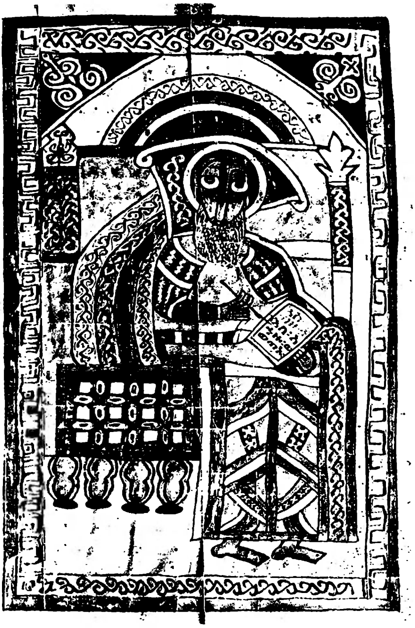
Däbrä Mäᶜar

D.M. (ደብረ፡ መዓር, lit. 'Mount of Honey', also Däbrä Mäᶜarä, Däbrä Maᶜara, Däbrä Maᶜəräyä) is a site with two rock-hewn churches on a mountain top, ca. 600 m above a wide valley on the ↗Dəgum plateau (↗Gärᶜalta). Formerly, there was a monastic community.

Little is known about the history of D.M., yet the place appears to have been important, particularly in view of the extent of the monastic cemetery. It includes a large double grotto (11 m x 4 m x 3.5 m and 5 m x 3 m x 1 m) with about 80 *cubiculi* hewn out of the walls on different levels. According to a local tradition, the founder of the main church was the 14th-cent. *abunä* Gäbra Mäsqäl of Gärᶜalta, whose relics are said to be preserved in D.M. He is also recognized as founder of the Maᵓaquddi church nearby. The second is a simple cave-church, presently serving as a sheepfold.

In the course of time, the churches of D.M. possibly owned different *tabot*-tablets and received different dedications. The notes in the 14th-cent. Gospel Book of D.M., kept in the treasury of the main church, mention the "Gabriel church of Däbrä Mäᶜära" (fol. 14v, 230v–231r). Currently, the *tabot* of the main church is dedicated to St. ↗George of Lydda, yet two other alabaster *tabots*, with other names, have recently been discovered in the burial cell



John the Evangelist; miniature from a Gospel Book, fol. 11^{v}; dated 1341; treasury of Däbrä Mäᶜar Giyorgis; photo 2000, courtesy of Michael Gervers

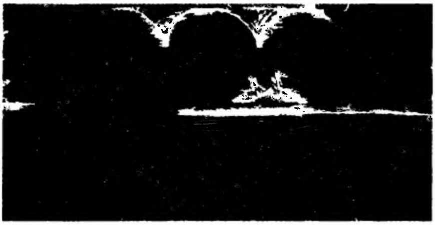
of Gäbrä Mäsqäl, situated in the main church. Teweldemedhin Josief (1970:54, nos. 25, 26) recorded the D.M. churches as Ǝnda Maryam and Ǝnda Giyorgis (cp. Sauter 1976, no. 1214); Pearce and Jäger (1974:115), describing only the main one, called it Däbrä Mäᶜar Giyorgis.

As follows from the notes preserved in the Gospel Book, among the benefactors of the monastery were *aṣe* ↗Dawit II, ↗Zärʾa Yaᶜəqob and a certain *ᶜaqqabe säᶜat* Mäksimos (who was in charge of commemoration services for both emperors, fol. 14v). In the land charters attached to the *Mäṣḥafä* ↗*Aksum*, Däbrä Mäᶜara and its abbot Näftalem are included in the list of monasteries and ecclesiastics endowed by *aṣe* ↗Ləbnä Dəngəl.

The main church (15.24 m x 8.8–7.7 m x 3.7–4.5 m) is considerably damaged due to advanced rock fragmentation. It is a three-aisled structure divided by eight uneven columns into five irregular bays. The easternmost bay, which forms the ↗*mäqdäs*, is the largest. The columns, with their flutings, reflect the shape of their classical counterparts. The largest, at the front of the sanctuary, measure 3.2–3.5 m in diameter. The aisles and the central nave open through low arches into the sanctuary. In the nave, above the lintels, runs a frieze of blind arcades. Four sections of the aisle ceilings are decorated with reliefs based on wooden models, three of them imitating a dome. A cell, cut high above the ground in the wall of the south aisle, houses a coffin with bones – reportedly the remains of Gäbrä Mäsqäl.

The inside of the church was once covered with paintings, fragments of which are still visible under subsequent layers of whitewash. Stylistically, they are very close to the better-preserved ensemble in ↗Däbrä Ṣəyon. Among the angels and figures of ecclesiastics depicted inside the arcade friezes, only *liqä pappasat* Matewos (Alexandrian Patriarch Matthew I, 1378–1409?) may be identified by a surviving inscription. It is also possible to see, as in Däbrä Ṣəyon, that the capitals, arches and ceilings were extensively covered with interlace patterns. In the northern aisle, close to the main entry, a representation of King David playing the harpsicord in the form of a ↗*bägäna* appears to be of a later date than the rest of the paintings, possibly from the 15th/16th cent.

The church is entered through a *pronaos* (3.8 m x 5.5 m) with three constructed walls, that on the east being the rock-face. The porch is covered by a wooden ceiling supported by two wooden pillars crowned by double-bracket capitals. The ceiling and capitals are painted with geometric patterns similar to those in the church. The walls bear four paintings of later date, one of them depicting a saint holding a large cross d astride a lion. This figure may represent the founder of the church, Gäbrä Mäsqäl; in fact, a poem in his honour (KinBibl 74f.)



Wooden lintel and capital, carved and painted; Däbrä Mäᶜar Giyorgis; vestibule of the church; photo 2002, courtesy of Michael Gervers praises him as "a second Elias", able to ride a lion without bridle.

D.M. possesses a unique collection of old manuscripts, ↗crosses, paintings on wood and a small wooden *mänbärä tabot* ('the throne of the *tabot*'). The most important object is the famous Gospel Book created, according to the scribal notes, in the "Year 525 of Grace" [1341/42 A.D.] (fol. 230v), during the reign of ↗^{c}Amdä Ṣəyon I (whose explicit mention was previously unknown, s. Fiaccadori 2003:200f., 245f.). According to other notes (fol. 4v, 231r), the manuscript was ordered by *abunä* Maḥṣäntä Krəstos and *abunä* Kəbur Mäsqäl. It is decorated with a complete set of ↗Canon Tables and eight full-page miniatures. These include the so-called short Christological cycle, with the ↗Crucifixion, in which Christ is depicted symbolically as a lamb (Balicka-Witakowska 1997:126f.), and the portraits of the ↗Evangelists. However, the folios with pictures of Luke, Marc and John, distinguished by colourful patterned backgrounds, originate from another manuscript.

One of the crosses, which can be classified as belonging to the "Lalibäla type", with a central Greek cross presented under a large arched canopy, has the unusual shape of a half-open fan. Among the paintings on wood, the 16th-cent. triptych with an early depiction of the Trinity on the central panel (ChojPaint 102, fig. 30) deserves particular attention.

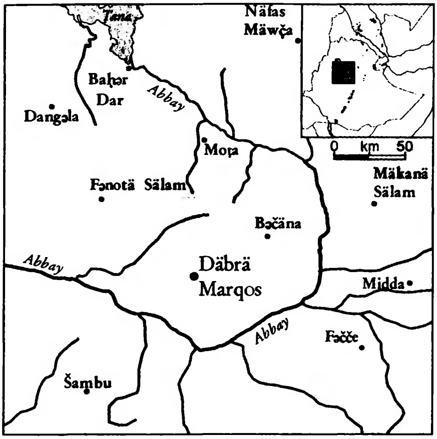
Däbrä Marqos

The town of D.M. (ደብረ፡ ማርቆስ, lit. 'Mount of St. Mark') is located 300 km north-west of Addis Abäba along the Addis Abäba–Gondär road at an elevation of 2,400 m A.S.L. The total municipal area of the town is about 2,720 ha. The minimum and maximum temperatures in the town average 14° C and 20° C, respectively.

D.M. was founded in 1853 by *däǧǧazmač* ↗Tädla G^{w}alu, who was at that time the ruler of Goǧǧam. The town was originally named Mänq^{w}ärär. *Nəguś* ↗Täklä Haymanot, who became the ruler of Goǧǧam in 1881, changed the name of the town to D.M. and then divided it into separate zones, i.e. areas in which specific social groups live: Kahən Säfär ('camp of the priests') around the church of St. Mark and inhabited by the priests serving there; Färäs Bet ('house of horses') at the western edge of the town was occupied by the domestic servants of Täklä Haymanot and the merchants who traded in horses and donkeys; Abun Säfär ('camp of the *abun*') which was occupied by *abunä* ↗Luqas, who was the bishop of the town. The area called Moṭa Säfär was inhabited by the people who had migrated to D.M. from the Moṭa *awraǧǧa*. Throughout the first half of the 20th cent., D.M., the town of *ras* ↗Ḫaylu Täklä Haymanot, remained the most important town in Goǧǧam. During Ḫaylä Śəllase I's reign, it was the capital of the Goǧǧam governorate-general. Since 1991 it has become a part of the Amhara *kəlləl* and capital of Məsraq Goǧǧam Administrative Zone.

Currently, the central part of the town serves as a market-place. Most of the government administrative buildings are located within the compound of the former palace. The residential

A market scene in Däbrä Marqos; photo 1965, courtesy of the IES (no. 9D, 634)



areas are scattered throughout the town. The population of D.M. was estimated at 53,164 in 1991 and at 78,188 inhabitants in 2004 (s. CSA 2004). According to the census of 1994, the population was 49,297 in 9,617 housing units. All in all, D.M.'s growth rate together with the provision of infra-structural facilities such as education, health, housing and transportation and communications are still far below the expected level given the town's age of nearly 150 years.

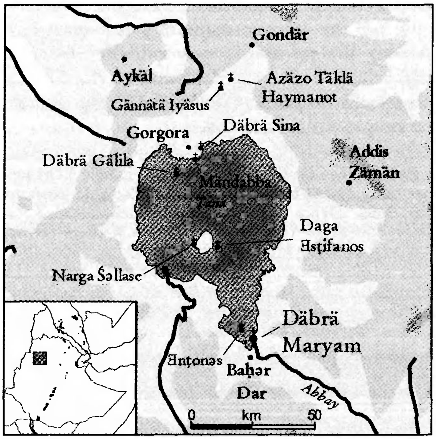
Däbrä Maryam

D.M. (ደብረ፡ ማርያም, lit. 'Mount of St. Mary') is a monastery located on an island which bears the same name, on the southern side of Lake ↗Ṭana, quite close to the shore.

The manuscripts of D.M.'s monastic library have been microfilmed (31 by Ernst Hammerschmidt; s. HamTana II; Hammerschmidt 1977, plates 132–35; also by EMML, not yet catalogued), but they contain only few notes concerning D.M.'s history. At an unknown date, D.M. on Lake Ṭana was identified with the monastery of D.M. in Dära (cp. ↗Därra), initially called Däbrä Ṣäqʷän, which was founded by *abba* ↗Tadewos of Ṣəlaləš during the reign of *aṣe* ᶜAmdä Səyon I (s. HamTana I, 60; Six 1975:21, passim). However, this suggestion, based upon the identification of ↗Dära of Bägemdər, on the southern side of Lake Ṭana, with Dära where Tadewos was active, is debatable (TadTChurch 188, n. 3; Cornuau 1994:14f., 30–33; DerDomTh 214–24). It seems to be a later historical "reconstruction", dating back, apparently, to the time of the revision of Tadewos's hagiography after 1515 (DerDomTh 214–24). The same confusing elements as those in the Acts of Tadewos can be found in the short undated Amharic text added to the D.M. Gospel book (ms. Ṭānāsee 59, fol. 96vb–97r, s. HamTana II, 52; cp. Six 1975:380–83) with the D.M. church's history, possibly an apocryphal chart. Furthermore, there is no mention of D.M. in the sources concerning Lake Ṭana during the 14th and 15th cent. Besides, most of the time D.M. church is mentioned in a text one cannot prove that the Lake Ṭana D.M. is meant (e.g., PerrZarY 27f.).



The claims of the D.M. monks connect them to the network of ↗Däbrä Libanos of Šäwa; its claims and the rewriting of the *Gädlä Tadewos* obscure the historic beginnings of the monastic establishment on the island. Only from the beginning of the 17th cent. there is a greater degree of certainty about D.M.'s history. At that time, according to the Jesuit Pedro Paez (in BecRASO II, 579), the monastery was related to the "network" of Däbrä Libanos. At the beginning of 1688, D.M. witnessed for several months the debate over Christ's Unction (↗*Qəbat*) between the opposed factions of monks who had retired to the island by order of *aṣe* Iyasu I so as to discuss and consult the Holy Books, but did not reach an agreement (GuiIohan 116f., 121–26).

The church of D.M. is believed to have been burnt down during the ↗*Zämänä mäsafənt* and later rebuilt under *aṣe* Tewodros II (oral information collected by Hammerschmidt; s. HamTana I, 60, fig. 24; sketch in Angelini 1971:53). The present church is very small and much more recent. It was built in 1970s, but some red cut stones betray the presence of an earlier Gondärine architecture.

Däbrä Maryam

The monastery of D.M. (ደብረ፡ ማርያም, lit. 'Mount of St. Mary') lies in the Q^{w}äḥayn district of Säraye province (in present-day Eritrea, *zoba* Däbub), west of ^{c}Addi K̠^{w}ala (s. map for Däbrä Bizän). It is also known as Ǝnda Abunä Absadi, because it was founded in 1374 by the monk ↗Absadi, a 14th-cent. leader of the monastic movement of the ↗Ewosṭateans.

According to written traditions (*Gädlä Absadi*, s. Lusini 1996), Wägrä Kəsahe was the old name of the mountain where the monastery stands, near the confluence of the Märäb river with its tributary, the Obel. After Absadi's death, the monastery was headed by abbot Täwäldä Mädḫən, in charge from 1390 or 1391. Following the council summoned in April 1400 by *aṣe* Dawit II (r. 1382–1412), the community was persecuted for its loyalty to Ewosṭatewos's rule. A few years later, around 1403 or 1404, Dawit allowed the celebration of the Saturday-↗Sabbath, i.e., observance of rest on both Saturday and Sunday. According to the documents, after the new council of ↗Däbrä Məṭmaq (1450) and the subsequent end of the monastic schism, D.M. was generously granted land by *aṣe* Zärʾa Ya^{c}əqob (r. 1434–68).

astery is situated in Goğğam, Baḥər Dar *awrağğa*, in the district of Yəlmanna Densa. It is said to have been founded by *qes* Täklä Mädḫən, who brought the *tabot* of Mary from Šäwa to D.M. in 1518 (yet, some other traditions put the foundation of D.M. in the 17th cent.). The abbots of D.M. still bear the title of ↗*gäbäz*.

Following the conversion of *aṣe* ↗Susənyos to Catholicism, learned churchmen gathered, in opposition to that, at D.M. under the leadership of *abba* Akalä Krəstos. Suddenly attacked by soldiers on 19 *Ṭəqəmt* 1616, more than 7,000 people are said to have been slain there. *Aṣe* ↗Fasilädäs proclaimed a yearly festival to honour these martyrs (*Bəzuḫan Maryam*, 'The Crowds of Mary'), celebrated on 21 *Mäskäräm*, he also constructed a memorial at Gənb Giyorgis.

In 1701 *aṣe* ↗Tewoflos pursued his enemy, *däğğazmač* Dərmən, into the church of D.M. which manifested its strength by protecting him twice from incineration. Tewoflos then vowed to Mary that he would rebuild the church in stone and plaster if his enemy was burned. His request was granted and Dərmən was killed, while the *tabot* of Mary rested in an olive-tree. The miracle was accompanied by thunder. The *tabot* received the epithet ገባሪተ፡ ኀይል (*gäbaritä ḫayl*, 'wonder-worker'). Monastic status was granted to D.M.; only the monks celebrated the liturgy.

During the Italian war of 1935–36 the church of D.M. was bombed and soon after restored again. It possesses many treasures. They include donations by *ətege* ↗Ṭaytu Bəṭul; some of them are associated with *aṣe* Mənilək I. A recent lack of manpower has caused decline in the physical state of the church.

Marie-Laure Derat

Däbrä Məṭmaq

D.M. (ደብረ፡ ምጥማቅ, or Däbrä Məṭmaq Maryam) is a royal church and monastery located in ↗Tägulät, Šäwa shore, which was founded by *aṣe* ↗Zär᾿a Yaᶜəqob. According to the Chronicle of the Emperor (PerrZarY 55ff., 88) and the Miracles of St. Mary (CerMaria 124f.), the building of D.M. was inspired by the destruction of an Egyptian monastery called "Məṭmäq" (Gəᶜəz for Arabic *maġṭis/miġṭas* 'baptistery'), famous for its miracles of Mary. This monastery was a station for Ethiopian pil-

grims on their way to the Holy Land. In 1441, John, the Patriarch of Alexandria sent a message to Zärʾa Yaᶜəqob telling him of the destruction of Məṭmaq. We can assume that the building of D.M. did not begin before this date.

The exact ecclesiastical hierarchy of D.M. is unknown. However, the monastery was affiliated to the community of ↗Däbrä Libanos and the abbot of Däbrä Libanos was also the abbot of D.M. It received ↗*gʷəlt* lands in the region of Tägulät.

This monastery and church became famous because of their close ties to Zärʾa Yaᶜəqob. According to the *Mäṣḥafä ↗milad*, which is attributed to the Emperor, on 21 *Taḫśaś* 1445, he celebrated the feast of Mary in his church at D.M. There he learnt that ↗Aḥmad Badlāy, *sulṭān* of ᶜAdal, was leading a revolt of the Muslim sultanates against the Christian empire. During the service, a hand moved from an icon of Mary, pointing to Zärʾa Yaᶜəqob. This miracle was interpreted as a sign of the Emperor's victory over Badlāy (Wendt 1962:13f.). This victory took place on 26 December 1445. After the battle, the Emperor sent his trophies to D.M., where his triumph had been foretold.

On 21 *Yäkkatit* 1450, Zärʾa Yaᶜəqob gathered a council at this church to discuss the orthodoxy of the ↗Sabbath. *Abunä* ↗Gäbrəʾel and *abunä* Mikaʾel were present. The Emperor persuaded the Metropolitans to recognize the Saturday Sabbath as orthodox and to write a letter to the Ethiopian clergy to confirm this decision. With this council, Zärʾa Yaᶜəqob brought an end to the controversy around the question of the observance of the Sabbath.

The monastery was still active during the reign of *aṣe* Bäʾədä Maryam (1468–78). After this date, there is no information concerning this community.

Däbrä Məṭmaq Maryam

The church of D.M.M. (ደብረ፡ ምጥማቅ፡ ማርያም), located to the south of the Royal Castles' compound in ↗Gondär (s. CrumLand 80), was built by *aṣe* ↗Täklä Giyorgis I, the last Gondärine king to found a church on his own (Guidi 1926:416). Construction began in November 1782 and was overseen by *ras* Ayädars (BlunChr 269f.). The name of the church (meaning, lit., 'mount [church] of the baptistery') was chiefly reminiscent of the homonymous Egyptian monastery, in which several of the miracles of Mary took place, but also of the church ↗Däbrä Məṭmaq in Tägulat, Šäwa, founded by *aṣe* ↗Zärʾa Yaᶜəqob. In August 1783, Täklä Giyorgis assigned the lands and established the clergy (CrumLand 148), according to the royal chronicle and the records kept in a D.M.M.'s manuscript (BlunChr 296, 301; ms. *Täʾammərä Iyäsus* of D.M.M.). He also richly endowed the church with liturgical items (BlunChr 298-301). At the time of the foundation, he decided to bestow the title of ↗*ᶜaqqabe säᶜat* on the head of the D.M.M. priests (a function "which had been raised above all the official grades") and chose him amongst the "monks of Däbrä Libanos". The *qes aṣe* Käbte, reputedly a learned monk, was then appointed to this post (BlunChr 296f.). The royal foundation of D.M., in the monastic "network" of Däbrä Libanos, also enjoyed the privilege of being a place of ↗asylum (ibid. 449f.).

A list of the books and items of the church, in Amharic, was copied for the mission Dakar–Djibouti in 1932 (ms. Paris, BN éth. 630).

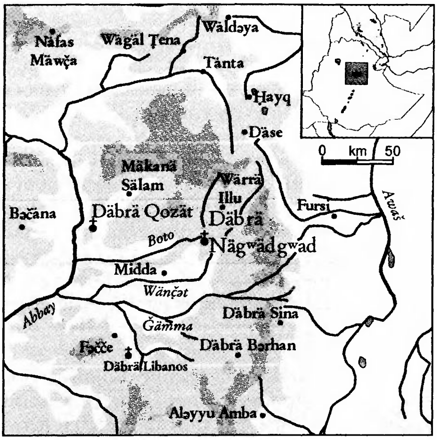
Däbrä Nägʷädgʷad

D.N. (ደብረ፡ ነጐድጓድ, lit. 'Mount of Thunder), is the name of the royal church and monastery founded by *aṣe* ↗Zärʾa Yaᶜəqob some time before 1450 in the district of Dähaya, in ancient Amhara. According to the sources, it served as a sanctuary (መቅደስ, *mäqdäs*), a church and a great monastery (መካን, *mäkan*) all at the same time. As such, the institution was not only run by court ecclesiastics (ካህናተ፡ ደብተራ, *kahənatä däbtära*), but also by the abbot of the most influential monastery of the time, ↗Däbrä Libanos of



Šäwa. At the Emperor's initiative, Däbrä Libanos became the "mother house" of D.N. Among the court ecclesiastics appointed by Zärʾa Yaʿəqob, we can distinguish a chief of the priests (↗*Liqä kahənat*), named Minas, and a teacher (*mämhər*), named Fəre Kahən.

The monastery's land holdings appear to have been considerable, and were granted by Zärʾa Yaʿəqob with an hereditary status, in part for the commemoration of the monarchs. Later, *aṣe* ↗Bäʾədä Maryam released the church from all taxes.

Zärʾa Yaʿəqob showed a strong affection for D.N. After his 1450 victory over the ʿAdal *sulṭān* ↗Aḥmad Badlāy b. Saʿdaddīn he donated the trophies of this victory to the church. Moreover, he made the church a royal necropolis, transferring the body of his father *aṣe* ↗Dawit II there and burying his mother Əgziʾ Kəbra and the *mämhər* of Bäʾədä Maryam, Täklä Iyäsus, at the same site. Zärʾä Yaʿəqob himself was buried at D.N., though later his remains were translated to the monastery of ↗Daga Əsṭifanos.

After the reign of Zärʾa Yaʿəqob, the monastery became a place of pilgrimage and place of residence for his successors until it was destroyed by the army of *imām* Aḥmad b. Ibrāhīm al-Ġāzī on 3 November 1531. Brielli (1945) located its ruins in Wällo (ancient Amhara) between Legambo and Lägä Hida.

The toponym D.N. is also linked to many other churches and monasteries, including one of the churches on Lake Ḥayq (↗Däbrä Ḥayq Əsṭifanos).

Däbrä Nägʷädgʷad ↗Däbrä Ḥayq Əsṭifanos

Däbrä Qozät

D.Q. (ደብረ፡ ቆዛት) is a monastery located on the slopes of the highland in Wäläqa (ancient province of Amhara), now Čaqata (Boräna, Wällo, today Amhara *kəlləl*; s. map for Däbrä Nägʷädgʷad). According to the Acts of ↗Iyäsus Moʾa, D.Q. was founded prior to the 15th cent., for *abba* ↗Gäbrä Əndrəyas of D.Q. is introduced as a disciple of the first abbot of ↗Däbrä Ḥayq Əsṭifanos. However, Gäbrä Əndrəyas was apparently not the founder of D.Q., his Acts giving the name of a Gäbrä Krəstos as the head of the monastic community, whom Gäbrä Əndrəyas succeeded. According to the local tradition, the monastery was founded in the reign of Dəl Näʿad (↗Dəlnaʿod), that is, even before the rise of the ↗Zagʷe dynasty.

The ↗Oromo, who settled in the region during the 17th cent., posed a continuous threat to D.Q. and the monastery eventually declined. But it re-emerged in the 19th cent., during the second Christianization of the region. *Aṣe* Mənilək II rebuilt the monastery in 1895/96 (ms. EMML 654, fol. 39r). A few years later (1913), *ras* Mikaʾel presented the community with a copy of the Acts of Gäbrä Əndrəyas, thus restoring back its identity (EMML 654, fol. 35v).

Nowadays, D.Q. has a still active, but very small community, and the monks keep the cult of Gäbrä Əndrəyas, reading a miracle of the saint at the beginning of each liturgical office.

Marie-Laure Derat

Däbrä Ṣäḥay Qʷəsqʷam

D.Ṣ.Q. (ደብረ፡ ፀሐይ፡ ቍስቋም) was one of the principal churches of ↗Gondär. It was founded by *ətege* Məntəwwab (↗Bərhan Mogäsa) over a period of some 13 years. She began the process in 1733, dedicated the *tabot* in April 1740, completed the building around 1743, and completed the church's endowment sometime after 1746. D.Ṣ.Q. was richly endowed with lands that supported 260 clergy, making it the largest clerical establishment in Gondär. The lands for the clergy were in Bağäna (in today's ↗Armačəho), in ↗Bäläsa and in Ǝbənnat. Yet other lands supported the church's services and material fabric. Its establishment served as a model for later establishments in Təgray and Goğğam.

In 1866 the church was sacked by *aṣe* Tewodros, who removed many of its manuscripts and special communion vessels to ↗Mäqdäla, and from Mäqdäla the manuscripts and vessels were taken by the British expeditionary force in 1868. Many are now in the ↗British Library, London. In the 1880s Sudanese Mahdists sacked D.Ṣ.Q. further, so that today's church, while it maintains the same church yard and basic building of the days of Məntəwwab, is a pale reflection of its days of glory. In 1941 D.Ṣ.Q. was badly damaged by air raids. It has been recently restored.

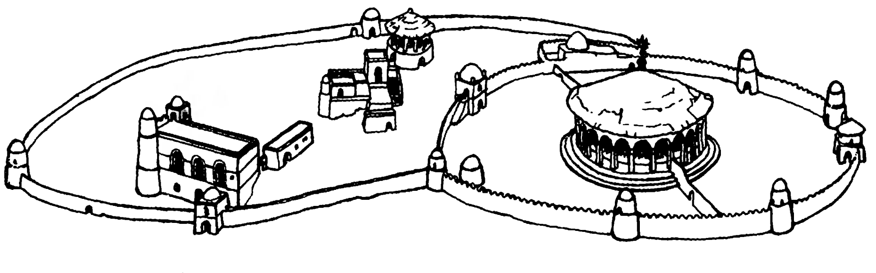
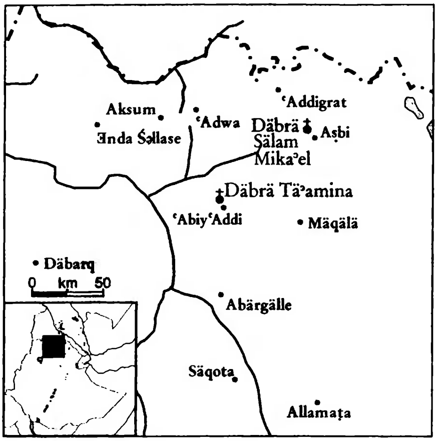
Däbrä Sälam Mika'el

The church D.S.M. (ደብረ፡ ሰላም፡ ሚካኤል, lit. 'Mount of Peace [dedicated to the archangel] Michael') is situated in a cave (ca. 15 m x 12 m x 7.5 m) some 7–8 km north-west of Aṣbi (Aṣbi Dära, Kələttä Awləᶜalo, Təgray). It is an oriented basilica of Aksumite type (dimensions: 8.8 x 7.5 m), partly constructed and partly rock-cut. The building consists of two bays closed from the west by a constructed vestibule and from the east by a semicircular apse flanked by two side rooms. The walls between the horizontal beams, containing clearly protruding transversal "monkey-heads", are filled with blocks of dressed stone instead of the traditional rubble in mud-mortar. The north wall is cut out of the rock. A wooden stepped podium rises well above ground level. The windows, in two rows, have wooden frames and are filled with interwoven wooden and stone tracery. Some of them are supplied with shutters. Two doors, to the west and south, are also framed. The latter,



Drawing of the Däbrä Ṣäḥay Qʷəsqʷam complex. On the right the church, on the left the residence of Bərhan Mogäsa, with a circular chapel serving as an oratory; both are surrounded by a wall with entrance-towers in Gondärine style, from Doresse 1956:117



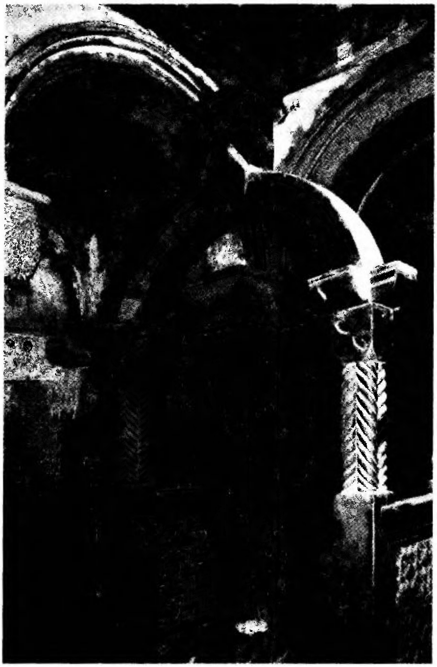
once serving as the main entrance, is accessed through a portico built of alternating wood and stone layers. The western entrance is accessible indirectly via a vestibule opening to the south.

The bays are bounded by arches supported both by free-standing and engaged pillars, crowned with bracket capitals bearing imposts. Corresponding blind arches in bold relief decorate the walls of the aisles and the western wall. The ceilings, the dome of the apse and the Aksumite frieze of squared metopes, which passes round the nave walls above the arches, are cut from the rock. The ceiling of the central nave is higher than those of the aisles. A carved wooden ceiling covers the vestibule.

In the central nave, a wooden chancel stands before the bay closest to the sanctuary. The screening panels, about 1.5 m high, are decorated with carvings consisting of interwoven geometrical patterns, the motif of crosses being dominant. Entry is through a central arch supported by two short columns with double braked capitals, and topped by a large cross.

The cave is closed off by a squared wall measuring approximately 12.5 x 15 m. From a functional viewpoint, this entire area between the outer built wall and the church itself is treated like the *qəne maḫlet* in the round churches and is accessible to the community, while the church itself plays the rôle of the ↗*mäqdäs*. In the cave, on the west side of the church, a stream of holy water empties into a hewn basin. The inner church was dated by Buxton (1971:77) to the 14th cent., but an alleged 10th-cent. document (renewed in the 15th cent.) preserved in the *Mäṣḥafä ↗Aksum* (CRAxum nos. 5, 14) may suggest it was constructed much earlier (s. here other documents of the 16th/17th and 19th cent., ibid., nos. 53 [54], 82). A local tradition has it that king ↗Gäbrä Mäsqäl was first buried at D.S.M., and only later was his body taken to ↗Däbrä Damo (Fiaccadori 1992:441, 444).

The interior of the church is decorated with wall-paintings, some being badly damaged. The cupola preserves a fragment of the *Maiestas Domini* (the enthroned Christ holding a codex, sitting on a *mandorla* borne by the Four Celestial Creatures, is accompanied by the *collegium apostolicum*). The Entry into Jerusalem occupies the lower zone of the north-east corner in the north aisle (Christ on a grey mule, the apostles, people carrying the palm-branches and spreading garments). The second *Maiestas Domini* (Christ on a throne inside a *mandorla* encircled by the Four Celestial Creatures, flanked by two large crosses) appears in the north aisle, under a



Däbrä Sälam Mikaʾel; wooden chancel in front of the entry to the *mäqdäs*; 13th cent. (?); photo 2000, courtesy of Michael Gervers

blind arcade decorating the north wall. St. Mary with Child, flanked by two angels, is depicted on the lower register of the east wall of the south aisle. Standing figures (over 40 are still more or less discernible) presented in rows, singly or in groups of three or four, appear on the walls, around the pillars and on the pilasters. All are depicted frontally, wearing a long-sleeved, *pallium*-like tunic, or sometimes a cloak and holding either a codex or with hands raised in prayer. The angels, probably numerous in the original programme, are presently limited to six. Two persons riding an elephant are depicted on the western wall of the north aisle. Different kinds of birds and crosses of "fleur-de-lis" type enclosed in a circle enrich the decoration.

The poor condition of the paintings and a total absence of inscriptions make it difficult to identify all the figures and to interpret the ideological message of the programme. Only the conjunction of the *Maiestas* and the Entry into Jerusalem, clearly rendered as the *Adventus Domini,* may suggest the earthly and celestial triumph of Christ. The standing figures spread around the church could be the prophets, but neither their appearance nor attributes are distinctive enough to permit precise identification. According to Lepage (1976), the entire ensemble of paintings may be interpreted as a vision of the Celestial Jerusalem. Stylistic characteristics – the use of sharp, black outlines; figures with stocky bodies clothed in simplified conventional dress; round heads whose eye-sockets and nose are marked with a single line; eyebrows indicated by two connected lines; narrow moustache; a black circle around the hairline and beard – reflect those of some Coptic paintings dated to the second half of the 12th cent., as, for instance, in the chapel of St. John the Baptist of St. Mercury church in Old Cairo and in Dayr Anbā Bišūy in Wādī n-Naṭrūn.

A painting of St. Mary *Hodigitria* in the Second Gondär style decorates the inside of one of the window-shutters on the south side. A list of 44 manuscripts belonging to the church was compiled in 1974 by the Oxford expedition. In 2000 and 2004 photographs were taken of fragments from a painted liturgical fan (↗*Märäwəḥ*), of the 15th/16th cent., and a triptych (late 17th cent.) stored in the treasury.

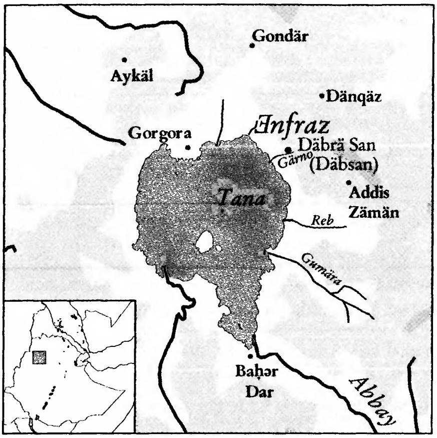
Däbrä San

D.S. (ደብረ፡ ሳን) is the name of an ancient monastery and a locality in ↗Ənfraz, Bägemdər. It is located on top of a mountain (2,100 m A.S.L.) on the Gärno (Arno) river, in former Gondär-Zuriya *awrağğa* (North Gondär Zone). The actual name of place is in all probability Däbsan (ደብሳን) or Dəbsan (ድብሳን), D.S. being a folk



etymology introduced in hagiographic literature (s. Conti Rossini 1938:445, n. 2).

According to written traditions, the monastery of D.S. was founded by the monk ↗Gäbrä Iyäsus some years after the death of his spiritual father ↗Ewostatewos (1352). The 16th-17th-cent. Acts of Gäbrä Iyäsus describe the region of D.S., called ↗Wäyna Däga and celebrated for its fertility, as occupied by ↗Betä Ǝsra^{ɔ}el settlements. During the first phase of the spread of the ↗Ewosṭateans, the foundation of D.S. represented their westernmost boundary. In the second phase, during the 15th cent., they extended Ewosṭatewos's rule down to Goǧǧam, as is the case for the monastery of ↗Däbrä Wärq, established by the Ewosṭatean monk Śärṣä Peṭros.

During the reign of *aṣe* ↗Susənyos the site became one of the strongholds of Catholicism. From 1626 to 1633 it was here that the Catholic Patriarch Afonso ↗Mendes had his residence (BecRASO VIII, 180f.). The ruins of what once possibly was his palace can still be seen there (Anfray 1980–81:9ff.).

The monastery of D.Ṣ. (ደብረ፡ ጸራቢ, lit. 'Mount of the Carpenter') lies in the Ṣəra^{c} province of eastern Təgray. According to the 16th-cent. Acts of ↗Ananya, this community was established by ↗Ewosṭatewos himself, who stayed there from 1300 to 1307. His first successor was Bäkimos, who gave the monastic habit to ↗Filəppos of Däbrä Bizän. Ananya was initiated into the monastic life at D.Ṣ. by the abbot Ṗawlos, whom he succeeded after the latter's death. We also know of Iyosäyas, who was Ananya's successor.

The monastery of D.Ṣ. (ደብረ፡ ጽጌ, lit. 'Mount of the Flower') lies in Eritrea's Märag^{w}əz district of the Säraye province, south-east of ↗Mändäfära (^{c}Addi Wəgri), in the historical region of Täk̠äla (s. map for Däbrä Bizän). It is also known as Ǝnda Abunä Yonas La^{c}əlay, since it was founded in 1455 by the monk ↗Yonas, ↗Ewosṭatewos's disciple. It is not to be confused with another monastery established by the same Yonas in 1489, ↗Däbrä Dəḫuḫan, known also as Ǝnda Abunä Yonas Taḥtay, in the Q^{w}äḥayn district of Säraye province. To this day D.Ṣ. and Däbrä Dəḫuḫan share a single abbot for both communities. According to the documents, D.Ṣ. was granted land by *aṣe* ↗Zär^{ɔ}a Ya^{c}əqob. The church of the monastery is outstanding because of its antiquity and accounting for its basilica plan.

Däbrä Ṣəge Qəddus Ura^{ɔ}el

D.Ṣ. (ደብረ፡ ጽጌ፡ ቅዱስ፡ ኡራኤል, also Däbrä Ṣəge) is one of Addis Abäba's earliest and most important churches. Its history begins with the Ura^{ɔ}el church, founded at ↗Ǝnṭoṭṭo north of Mənilək II's palace, while the churches of

↗Ǝnṭoṭṭo Maryam and ↗Ǝnṭoṭṭo Raguʾel were founded east and west of the palace, respectively (Archangels Raguel and Uriel were both considered patrons of the Šäwan dynasty). A few years later, the Uriel church was moved to the capital.

The year of the D.Ṣ.'s foundation at its present location in Addis Abäba (to the south-east of the former Asmära Road) seems to be 1885. This date is confirmed by the documents of the municipality of Addis Abäba (s. Johnson 1974:183; before 1886 according to Garretson 1974:343). Richard Pankhurst, stating that 1884–85 were the years in which the construction of the churches of Ǝnṭoṭṭo Maryam and Raguʾel was begun, remarks that a third church – dedicated to Uriel – was built somewhat later by *ras* ↗Darge Śahlä Śəllase. Still others say that it was established in 1886, the year of the foundation of ↗Addis Abäba. The wall-paintings were reputedly done by *aläqa* ↗Elyas.

Before the foundation of the church, the area belonged to the minor chief Ṭefa Aduña from Mänz, supposedly a relative of *aṣe* Mənilək on his mother's side. When the *tabot* of Uriel was brought from Ǝnṭoṭṭo, it was first placed in Ṭefa Aduña's smaller house, *əlfəñ*, while a larger one was given to the clergy who came to serve the church. The smaller house remained the temporary dwelling of the *tabot* until a large church was later constructed by *ras* Darge. Ṭefa Aduña received a tract of land in compensation for the loss of his old residence.

Construction of the church was completed in 1895. Gäbrä Śəllase, Mənilək's chronicler, states that construction work was finished in the rainy season (GSMen 372), immediately before the campaign of ᶜAdwa. *Ras* Darge distributed plots of land among the clergy around the church. He also made his loyal servant *däǧǧazmač* Layäh the ↗*gäbäz* of the church. Moreover, *ras* Darge is said to have given *ətege* ↗Zäwditu a piece of land, on which she built her house. Consequently, this area was sometimes called Zäwditu Säfär (or Nəgəśt Säfär) and the road between palace and church was named Zäwditu Mängäd.

Soon after its establishment, Uraʾel church came to be known as D.Ṣ. As indicated above, Zäwditu had a residence in the Uraʾel ↗*aṭbiya* which she greatly favoured, especially on Sundays. However, after the death of Mənilək in 1913, she became a victim of *ləǧ* ↗Iyasu's whims. While exiled to Fale in Mullo district (Šäwa), she is said to have prayed to Uriel for help; some three years later, *ləǧ* Iyasu was deposed and she was brought back from Fale by *fitawrari* ↗Habtä Giyorgis to be crowned Empress of Ethiopia. Once in power, she had the D.Ṣ. church rebuilt with stone walls and a roof covered with corrugated iron, giving it its present appearance. The church is square with three concentric walls, dividing the space inside into three compartments. There is also a small chapel within the church, which was used by Zäwditu for private prayer. The handles and hinges of the doors of the church are said to have been imported by the famous Indian merchant of the early 20th cent. Muḥammad ᶜAlī.

Däbrä Ṣəyon

History of the monastery of Däbrä Ṣəyon

The monastery of D.Ṣ. (ደብረ፡ ጽዮን, lit. 'Mount of Zion') in the ↗Gärᶜalta province of eastern Təgray (s. map for Gärᶜalta) was probably established by the monk ↗Abrəham at the end of the 14th cent., during the reign of *aṣe* ↗DawitII. Since the Vita of Abrəham is still unpublished, we have little information about the history of this monastery. We do know, however, that Dawit plays an important role in that hagiographical text. A land charter of *aṣe* ↗Ləbnä Dəngəl, dating to around 1530 and preserved in the *Mäṣḥafä* ↗*Aksum* (CRAxum no. 44), refers to D.Ṣ. together with at least six other Təgrayan monasteries ([Däbrä] Halleluya, Däbrä Aysäma, Däbrä Bänkʷäl, Däbrä Bäkʷər, Däbrä Bärbäre and Däbrä Mäᶜara), to whom the Emperor awarded the renewal of previous *gʷəlt* grants. According to the same document, at that time the abbot of D.Ṣ. was Täklä Giyorgis and all the monasteries mentioned were in poor conditions.

Judging from the notes in the 14th-cent. Gospel Book (fols. 4v, 5v) which is still kept in the house of the ↗*gäbäz* of the monastery, D.Ṣ. was richly endowed with land and other gifts during the time of *aṣe* ↗Iyasu I.

Churches of Däbrä Ṣəyon

There are two churches on the site of D.Ṣ. of Gärᶜalta, hewn just below the summit of the mountain. The smaller one, dedicated to the founder of the monastery, *abunä* Abrəham, is presently out of use. It is a simple, small, square cave, divided by four circular columns into three aisles. An arched opening connects the main room with an oval sanctuary ended at the east by a semi-circular niche. Beneath the compound, about 9 m down the face of the cliff, there are several caves which until recently were used by the monks.

The main church, with *tabots* dedicated to Kidanä Məḥrät and St. Mary, is rectangular in shape. From the west, south and east it is surrounded by a large ambulatory, leaving only the northern façade, with a door and windows, exposed. Two more doors (west and south) offer indirect access via ambulatory. Part of the church's exterior wall reflects an imitation of misunderstood Aksumite wall-structure.

The interior (21 m x 10 m x 7.3 m) is divided by six cruciform pillars into three naves and four bays. A hewn, narrow narthex is situated at the west end. The nave and the aisles are not clearly differentiated. The entire eastern bay serves as the sanctuary (↗*mäqdäs*). It is not raised and can be entered under high arches from the nave and the aisles alike. A system of arches connects the free-standing and engaged pillars. Ten ceiling sections are cut in form of domes, those above the sanctuary surprisingly reposing on pendentives. The walls of the aisles and the eastern wall of the *mäqdäs* are decorated with large blind arches and smaller arches arranged in two or three rows. Aksumite friezes are visible here and there on the walls. The central and southern parts of *mäqdäs* each contain a monolithic altar. In the eastern part of the corridor surrounding the church there is the entry to two hermit cells. The larger one, a circular shallow-domed room (3 m x 3 m), decorated with low relief, geometrical and figural (St. Mary, two archangels, an ecclesiastic before an altar) is believed to be the oratory of *abunä* Abrəham.

The interior of the church is covered by paintings executed during at least three different periods. The earliest set, spread around the church is most probably contemporary with the foundation of the church; the second, of the first bay and its pillars, probably dates from the end of the 15th cent.; the paintings of the narthex are difficult to locate in time.

The earliest set might have come from the same workshop which decorated ↗Däbrä Mäᶜar. The paintings are badly damaged. Still recognizable, within the small arcades of the south and north aisles, are figures of saints and martyrs particularly venerated in the Coptic Church (among them John of Senhut, ↗Arkälädəs, Awsanyos, Minas of Däbrä Məṭmäq). The walls of the sanctuary bay are occupied by a

Maiestas Domini; wall painting, main church of Däbrä Ṣəyon, eastern wall of the *mäqdäs*; 14th cent.; photo 2004, courtesy of Michael Gervers large *Maiestas Domini* and St. Mary with the Child. Another thematic group represents the ↗equestrian saints: ↗Gälawdewos and ↗Tewodros are depicted in the second bay of the north aisle, Mercury on the western wall and Mar Behnam in the narthex. In the third bay of the northern aisle appears a short Passion cycle composed of the ↗Crucifixion, the Entombment and the *Anastasis*. The four ↗Evangelists on the ceiling of the first bay of the northern aisle and an elaborated, ↗*haräg*-like interlacing ornament which covers other sections of the ceilings and the arches belong to the same early period.

The second set of the murals is devoted exclusively to monastic subjects. The central theme appears to be the life of ↗Samuel of Waldəbba depicted by four large paintings (one destroyed). In addition, pairs of famous monks placed in four registers covers all sides of the pillars and pilasters. A couple of them are repainted in the style of ↗Gʷəḥ Yəmᶜata murals. Narrative scenes and some of the monks' figures are accompanied by dedicatory notes, prayers and invocations on behalf of D.S. community.

A 14th-cent. Gospel Book, decorated with unfinished ↗Canon Tables and archaic portraits of standing evangelists and a very well-preserved liturgical fan (↗*märäwəh*) are housed in the D.Ṣ. treasury.

Däbrä Ṣəyon ↗ Tulluu Guddoo

Däbrä Ṣəyon

D.S. (ደብረ፡ ጽዮን, 'Mount Zion') is one of the central elements in the Ethiopian version of the millenarian doctrine (↗*Dagəm məṣᵓatu läkrəstos*; ↗Eschatology), accepted by the ↗Ethiopian Orthodox Täwaḥədo Church. The first detailed exposition of this doctrine can be found in the *Mäṣḥafä* ↗*məsṭir* of Giyorgis of Gasəč̣č̣a (YaqMist I, 204), while in the collections of the miracles of Mary, e.g., ms. EMML 5492, fol. 24b (19th–20th cent.), a clearer version of it can be found: "Listen, O my brothers, to this ... mystery which our holy fathers have told us, which they have found written in the Holy Scriptures. They said: When Our Lord comes at his second coming ... the dead will rise. Our Lord will sit on the throne of His glory at Mount Zion to judge the whole world. Heavenly Jerusalem will descend with all the saints and martyrs and be set on top of Mount Zion, (at) Jerusalem, facing the Mount of Olives. Between them, there is a very deep valley, called the Field of Josaphat. There is a church there, built on the tomb of Our Lady the Twofold Virgin Mary ... at the last day, it will become like a ship and bring across (the sea of fire) Christians who had observed the holy day(s) of Our Lady the Twofold Virgin Mary, and had been merciful to the poor and the wretched in her name. She will make them merry with her in the Kingdom of Heaven and make them inherit eternal life".

Aṣe ↗Zärᵓa Yaᶜəqob was an ardent proponent of the thousand-year reign of Christ with the Righteous (ጻድቃን, *ṣadqan*). The Emperor and the Church authorities maintained that this thousand-year reign before the end of the world would be a thousand-year repose and banquet on D.S. (ምሳሕ፡ በደብረ፡ ጽዮን) for the Just (e.g., Wendt 1963:37–44). This position may reflect the popularity the idea earned among the Ethiopian clergy; hagiographic writings frequently mention the immediate entrance to "the banquet on D.Ṣ." as one of the rewards promised by God to saints and their followers (s., e.g., Guidi 1895:28).

The doctrine sparked a controversy (to which the diffusion of D.Ṣ. as a proper name in the 15th cent. is also related; ↗*Däbr*). The ↗Zämikaᵓelites and the ↗Stephanites openly refused to accept such teaching (Getatchew Haile 1991:32; cp. Taddesse Tamrat 1966:110, no. 6). Risking their lives, they maintained that the reign of Christ had begun with his first coming. In the words of Zärʾa Yaʿəqob, they said: "There is no one thousand years for the saints other than these times. And the banquet is the body and blood of Christ" (አልቦ፡ ዘ፲፻ዓመት፡ ዘቅዱሳን፡ ዘእንበለ፡ ዝንቱ፡ አዝማን። ወምሳህኒ፡ ሥጋሁ፡ ወደሙ፡ ለክርስቶስ; Wendt 1963:40). But the Emperor had calculated and affirmed that the present Christian era would end in 1500 A.M. (ibid., 42, 100f.), for the new era, known as the eighth millennium, was to begin. According to tradition, the world was created 5500 years before the birth of Christ, making the eighth millennium start in 1501 A.M. [1508/9 A.D.]. Since nothing unusual happened at that time, the teaching was no longer related to a fixed time, but still remained a component of the faith of the Ethiopian Orthodox Church. The liturgy has prayers to the Lord that he may make the faithful partakers of the banquet.

Däbrä Sina

Several places in north-east Šäwa are named after Mount Sinai (Gəʿəz, Amh. ደብረ፡ ሲና, e.g., Ex 19:11). One of them is a small town, and another D.S. is a site just about 20 km south-east from the first one and about 196 km north-east of Addis Abäba. Local Christian tradition asserts that the site was named D.S. by Christian settlers in very early times.

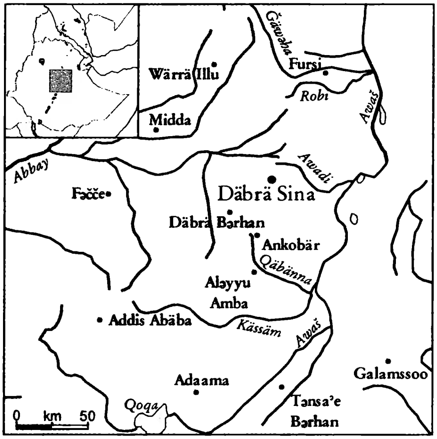
Before the Italian Occupation of 1936 the area of D.S. was known under three appellations, namely Ṭid Amba, Wanzit and Fasil Amba. The area between the rivers Robi and ↗Awadi used to be administered from a political centre known as Wäyra Amba about 10 km to the left of the main road, north of the present D.S.

As all available sources confirm, the current D.S. town was founded by the Italians in 1936. When the whole region had become an important platform for the vigorous and multiethnic patriotic movement, the Italians moved their administration centre from Wäyra Amba to the more strategic location of Fasil Amba. It was the inhabitants of Wäyra Amba, Argaga Ençinne and Šola Meda, on the suburbs of D.S. town, who seriously attacked the Italian force under Pietro ↗Badoglio on 29 April 1936. After a few days, however, Badoglio and his force passed through the area on their march to capture Addis Abäba.

D.S. was founded as a village town under the mountain ↗Ṭarma Bär (at the eastern edge of the Šäwan plateau) which could be reached from the south after passing through the three tunnels built by the Italians. Travellers from the north could also reach there after their gradual ascent through the ragged terrain and over ridges of Asfačäw, Çira Meda, ↗Armanya and ↗Šola Meda. Near the tunnels on the mountain Ṭarma Bär the Italians "set up a monument to commemorate their conquest of the mountain".

In this newly founded strategic town of D.S. (on the site of the previous Fasil Amba), a few Italians and one battalion of the ↗*askari* were left, to turn the administrative activities and to crush the patriotic resistance movement which was getting stronger from the direction of ↗Yəfat under *däǧǧazmač* Täsämma Ǝrgäṭe (1895–1972), *däǧǧazmač* (then *ləǧ*) Käffäläw Wäldä Ṣadəq (d. 1964) and *wähni azzaž* ↗Ayyälä Ḫayle.

After the liberation the area of Mänz and Gəšše was lumped together with that of Yəfat in



1941, to form a larger *awrağğa*, its capital D.S. having the first elementary school in 1942. D.S. played a key administrative role in this region until 1958, when the Mänz–Yəfat *awrağğa* was deemed too large and subsequently divided into two independent administrative zones (Mänz–Gəšše and Yəfat–Ṭəmmuga *awrağğas*). As a result D.S. became part of Yəfat and was reduced to an administrative centre of the sub-district (*wäräda*) known as Fasil Amba until 1968. Between the years 1968 and 1991 D.S. revived as the administrative capital of Mafud district, housing the first-rate comprehensive Senior Secondary School of the Yəfat–Ṭəmmuga *awrağğa* which was opened in 1972.

D.S. is still one of the least developed towns in the country with most of its ancient historical features still intact to a large extent.

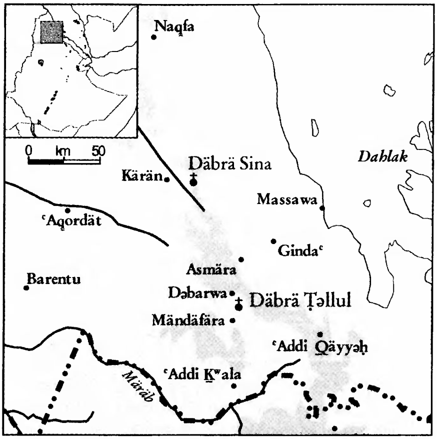
The monastery of D.S. (ደብረ፡ ሲና, lit. ‘Mount Sinai’) lies in Eritrea’s Sänḥit region, north of the main route connecting Asmära to Käränn, between the villages of ᶜAd Täkälezan and ᶜAddi Bärᶜəd, on the mountain massif of Säläba, overlooking the ↗ᶜAnsäba valley. Not far from the convent, in the Aratu region, Aksumite ruins have been detected. The local people also call these ruins Däbrä Sihat, a name which probably reflects an Ethiopic adaptation of the Arabic name Šihat (or Šayhat, from Coptic Šihēt), indicating the Egyptian desert of Scetis (in Ethiopic also called Asqeṭəs).

According to local traditions, D.S. was established by a monk Yoḥanni (possibly a name of Coptic origin), who came from Egypt with his followers in the reign of ↗Gäbrä Mäsqäl, the successor of ↗Kaleb Ella Aṣbəḥa, and most likely his historical son ↗WᶜZB, who reigned from 534 to 548 approximately (↗Ǝsraʾel).



Near D.S. a rock is venerated as the place where the Holy Family escaped from the hands of Herod’s soldiers during their flight to Egypt, a tradition also transmitted in the 20th cent. ↗*Dərsanä Uraʾel*.

The traditional school of D.S. played a role in Ethiopian intellectual history. In the 15th cent. a monk from this monastery, Nabyud, composed an apocalyptic and exhortatory book (Beylot 1976). Towards the end of the 19th cent. various men of letters acquired their traditional education at D.S., e.g., ↗Täklä Maryam Wäldä Sämharay, the author of many grammatical works, and Aśrätä Maryam, the author of a hagiographic history of the monastery (*Zena Däbrä Sina*, s. Aśrata Māryām 1910).

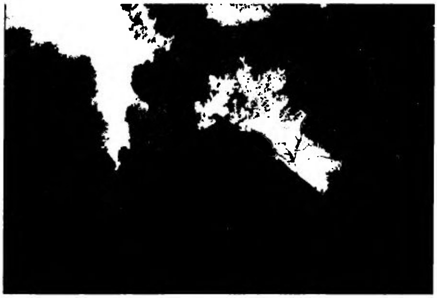
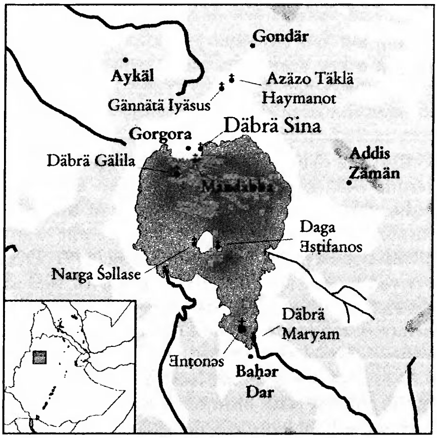
Däbrä Sina

D.S. (ደብረ፡ ሲና, lit. 'Mount Sinai'), located on the shore of Lake Ṭana near ↗Gorgora, is said to have been founded by *abunä* Ṭomas during the reign of *aṣe* ᶜAmdä Ṣəyon I (1314–44). The present church, circular in plan, is dated to the 17th cent.

It preserves an almost complete scheme of wall paintings. An inscription added to the picture of the Virgin Mary (western wall) mentions a certain Mäläkotawit as a donor of the paintings. Her true identity and the date of the painting have yet to be established. Cheesman, for example, identifies Mäläkotawit as the eldest daughter of *aṣe* ↗Susənyos (ChTana 196f.); however, Staude and also Chojnacki believe she was the third wife of *aṣe* ↗Iyasu I. Additionally, two other princesses with the same name who were alive during the reign of Iyasu were identified by Bosc-Tiessé and Wion (1998). It must be noted, however, that the Mäläkotawit inscription was written by a later hand, while the original hand accompanies the portrait of a royal couple depicted on the southern plinth. Unfortunately, the names of the figures are difficult to decipher. Although the exact dating of the paintings is thus not possible, their style allows us to identify them as belonging to the early period of the first Gondärine school. This style is characterized by carefully modelled faces with cheeks and chins shadowed with a red wash, minutely rendered details drawn with black lines and a soft play of colours dominated by white, red, beige and yellow.



Däbrä Sina, Church of St. Mary; early 17th cent.; view towards south; photo 1993, courtesy of Michael Gervers



The paintings cover all the walls and the tambour of the ↗*mäqdäs*. They are partially damaged, but most of them are still recognizable. The paintings on the plinths suffered most through time and only two of the original paintings there are preserved (the group on the western plinth: the Virgin Mary as the Queen of Heaven, the mounted St. George and St. Michael; two episodes from the legend of the Archangel, were added in the 19th cent.). Almost all the scenes and figures were labelled with texts which have faded a great deal throughout the course of time.

Four thematic groups may be distinguished: 1) O.T.: the Sacrifice of Abraham, the Three Youths in the furnace, Jonah, Daniel, Manasseh, the king of Judah, and four kings of Israel: David, Solomon, Hezekiah and Josiah accompanied by prophets and court attendants; 2) N.T.: the Annunciation, the Nativity, the Adoration of the Magi, the Flight into Egypt, the Massacre of the Innocents, Christ's baptism, the Entry into Jerusalem, the Sermon on the Mount, Christ's temptation, the Transfiguration, the Crucifixion, the Descent into Hell, the Ascension, the Last Judgement and the *Maiestas Domini* with 24 Heavenly Priests; 3) saints and martyrs: the Decollation of John the Baptist and the martyrdoms of Paul, Peter, Stephen, Cyriacus and Julitta; Egyptian desert fathers and monks: Anthony the Great, Shenute, Bishoi, Pachomius, Poemen, Abib, Afer, Palamon, Onophrius, Latson and Serapion; equestrian saints: George, Basil, Mercurius, Claudius, Justus, Theodore and two others difficult to identify; Ethiopian saints: Täklä Haymanot, Gäbrä Mänfäs Qəddus, Samuʾel of Wäldəbba, Ǝwosṭatewos, the Nine [Syrian] saints and two ecclesiastics connected to the church by names Ṭomas and Efrom; 4) Mariological scenes: the Virgin ↗Mary with the Child (twice: western wall and eastern plinth), the Covenant of Mercy (↗*Kidanä məḥrät*), the Apparition of the Virgin Mary at Məṭmäq and the Virgin Mary among the angels.

Some scenes display unusual iconography, e.g. the Sacrifice of Abraham with Sarah, the Nativity with the Priest Simeon, the Annunciation with Gabriel represented as an old man. On the western tambour are depicted 18 (22?) naked and haloed young men in half figure. Only a few of their names can be read. The same scene (also painted on the tambour) appears in the Ǝsṭifanos church on ↗Kəbran and also in ↗Qoma Fasilädäs (36 figures, s. Wion 2001). The wooden frames of the doors and windows of the *mäqdäs* and the beams holding up the roof are carved in various scroll patterns. In the church, a group of manuscripts is preserved from the 17th and 18th cent., among them an illuminated ↗*Täʾammərä Maryam* and ↗*Dərsanä Mikaʾel*, two triptychs and a silver processional cross of the 19th cent.

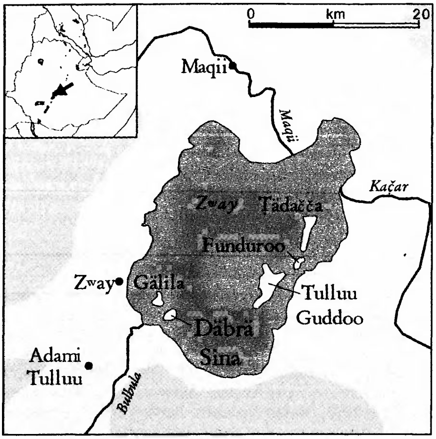
D.S. (ደብረ፡ ሲና, lit. ‘Mount Sinai’) the southernmost of the five inhabited islands of Lake ↗Zʷay, is a round volcanic upthrust, rising some 30 m and located approximately 1,500 m A.S.L. from the south-western shore of the lake. Like the other Zʷay isles, D.S. was one of the southernmost outposts of Ethiopian Orthodox Täwaḥədo Christianity, which gradually lost connection with the highlands in the course of the 16th–17th cent. However, when *nəguś* Mənilək came to conquer the Zʷay area in 1880s, he was surprised to find the inhabitants, including those of D.S., still calling themselves Christians, even though they were in desperate need of priests and had ceased to perform almost all the religious services.

Later, the residents of D.S. gradually left the island for the nearby lands granted to them by Mənilək. Now thickly forested, D.S. has traces



of former cultivation and pasturage, but has been uninhabited since 1960, except for a few nuns, who have houses around a small church dedicated to the Virgin. This church, originally a small thatched round-shape house, was replaced in the late 1990s by a solid round masonry structure, financed by descendants of former inhabitants of the island who moved to the nearby town of Zʷay. Services are held occasionally by clergy from the mainland.

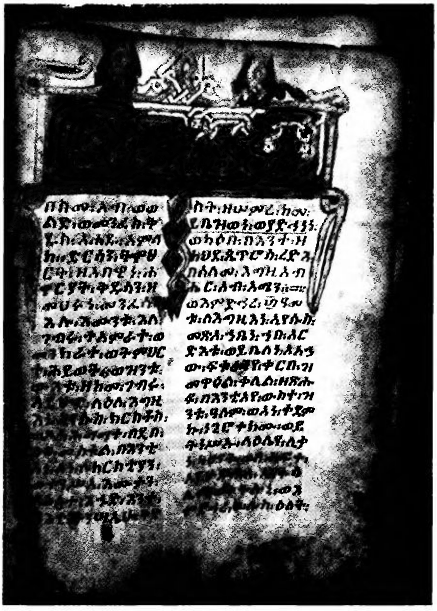
Däbrä Täʾamina

D.T. (ደብረ፡ ተአሚና, or ደብረ፡ ትጉሃን, Däbrä Təguhan, lit. 'Mount of the Vigilants') is a little-known monastery in Təgray, in the district of Qʷälla Tämben (s. map for Däbrä Sälam Mikaʾel). According to Kinefe-Rigb Zelleke (KinBibl nos. 110, 147; repeated by Raineri), it was founded – at an unknown date – either by Mäsqäl Bezanä (also Krəstos Bezanä), or by Tadewos of D.T., one of his spiritual sons. The only sources on D.T. are: two manuscripts from the monastery, *Gädlä Mäsqäl Bezanä* (unpublished) and *Gädlä Tadewos* (cf. de Santis 1942); another copy of the *Gädlä Tadewos* at the IES, mf. 118; some information in the manuscript of *Gädlä əččäge Yoḥannəs*, IES, ms. 38, fol. 210 (cf. KinBibl 84), nothing being found, however, in the translation of the published recension of the same text (cf. Ricci 1971). Neither D.T. nor the two saints seem to be mentioned in the published recensions of the ↗*Sənkəssar*.

D.T's rock-cut church (ca. 16 m x 10 m x 5 m) is dedicated to St. Mary. The sanctuary, delimited by four L-formed pillars, is encircled by an elongated ambulatory passing on the west side the constructed *pronaos* with three doors. The ceiling in the southern and eastern part of the ambulatory is in the form of shallow domes. The external walls of the sanctuary are covered by wall-paintings from the beginning of the 20th cent. On the northern wall the founders of the monastery protecting two supplicants are depicted. The church owns an interesting collection of manuscripts, crosses and church paraphernalia. One of the staff crosses made of bronze and decorated with engravings representing St. Mary with the Child can be dated to the time of *aṣe* Zärʾa Yaʿəqob (1434–68). From the same period an iron hand cross decorated



Däbrä Täʾamina, *Gəbra ḥəmamat*, fol. 137r; 14th cent.; photo 2002, courtesy of Michael Gervers with brass inlay seems to originate. Among the manuscripts, the 14th-cent. ↗*Gəbrä ḥəmamat* deserves special attention. So does the 15th-cent. Gospel Book which preserves only two portraits of writing ↗Evangelists and two pages of illuminated ↗Canons tables.

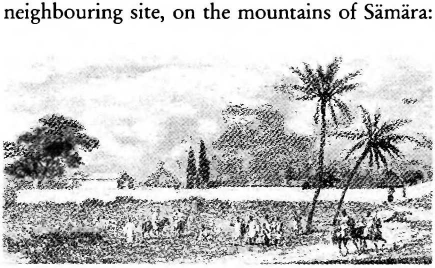
Däbrä Tabor

D.T. (ደብረ፡ ታቦር) is a town in Bägemdər (11°51'N, 39°46'E, 2,945 m A.S.L.) named after the biblical Mount Tabor. It was founded sometime in the first decade of the 19th cent., and was the headquarters, or capital, for most of the rulers of the Oromo ↗Yäǧǧu dynasty, and later of ↗Tewodros II and ↗Yoḥannəs IV. The settlement was founded by the Yäǧǧu chief *ras* ↗Gugsa Märsa, who is said to have chosen it at the behest of a monk. The latter reputedly told him that he should abandon his earlier capital, at nearby Ləbo, and seek out a place where a female leopard had just lain down. There, after killing the feline beast, Gugsa Märsa is said to have cleared the forest and established the town (GueCopMen 201f.). Be that as it may, the site he chose was convenient. Well watered, with several dozen natural springs, it had a healthy highland climate, and enjoyed good communications with many parts of the empire. The town served *ras* Gugsa thereafter as his capital for the rest of his life – and it was at D.T. that he was buried in the church of Iyäsus (↗Däbrä Tabor Iyäsus) which he had built on a mountain overlooking Lake Ṭana in the distance.

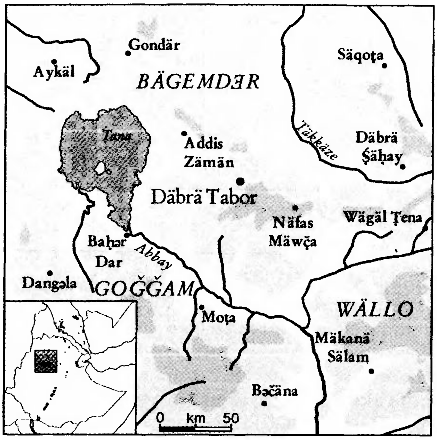
The settlement was subsequently inherited as their capital by Gugsa Märsa's successors *ras* Yəmam, *ras* ↗Dori Gugsa and *ras* ↗Ali Alula. The French Saint Simonian missionaries Edmond Combes and Maurice Tamisier (1838, vol. 2, 54ff.), the first travellers to visit the town, describe it, in 1835, as essentially a military camp, "inhabited by soldiers", whose "life of carelessness", they claim, attracted "a large concourse of dancers and courtesans". The settlement was then dominated, they say, by Ali Alula's palace (↗*Gəbbi*). Surrounded by a "vast" courtyard, it contained a large audience chamber with two divans, many "fine weapons" on the walls, and three recesses for Ali Alula's favourite horses (*ibid.* 61, 83). The town, according to a somewhat later French traveller, Arnauld d'↗Abbadie, comprised 1,600 to 1,700 houses, which, on the assumption of six inhabitants per house, would suggest a population of well over 10,000 inhabitants, much more than that of most settlements of the time (AbbSéjour vol. 2, 190).

D.T. was captured and partly burnt down, in June 1853, by *däǧǧazmač* Kaśa, the future *aṣe* Tewodros II, who, having defeated his father-in-law Ali Alula, made it his capital, as well as by extension the abode of the *abun*. There the Emperor built a new church, dedicated to Mädḫane ʿAläm ('Saviour of the World'); and it was at D.T. that his son ↗ʿAlämayyähu was born. Tewodros allocated ↗Gafat, a settlement an hour's walk from D.T., to his missionary and other foreign artisans; and it became the site of the first casting of cannon in Ethiopia, as well as that of Tewodros's earliest road-building activities. However, as a result of the arrival of the British expeditionary force led by Robert Napier, the Emperor felt obliged to abandon D.T. in favour of the mountain fortress of ↗Mäqdäla, in October 1867.

D.T. was later chosen as one of his centres by *aṣe* Yoḥannəs IV, who built his palace on a new neighbouring site, on the mountains of Sämära:



Sämära, the residence of *aṣe* Yoḥannəs IV in Däbrä Tabor; from Rohlfs 1883:194



it was there for example that he crowned *ras* Adal of Goǧǧam as *nəguś* ↗Täklä Haymanot. Yoḥannəs was responsible for the erection of a new palace, with three adjacent large thatched round buildings, as well as the rectangular church of Ḫəruy Giyorgis, which was built with the help of the Italian craftsman Giacomo ↗Naretti. Yoḥannəs, in the early 1880s, however, moved, with the *abun*, to Təgray, and D.T. lost much of its earlier importance.

The death of Yoḥannəs, in 1889, and the rise of Mənilək, king of Šäwa, spelt the continued decline of D.T. The town nonetheless remained the local capital of Bägemdər. It was the headquarters, in the early 20th cent., of *ras* ↗Gugsa Wäle, the sometime husband of Mənilək's daughter Zäwditu, later Empress. Sometimes referred to as the "second Gugsa" – an allusion to the earlier ↗Gugsa Märsa – he moved his palace to yet another D.T. site, and repaired the earlier church buildings.

The town today has an airport, and is conveniently linked by road (built by Italians and later rebuilt with the help of China) with Gondär, Baḥər Dar, Däse and the Addis Abäba–Asmära highway.

Richard Pankhurst

Däbrä Tabor Iyäsus

D.T.I. (ደብረ፡ ታቦር፡ ኢየሱስ) is one of the principal churches of ↗Däbrä Tabor. Situated on a hilltop above the town, D.T.I. was reportedly founded as a sanctuary by the 14th-cent. *aṣe* ↗Säyfä Arʿad (Heyer 1981:23) when the fist monastic communities were established on the Lake Ṭana islands. In fact, D.T.I. was founded much later, by *ras* ↗Ali Gʷangul or, more probably, in the 19th cent. by *ras* ↗Gugsa Märsa, the ↗Yäǧǧu dynasty greatest ruler, as his burial place (↗Graves). His tomb, a square tower with an egg-shaped dome (↗*ənqulal gəmb*; s. CrumLand 158f.), still exists in the compound.

Gugsa Märsa richly endowed D.T.I. His distant descendant, *ras* ↗Gugsa Wäle, was active in its further development by reconstructing the church (PankHist II, 349) and sponsoring *aläqa* Bərhanu to paint its inner walls.

D.T.I. is a circular stone church with the centrally placed squared ↗*mäqdäs* and with a spacious compound encircled by a stone wall. The paintings are arranged according to the scheme established in the 17th cent.: the Trinity, St. Mary and St. George killing the dragon are depicted on the west wall; Mariological scenes, including the miracles of Child Jesus and of St. Mary (mostly illustrating ↗*Täʾammərä Maryam*) e.g., "the one who eats people" (በላዔ፡ ሰብእ, *Bälaʾe säbʾə*) and the metamorphosis of the five camels into five stones decorate the south wall; Christological scenes, with the Passions in the centre, cover the eastern, the ↗equestrian saints the northern wall. The murals, partly destroyed by birds who had pecked at the colours, were repainted in 1979 by a certain Muse and the painting class of the Däbrä Tabor Church School.

In the ↗*ʿəqa bet* of D.T.I., illuminated manuscripts of *aläqa* ↗Ǝngəda have been preserved, among them an illuminated *Täʾammərä Maryam*.

Däbrä Ṭəllul

The monastery of D.Ṭ. (ደብረ፡ ጥሉል, possibly from ደብረ፡ ጽሉል, lit. 'Mount of the Possessed') lies in the Gʷala district of Säraye province (*zoba* Däbub in present Eritrea), south-east of Dəbarwa, in the locality called Däqqi Bäḵʷəri (s. maps for Däbrä Bizän and Däbrä Sina in Eritrea). It is also known as Ǝnda Abbona (Ǝndabbona) or Däbrä Abunä Abranyos, since it was founded in the second half of 17th cent. by the monk ↗Abranyos.

Until 1974, the *gädäm* had considerable land property (*rəsti* and *gulti*) out of its own borders, but after the ↗Revolution most of it was expropriated. Among the remaining *gulti* is ʿAddi Aṭāl (close to May Ṣäʿada in ↗ʿAddi Ḵʷala area).

Today D.Ṭ. is the most influential monastery in the ↗Mändäfära area. It has dozens of nuns (at the foot of the mountain), monks and students (in the main monastery), and a number of economic activities inside it. The library has a few valuable illuminated manuscripts (Guida 234f.). The church on the very top of the mountain was built in the early 20th cent. by the Italians. The alleged tomb of the founder, Abranyos, is still venerated in a separate building next to the church, along with a rudimentary pulpit (made up of two stone slabs between the church and the tomb) from which the Saint is said to have preached.

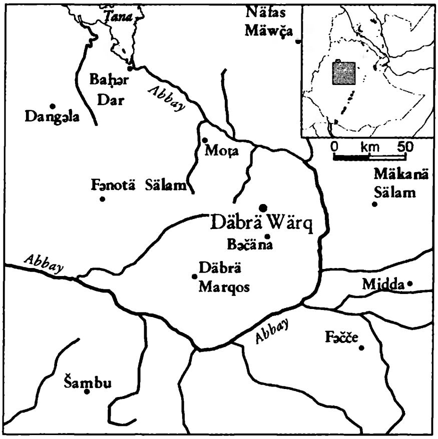
Däbrä Wärq

The monastery of D.W. (ደብረ፡ ወርቅ, lit. 'Mount of Gold', 'Golden Mountain') is located in eastern ↗Goğğam, on top of a hill in the town by the same name. According to different sources, its church is devoted to either the Archangel Michael (s. BecRASO XI, 128: early 17th cent.) or the Virgin Mary (d'Abbadie 1873:574). Today it is often referred to as Däbrä Wärq Maryam.

D.W. is said to have been founded by the holy monk ↗Śärṣä P̣eṭros, whose Acts, preserved in the monastery, are still unpublished (KinBibl no. 139); it seems, however, that he was a disciple of *mämhər* Täklä Maryam of ↗Märṭulä Maryam and a contemporary of *aṣe* ↗Bäʾədä Maryam. Equally unpublished local documents give contradictory indications as to the chronology of his life, though within the 15th cent. (TadTChurch 202f.) – when the satellite monastery of ↗Getesemane Maryam would also have been founded. More intriguing, a lost Gəʿəz inscription of Dayr al-Abyaḍ (Sūhāğ, ↗Egypt) recorded Ethiopian pilgrims from Goğğam, in particular a "Śärṣä Yoḥannəs from Däbrä Wärq", passing by on their way to the Holy Land on 8 *Säne* 222 A.M. (de Bock 1901:54, fig. 65, cp. Conti Rossini 1923:461f.), possibly equal to 2 June 1038 or 1114 (Chaîne 1925:191f., discarding Conti Rossini's 1563). This could suggest a much earlier chronology for the monastic settlement, which also boasts connection with the legendary ↗Abrəha and Aṣbəḥa (Fiaccadori 1985:77; 1984–85:234f.).



D.W. was later an important centre for the ↗Ewosṭateans: although the sources are not perfectly eloquent (s. Cohen 1923:160f.), a local ↗*Sənkəssar* with a special entry on *abba* ↗Filəp̣p̣os, founder of the Ewosṭatean monastery of ↗Däbrä Bizän (Schneider 1978:135), may shed light on that. In fact, from both the writings of the Jesuits and the participation of monks from D.W. in the Gondär synod of 1688 (GuiIohan 123; Paez in BecRASO II, 579) the place appears to be a 17th-cent. ↗*Qəbat* stronghold.

According to James ↗Bruce (BruNile vol. 4, 308), or rather his undisclosed sources, *aṣe* ↗Gälawdewos had the church rebuilt after it was destroyed by the Muslim, i.e. when ↗Nūr b. Muğāhid fought against him. In the 17th cent., D.W. was frequently camped at by emperors Susənyos and Iyasu I (PerChron 53, 108, 123, 172; GuiIohan 68, 70, 106, 163). Next to the church, a square tower still shows Gondärine masonry (Anfray 1988:22).

Before being translated to Atronsä Maryam, *aṣe* ↗Ǝskəndər was buried first at D.W. (PerrEsk 341, 343; BassÉt 13). An illuminated Gospel book from his time is still kept there, with images of the ↗Evangelists attributed to the Venetian painter Niccolò ↗Brancaleone – like the side panels added to the famous 18th-cent. "Greek" icon (possibly of Syrian origin) called **ሥዕለ፡ ወይኑት** (*Śəʿəlä wäynut*, 'Image of Wäynut [= Purple?]'), also part of the treasury of the church (Kriss – Kriss-Ḥeinrich 1975:66; ChojPaint 385–89, 439, figs. 179f.). This icon was reportedly brought from Egypt by *aṣe* ↗Dawit II and presented to the monastery by *aṣe* ↗Zärʾa Yaʿəqob (Spencer 1972:83ff., ill.).

The church of D.W. – seen by the Jesuits as one of the most important in early 17th-cent. Ethiopia (BecRASO XI, 128) – still keeps a few other richly ornamented books, among them a 15th-cent. Psalter with 26 full-page miniatures (ChojPaint 186, fig. 71; Leroy 1967:52, pl. XVI; Balicka-Witakowska 1984-86, figs. 33-38) and a copy of the ↗*Täʾammərä Maryam* in the first Gondärine style (ChojPaint 270, fig. 111; AfrZion 97f., no. 12). A few manuscripts from D.W.'s library have been microfilmed by the UNESCO and University of Illinois at Urbana–Champaign teams and deposited into the IES library (s. CrumLand 329f.)

Decorated with a series of 18th- to 20th-cent. murals unfolding a version of the history of the monastery (Annequin 1990, vol. 2, 102–05, 116–19, 124f.; Bell 2004, pl. 14[b1]), the church also preserves a 16th-cent. helmet and a contemporary mail shirt. Both associated with *abba* Śärṣä Ṗeṭros and *aṣe* Zärʾa Yaʿəqob in local tradition, these items are reproduced in the Gondärine wall-paintings: the Emperor, who had captured them in battle against the Muslims, is shown presenting them to the Saint. Actually, they are likely to have belonged to a Portuguese soldier of Cristovão da ↗Gama's military expedition of 1541–43 (Bell 2004:152f., 156).

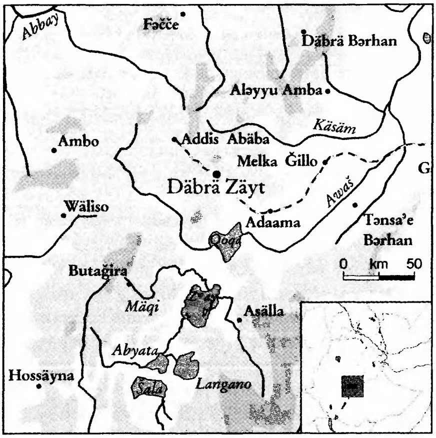
Däbrä Zäyt

D.Z. (ደብረ፡ ዘይት, lit. 'Mount of Olives'; also Bišoftuu, Oromo sp. Bishoftuu) is a town located at 1,900 m A.S.L. about 48 km south-west of Addis Abäba on the main road to Adaamaa/Nazret, in the Oromiyaa *kəlləl* of the Eastern Šäwa zone. There are five crater lakes in the area of D.Z., four of them constitute a major part of the topography of the town: Bišoftuu, Hooraa Arsid, Hooraa Guuda and Kuriflu.

Generally, it is believed that the town was established in 1888, when it assumed its original name of Bišoftuu. The most important factor behind the development of D.Z. was the construction of the Addis Abäba–Djibouti ↗Railway in 1917. As the railway passed through the town, it created easy access to commercial activities and facilitated domestic and foreign trade. It also improved the communications and transportation systems, such as



motor-cars, traction-engines, bicycles, telephones and telegraphy, which resulted in the further growth of commercial activities, as well as in the gradual attraction of governmental and non-governmental institutions.

During the Italian invasion, services such as hotels, bars, restaurants etc. developed. The expansion of the town started at the end of the 1950s when the Swedes established an airbase and when veterinary laboratories were opened, which remained under French management until the Revolution. As a result, new facilities such as apartments and recreation centres, which catered largely for the military personnel posted in the town, were introduced. After the Italian war Ḫaylä Śəllase I and Crown Prince Asfa Wäsän used their farm in D.Z., which had been turned by the Italians into the Azienda Agraria di Biscioftù, as a weekend residence. Many wealthy residents of Addis Abäba have second residences in D.Z. However, the town has never been an important administrative centre.

D.Z. has grown dramatically throughout the final decades of the 20th cent. In 1970 it had a population of 27,627. By 1984 this had grown to 55,655. The 1994 Census indicated the total population of D.Z. to be 73,372. Out of this population, over 70 % spoke Amharic as their mother-tongue, while a further 20 % spoke Oromiffa. In 2004 the population was estimated to have grown to 119,393.

In spite of urban growth, traditional Oromo cults continue to thrive and attract pilgrims. D.Z. is the starting-point for the climb to the top of Mount ↗Zəqʷala, where on the 25 *Mäggabit* pilgrims take part in the pilgrimage of Saint Abbo (↗Gäbrä Mänfäs Qəddus).

Däbsan ↗Däbrä San

Däbtära

The term D. (ደብተራ; from the Greek διφθέρα 'skin or leather [used as a tent]'; LesCDic 122) means 'tabernacle [Heb 9:11], sanctuary, [royal] tent, camp' and by extension and commonly refers to a group of unordained clergy. The D. are the most educated clerics and may be described as "lay ecclesiastics". They occupy an intermediate position between the clergy and the laymen. They are not ordained, but no service can be held without them.

They are choristers (sometimes called አወዳሽ, *awäddaš*, 'who glorifies, performs canonical hours', from አወደሰ, *awäddäsä*, s. KaneDic 1565), poets, dancers, scribes, painters, herbalists, wizards. Special knowledge is required for the role, but not special holiness. Recruitment is informal. There are no rites of ordination, nor is there any point at which a person becomes or ceases to be a D.

They are not set off from the populace by special insignia. Some wear turbans like the priests, but others dress like laymen (those D. who held more prestigious posts may be seen with fly-whisks or wearing a *bärnos* cloak).

Becoming a D. entails a course of study beyond that minimally required for priests. They receive some instruction in the Bible, especially the Psalter. They are trained in the study of Amharic and Gəʿəz, but their attainments in the latter are apt to vary widely. They undergo instruction in ↗*qəne*, ↗*zema* and ↗*aqʷaqʷam* and at least in theory in the ↗*Fətḥa nägäśt* and canon law (↗Ethiopian

Däbtära copying a manuscript page: *märigeta* Fänti Ǝndaläw; photo 2002, courtesy of Anne Parsons

Orthodox Täwaḥədo Church). In addition, knowledge is acquired of writing, preparation of magical formulae and the use of herbs. Women are excluded from the priesthood, but in rare instances they may perform the duties of D.

The D. is the subject of marked ambivalence. They are feared for their magical powers and resorting to ruses and deceitfulness, but respected for their learning. They are the masters of sophisticated poems, but also of magical spells. They are known for their skilful use of language (ቃለ፡ ደብተራ, *qalä däbtära*, lit. 'the speech/language of D.', the argot used by D., KaneDic 1786) and for interspersing their Amharic with Gəʿəz.

The D. writes amulets to keep away sickness and evil spirits. He knows formulas that can protect one from bullets, help a student in his or her studies and attract a mate. He can bring rain or plague and stop them as well. He performs divination using books, brews and interpreting leaves, and writes on paper. He is an expert on knowledge of plants and herbs that can heal. He can also perform sacrifices.

Musical performance of *däbtära*

Foremost among the esoteric knowledge acquired and transmitted by the D. is that related to musical performance. Following his mastery of reading and writing in Gəʿəz, and memorization of the ↗Psalter, the student D. begins to study sections of the liturgy as an oral tradition during the night-time hours. Following the young D.'s mastery of the central body of Ethiopian Christian liturgical music, most particularly the Hymnary (↗*Dəggʷa*), he will select a church or monastery outside his natal parish for advanced musical studies.

The most ambitious and promising D. have traditionally studied at one of the major ↗*zema bet*, the foremost being, since the 16th cent., the Betä Ləḥem monastery south of the town of ↗Däbrä Tabor. It takes at least four years to achieve a grasp of *zema* and its use in the liturgical setting, with additional time devoted to mastering the signs (↗*Mələkkət*) of the indigenous Ethiopian system of musical notation and copying the D.'s own personal copy of the *Dəggʷa*. While many D. seek employment in a church once they have completed the chant school, it is traditional for an individual to specialize in at least one area of liturgical music, such as *aqʷaqʷam*, *qəne* or ↗*mäwaśəʾt*.

By the mid-20th cent., the drive to systematize education according to Western models resulted in a movement away from the traditional education of D. in rural monasteries and the centralization of church music education in Addis Abäba at the newly founded Theological College. With the loss of church lands and tax revenues in post-revolutionary Ethiopia, increasing numbers of highly literate D. accepted outside employment in government agencies and the business sector.

Daçe

The D. language (also Dacʾe, Dache, Dace or Gerese) belongs to the ↗Ometo sub-branch of Omotic (according to some scholars, a member of the Cushitic family corresponding to "West Cushitic", cf. Lamberti 1994). Its speakers (number unknown), usually referred to as the ↗Gäräse, live in the former province of ↗Gamo Gofa in and around the district of Gardula, in a territory delimited by other Ometo-speaking groups such as Dorze (in the north), Kačama (in the north-west), Koyra (in the west) and Zayse (in the south) and in the east by the non-Ometo Burği. Within Ometo, D. is part of the Northern branch together with ↗Wälaytta, Zala, Dawro, Konta, Malo, Gofa and Gamo, to the last of which D. seems to be particularly close. Linguistically, it represents a bridge between Gamo and Zayse (East Ometo) assuming thus a peculiar intermediate position between North and East Ometo (closer to North than to East Ometo).

As far as the structure of the language is concerned, D. is predominantly an inflectional language. It is not yet completely clear whether it is a tone language, probably it is a "tonal accent language", as Gamo and other Omotic and Cushitic languages are. D. seems in fact to present an interaction of accent and tone within the phrase, which renders the prosodic analysis of the system difficult. The usual syllable structure of D. consists of Consonant-Vowel and Consonant-Vowel-Consonant. The vowel system has the canonical five vowels (*i*, *e*, *a*, *o* and *u*), wherein vowel length is phonologically relevant; the vowel phonemes are thus altogether ten; there are also voiceless vowels, but it is dubious whether they are phonologically relevant. The consonant system consists of five points of articulation (labial, coronal, palatal, velar and glottal) and eight manners of articulation (stops, fricatives, affricates, ejectives, nasals, vibrant, lateral and glides). Consonant gemination is, as in other Ethiopian languages, phonologically relevant. Word stems are often biradical, but triradicals are also very numerous, especially if they contain a sonorant as second radical.

Morphologically, D. nouns have all three categories: two genders (masc. and fem.), two numbers (sg. and pl.) and nine cases (absolutive, subject case, genitive, dative, directive, locative, instrumental, ablative and vocative). The feminine form is unmarked, so that nouns referring to inanimate objects are thus as a rule feminine. Plural marking is characterized, as is usual in Ometo languages, by a suffix with a dental. Case marking takes place by means of morphemes suffixed to the end of the whole noun phrase (if the head noun does not have the last place in the noun phrase, it always appears in its absolutive case). Adjectives (with the exception of demonstratives) remain as a rule uninflected. The verb system exhibits a complicated inflexional system with a great richness of paradigms and forms. Verbs are exclusively inflected and derived by means of suffixes. Syntactically, D. has a basic Subject-Object-Verb structure; within the noun phrase modifiers always precede their head noun, while the definite article (*-za* 'the') is suffixed to the noun it refers to. In possessive constructions the genitive always precedes its head noun. Relative clauses as a rule precede their head noun, but they can also follow it. In verb phrases auxiliaries follow their main verb.

Verbs have four different conjugation rows: affirmative positive, affirmative negative and interrogative positive and interrogative negative. The first has three tenses (past, present, future), for the last three only two tense forms are found (past and present/future). This is an example of a verbal paradigm for the affirmative positive conjugation of the D. verb *beʾ* ('to see'):

Person	Past tense	Present	Future
1. sg.	*beʾ-a-dis*	*beʾ-ays*	*beʾ-an-dis*
2. sg.	*beʾ-a-dasa*	*beʾ-aasa*	*beʾ-an-dasa*
3. masc. sg.	*beʾ-i-des*	*beʾ-ees*^{e}	*beʾ-an-des*
3. fem. sg.	*beʾ-a-dus*	*beʾ-aws*^{u}	*beʾ-an-dus*
1. pl.	*beʾ-i-dos*	*beʾ-oos*^{o}	*beʾ-an-dos*
2. pl.	*beʾ-i-deta*	*beʾ-eet*^{a}	*beʾ-an-deta*
3. pl.	*beʾ-i-da*	*beʾ-ettes*	*beʾ-an-da*

Language samples: *bizzo* ('one'), *namʾa* ('two'), *hayttso* ('three'), *waattse* / *haattse* ('water'), *budo* / *tama* ('fire'), *ʾawa* ('sun'), *ʾagina* ('moon'), *suutts*^{i} ('blood'), *ʾintsʾare* ('tongue'), *ʾačče* ('tooth'). Personal pronouns: 1st pers. sg. *ta*(*a-n*^{i}) ('I'), 2nd pers. sg. *ne*(*e-n*^{i}) ('thou'), 3rd pers. fem. sg. *ʾizaa* ('she', inflecting stem *ʾizi-*), 3rd pers. masc. sg. *ʾizi* ('he', inflecting stem *ʾiza-*), 1st pers. pl. *nu*(*u-n*^{i}) (we), 2nd pers. pl. *hinte*(*e-n*^{i}) / *hutuni* ('you'), 3rd pers. pl. *ʾizeeta* / *ʾesuni* ('they'); polite forms: direct form *hutuni* ('You', singular and plural), indirect form *ʾesuni* ('He/They').

D. possesses several demonstrative forms which vary according to the gender, number and case of the head noun, only some of them are indicated here:

	masc.	fem.	pl.
this (subj.)	*hay/hayssi*	*hanna*	*hayti*
this (abs.)	*ha/hayssa*	*hanni*	*ha/hayta*
that (subj.)	*heessi/seekk'*	*hinna/seekk'*	*heyti/seekk'*
that (abs.)	*heessa/seekk'*	*hinno/seekk'*	*heyta/seekk'*

The copula is: *-ko* (is/are).

Dafaa Ǧammoo

Qes D.Ǧ. (Oromo: Dafaa Jammoo; b. 13 August 1913, Dafaa Ǧammoo, Western Wälläga; d. 27 February 2002, Aʾira) was the first Ethiopian Lutheran pastor, one of the founders of the Mekane Iyesus Church and a productive Oromo writer. In 1928 he was employed by German Lutherans from the ↗Hermannsburger Mission and trained as a teacher and evangelist. Confirmed as first communicant in 1935, he maintained and defended the mission station during the Italian occupation. After the return of the missionaries in 1939, D.Ǧ. was ordained as a Lutheran pastor in 1941 and became the president of a number of evangelical congregations which organized themselves as a national church in 1949 (Gimbii Board). When in 1959 the ↗Ethiopian Evangelical Church Mekane Iyesus was constituted, the Gimbii congregations formed the main body as the new "Western Wälläga Synod". D.Ǧ. served as Synod President until 1971 and after that as Superintendent of the Aʾira District until his retirement in 1978.

D.Ǧ. wrote a considerable number of manuscripts on linguistic, cultural and religious matters, all in ↗Oromiffa. His works include poems and short stories, with which he influenced the development of modern Oromo literature. Some of them are still unpublished and circulate locally in several copies.

Däga

D. (ደጋ) is one of the ecological zones of Ethiopia (along with ↗*wäyna däga*, ↗*qʷälla*, *bäräha* and *qur*) which lies at altitudes ranging from 2,300 m to 3,300 m A.S.L. The mean annual temperature is between 10° C and 15° C. The

Ethiopian highlands within the D. zone occupy a major part of the country that slopes downwards towards the west and south.

The country's varying climatic zones significantly affect the cultivation of crops, among other factors. In general, most of the production of cereals, grain crops and pulses is concentrated in the highland areas of the country where the climate is temperate and which enjoy D. and *wäyna däga* climates. Wheat, ↗barley and ↗*ṭef* are the dominant food crops grown in these zones. The word D. does not only designate a level of vegetation, but also a good place to live, to resist invasions and an "étage de prestige, de commandement" (cp. Gallais 1995).

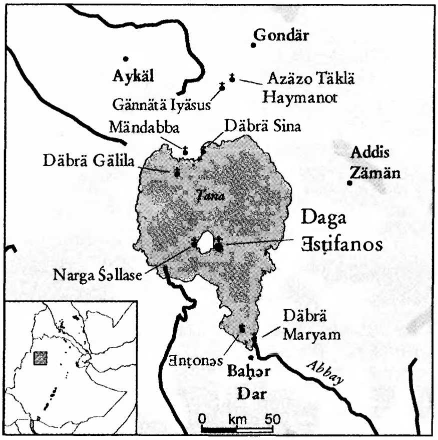
Daga Ǝsṭifanos

D.Ǝ. (ዳጋ፡ እስጢፋኖስ, also Däbrä Daga Ǝsṭifanos) is the monastery dedicated to the proto-martyr St. Stephen. It is located on the small conic island of Daga, at the centre of Lake ↗Ṭana on the main island's eastern side, ↗Däq. Thanks to the microfilming projects on its important library (67 mss. microfilmed by Hammerschmidt and catalogued by Six [SixTana III], around 40 microfilmed by the EMML project, not yet catalogued; and, additionally, 28 mss. kept at the Bibliothèque Nationale de France), we can construct a broad outline of D.Ǝ.'s history and follow the hagiographic and historiographic activities of the monks (Six in MisAethKur 251f.; Bosc-Tiessé 2001:215–20).

D.Ǝ. is usually considered the first monastery on Lake Ṭana's islands. But the alleged foundation of D.Ǝ. by the saint ↗Ḫirutä Amlak, who is said to have been sent there by his spiritual father *abba* ↗Iyäsus Moʾa, appears today to be a historical reconstruction connected with the attempts of the "networks" of ↗Däbrä Ḥayq Ǝsṭifanos and ↗Däbrä Libanos of Šäwa to take possession of this monastery (Bosc-Tiessé 2001:50f., 54–60; cp. SixTana 208f.; Six in MisAethKur, 250f.).



One can assume that the island was probably already inhabited by some hermits at the end of the 13th cent. or at the beginning of the 14th cent. (cp. Wajnberg 1936:32–37). But there is no other information on the monastery's history before the 15th cent. In any case, monastic life at D.Ǝ. expands during the 15th cent., as attested by royal grants, burials and artistic realizations. *Aṣe* ↗Yəsḥaq gave the lands of Ləǧome and Zäǧor to the monastery as *gʷəlt*. During the reign of *aṣe* Zärʾa Yaʿəqob, *mämhər* Yəsḥaq ordered the monk-painter ↗Fəre Ṣəyon to create an altar-panel which reflects the new theological trends of the court (Heldman 1994:24, 165–71). It certainly goes together with the set of canvas paintings meant for the walls, as shown by the extant fragments of these paintings, executed in the same style (Bosc-Tiessé 2001:40–48).

During the same century, D.Ǝ. seems to have become a burial-place for emperors, but the major part of the sources which characterize D.Ǝ. as a "royal necropolis" consists of late texts or texts written at Daga, conflicting mutually and with external documents (Bosc-Tiessé 2003). At least since the beginning of the 19th cent., the alleged royal remains were kept inside the ↗*ʿəqa bet*. However, the translation of Zärʾa Yaʿəqob's body to the island by *aṣe* ↗Naʿod, with items that the former had deposited at ↗Däbrä Nägʷädgʷad, is attested (PerrEsk 365).

Daga Ǝsṭifanos; church building; photo 2001, courtesy of the author

During the second half of the 16th cent., the monastery was still used as a mausoleum, not for the emperors themselves, but for the members of the royal family, as recorded in the local *Sənkəssar* (BN, ms. d'Abbadie 66–66bis.; Bosc-Tiessé 2001:89).

At that time, the monastery seems to have been especially prosperous. Between 1563 and 1574, *mämhər* Gäbrä Krəstos restored the church with financial support from *käntiba* Gäbrä Mikaʾel. Two canvases show that a part of the murals may have been renewed at this point (Bosc-Tiessé 2001:85–89). *Aṣe* Śärṣä Dəngəl asked the monastery for support in the wars against the Muslims and, in return, gave it lands on Däq as *gʷəlt*, precious items and books.

In addition, he deposited there the trophies taken from the defeated enemy (Perruchon 1896:274). The young Zädəngəl (r. 1603–04), before becoming emperor, was brought up at the monastery and was later buried there (Perruchon 1896:358, 362).

In the 17th cent., the monastery benefited much from the emperors' favours. At the end of 1646, *aṣe* ↗Fasilädäs, following the imprisonment of his brother Gälawdewos (BassÉt 135), who was the direct pretender to the throne, gave land in Dərdəra as *gʷəlt* shared between Daga and ↗Kəbran (Perruchon 1898:87f.). This *gʷəlt*-right was renewed by *aṣe* Yoḥannəs in 1677 (ms. Kebrān 41, fol. 3^{rb}, cp. HamTana I, 181). Also in 1646, Fasilädäs decided to rebuild the church (Perruchon 1898:87f.) and probably to renew the murals. The buildings were finished between 1651 and 1653 (Bosc-Tiessé 2001:91ff.), but the church burnt down again in 1714 (s. BN, ms. Éth. 104, fol. 63r; Bosc-Tiessé 2001:215–24, 513). At that time, Fasilädäs gave the land of Zəbəd as *gʷəlt* to the priests, whereby the ↗*märigeta* of D.Ǝ., *abba* Yaʿəqob, was granted a personal *gʷəlt* in Zəbəd or in Bäd (cp. Perruchon 1898:89; DombrChr 202). Fasilädäs's body, first buried at Azäzo, would have been exhumed later and reburied in D.Ǝ. (Perruchon 1898:92).

Aṣe ↗Iyasu I also often visited D.Ǝ. from 1684 onwards (GuiIohan 68, 110, 127, 140f.). *Mämhər* Askal, who succeeded Arku as head of the monastery in autumn 1684, was close to the Emperor. Iyasu I often stayed at Askal's, at Ləǧome, on the south-eastern shore of the lake, even though Iyasu had to intervene against him in a conflict with other monks of Daga when they begged for his arbitration in 1705 (Bosc-Tiessé 2001:201f.). When ↗Bərhan Mogäsa founded the church of ↗Narga Śəllase nearby, she endowed it some of the lands traditionally attributed to D.Ǝ., which caused recurrent conflicts (Bosc-Tiessé 2001:295–99). In this context, *aṣe* ↗Täklä Giyorgis gave D.Ǝ. the right of ↗asylum in July 1782 (BlunChr 264f.; Bosc-Tiessé 2001:306–09). Today, monastic life is still important in D.Ǝ.

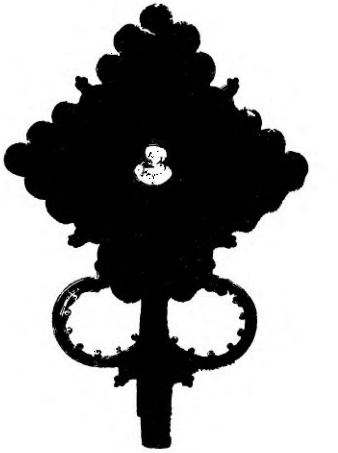
The art of Daga Ǝsṭifanos

The monastery church of D.E. was rebuilt several times. The present, octagonal building, reconstructed after a fire in about 1880, replaces the church erected at the beginning of the 17th cent.

Two fragments of monumental painting from that time are preserved: one on the door of the ↗*mäqdäs*, portraying an archangel, and a second, framed and kept separately, representing the Virgin Mary on a crescent with the Child and two angels. Both paintings stylistically belong to the first Gondärine school. Two other fragments – a *Maiestas Domini* surrounded by seven archangels and scenes from the life and martyrdom of St. Stephen, painted on cloth which was previously glued on a wall – are attributed to ↗Fəre Ṣəyon. A painted panel signed by this artist, with the *Galaktotrophousa* guarded by Michael and Gabriel and, in the lower register, St. Stephen flanked by St. Paul and St. Peter, is kept in the church treasury. Also preserved is a triptych dated to the turn of the 15th and 16th cent., with the Holy Trinity surrounded by the symbols of the ↗Evangelists and Heavenly Priests and with Christological scenes on its wings.



Daga Ǝsṭifanos; shafted cross of Däbrä Nägʷädgʷäd; 15th cent.; photo 2001 by Roger Schneider; courtesy of the author

The monastery houses a large collection of crowns and crosses. The most precious seems to be a processional bronze cross with a cavity for relics, decorated with the figures of the Crucified Christ, the *Maiestas Domini* in high relief and open-work ornamentation with inlaid gold and glass. It was a gift of *aṣe* Zärʾa Yaʿəqob to the monastery of ↗Däbrä Nägʷädgʷad. Among the manuscripts there is an illuminated Gospel book dated to the end of the 15th cent. with two miniatures of the Evangelists and richly ornamented frontispiece pages.

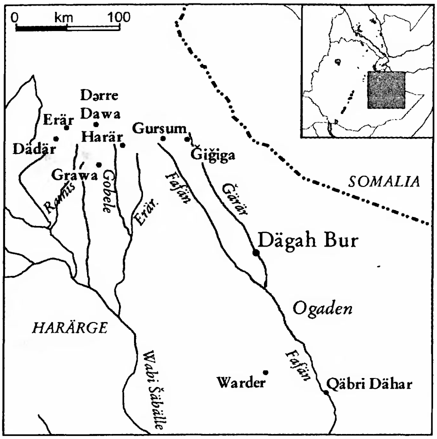
Dägah Bur

D.B. (ደጋህ፡ ቡር, Somali sp. Dhagaxbuur) is located at the elevation of 1,106 m A.S.L. on the Ǧärer river, which flows from the highlands of ↗Harär downwards into the steppes of the ↗Ogaden. The name of the town (from Somali *ḍagaḥ*, 'stone') recalls the rocky scenery of the surrounding areas. Some time after 1936, the Italians built the bridge on the Ǧiǧiga – Beled Weyn – Mogadishu route which connected the capitals of Ethiopia and Somalia. It was here that, at the beginning of the 20th cent., the troops of *ras* ↗Mäkʷännən Wäldä Mikaʾel (the first Ethiopian governor of Harär) met on their advance to the south the strong resistance of the dervishes of *sayyid* ↗Muḥammad ʿAbdallāh Ḥassan.

The British only gave D.B. back to Ethiopia in 1948, along with the "Reserved Areas".

In order to hold back the Somali of the Ogaden clans, the Ethiopians installed one of their strongest garrisons in the city, along with that of Gode. The area saw violent battles during the Ethiopian–Somali wars of 1964 and 1977/78. The *maquisards* of the Western Somalia Liberation Front fought against the Ethiopian army until in 1988 the treaty on boundaries was signed by the two countries.

With the disintegration of the Somali State, many refugees found a shelter in Somali *kəlləl*.



In 2000 they suffered from a grave famine that affected all the Ogaden.

Today D.B. is the capital of the zone and of the *wäräda* of the same name. The population counts to 32,617 inhabitants (2000 Census), as opposed to the 2,000 inhabitants of 1938 (Guida). To the south of the town, in Šilabo, works to exploit a natural gas pocket have recently started.

Dägälhan

D. (ደገልሃን, also Degälḥan, Delḥan), an 16th-cent. Ethiopian aristocrat, married *aṣe* ↗Ləbnä Dəngəl's sister Amätä Wəṭən, and was made a governor of the frontier province of ↗Bale with the title of *ras*. His main task was to neutralize raids by the Muslims of ↗ᶜAdal.

In 1527 D. led a punitive expedition and was victorious, but when *imām* ↗Aḥmad Ibrāhīm al-Ġāzī attacked him with his stirruped cavalry (s. ↗*Mäläsay*), D.'s troops fled. D. was probably the first Ethiopian leader who appreciated the significance of these new Muslim shock-forces and during the *imām*'s conquest of ↗Däwaro in 1531, he warned the Emperor of the inability of Ethiopian troops to withstand them. As depicted in the *Futūḥ al-Ḥabaša* (BassHist 179f.), he served Ləbnä Dəngəl loyally and defended him from the Muslims. The time and circumstances of D.'s death are obscure, but his son, Täklä Haymanot, also fought bravely against the Muslims, survived the ↗*ǧihād* and was active until the reign of *aṣe* Śärṣä Dəngəl (Kropp 1988:53, 61f.).

Däǧän

D. (ደጀን, older variants: *ǧädän*, *žedan*) is neither a title nor a military rank, but a temporary grade given to an officer who acted on the march as commander of the rearguard, and, by extension, of a military unit engaged in its defense. The traditional Ethiopian ↗army, formidable in its assault, was rather vulnerable on the march, especially while going through narrow mountain passes when it was returning from a successful campaign with captured slaves, cattle and booty. This weakness was well known, both to the local people eager to take revenge and to rescue their kinsmen and property, and to the soldiers themselves. Therefore, on the march the most experienced and trusted officers were usually appointed as D. They brought up the rear, helped those who weakened and those who fell behind and repelled enemy attacks. The first case of this term's use is dated to 1567, as is recorded in the Chronicle of *aṣe* ↗Śärṣä Dəngəl.

Dagəm məṣ'atu läkrəstos

D.m. (ዳግም፡ ምጽአቱ፡ ለክርስቶስ, 'the second coming of Christ') belongs to one of the "Five Pillars of Mystery" (↗*Amməstu aʿəmadä məśṭir*) in the ↗Ethiopian Orthodox Täwaḥədo Church, the Resurrection of the Dead. It is called ዳግም (*dagəm*, 'second') because the human birth of Christ is known as the first coming. The teachings of the D.m. are found in Mt 24:25 (cf. also 1 Cor 15:51f.; 1 Thes 4:16f.). The Book of ↗Enoch can be interpreted as the detailed teachings about the D.m., particularly it says that the Lord will return on a Sunday.

The Ethiopian Church accepts and teaches the fundamental dogmas in the Nicaean Creed, in which the D.m. is referred to. St. ↗Yared wrote about the D.m. in the ↗*Dəgg^{w}a*, ↗*Ṣomä dəgg^{w}a* and *Mäzmur*. The ↗*Fəkkare Iyäsus* gives prophetic warning about the D.m. The author prophetically writes about things that happen before the D.m.: a big star with a tail will be seen on the sky and there will be a battle between two kingdoms, Gog and Magog, in the north. Since the D.m. (as well as the Resurrection of the Dead and the Ascension of Christ) is mentioned in the ↗Anaphora, it is mentioned at every liturgy. The Anaphora of Jacob of Serug 88–92 reads as follows: "Because thou didst say, Heaven and Earth shall pass away, but my words shall not pass away. Thou also didst say, The horn will be blown three times to awaken the dead". Church fathers such as ↗Athanasius also teach about the D.m.

The Ethiopian Orthodox Täwaḥədo Church celebrates the D.m. twice a year. The first celebration takes place on the fourth Sunday of Easter Lent, which is known as the festival of the Mount of Olives (Däbrä Zäyt). In addition, if one of the extra five days placed at the end of the year and in *Ṗag^{w}əmen* happens to be a Sunday, then it is celebrated as the D.m.

Däggafi

D. (ደጋፊ, lit. 'supporter') is a name for a servant who accompanies by foot a lady or cleric riding a horse or mule. His duty was to run beside them and see that the rider did not fall off. Usually noblemen were not assigned a D. However, after a good dinner, a careful host – after seeing his guest up to the gates himself – often ordered one or two servants to accompany the guest as D., a courtesy which sometimes was not altogether unnecessary.

Ṣäḥafe tə'əzaz Gäbrä Śəllase accompanied by two *däggafi*; early 20th cent.; courtesy of Peter the Great Museum of Anthropology and Ethnography, St. Petersburg

At the royal court of ↗Gondär D. was made a court title, and in the Chronicle of *aṣe* ↗Iyoʾas a certain D. Wäldä Ab is mentioned (s. Guilyas 245). Nevertheless, D. was more a function than an office, which was usually carried out by any servant who was ordered to do so.

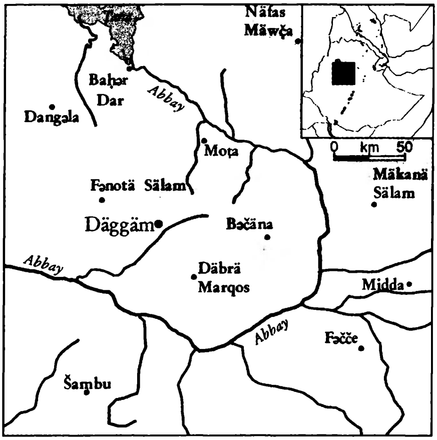
Däggäm

D. (**ደገም**, also Däggämo) was a village in the vicinity of Dämbäçа in southern Goǧǧam. The locality is mentioned in passing in the Chronicle of *aṣe* ↗Susənyos.



A military unit from the place seems to have been prominent in the early 17th cent.

Lit.: PerChron vol. 1, 257; BTafA 1016, s. index; HuntGeogr 176, 226.

Richard Pankhurst

Däǧǧazmač

D. (Amh. **ደጃዝማች**, also *däǧǧ azmač*, short form *däǧǧač*; Tgn. *däggäzmati*, short form *däggiyat*) was one of the highest military titles of traditional Ethiopia.

The prestige and rank of the bearer varied little in the course of the centuries until the title was reduced to a merely honorary one after 1941. Besides, those appointed by the provincial lords (↗*nəguś* or ↗*ras*) did not enjoy the same authority outside their jurisdiction as the imperial ones. Maḫtämä Śəllase Wäldä Mäsqäl (MahZekr 642f.) ranks it second to *ras* in his undocumented protocol of ranks, but there have also been cases where a D. could eventually be more prestigious and influential (particularly if he governed a powerful region, such as ↗Bägemdər) than an ordinary *ras* (cp. the case of D. ↗Gərmame). The provinces governed by such D. were known as **የነጋሪት፡ አገር** (*yänägarit agär*, 'the country of the drum of mobilization', the ↗*nägarit* being one of the articles of honour the D. was privileged to possess) or **የደጃዝማች፡ አገር** (*yädäǧǧazmač agär*, 'the country of a D.'). These regions enjoyed a special prestige and, hence, no one less in rank than the D. was allowed to govern them.

The term is made up of two words: *däǧǧ* and ↗*azmač*. The second component, which was used independently as a title, was the most important one. It signifies both the function (e.g. military leadership) and the position (i.e. one who causes to direct) of the bearer. Between the 16th and the 19th cent., it was often combined with regional offices as *bägemdər azmač*, *goǧǧam azmač*, *mäqet azmač* etc. The sources do not agree on the origin of the first component. Some sources conjecture that it was a derivative from an Amharic term for 'rear' (↗*Däǧän*). Hence, D. would signify rear-guard commander, in contrast to ↗*fitawrari*, commander of the vanguard, *qäññazmač*, commander of the right, and *grazmač*, commander of the left wing. However, this proposition is apparently based on logic rather than on any linguistic or historical evidence. A likely explanation is from the root *d*–g, signifying outside (of the palace or the capital), 'door, threshold' (cp. Gə^{c}əz **ዴዴ**, *dede*, Amh. **ደጅ**, *däǧǧ*, Tgn. **ደገ**, *dägä*), hence 'vanguard' or 'commander of the ruler's door'.

Under normal circumstances, the military commanders (D., *ras*, *fitawrari* etc.) were separate from the court officials and their contact was regulated mainly through the office of the *ligaba* (↗*Gəbbi*). When exactly the office of D. (*däǧǧazmačənnät*) was instituted is equally unclear. Tradition alleges that D. and a few other military titles were introduced in the reign of *aṣe* ↗Dawit II. The official did, at any rate, gain prominence from the second half of the 15th cent. onward. As a replica of his imperial lord, the D. had three basic responsibilities: governor of a province, chief judge of his particular governorate and commander-in-chief of the men at arms under his jurisdiction. His court and camp were constructed in the same form as those of the sovereign and his ceremonial march was in no way different. He could appoint officers with similar titles up to a *fitawrari*. He could pass verdicts in matters of administrative, civil, criminal and, to some extent, religious cases. The death sentence was in principle reserved for the sovereign, though some high officials (including a D.) were granted a rope at the time of their appointment as a special symbol of authority to punish criminals by hanging.

Bairu Tafla

Dagmawi Mənilək

In 1909 A.D. [1901 A.M.], while assistant to Francesco ↗Gallina at the Regio Istituto Orientale in Naples, ↗Afäwärq Gäbrä Iyäsus published a biography of *aṣe* ↗Mənilək II in Amharic, entitled D.M. (**ዳግማዊ፡ ምኒልክ፡ ንጉሠ፡ ነገሥት፡ ዘኢትዮጵያ**, *Dagmawi Mənilək nəguśä nägäśt zäʾityopya*). Printed in Rome at the Casa editrice italiana, the book, with 123 pages and of small format (12 x 16.5 cm), opens with a preface by his mentor, Gallina, and an introduction in which Afäwärq praises the use of Amharic instead of Gə^{c}əz. The narration does not include the battle of ↗^{c}Adwa, but after the text the edict of 10 *Gənbot* 1901 A.M. [18 May 1909] is added. Provided with an index, the book was dedicated by the editor to Yoḥannəs, the author's first son, who had just been born. It was on this son's initiative that the work would be re-edited in June 1967.

From 1883 to 1894 Afäwärq was a confidant of *aṣe* Mənilək II and was direct witness of important political events affecting Ethio-Italian relations, before being exiled because of his Italian sympathies. It is thus as collector of memories that he told the story of the Emperor, praising his achievements, rather than – as was his claim – as biographer or historiographer, and even less as historian. The criticism against D.M. of being incomplete or inexact are hence without foundation. Equally unfounded is that the author sought the Emperor's favour, since by 1909 Mənilək no longer exercized power. Indeed, the work faced hostility since it unmasked prominent contemporary groups and individuals.

By means of its tone, its style – vivid and pictorial, but a little obscure and peculiar – and its recourse to accounts of personal witnesses, it represents an innovation in Ethiopian historical literature (↗Historiography). It constitutes one of the rare direct Ethiopian sources on the first part of the reign of Mənilək. Often quoted for this reason, it remains nonetheless an isolated work, without having exercized much direct influence over historiography.

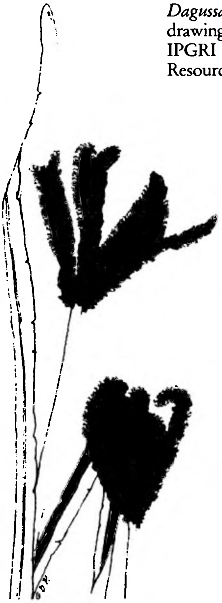
Dagussa

D. (**ዳጉሳ** or **ዳጕሳ** *dagʷəssa*) is the Amharic name for the minor cereal crop known as the African finger millet. It is a widely cultivated cereal belonging to the grass family (*Poaceae*). Botanically, D. is known by the name *Eleusine coracana*. It is mostly significant in the highlands of Ethiopia and Uganda.

D. is probably an Ethiopian domesticate, as it features among the oldest archaeological records (its grains were found in excavations of ancient sites). As it was also rather early recorded in India, it is possible that it was taken there together with other crops (sorghum, pearl millet, cow-pea) and cotton from Africa (cf. Vavilov 1951; Harlan 1969; Hancock 1992). In modern times D.'s importance has declined while other indigenous and introduced cereals have gained popularity (↗Plants, cultivated). The crop is still cultivated in many locales as a companion crop for minor uses.

Botanical and agronomic descriptions for the crop are available in many books and taxonomic accounts. In the wild, the species is encountered as an escape on roadsides. It is tolerant to drought and dependable under poor conditions. The plant is an annual that grows up to a height of about 0.5–1 m and has the appearance of a tall tufted grass. The head is branched into 5–7 spikes (fingers), usually 5–10 cm long, with



Dagussa plant (*Eleusine coracana*); drawing 1985, courtesy of the IPGRI (International Plant Genetic Resources Institute), Rome, Italy

numerous spikelets, which appear like fingers emerging from the hand. The dull red grains are rich in carbohydrates as well as calcium and iron and are known to store very well. ↗Bread, porridge and gruel can be made of D. flour alone, or in admixture with other cereals. The grains are used also in the making of various traditional beverages, including the famous *ṭälla* and *aräqi / katikala* (↗Drinks).

At present, D. is grown mainly in the northwestern parts of the country in the *q^{w}älla* and *wäyna däga* ecological zones (↗Climate) at altitudes ranging from 1,000–2,000 m A.S.L. The crop is said to show less diversity as compared with other indigenous cereals.

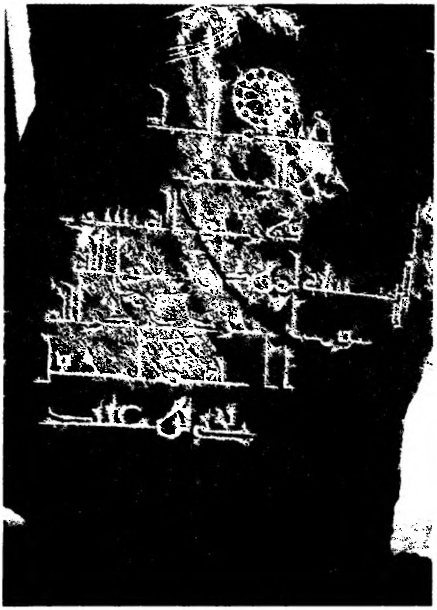
Dahlak islands

History of the Dahlak islands until 1945

The D. (دهلك) islands are an archipelago of ca. 125 flat islands, islets, rocks and coral reefs with deeply indented coasts in the Red Sea off the port of ↗Massawa, extending ca. 350 km. Their centre lies at about 40°10' E, 15°45' N. The most important islands are Dahlak (al-)Kabīr, Nokra (with the seat of administration), Nūra, Dohol, Raka (Baka), Daraka and Hāwāṭib.

So far the etymology of the name remains obscure (cf. Basset 1893:85–88). Al-Hamdānī (d. 945, ed. 1884–91), al-Ǧawālīqī (d. 1114; ed. 1942:66) and Yāqūt (d. 1229; ed. 1924, vol. 2, 634) read *dahlak*, while the latter also gives *dahlik*. According to Yāqūt (ed. 1924, vol. 3, 34; see also Ibn ad-Dayba^{c} 1971:185, n. 4), followed by al-Ǧawālīqī, *dahlak* is a foreign word which became Arabicized. Al-Akwa^{c} (1990:93, n. 1) remarks that in his *Mu^{c}ǧam mā ista^{c}ǧama*, al-Bakrī (d. 1094) gives *dalhak* – with metathesis of *h* and *l* – while in Piamenta (1990:159) the word *dahlak* is said to mean 'big merchant'. The broken plural *dahālik* also occurs as a place name (al-Hamdānī 1884–91, s. index; cp. Wright 1859:226 c–d). In the *dīwān* of the poet Kuṯayyir ^{c}Azza, *al-dahālik* evidently indicates the D. islands. The Ethiopian sources give *daḫlak* (ዳኅላክ, DillmLex 1422), *dahlaka*, *dalĕk*, *dālĕk^{h}* (Ricci 1954:116, n. 41) and *dälk*, *dahluk* (Acts of ↗Filəp̣p̣os of Däbrä Bizan, Conti Rossini 1900:106). Finally, the Arabic stelae read *dahlakā/dāhlakā/ad-dahlakāy*, but never a form derived from *dahlīk*.

In Pharaonic times, the D. may have been known as "the islands of the inhabitants of Uten" (CRStor 48) and in classical times the islands were called Elaía (Ptolemy, Artemidoros, Strabo) and Aliaeu (Pliny the Elder), both perhaps names of a tribe in the region of ^{c}Asīr in Western Arabia, between the Ḥiǧāz and Yemen. The ↗*Periplus of the Erythraean Sea* speaks also of Alalaios, a group of small islands off the port of ↗Adulis, which produced tortoise-shells. The Greek/Latin names are not found in the Arabic sources. Schneider (1983,



Ancient Muslim gravestone with *kūfī* inscriptions, from the Dahlak islands; from Schneider 1983, pl. II

vol. 1, 9–15) gives a list of Arab and European authors who mention or describe the islands.

Rainfall and vegetation on the islands are scanty and living conditions harsh. There are natural and carved-out cisterns, the latter attributed to the Furs, or Persians (CRStor 295).

Relations between Abyssinia and the D. islands are attested between the 4th and 7th cent. A.D. After Abyssinian pirates had sacked Jedda in 702 (Wüstenfeld 1857–61, vol. 2, 44), the D. islands were occupied by the Muslims. They thus became a bridge-head of ↗Islam in North-East Africa. The Umayyad Caliph ᶜAbdalmalik b. Marwān (r. 685–705) used the islands as a prison (*ḥabs,* Ibn al-Muǧāwir 1951-54:110). Under Caliph ᶜUmar b. ᶜAbdulᶜazīz (ᶜUmar II, r. 717–20), Yazīd b. al-Muhallab, governor of Ḫurāsān, was in 717–18 sentenced to be exiled in D., but was then permitted to remain in the prison of Aleppo (Basset 1893:18). The poet ᶜAbdallāh al-Aḥwaṣ al-Anṣārī (655–728) was an exile in D. four or five years for having written satirical verses against Caliph Sulaymān b. ᶜAbdalmalik (r. 715–17). Caliph Yazīd II b. ᶜAbdalmalik (r. 720–24) permitted him to leave what he called 'the land of thorns' (*arḍ aš-šawk*). The same caliph sent the religious scholar (*faqīh*) ᶜArrāk b. Malik into exile in D. This fate also fell on the sons of ᶜAbdalǧabbār b. ᶜAbdarraḥmān, the governor of Ḫurāsān, who had been put to death in 759/60 by the ᶜAbbāsid Caliph al-Manṣūr (r. 754–75). Exiles to D. are also mentioned by Ṭabarī (1879–1901, vol. 2, 1777). Hārūn ar-Rašīd (r. 786–809) is said to have asked the famous Muslim jurist Mālik b. Anas (715–95) whether he should attack the people of D. (al-Maqrīzī 1959, vol. 2, 202). This perhaps is to be put in relation with the revolt in Yemen against ar-Rašīd's governor Ḥammād al-Barbarī. The islanders may have taken advantage of that rebellion in order to liberate themselves from Yemenite tutelage.

In the 9th cent., the D. islands, along with the settlements on the African coast, were under the Christian ruler of Abyssinia (cf. al-Yaᶜqūbī 1892:319; 1937:159). Around 900 the king of ↗Aksum concluded a treaty of friendship with Ibrāhīm b. Ziyād (d. 902), the Ziyādid ruler of Zabīd in Yemen. The historian ᶜUmāra al-Yamanī (d. 1174) relates that the Ziyādid Isḥāq b. Ibrāhīm, Abū l-Ǧayš (r. 911–81) entertained good relations with the Abyssinian king and with the ruler of the D. islands, from whom he received black slaves, ambergris, leopard-skins and other objects (Kay 1892; cp. Ibn Ḥawqal 1964:122f.). Isḥāq even extended his rule over the islands, on which he imposed a tribute, consisting, among other items, of 500 Abyssinian and 500 Nubian female slaves. ᶜUmāra also seems to allude to pearl-fishing near the islands (s. Kay 1892; Derenbourg 1897–1904). Never a real political power of their own, the islands served as a transit station for goods travelling from Abyssinia to Yemen and profited from the thriving trade, which consisted mainly of Abyssinian slaves, who were highly valued in the Muslim world (cf. CRStor 297).

The necropolis of D. contains 260 + 7 stelae (Schneider 1983, vol. 1, 431), of which 56 undated and 33 dated stelae represent the period between 864 and 1010. They reflect Ismāᶜīlī influence, which was spreading in South Arabia at this time. In general, the names of the deceased refer to various tribes in Arabia, or to Mecca, Syria, Iraq, Iran and Byzantium, thus showing that D. was an international trading

Dahlak archipelago on a map of the German Imperial Navy of 1909 (as reprinted and slightly revised in 1943); collection of Alberto Valle post between Egypt and India. Stele no. 85, dated 980 A.D., is that of the daughter of Ḥafṣ b. ᶜUmar al-Yamanī, who died in ↗Əndärta in 1001.

In the 11th cent. D. played a role in the fighting between the ↗Naǧāḥids, a dynasty of Abyssinian slaves who ruled in Yemen from Zabīd (1022–1158), and the Ṣulayḥids, who ruled in Yemen from Sanᶜaᵓ (1047–1138). Like the Ziyādids (818–1018) before them, the Naǧāḥids imported soldier-slaves from Abyssinia. In 1061 Naǧāḥ, the founder of the Naǧāḥids, was killed. His sons, driven out from Zabīd by the Ismaᶜīlī Ṣulayḥid ᶜAlī b. Muḥammad (r. 1047–81), fled to the D. islands, which became the base of Naǧāḥid power. In 1081 Saᶜīd b. Naǧāḥ attacked Zabīd. According to ᶜUmāra (Kay 1892:83, 112), ᶜAlī b. Muḥammad counter-attacked Saᶜīd with 5,000 Abyssinian lancers, but according to Basset (1893:20), they fought for Saᶜīd. ᶜAlī b. Muḥammad was killed and Saᶜīd entered Zabīd. Through a local chief, ᶜAlī's grand-son ᶜAlī b. Aḥmad b. ᶜAlī (r. 1075 or 1086 to ca. 1091, cf. Bosworth 1996:102) had persuaded Saᶜīd to attack him. Saᶜīd is said to have launched an attack with 20,000 Abyssinian foot-soldiers, but they were dispersed and Saᶜīd again fled to D. In 1086 he re-established Naǧāḥid rule in Zabīd. He was killed in 1089 and succeeded by his brother Ǧayyāš b. Naǧāḥ.

Around 1075, D. again became a place of refuge, this time for the Egyptian ᶜAbdūn, who had deceitfully tried to become metropolitan bishop of Abyssinia. When the rightful metropolitan arrived, ᶜAbdūn fled to D., where he was imprisoned by the Muslim ruler. His possessions were confiscated and he himself sent to Cairo, where he was condemned and executed, probably in 1086 (Renaudot 1713:453; cp. TadTChurch 47, n. 3).

Inscriptions on tombstones (Schneider 1983, vol. 1) show that the islands, during the 12th and 13th cent., were important for the transit trade between Egypt and India. Among the deceased of this period are individuals who originated not only from Arabia, Syria and Iraq, but also from present-day Georgia, the south-west coast of the Caspian Sea, Marrakesh, Sousse and Valencia. They probably were artisans and merchants in transit, who had to pay levy-tax on D. The commercial activities of a certain Joseph Lebdi, who travelled between Cairo and India and called several times at D., are documented for 1097–98 (s. Goitein quoted by Schneider 1983, vol. 1, 34, n. 138).

Between (before 1093 or) ca. 1140–1249 the islands were ruled by a line of *sulṭān*s. In this period the title *sulṭān* was still limited to holders of real political and military power. Ṭuġril *beg* (r. 1038–63), founder of the Great Seljuk Sultanate in Iraq and Persia, was the first to receive this title from the ᶜAbbāsid caliph. Outside the islands, the rulers of D. were indicated as *ṣāḥib/malik* or *mutamallik* (*ǧazāᵓir*) *dahlak* (al-Qalqašandī, quoted by Schneider 1983, vol. 1, 37, n. 147). The titles of the D. rulers show resemblance to those used by Nūraddīn Maḥmūd b. Zanǧī of Aleppo (1147–74; cf. Wiet 1951–52:92): "defender of Islam, defender of the marches of Islam, glory of Islam and the Muslims, beauty of the sultans, standard of the champions of the faith, revivifier of justice in the worlds". These titles have a Sunnī character. In 1125–26 the *amīr* al-Muwaffaq, commander of the military slaves in Egypt, came with one hundred men to D. in order to arrest Ibn Naǧīb.

The first stele on which the title *sulṭān* is found dates from 1093 (s. below 1.). The epitaph reads: "*al-sulṭān al-mubārak*, client [*mawlā*] of ᶜAlī b. Aḥmad, died in 1093". Schneider (1983, vol. 1, 369; cf. Schneider 1983:167f.) translates: "Le sultan al-Mubarak". But Wiet (1951–52:90) has already remarked that *al-mubārak* may also be interpreted as an adjective, meaning "the blessed". In that case it is not sure that this *sulṭān* belonged to the Banū Sadād. On the other hand, as Wiet remarks (1951–52:91), the relative *al-mubārakī* (s. below no. 5) may be an indication that this *sulṭān* did belong to the line of *sulṭāns* of D. between (some date before 1093 or) 1147 and 1249 (s. below nos. 1–9; Schneider 1983, vol. 2, "Tableaux généalogiques", no. 13). In epitaphs of other *sulṭān*s, such as that of *sulṭān* Bahāᵓaddīn Abū l-Faḍl al-Mālik (s. below no. 4, stele no. 225), it is said: "this is the tomb of ... *sulṭān* Bahāᵓaddīn" etc. In 1119–20 the *daᶜī*, or *Šīᶜī* propagandist, Ibn Ḥāǧib ad-Dawla, met in D. with the *dāᶜī* Muḥammad b. Abī l-ᶜArab of Aden (Kay 1992:57).

The genealogical table is not complete. Most of the *sulṭān*s do not have their own stelae, their names are mostly found in the epitaphs of other people.

1. Sulṭān al-Mubārak or "the blessed sultan", d. 1093.
2. Abū s-Sadād al-Muwaffaq (I) b. Yaḥyā b. Abī s-Sadad al-Muwaffaq al-Mubārakī, Nāṣiraddīn. His name is found on stele no. 226 in the epitaph of his daughter Zaynalmulk. According to Wiet (1951–52:91), he died in 542 H. [1147/48 A.D.].
3. Yaḥyā (I) b. Abī s-Sadād al-Muwaffaq. He is mentioned on stele no. 223 in the epitaph of his client Umm ᶜAbdallāh. According to Wiet (1951–52:91), he died in 563 H. [1167 A.D.].
4. Abū l-Faḍl al-Mālik b. Yaḥyā b. Abī s-Sadād al-Muwaffaq, Bahaʾaddīn. He died in 567 H. [1172 A.D.] (stele no. 225).
5. Abū s-Sadād (II) al-Muwaffaq b. Yaḥyā b. Abī s-Sadād al-Muwaffaq al-Mubārakī. He is mentioned on stele no. 219 in the epitaph of his client Umm Yūsuf Fātiḥa (who died in 1133) and on stele no. 224 in the epitaph of his daughter Sitt al-Mulk (who died in 1171). According to Wiet (1951–52:91), he died in 1193.
6. ? b. Yaḥyā (II) b. al-Malik b. Yaḥyā b. Abī s-Sadād al-Muwaffaq. On the fractured stele no. 233 the date of death is illegible. Schneider (1983, vol. 1, 399) remarks that this may also be the tomb of a parent or of a client of the sultan.
7. Abū ᶜAbdallāh Muḥammad b. Yaḥyā b. al-Mālik b. Abī s-Sadād; d. 1230 (stele no. 242).
8. Fāḍil b. Sulaymān b. Abī s-Sadād b. Yaḥyā b. Abī s-Sadād al-Muwaffaq. He is mentioned on stele no. 246 in the epitaph of his daughter (?) Qamula (?), who died in 1240.
9. Abū s-Sadād (III), mentioned by Schneider's "Tableaux généalogiques", no. 13, as descendant of Abū s-Sadād II. According to Wiet (1951–52:91), his full name is Abū s-Sadād b. Abī s-Sadād al-Muwaffaq b. Yaḥyā al-Muwaffaq. He died in 647 H. [1249 A.D.].

The Egyptian poet Ibn Qalāqis (d. 1172; cp. EI^2, "Ibn Ḳalāḳis"), who had suffered shipwreck in the Red Sea and sought shelter on D., was badly received by Mālik b. Sadād (above no. 4), whom he calls "Mālik, guardian of Hell" (i.e. D.), with a play of words on Mālik, according to tradition the guardian of Hell (s. al-Buḫārī 1903, vol. 1, 449; Ibn al-Daybaᶜ 1971:185 n. 4). The Sunnī character of the titles given above may refer to the fact that the *sulṭāns* were looking for investiture from Nūraddīn of Aleppo, at a time when the power of the *Šīᶜī* Fāṭimids, probably their overlords, was in decline (Wiet 1951–52:91). During the reign of the Ayyūbid Tūrān ŠāhI b. Ayyūb over the Yemen (1174–81), D. was independent from both Abyssinia and the Yemen. But such periods of independence, which may have reached out to coastal settlements on the African mainland, including ↗Massawa, were short-lived. The islands intermittently fell under Abyssinian or Fāṭimid, later Yemenite, suzerainty.

In 1171 A.D. the Spanish Jewish traveller ↗Benjamin of Tudela travelled from ᶜAyḏāb to Aswān. D. and some settlements on the African coast, he writes, were ruled by Muslims.

Of the 12th cent., only a few stelae are known. This may be an indication that commercial activities had diminished. Stele no. 239 contains the epitaph of Rizqallāh b. ᶜAbdallāh al-Ḥabašī al-Qirwāšī (d. 1214), a Muslim of Abyssinia, called *nāḫuḏā*, the Persian word for ship-owner or "manager" in charge of passengers and goods (Goitein quoted by Schneider 1983, vol. 1, 408).

In 1265–66 the Mamlūk *sulṭān* ↗Barsbāy wanted to interfere in Red Sea trade, but the islanders managed to continue their lucrative activities. Ibn Saᶜīd al-Maġribī (d. 1286; s. EI^2) relates that the ruler of the islands was an Abyssinian Muslim who tried to defend his independence against the rulers of the Yemen. The Abyssinians called the *sulṭān* of D. *šumä baḥər* 'prefect of the sea', to distinguish him from the ↗*baḥər nägaš*, a high-ranking Abyssinian official. The ruler of D. had a *nāʾib*, or deputy, in Massawa, the port which still in the 16th cent. was linked to the D. islands (de Barros 1777, vol. 8, ch. 1).

There are no stelae of the 14th cent. Abū l-Fidāʾ (d. 1331) relates that the ruler of D. was "managed" by an Abyssinian Muslim. In 1385 the ruler of D. sent an elephant, a giraffe, an ostrich and other wild animals as presents to Yemen, and in 1392–93 to Egypt, together with male and female slaves, who probably came from Abyssinia.

In the 15th cent. *aṣe* ↗Zärʾa Yaᶜəqob tried to establish Abyssinian influence over the lowlands along the Red Sea. This led in 1464–65 to the pillage of Massawa and of the D. archipelago, during which the local *qāḍī* was killed (s. KolTrad).

In 1513 d'Albuquerque, the Portuguese governor of India, sent captain João ↗Gomes from Qamarān island (cp. EI^2, "Ḳamarān") to D. and Massawa in order to reconnoitre. The *šayḫ* of D., probably *sulṭān* Aḥmad's father Ismāᶜīl, who was a vassal of the *sulṭān* of Aden, said that there were no merchants on the islands, only fighters. In 1517 Lopo Soares de Alvergaria, then governor of India, sent João de Silveira to take possession of Massawa and D. Even though Aḥmad b. Ismāᶜīl submitted to him and made a great show of friendship, de Silveira preferred to stay at "Darua", near ↗Ḥərgigo, on the mainland. Five Portuguese, who had been assured they would be safe, were ambushed on D. (al-Kabīr) and killed, probably by Aḥmad b. Ismāᶜīl, who was described by the Armenian ↗Mateus as a man to be mistrusted. In 1520 Diogo Lopes de Sequeira, successor of Lopo Soares, left Goa on a punitive expedition against D. On board were the Armenian Mateus and the ambassador Rodrigo da ↗Lima. Massawa was occupied, while on D. houses and huts were destroyed. In 1526 *sulṭān* Aḥmad submitted to Hector de Silveira and committed himself to pay 3,000 *parados* annually. Some time later he joined ↗Aḥmad b. Ibrāhīm al-Ġāzī and received Ḏuḫunu/Dahono [Ḥərgigo] as appanage (Schneider 1983a, vol. 1, 45ff.). On stele no. 255, Aḥmad b. Ismāᶜīl, the last ruler on Schneider's list, is called "fighter for the faith" (*muǧāhid*), warrior on the frontier (*murābiṭ*), the *sulṭān* of Islam in the march of the well-protected D. (*sulṭān al-islām bi-ṯaġr Dahlak al-maḥrūs*). He died on 16 *Šawwāl* 946 H. [24 February 1540 A.D.] i.e. before the Portuguese attack against D. of 1541 and the battle of Sälf (in the region of Särd) in the same year between *aṣe* ↗Gälawdewos and *gärad* Ǝsman (BassEt I, 332f.). Aḥmad b. Ismāᶜīl's successor was appointed governor of Ḥərgigo, but this led to a second Portuguese attack in 1541, in which D. was destroyed and a mass evacuation of the islanders took place. When Estevão da ↗Gama arrived in Massawa in 1541, the local ruler, a Muslim, also ruled D.

With Ḫadim Süleyman *paša*'s naval expedition of 1538 against Gujarat began the rarely asserted Ottoman suzerainty over the D. islands.

In the second half of the 19th cent., the islands temporarily came under Egypt, but they remained a backwater. In 1889 the Italians occupied Eritrea and established a vice-residency on the island of Nokra. The census of 1931 gave a total of 2,275 inhabitants, composed of 1,475 Təgre, 475 Arabs and 325 ᶜAfar. After the end of the Italo-Ethiopian war in 1941, the D. islands came under British care-taker rule until 1952, when Ethiopian sovereignty was established.

Dahlak ethnography

Today, out of the entire D. archipelago, four islands are inhabited, with a total population of ca. 2,500, most of them officially recorded as ↗Tәgre (the original inhabitants calling themselves Dahālík), specialized in fishing and fish trade. Most of the inhabitants, ca. 1,500, live on D. al-Kabīr, a former *Därg* military base. Traditional pearl fishery is still practised on that island, until the early 20th cent. mostly traded by the ↗Banyan. Also other goods were traded by them, like shark skins and fins for the China market, tortoise-shell, cowrie shells and mother-of-pearl (cp. Pankhurst 1979).

Haka na Dahālík ('Language of the people of D.', s. below), mainly spoken on D. al-Kabīr, is influenced in its vocabulary by Arabic and ᶜAfar, which points to the political and migration history of the archipelago (e.g., Egyptian Mamluks fled to D. in the 16th cent, but also Arabs from the Arabian Peninsula and several Persians settled on D., s. Dapper 1652:663).

All men are at least bilingual (ᶜAfar, Arabic). Both continental Tәgre speakers and the Dahālík themselves traditionally style this language as a mixture of Tәgre, Arabic and ᶜAfar. Modern research shows, however, that the situation is more complex. In 2000 it has been reported that pure monolinguals do not understand continental Tәgre (Simeone-Senelle 2000:169). Munzinger in 1853 similarly noted that the language spoken on D. could hardly be understood by Tәgre in Massawa (Munzinger 1856:298). The lingua franca was then Yemenite Arabic. Interestingly, already the 17th cent. Dutch geographer Olfert Dapper, whose reports on "Abyßina" and surrounding areas are of considerable value, notes that the language of D. differs "to some degree" from the language spoken at the coast (Dapper 1652:663).

Apart from fishing, the population of D. also lives of salt trade. Large deposits of salt were discovered before World War II and again in the 1960s during drillings for oil. Oil-bearing layers had already been identified by 1917; exploratory drillings of 1935–40, especially in the surroundings of the village of Darbuset, eastern D. al-Kabīr, were stopped by the war.

The D. islands were declared a national park due to the considerable variety of the sea fauna and flora, which makes diving attractive. After 1993, the construction of a tourism resort started, but has been stopped after the deterioration of the relations with Yemen in 1995; tourism has been developed only on a small scale. Modern migration from the continent to D. remained relatively small, continental Tәgre and ᶜAfar being the most important migrant groups.

Wolbert Smidt

Haka na Dahālík

Haka na Dahālík (short form Haka Dahālík or simply Dahālík, lit. '[Language of] the people of D.') is the term used by the native speakers when they refer to their own language. This mother tongue of about 2,500 speakers is spoken exclusively on the largest island of the archipelago of D., D. al-Kabīr, and two smaller islands. Up to the 1996 French survey on the island, Dahālík had totally escaped linguistic investigation and was defined as Tәgre without attention to its linguistic specifics. Dahālík belongs to the ↗Ethio-Semitic group. Its exact position within this group remains to be assessed. It is close to Tәgre and Tәgrәñña, but many linguistic features, as well as the degree of mutual non-intelligibility between Tәgre and Dahālík speakers have suggested that Dahālík would be set apart as an original unit within the Northern Ethio-Semitic group. The discussion of this hypothesis is still open, as it had not yet been confirmed or disputed by other linguists. On the island, Dahālík is in contact with ᶜAfar, Arabic and, to a lesser extent, Təgre. The prevalent situation is that of bi-/multi-lingualism. Standard Arabic is the only language taught in primary schools.

The phonemic system includes five vowels (*a, i, e, o, u*) and *ə* in unstressed syllables; the status of long vowels has to be specified. There are 24 consonants, as in continental Təgre. Č̣ is the only ejective, which occurs in a few (loan?) items; the prevailing articulation of *ṭ* and *ṣ* is as velarized obstruents, as in Arabic. /*Q*/ is commonly articulated as a uvular: voiced in intervocalic position, voiceless in front of a consonant. Vocalic harmony is a widespread phenomenon. Assimilation of the apico-alveolars and bilabials to the first consonant of the suffix is regular.

The nouns have two genders and two numbers. Gender opposition for adjectives is very often marked by vocalic apophony. Broken plurals are wide-spread, but external plurals with suffixes are rare. The independent pronouns are: *ana* 'I', *enta, enti* 'you' (masc., fem.), *itu* 'he', *ita* 'she', *neḥna* 'we', *intum, intun* 'you' (masc., fem.), *itun, itan* 'they' (masc., fem.). The verb morphology is based on aspectual opposition with two simple paradigms, enlarged by composed conjugations with two auxiliaries *(h)elle* and *kōna.* In the perfect and the imperfect, the verbal personal markers are the same as in Təgre, except for the imperfect 3rd pers. masc. sg. (no marker) and 3rd pers. masc./fem. pl. (no personal marker, number marker only). In the imperfect, a few irregular verbs have the marker *i-* for 3rd pers. masc., as in Təgrəñña: *ibil* 'he says', *ibilu* 'they say'. Word order in the sentence is Subject–Object–Verb. There is a definite article *ya-*; the order in the phrase is (article +) qualified + qualifier: *ya-aw-awlet* 'the girl's father', *bisíd-da (/bisit-da/) ᶜab-báy* <woman-this (fem.) / old (fem. sg.)> 'this old woman'.

The ten-word list for D. is: *ḥente* 'one', *kile* 'two', *salas* 'three', *ᵓisat* 'fire', *may* 'water', *aḥya* 'sun', *warɛḥ*, *qammaret*, *qamar* 'moon', *dam* 'blood', *lisan* 'tongue', *sin* 'tooth'.

Marie-Claude Simeone-Senelle

Dainelli, Giotto

Professor D. (b. 19 May 1878, d. 1968) was a distinguished Italian geographer, geologist, palaeontologist and explorer. Part of his vast world-wide scientific research was devoted to Eritrea and Ethiopia, the destinations of two of his main expeditions. The first one, in the years 1905/06, led him to Eritrea. D. was accompanied by his fellow scholar, the geographer Olinto Marinelli. The achievements thereof were reported in the priceless book *Risultati scientifici di un viaggio nella Colonia Eritrea* (1912). The other expedition was carried out in north-western Ethiopia in the year 1937 and was concerned with research on physical geography, anthropology, economics, chemistry, biology, ornithology, botany and limnology. The results were summed up in a serial publication in seven volumes under the title *Missione di studi al Lago Tana* (1938). Among others, the series contains the following works: Lidio Cipriani, *Ricerche antropologiche sulle genti* (Roma 1940), Vinigi Lorenzo Grottanelli, *Relazioni preliminari* (Roma 1938) and *Ricerche geografiche ed economiche sulle popolazioni* (Roma 1939), Vinigi Lorenzo Grottanelli – Claudia Massari, *I Baria, i Cunama e i Beni Amer* (Roma 1943).

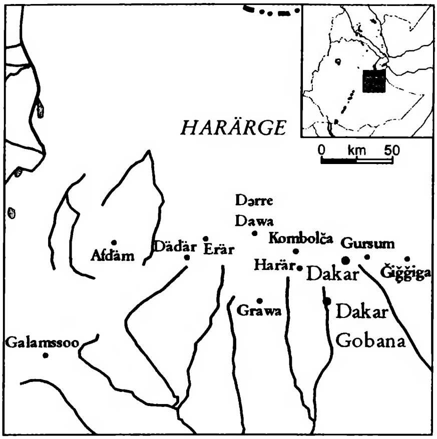
Lanfranco Ricci

Dakar

There are two places called D. (دكر). One, Dakar Gobana, was located on a slope south-east of Harär in immediate vicinity of the town near the road to ↗Ǧiǧǧiga, where today is an oil refinery (Paulitschke 1888:297; Robecchi-Bricchetti 1896:215; WagFath 82). It is said that some ruins are still visible there. Dakar Gobana was the place where the legendary *amīr* Ḥabbūba



is supposed to have defeated the Christian Čanbalul (?; Wagner 1976:201, note 46). It is also mentioned as a village (*qarya*) in the ↗*Fatḥ madīnat Harar* by Yaḥyā b. Naṣrallāh, year 1234/5 (WagFath 80).

Another D. according to a marginal note on a manuscript of ᶜArabfaqīh's *Futūḥ al-Ḥabaša* was located about 65 km east-northeast of Harär near the modern town Fiyambiro (Cerulli 1931:39). Huntingford (HuntGeogr 101f.) suggests that it may have been the fortified rocky hill "Čenahasan" (?) or "Jenasēnē" in this region.

This second D. became the capital of the ↗Walašmaᶜ rulers when they returned from Yemen and transferred the centre of their sultanate from ↗Ifat to ↗ᶜAdal, which was not so much exposed to Christian attacks. Al-Maqrīzī (MaqIlmam² 20) mentions D. as the residence of the Walašmaᶜ *sulṭān* ↗Aḥmad Badlāy b. Saᶜdaddīn. In 1479 D. was destroyed by *aṣe* Ǝskəndər when he fought against ᶜAdal (PerrEsk 342). In 1520 the Walašmaᶜ *sulṭān* ↗Abū Bakr b. Muḥammad b. Āzar transferred the capital of ᶜAdal from D. to Harär (Cerulli 1931:42). The *Storia dei re* reports that shortly before ↗Nūr b. Muǧāhid's death in 1568, the Oromo devastated many places, among which was also D. (Cerulli 1931:57). This is the last time that D. occurs in the sources.

Ewald Wagner

Dälanta

D. (ደላንታ) is a wide highland plateau on the northern side of the Bäšəlo river in North Wällo, between ↗Dawənt to the east and ↗Yäǧǧu to the west. From the 17th cent. onwards D. had been a buffer zone between Bägemdər, Wällo and Yäǧǧu regions. In modern Ethiopia, D. was first paired with ↗Wadla with a single designation as Wadla-Dälanta *awrağğa*, before being linked with Dawənt as a *wäräda*, the main town of which is Wägäl Ṭena.

Dämä Krəstos

D.K. (ደም፡ ክርስቶስ) was the 14th *wag šum* to appear in the official list of the regional rulers of ↗Wag and ↗Lasta for the years ca. 1720s–30s.

He assumed the office in the first quarter of the 18th cent. and was a contemporary of *aṣe* Bäkaffa and *aṣe* Iyasu II. His father, *wag šum* Aśär I was deposed by the son of one of his sisters, ↗Arʾayo, who took the office by force in ca. 1697. D.K. was unable to succeed his father and a local power struggle for the office of the *wag šum* emerged between *wag šum* Arʾayo and the descendants of *wag šum* Aśär I.

Oral sources indicate that D.K. was in rebellion against his nephew and later removed Arʾayo and acceded to his legitimate office. Power remained in the hands of D.K. until the advent to power of *aṣe* Iyasu II. He was succeeded by his son, *wag šum* ↗Tewodros, who is mentioned in 1740 as paying tribute to the court of *aṣe* Iyasu II.

Dämära

D. (ደመራ, from the root meaning 'to add, join') is a stack of upright poles or bundled twigs, which is erected then set ablaze on the eve of the Feast of the Invention of the True Cross of 17 *Mäskäräm* (s. ↗*Mäsqäl*). The ritual of the burning of the stack is called "D." as well.

The big D. is usually built in the centre of a town, on an open public area, in the vicinity of the church and sometimes under the auspices of its clergy. For the D., long straight twigs are cut and their upper ends are decorated with *mäsqäl*-flowers (*Delphinium dasycaulon*, but also others); this happens in a vivid and joyful atmosphere, which marks the entire week before the holiday. The twigs are brought to the place where the D. is erected. The D. is built under the supervision of a few old and respected people (*šəmagəllewočč*). The construction requires precision, lest the D. pyre, which may be around 12 metres high, fall and the feast be marred. As soon as the D. is constructed and embellished with *mäsqäl*-flowers, the top being decorated with the cross, the priests celebrate the liturgy and walk around the D. three times. The senior ecclesiastic blesses the D. The D. is left till the twilight, when the people gather to set it ablaze. This happens in the presence of the senior ecclesiastics, dignitaries and state officials (in Addis Abäba, the D. ceremony on Mäsqäl Square was usually attended by the Patriarch and the emperor himself). One of them (e.g., the governor or local chief) sets fire to the D. with a *čəbbo*-torch, amid common jubilation. While it is burning down, the people watch carefully; it is said that the direction of the D. fall points to the parts of the country where tribulations may be expected. The people take the ashes to draw on the forehead the sign of the Cross; they go home to burn piles of dry wood – small "D." of their neighbourhoods – and to participate in festive meal, dancing and singing.

We know that the *Mäsqäl* feast dates back into the first half of the 15th cent.; however, it is not known how old the D. ritual is. It certainly existed before the 19th cent., as European travel reports started to mention the "bonfires" in connection with the Christian feast of *Mäsqäl*. The Ethiopian Orthodox tradition derives the symbolic interpretation of the D.-ceremony from the narratives about the Finding of the True

Blessing the *dämära* at Hossäyna market, Hadiyya; photo 1999, courtesy of Dirk Bustorf

Cross by the Empress Helena; it is said that D. are kindled in commemoration of the bonfires Helena ordered be lit in Palestine to let the people of Constantinople know that the True Cross had been found (Hyatt 1928:165); otherwise, it is said that the D. symbolizes a bundle of burning twigs, the smoke of which came to the place where the Cross was hidden.

The ritual burning of bundled poles or twigs as the focus of a festival, similar to the *Mäsqäl*, is widespread among different ethnic groups of Ethiopia, and presents a complex set of indigenous cultural elements and Christian Highland influence, from both medieval and modern times. The feast is usually called by a name clearly deriving from the word *Mäsqäl*. It is generally celebrated in the period close to 10–27 *Mäskäräm*; cp. *Mäskäla* of the ↗Dorze on 15–17 September (VSAe III, 206f.), with the burning down of the big stack, *Maskarro* of Ǝnnarya and *Mašqarro* of Šeko (Lange 1982:46, 162f.), *Maskala* of Wälaytta with the setting ablaze of the *gulia*-bonfire (Petros F. Tekle 1961), etc. The festivities usually include ritual slaughter of cattle, and meat consumption. Previously, the Gurage celebrated their *Mäsqäl* at the beginning of the rainy season in June–July, with every adult male contributing his *Mäsqäl*-pole to the common *mʷəqʸər* – the equivalent of the D. (the role of the lighter of the bonfire implied a dominant position in the political hierarchy). Under the imperial authority, the feast was moved and styled in order to coincide with the nation-wide *Mäsqäl*. Among the agriculturalist groups of Ethiopia, the ritual of the D. might have been a reflection of an ancient pre-Christian celebration to mark the beginning of the dry season, the renewal of the procreative power of nature and a new period in economic and social activities of the people (cp. VSAe III, 206f., Shack 1968:460, n.1).

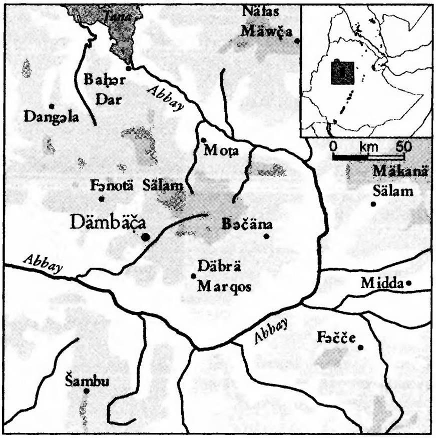
Dämbäč̣a

D. (**ደምበጫ**, also Dänbäč̣a) is a town in ↗Damot, situated about 40 km north-west of Däbrä Marqos, Goǧǧam (for a while the capital of D. *wäräda*, Qʷälla Däga Damot *awraǧǧa*). It probably developed as an urban settlement due to its location in a commanding position on the slope of a ridge extending from the ↗Č̣oqqe Mountains and along the great western caravan route from Gondär to ↗Limmu Ǝnnarya. Another factor may have been the safety provided by its renowned church, which the metropolitan *abunä* ↗Yosab made a sanctuary in the late 18th cent. The town appears to have gained importance in the early decades of the 19th cent. with the rise of *däǧǧazmač* Zäwde Səlṭan (d. 1809), who established his residence there. According to one tradition, he also raised the status of the church to a large ↗*däbr* with generous endowments. The church would subsequently serve him as a sanctuary from his enemies and as a resting place for his remains.

Däǧǧazmač ↗Goššu Zäwde also resided there frequently over his long period of rule over Goǧǧam and Damot, thereby enhancing the standing of D. Its market was important for the beewax that the surrounding regions produced.

The development of the Addis Abäba–Djibouti Railway and the consequent diversion to Šäwa of the trade of south-western Ethiopia and eastern Goǧǧam seems to have played a major part in the decline of D. as a market place in the 20th cent.

In 1999 the town of D. had ca. 11,500 inhabitants; currently it is the administrative centre of D.



(former) *awrağğa*, a part of Məʿərab Goğğam Administrative Zone within the Amhara *kəlləl*.

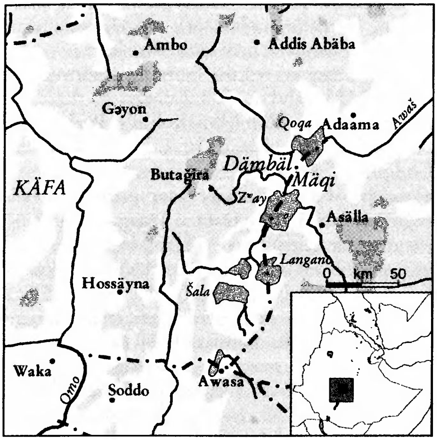
Dämbäl Mäqi

D.M. (ዴምበል፡ መቂ) is an area north-west of Lake ↗Zʷay around the Mäqi river, one of its main tributaries. The word *dämbäl* might be a corruption of Oromo *dambali* ('deep [of water], overflowing'), D.M. thus meaning 'the deep [place on the] Mäqi', or it may simply refer to Lake Zʷay itself, which is often referred to as Dämbäl. The name D.M. also refers to a small lake and a chain of mountains in the area. There was also a small town called ↗Mäqi (also Ponte Macchi) on the road to the south in the 1970s.



During ↗Mənilək's 1880 campaign against the ↗Arsi Oromo, he, together with the troops of the recently baptized *ras* ↗Mikaʾel, undertook numerous successful raids along the Zʷay coast, including at D.M. Mənilək returned there at least twice: in December 1886, when he camped on the shores of the Mäqi (s. GueCopMen I, 336), and in December 1895, when a major epidemic among horses and mules of the expedition broke out (ibid. II, 414).

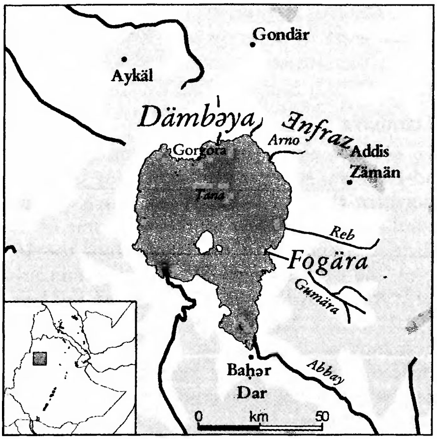
Dämbəya

D. (ዴምብያ, also Dämbiya; in Arabic sources: ad-Danbīya) is a vast plain bordering upon the northern shore of Lake ↗Ṭana, a rich agricultural district (in a few sources the name of the district is applied to the lake). Until the 16th cent. the population of D. was predominantly of ↗Agäw stock; later it constituted the large Fälaša (↗Betä Əsraʾel) population of the region, concentrated in particular around Gondär. A dialect of ↗Kəmantənay known as Dämbəñña or just as Dämbəya was reportedly spoken in D. till the 19th cent.

Since early times D. seems to have hosted trade routes connecting coastal areas with the interior of the African continent. *Aṣe* ↗ʿAmdä Ṣəyon I may have obtained some territorial gains in D.; some ↗*čäwa* were settled in D., perhaps from the 14th cent. on. Hagiographies of 14th-cent. monks (e.g., ↗Yafqərännä Əgziʾ, ↗Zäyoḥannəs) attest to the spread of Christianity into the region, which, however, was politically dominated by local rulers. *Aṣe* ↗Dawit II is reported to have appointed over D. a Fälaša governor from Səmen.

Some time in 1534 ↗Aḥmad b. Ibrāhīm al-Ġāzī (Grañ) chose D. for his residence, impressed by the fertility of the region. Afterwards, D. increasingly attracted the attention of the Ethiopian emperors, who, in resisting the ↗Oromo invasion, for security reasons had to move their "winter residences" further and further to the north. *Aṣe* ↗Śärṣä Dəngəl regularly visited D., and used to launch from there his expeditions to the south, against the Oromo, or, to the north, against the Fälaša of Səmen, and to the north-east. After *aṣe* ↗Zäəngəl was killed in 1604 by rebellious regiments at ↗Barča, in D., *aṣe* ↗Susənyos set up his "winter residence" there at ↗Gorgora, in 1614 (although this location, infested with malaria, appears less than ideal). His son *aṣe* ↗Fasilädäs completed the process by establishing in 1636 a genuine permanent capital city at ↗Gondär, also in D. Thus the status of the region changed radically. D. became not simply a granary for the growing city, but a capital district, and soon its governor with his traditional title of



↗*käntiba* became a sort of mayor of Gondär. The royal capital became the greatest consumer of goods, both imported and local. It was also the base where Ethiopian emperors and their armies returned after annual campaigns along with their booty, slaves being the most valuable and convertible items. This attracted to D. in general and Gondär in particular Muslim long-distance traders (mainly from ↗Sinnār), and in the capital a special quarter for them (Ǝslam Bet) was established, together with a quarter for artisans (Kayla Meda, or Fälaša Meda).

During the ↗Gondärine kingdom period, the capital district of D. prospered, whereas the territory under Christian monarchs' control diminished considerably. Probably to compensate for this, the Gondärine kings sought to concentrate in D. all famous sacred places of Ethiopia. In Azäzo, at the former Jesuit residence ↗Gännätä Iyäsus, "new Däbrä Libanos" was established, with the *tabot* of St. Mary from the old ↗Däbrä Libanos of Šäwa (↗Azäzo Täklä Haymanot). In Gondär itself such famous churches as ↗Däbrä Bərhan and ↗Däbrä Ṣäḥay Q^{w}əsq^{w}am were erected. The capital district of D. became not only the most important political and economic core of the Christian kingdom, but also a centre of ecclesiastical learning, art and culture. Due to the presence of the royal court, army and leading clergy, ↗Amharic, which had been spreading rapidly in D. since the middle of the 16th cent., became the predominant language; its local Gondärine variant was long considered the "superior" dialect of Amharic. For the same reasons, during the 17th–18th cent. D. became noted for its security, and the expression "safe as in D." was the best praise for any province in the country.

This situation changed with the appearance of *ras* ↗Mika'el Səḥul in D. in 1767 and the beginning of the so-called ↗*Zämänä mäsafənt*, which put an end to the real power of Gondärine kings. However, the former political and religious importance preserved a degree of significance to this region; in the 1820s it afforded a base for the short-time rise of *däǧǧazmač* ↗Maru. It was precisely this hegemony of both the district and the capital city that *aṣe* ↗Tewodros II wanted to liquidate by burning down Gondär in 1864. The next emperor, *aṣe* ↗Yoḥannəs IV, was not greatly interested in this region (↗Çəlga becoming its major settlement), and D. became an ordinary Ethiopian provincial district.

The Italians seized the Gorgora peninsula on 14 April 1936, and in 1938 inaugurated there, on the Vetta Mussolini ('Mussolini's Peak'), the Faro della Conquista ('The Lighthouse of the Conquest'). After the Liberation, D. became an *awraǧǧa* of Gondär/Bägemdər province, with the capital in Q^{w}älla Däbba. During the 1950–60s malaria remained a problem; in 1953–54 the government even had to order the evacuation of the district and the Q^{w}älla Däbba market. Since malaria seems to have been eradicated, tourism could benefit the population of the region. A boat service connects Gorgora to the monasteries of lake Ṭana and Baḥər Dar; the ↗Däbrä Sina church is still in good condition, but the ↗Maryam Gəmb church collapsed after the 1995 rains. According to the 1994 Census, the population of the region (after 1991 a *wäräda* of the Səmen Gondär zone, Amhara *kəlləl*) reached 226,000, while the population of Q^{w}älla Däba increased from 6,837 in 1984 to 11,716.

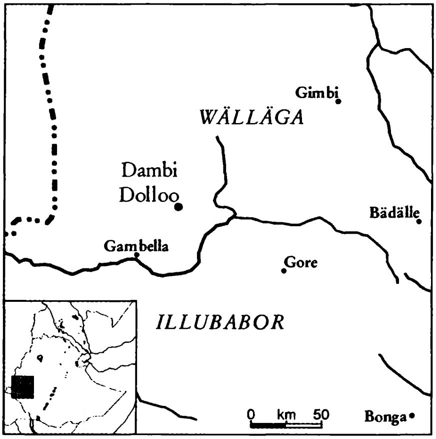
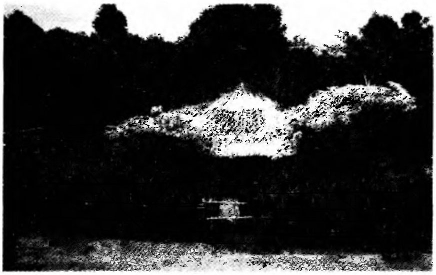
Dambi Dolloo

D.D. (Amh. sp. ደምቢ፡ ዶሎ Dämbi Dolo) is an administrative and trade centre on the western edge of the north Ethiopian highland at 1,821 m A.S.L. The town, earlier known as Sayyoo (under the name of the ↗Mäčča Oromo subgroup inhabiting the territory in and around it), was renamed during the period of Italian administration (↗Africa Orientale Italiana). The name D.D. probably refers to *dambi* or *dimbi* (*Ficus Thonningii*), a sycamore species holy for the Oromo.

It is the area where Oromo migration towards the west came to a standstill in the 18th cent. Between 1886 and 1908, D.D. belonged to the territories controlled by *mooti* ↗Gootee Tulluu, after he, with *aṣe* ↗Mənilək II's help, defeated the Sayyoo "strong man" Barayuu. In the 1930s it grew to a great commercial centre. From there, ↗coffee, agricultural products, wax and skins (earlier also gold) were exported to the Sudan; imported goods, in the first place, textiles, were sold on further into the country. Numerous foreign companies (especially Greek) were resident in D.D. In 1938 the population was estimated at 8,000 inhabitants (*Guida* 509).

D.D. is also an important early centre of western Christian missions (mostly Protestant). The Protestant mission school in D.D. was the major cradle of pan-Oromo nationalism; many Oromo Liberation Front (O.L.F.) leaders were educated here. In 1991-92, D.D. was the only district controlled and governed by the O.L.F.





Anfillo courtyard in Šabal near Dambi Dolloo; photo 2001, courtesy of Günther Schlee

In the administrative system of the Ethiopian Empire, the town was the capital of Qelləm *awrağğa* (Wälläga province). Currently, it belongs to Säyyo *wäräda* of East Wälläga Zone, *kəlləl* Oromiyaa. The town counts over 26,000 inhabitants (26,356 in 2000) and is growing rapidly. There is an international airport at D.D. In recent years it has been developing into a tourist centre (on the way to Gambella). Among its main attractions are the old gold mines in the vicinity of the town.

Hermann Amborn

Damian of Alexandria

D. (ደምያኖስ, Dəmyanos), an anti-Chalcedonian 35th archbishop of Alexandria (578 [577]–607 [606] A.D.) and saint, was a leader of a group of bishops and Church writers (Orlandi 1989) and the originator of a triadological concept which was predominant in Egypt until the late first millennium. Arguing against the so-called "tritheist" doctrine, where the three hypostases of the Divinity were considered as three separate beings, D. elaborated a diametrically opposite doctrine of his own, where the unity of the three hypostases was treated as an identity, with the only real distinction being of three "characteristic properties" which make the difference between the hypostases of the same nature (like "unborn", "born" and "proceeded"). D.'s teaching immediately caused (588) a rupture with the monophysite Severianist Patriarchate of Antioch. D. managed, however, to obtain support from the side of the Julianists (581). The last mention of Damianism as a separate Christian sect was made by a Muslim author in the 10th cent. (Dodge 1970:814, cp. note 400).

Despite the absence of D.'s works in Ethiopia, he is commemorated in the ↗*Sənkəssar* (on 18 *Säne*), and his thought influenced the Ethiopian Orthodox Church in many ways: first of all, in the 15th cent., under the pressure of the followers of ↗Giyorgis of Sägla, but also in the ↗*karra* doctrine (cp. discussion in Lourié 1999:329–34). For instance, the following is a specimen taken from the *Mäṣḥafä* ↗*məṣṭir* by Giyorgis of Sägla, where the trinitarian doctrine is entirely within the Damianist framework: "We have found, as to the Father, that He is called 'Father', being the Holy Spirit according to His hypostasis and His essence. And we have found, as to the Son, that he is called 'Son', being the Holy Spirit according to His hypostasis and the community of essence [calque from Gr. ὁμοουσιότης] with the Father. But we have found no father of the Paraklete, to call Him 'Son', nor son, to call Him 'Father'. Therefore, He is always called 'Holy Spirit', as was demonstrated by us, and the Holy Spirit is Holy Spirit, as was demonstrated by us, because 'spirit' means the Godhead impalpable and the power invisible" (YaqMist II, 268).

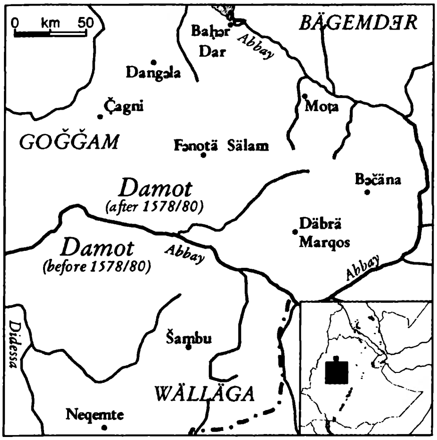
Dammohoytá ↗ᶜAdoyammára and ᶜAsahyammára

Damot

The kingdom of D. (ዳሞት) seems to have been in existence at least as early as the 10th cent. in the region immediately south of the ↗Abbay in present-day Wällägä and western Šäwa. Its bounds are uncertain, but they may have stretched as far west as the Didessa River and as far south as Wällamo. One of several states inhabited by non-Christian Sidama on and to the south of the Šäwan plateau, D.'s inhabitants may have had queens as well as kings for rulers. For instance, in the mid-10th cent., a queen of the "Banū l-Ham(u)wīya" led her people against the overlordship of the late Aksumite Christian kingdom, destroying churches, killing the king and many of his subjects, and threatening the kingdom's survival (↗Ǝsato). She restored her people's independence and thereafter ruled over a large and powerful kingdom that apparently included former Christian lands. Yet, the identity of the queen and the reference of this episode to D. are both uncertain (but note an alternative rendering of "Banu d-[D]amūta" for country and people). The earliest unambiguous reference to the "kingdom of Damot" occurs in 13th cent. ↗Zagʷe records.

From the 10th to the 13th cent., D. was the dominant power on the Šäwan plateau, defeating at least one Zagʷe attack from the north-east and reducing Muslim principalities as far east as Ifat to vassalage. In the early to mid-13th cent., a famed legendary ruler named ↗Motälämi (TadTChurch 121) led his subjects in devastating campaigns against Christian settlements in Šäwa. Later hagiographic legends maintain that the Šäwan saint ↗Täklä Haymanot evangelized in D. and converted Motälämi to Christianity, but such traditions are not reliable.

In the late 13th cent., ↗Yəkunno Amlak drove D. overlords from the Šäwan plateau, but it was *aṣe* ↗ᶜAmdä Ṣəyon I in the early 14th cent. who began subjugating the kingdom. Thereafter, Christianity and ↗Amhara culture slowly diffused among the population. By the 16th cent., D. had become an integral province of the empire of Ethiopia, and its governor carried the same title as the governor of Šäwa – ↗*ṣäḥafe lam*. During the mid-16th cent., the now partly Christianized population joined with their Amhara and Təgray



countrymen in fighting against the Muslim invasion of ↗Aḥmad b. Ibrāhīm al-Ġāzī.

About 1578–80, the ↗Mäčča Oromo branch attacked D. as they pursued their conquest of the Šäwan plateau. Unable to repulse the Mäčča, most of the people of D. submitted to their conquerors, who absorbed them into Mäčča society and made D. their new homeland. Some, however, including many who had become Christian, fled across the Abbay into ↗Goğğam. There, in the early 17th cent., they re-established their homeland in the plains between Goğğam on the east and Agäw lands on the west. Thereafter, D. once again became one of the major provinces of the Christian empire, and its inhabitants, composed of the population from old D., other peoples such as the ↗Gafat who had similarly fled before the Oromo, and various Mäčča groups who were permitted to settle on the north bank of the Abbay, accepted Amhara culture, adopted the Amharic language, and converted to Christianity.

Throughout the 17th and 18th cent., D. allied itself with Goğğam and ↗Q^{w}ara in pursuit of influence and power in Gondär. The province's military forces, especially its cavalry composed of ↗Ğawe Oromo were renowned for their fighting abilities. In 1704, as a reward for their service in his campaigns, *aṣe* ↗Iyasu I settled the Ğawe on the north bank of the Abbay in D. to serve as a bulwark against incursions by their Mäčča kinsmen.

Two Oromo, Tulluu and ↗Wäräñña, were among D.'s most prominent leaders. *Däğğazmač* Tulluu, governor of D. and son-in-law of *aṣe* Iyasu I, led his armies in Iyasu's unrelenting raids into Oromo lands south of the Abbay. Tulluu rallied his forces behind Iyasu in the struggle with Iyasu's son, the future Emperor ↗Täklä Haymanot I, over the throne in 1706. Tulluu helped negotiate Iyasu's retirement and Täklä Haymanot's accession, but Täklä Haymanot immediately exiled and blinded him in an attempt to quell discontent in D. and Goğğam over the arrangement.

Having helped enthrone *aṣe* ↗Iyasu II in 1730, D.'s leaders insisted that *däğğazmač* Wäräñña, not the court's nominee, be appointed their governor. Two years later, armies from D. and Goğğam under Wäräñña's command rescued the court from certain defeat at the hands of rebels who had laid siege to Gondär, ushering in four decades of Q^{w}aran rule. In early 1768, the D., again insisting that they be governed by one of their own, refused to accept *ətege* Bərhan Mogäsa's (Məntəwwab's) brother, Əšäte, as their overlord, a stance that contributed to Əšäte's death and to the end of Q^{w}aran dominance in Gondär. In 1779, they secured the enthronement of ↗Täklä Giyorgis I in place of ↗Solomon II as emperor. In the mid-20th cent., D. was incorporated into the Province of Goğğam as an *awrağğa*, after 1974 known also as Q^{w}älla Däga Damot.

Däm^{w}am^{w}it

D. (also Däm^{w}ät) is a female deity of the autochthonous folk-religion of the *Säbat Bet* ↗Gurage. D. has some symbolic relation to a certain type of snake and to the leopard. Like the other deities (or spirits) of Gurage, ↗Waq and ↗Bożżä, D. has an ambiguous nature: to people who observe the rules of the socio-religious order, she guarantees health and fertility, while her enemies have to suffer of certain diseases, e.g., the ritual illness of *zit*. The one who suffers of *zit* (eventually connected with liver or kidney problems) is seen as being possessed and ritually polluted, and is to be isolated from society.

Due to her life-giving power D. is associated with blood. In songs of praise she is called "the red" or the "bloody one". Her irascibility is expressed by referring to her "bloodshot eyes".

The deity is said to protect especially the women and the weak and to punish hard the sexual harassment of girls dedicated to her. D.'s function as a healer is shown, e.g., by association with the ↗*kosso* tree and its red blossom.

As Shack (1966:198) states, in the Gurage religious system "men and women are placed in a cross-sexual ritual relationship" with their accordant deities. The cult of D. is mainly a cult of women and can be seen as the structural antagonist of the predominantly male cult of Waq.

The internal structure of the D. cult is based on the *m^w^əyät* female age-organization and the male ritual representative of D., *Yäwäy dämam* ('Master of Honey') at Yäbiṭara, ↗Čaha.

Unmarried Gurage women – if following the old custom – belong to the *m^w^əyät* association from ↗circumcision till marriage. After marriage the relation to the association is weakened but not given up (but cp. Gabreyesus Hailemariam 1991:143). In the first month of membership in the *m^w^əyät* association the young girls are secluded and ritual knowledge is conveyed to them, including the secret "language" Fedwät, which is produced by the replacement or modification of a number of words (cp. Leslau 1964:16–30). Part of the ritual activities is allegedly related to an altered state of consciousness. The local *m^w^əyät* associations are led by male ritual specialists of ↗Fuga origin.

A selected group of *m^w^əyät* members does not marry, but dedicate life to D. Members wander around in small groups, carrying a croched ritual stick (*zänzäna*) which is considered as symbolic "husband". In the villages they visit they receive food and shelter from *m^w^əyät* members.

The *Yäwäy dämam*, and the shrine of D. he guards, is protected from ritual pollution by a set of taboos, similar to those surrounding other spirit intermediaries in southern Ethiopia. In contrast to the role women play in the D. cult it is not allowed to women, with the exception of *Yäwäy dämam's* wives, to enter his compound or to see his face for they are considered to be ritually impure. At the annual *Sänčä* festival *m^w^əyät* groups from all over Gurage gather at Yäbiṭara. The festival is characterized by rampant dancing and singing of chants of praise dedicated to D. (*wäywät*). The *Yäwäy dämam* receives a tribute of honey, grain, coffee or male sheep which is collected by the *m^w^əyät* leaders for the sake of D. At other occasions, sacrifices for D. are held at the waterside, where the blood of the slaughtered animals is led into the water.

The symbolic power of the *Yäwäy dämam* extends into the field of traditional politics and legal practice, therefore he attends meetings of the pan-Gurage assembly *Yäğoka*. According to Shack (1969:153) the *Yäwäy dämam* also plays a role during the installation rite of clan chiefs.

In the 1994 census a number of 731 people in Gurage declared that they follow a "traditional religion". A further differentiation could not be expressed in the census. In areas dominated by Christianity the *m^w^əyät* associations are considerably weakened; in Muslim areas of *Säbat Bet* Gurage their importance continued to a certain degree.

Dirk Bustorf

Dan

D. was one of the sons of the Biblical patriarch Jacob, and gave his name to one of the twelve tribes of Israel. Following the destruction of the northern kingdom of Israel, D. was one of the ten tribes that went into exile and became known as the Ten Lost Tribes. To this day, attempts are made to associate different groups and tribes with one of several of these tribes. Since the time of ↗Eldad Ha-Dani, there have been claims that the ↗Betä Ǝsraʾel were descendants of the tribe of D. In 1488, the noted rabbi and Talmudic scholar Obadiah of Bertinoro, wrote that the Jews from the land of ↗Prester John claimed to be from the tribe of D. The Egyptian Talmudist and legal authority ↗David Ben Abi Zimra based his affirmation on Betä Ǝsraʾel's Jewishness on the belief that they were descendants of D. This view was cited again by the Sephardi Chief Rabbi of Israel, Ovadiah Yosef, when in 1973 he declared the Betä Ǝsraʾel were Jews.

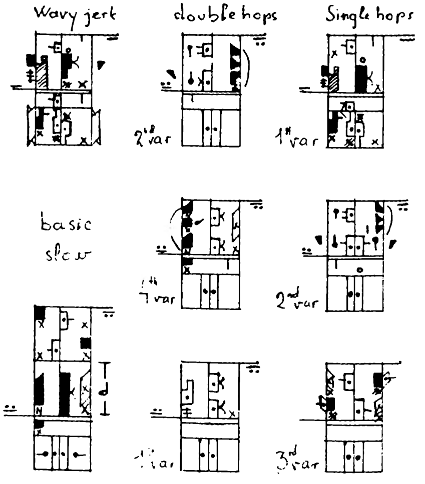
Dances, secular

Function and organizational structure

The majority of Ethiopian D. are performed by both men and women as entertainment at wedding celebrations and other festivities for family and friends, or on holidays such as ↗*Mäsqäl* and ↗*Ṭəmqät*. Some fulfil other functions related to courting and working and as displays of patriotism. D. can be performed individually or in pairs, or performed in alternation like the **እስታሌላይ** (*əstalelay*, a Təgray pair-D.). The Təgray pair-D. is performed with the Təgray circle-D.

Gurage steps



Some dance foot motifs, notated by Labanotion; from Tibor Vadasy 1973:220

The two-part division of the D., designated sections A and B, generally corresponds to an open-ended, cyclical, binary musical form. Most D. are in double metre, save the Təgray D., which are in triple metre. D. is accompanied by singing, hand-clapping and instrumental accompaniment, notably through various types of drums.

The accompanying *zäfän* (secular ↗songs) are responsive, consisting of a solo statement followed by a choral response. Although section A is always shorter in duration than B, each can last from about half a minute or less to several minutes until the cycle is repeated. Section A functions as a warm-up or rest period, sets the mood, and acts as a tension release after the climax is achieved in section B.

Basic foot motifs include stepping and/or stamping in place and various "walking" rhythmic patterns. The second longer section contains the D. proper. Compared with section A, section B has accelerated tempo, denser rhythmic patterns, greater dynamic level, an increased number of D. motifs and more energy expended executing D. movements. These changes can occur gradually or quite abruptly.

The basic D. formation consists of a circle from a dozen to over a hundred dancers and singers. Within the circle, there are solo dancers numbering from one to five individuals, or soloists grouped in twos, threes or fours, or solo dancers in multiple two- to four-line formation. Circle-dances focus on the group during the first section and highlight the soloists during the second section, where an outer circle of performers singing in chorus with instrumental accompaniment cheers on the soloists, who display their D. skills and virtuosity. This duality displayed within the AB format and the use of contrast exemplified by the group-versus-solo performance are dominant features of the D.

Ǝskəsta

A major feature of the D. is known as **እስክስታ** (*əskəsta*). The word is said to be derived from the Amharic **እስክስ** (*əskəs*, 'to do something smoothly'; s. Yasuko Endo 2001). This meaning is demonstrated by the symbolic imagery of moving water as replicated in the D. movements in the upper-shoulder region of the body, of water flowing, rippling and falling (waterfall).

Dance of ʿAfar warriors; early 20th century; photo by Arnold Holtz; from the collection of André Evalet

Ǝskəsta has been variously defined as a D. genre, a specific D., or D. style identified by its most prominent feature, the shoulder movements of the dancer. It is actually a D. technique with variations in the manner the shoulders are shaken. This "shaking shoulder" motif serves as the pivotal point of the technique itself. Shoulder movements involve direction (vertical, horizontal, diagonal), manner of movement (jerking, shaking, twisting) and points between which shoulders are able to move (direction, shoulder position). There are gradients and varying combinations of direction and position, as in the "jerking *əskəsta*". When the technique is extended, it affects other body parts, such as the chest or even the entire body. Technically, *əskəsta* is always supported by different body and foot movements such as bending, jumping, small springing action and knee flexions. *Ǝskəsta* is favoured by solo dancers to display their virtuosity, to stage a competition and to create and perform new solo parts in combination with other D. techniques.

Ǝskəsta can function as the most important component of a D. consisting solely of it, though it is used in conjunction with foot movements to support it, as in the D. of Goǧǧam and Gondär. Alternatively, it can serve as an accompaniment to another D. movement where body or foot movements are equal or more important than *əskəsta*, as in some of the Gurage or Mənǧar dances. It also can serve as the finale, as in the Təgray and Oromo D.

In Amhara D., both partners or soloists perform different *əskəsta* techniques simultaneously and change technique at will. However, in Wällo dances, both partners perform the same *əskəsta* techniques simultaneously and change technique only when given a signal by the D. leader. Emphasis on *əskəsta* varies from slight, in which the basic character of the D. does not require *əskəsta*, as in Gurage D., to a primary emphasis, as in Amhara D.

Goǧǧam D. are identified by various movement patterns, of which the three major ones are the **ድረባ** (*dərräba*, 'twice'), involving a ratio of two to one, that is two shoulder movements per one foot movement (beat); the **ዝናብ** (*zənab*, 'rain') where the shoulders move up and down imitating the motion of falling rain, and the **እንቅጥቅጥ** (*ənqəṭqqəṭ*, 'shake'), involving a number of short, sharply executed shoulder shakes per one foot movement (Yasuko Endo 2001).

Dancers from the Gondär region perform the greatest number of different *əskəsta* variations and are known for their consummate skill in their execution. Dancers from the Mənǧar region prefer more foot motifs than the Goǧǧam and Gondär dancers. But the Gurage use the most foot motifs, so much so that it is these foot motifs rather than *əskəsta* that define the character of Gurage D. (s. Tibor Vadasy 1971:194).

Some distinctive characteristics of Dances

Though the Gurage sing during the first D. section, this ceases in the second section, where the vocalists emit a continuing, guttural breathing, in-out technique corresponding rhythmically with the foot motifs.

Both the Gurage D. and the Oromo *ragada* dance are the most energetic and violent in the B section, with angular jerking and kicking movements that affect the entire body. There are no pauses during this section, lasting between ten and thirty seconds. However, in the Amhara and Təgray D., there are pauses and the entire *əskəsta* is performed at an even higher energy level often lasting several minutes. When Oromo dancers pause between the two sections, the solo partners make an elastic bow towards each other. During the bow, the head is bent forward and sways from left to right or right to left. This is very typical, and basic to the *šagoye*, an Oromo couples' dance from Harär.

Some dances, like the *hota*, a war D. from Wällo, do not consist of an established D. formation, but simply of a mass of men pressed together who move and sing together in rhythm. Often, after the *əskəsta*, the closed mass of men opens up and they run away searching for another locale or "enemy." As part of the D., this running takes place at the beginning and at the end of the sequence.

The Hamär ç̣urra (spring D., "to leap high") takes place at night and appears to illustrate male and female courting. Two dozen male dancers form a semi-circle where half the men step forward out of the semi-circle. They then perform, individually, feats of high leaps with twists and turns of their bodies, and move their heads rhythmically in different directions. The remaining men in the circle clap independently. Later, all dancers leap and clap in unison. This established, the women rush en masse towards the men and the D. terminates the very moment they reach the men. The women are chased away and the entire sequence begins again. This D. is defined by the alternation of chaos and order; the dissolution of order takes place at the very moment it has been achieved.

Special props are often integral to the performance, such as the drum, stick, sword and *šämma*. Drums play a decisive role in the Təgray circle D. As leaders, two to five drummers give the basic rhythmic patterns and signal when to begin *əskəsta* and when to repeat the D. sequence. The Wällo *hota* and Oromo *ičisa* men's war D. do not allow anyone to participate unless he is in possession of a stick, probably symbolic of weapons used in battle. In the *šire* (Təgray sword D.), two to four men run 20 to 30 m out of the circle each holding a sword in one hand and its sheath in the other. Though they dance with sword in hand, it is never used to initiate an attack on a partner. The *awrus* (Təgray pigeon D.) ostensibly enacts a duel between a pigeon and an eagle, but symbolically represents the enticement of a man by a woman or two women. The woman uses the shawl of her *šämma* as wings to imitate a pigeon's flight and by the man to imitate an eagle's outstretched wings.

State of dance studies

A major attempt to study and document Ethiopian D. on a systematic basis was instigated in 1964 by the Hungarian government in collaboration with the Ethiopian Ministry of Information. In order to establish an organizational framework for study and for archiving materials, scholars and specialists with expertise in the performing arts were enlisted to travel throughout the country to collect and document music and dance. Under the aegis of the Yared School of Music and the ↗Institute of Ethiopian Studies, these materials eventually were to be made available to interested scholars and dance practitioners. Ethiopians who worked on the project included Ṣäggaye Däbalqe, former Director of the Music Division of Ethiopian Radio and Television, and Iyoʾel Yoḥannəs, Director of the Hagär Fəqr Tiyatər (Patriotic Association).

Two Hungarian scholars, György Martin and Bálint Sárosi, along with members of the Addis Abäba radio staff, participated in a preliminary expedition in 1965, collecting materials from seventeen regions in eight provinces, resulting in a broad overview of D. Approximately 3,000 metres of film and several hundred still photographs, as well as tape-recordings of music were collected (Bálint Sárosi 1970). Another Hungarian scholar and dance specialist who taught dance at the Yared School of Music was Tibor Vadasy who subsequently continued the research and collecting, but focused his attention on detailed analysis of specific dances of ethnic groups from various regions. Published during the early 1970s, his three articles on secular dance were the most detailed analyses of dance of that time (Tibor Vadasy 1970, 1971, 1973).

Publications containing terminology used in descriptions of dance genres and specific D. were not standardized but idiosyncratic using either a descriptive title (*awrus* or pigeon dance), a title by ethnic group (Oromo dance), by geographical location (Gondär or Wällo dance), D. formation (Təgray pair dance), D. technique (shaking *əskəsta*), by sex (*hota*, a men's dance), function (Mənǧar threshing dance), event (Gurage funeral dance), or in combination (s. Tse Kimberlin 1986).

Descriptions of D. are indeed problematic. For instance, Amharic terms often were used to describe D. of non-Amharic-speaking groups. Translation of indigenous words into English caused difficulty when no English equivalents were forthcoming. For example, the Amhara do not have an indigenous word for "music" and do not perceive the words "song" and "dance" as separate entities. Thus, *zäfän* could mean song, secular song, D. and/or music. Descriptions of D. movements often contained subjective words that could not be quantified such as harsh, soft, lively, and quick. Vadasy sought a more objective description of D. movement by utilizing Labanotation, a universally applicable notation system of nonverbal symbolism used to record movement. Based on the universal laws of kinetics, this system enabled him to reconstruct the simplest to the most complex movements (Laban 1928; Hutchinson 1954).

For information on secular D. after 1980, see Timkehet Teffera (1999) for aspects of D. accompanying Amhara wedding songs, with comments about D. and movement patterns among the Qottu, Harari, Wälaytta, Wällamo, Dorze, Gurage, Təgrəñña speakers and Oromo.

Although publications by other authors are acknowledged, the core of secular D. studies is discussed on the basis of Vadasy (1970, 1971, 1973) and Tse Kimberlin (1986).

Danəʾel

Ḥaṣ́ani D. (ዳንኤል) is known from two Gəᶜəz inscriptions on an ancient stone throne base still lying in a field at ↗Aksum, May Qoḥo. A third one, on a stone slab nearby, most probably a part of the same throne, may also be related to D. (s. DAE I, 59f.; IV, nos. 12ff.). These texts, dating roughly between the 7th and the 12th cent., are later than the throne is; they are crudely inscribed and mostly illegible, both reading and interpretation being mere matter of speculation (cp. RIE nos. 193 [I, II], 194; Schneider 1984:163).

Despite such an extreme uncertainty, the evidence on *ḥaṣ́ani* D. is of considerable importance. The inscriptions seem to show him battling victoriously in several areas of northern Ethiopia, thus rendering the king of Aksum his vassal. D. appears to have possibly defeated another *ḥaṣ́ani*, Karuray, to have fought the ↗Barya both near "Käsäla" (↗Kassala) and in ↗Wälqayt, and – as a final triumph – to have "subjected the king of Aksum and made him cease ruling Aksum".

No date can be set for these events (9th–12th cent. is the most general and likely estimate), but it is not impossible that *ḥaṣ́ani* D. was one of the rulers who controlled Ethiopia from ↗Kuᶜbar, a mysterious new capital city mentioned by Arabic writers from al-↗Yaᶜqūbī (fl. ca. 872–91) onwards. This city and the relevant kingdom might have had some later connection with the ↗Zagʷe dynasty (ca. 1137–1270) and its capital Roḥa (or Adäfa), later called ↗Lalibäla. If *ḥaṣ́ani* D. was an Agäw conqueror of Aksum, he might be considered as one of the Zagʷe's forerunners.

A striking feature is that *ḥaṣ́ani* D. refers to himself thrice as the "son of Däbrä Fərem" (yet readable, in one case, however: "Däbrä Afrem"?). Däbrä Fərem may not be D.'s patronymic, as once supposed, but rather points to the religious institution D. was affiliated to (as a monk? cp. "son of Däbrä Libanos", etc.), ↗*däbr* styling in fact a monastery or a church, *Fərem* being the eponymous holy person. If so, Fərem could be a hypocoristic form of the name Fəremnaṭos (Frumentius), evangeliser of the 4th cent.-Aksum, later better known as *abunä* ↗Sälama Käśate Bərhan, and refer to the ancient church of ↗Fəremona, 6 km from ᶜAdwa, to the south of the way to Aksum, where the Portuguese fortress was to be much later (s. Fiaccadori 1990).

As to the title of D., the Gəᶜəz word ሐፃኒ (*ḥaṣ́ani*) literally means 'tutor, guardian [of the children]', but its exact significance here, and the position of D. therefore, are unclear; it might have meant something like a 'guardian [of the state]' (an etymology from *ḥaṣ́ani* has been suggested for ↗*aṣe* and for *əč̣č̣ä*, s. Cerulli 1943:274ff., Fiaccadori 1990:328 respectively). It is nonetheless the same title born by King ↗Lalibäla, the Zagʷe ruler, in two land grants as they are preserved in the "Golden Gospel" of ↗Däbrä Libanos of Šəmäzana (in two other land charters, however, he is presented as *nəguś*: CRDLib nos. 6, 7), and mentioned in the account of *aṣe* ᶜAmdä Ṣəyon's campaign (*ḥaṣ́ane* Sägärat, s. MarAmdS 52f.). The title appears in non-Ethiopian sources: the 10th-cent. Arab author ↗Ibn Ḥawqal has it in the form *ḥaḍāni* as applying to the king of Abyssinia (the one killed by the queen of the Banī l-Hamwīya, s. ↗Ǝsato). It is possible that *ḥaṣ́ani* was a court title given to local governors (or rulers); and *ḥaṣ́ani* D. had became stronger than his (over)lord, the *nəguś* of Aksum – a situation known from other periods of Ethiopian history.

Danəʾel

D. (**ዳንኤል**, Ar.: Danyāl) was a metropolitan of Ethiopia consecrated by Coptic Patriarch Philotheus (979–1003). The biography of this Patriarch in the *History of the Patriarchs of the Egyptian Church* preserves a copy of a letter from a king of Ethiopia to King George II of ↗Nubia (r. ca. 969). The story relates how the "king of Abyssinia" sent to the king of Nubia to tell him how a "queen of Banū l-Hamwīya" had attacked his land (s. ↗Ǝsato). The Ethiopian king considered that the situation reflected divine retribution for Ethiopia's bad treatment of an earlier metropolitan, Peṭros, in the time of Patriarch Cosmas III (923–34), after which the Alexandrian patriarchs had refused to send another bishop to Ethiopia. The king begged George to assist him in persuading Philotheus to send a new metropolitan so that "God may remove his wrath from us". Philotheus agreed, and selected a monk from Dayr Anbā Maqār, called D., to renew the metropolitanate in Ethiopia. The Ethiopian ↗*Sənkəssar* (12 *Ḫ̮ədar*) repeats a version of the same story, but does not mention the foreign queen.

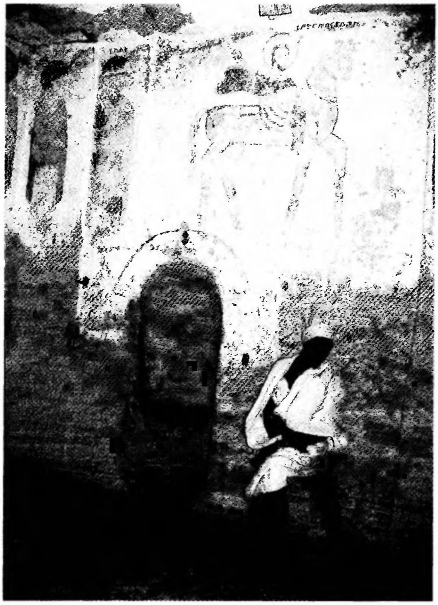
Danəʾel of Däbrä Maryam

The monk D. (**ዳንኤል**) of Däbrä Maryam (Təgray) was active in the second half of 13th cent. He is remembered as an abbot of the monastery of Däbrä Maryam on Mount ↗Qorqor, in the ↗Gärᶜalta province of eastern Təgray, where a frescoed chapel is dedicated to him. According to his *Gädl*, D. came from the Mänbärta province of eastern Təgray, "from the lineage of the *däqiqä afqäre* who were called *laᶜelāy mogarya*". He was initiated into the monastic life by ᶜƎbnä Sänbät, abbot of the same monastery of Däbrä Maryam in the last decades of the ↗Zagʷe period, toward the middle of the 13th cent.

D. was the spiritual father of ↗Ewosṭatewos of Däbrä Ṣärabi, the Təgrayan monk who led a dissident monastic movement during the reign of *aṣe* ↗ᶜAmdä Ṣəyon I. According to a frequent topos of hagiographic literature Ewosṭatewos was D.'s nephew. Advocating the independence of regular clergy from civil authorities and promoting the celebration of the Sabbaths, i.e., the observance of rest on both Saturday and Sunday, Ewosṭatewos made proselytes in northern Ethiopia. His meeting with D. is described in the Acts of both saints and must have occurred around 1280, when D. was already abbot of Däbrä Maryam.



Interior of Danəʾel's chapel: view towards north-east; niche in the eastern wall; wall-paintings: Abraham, Isaac, St. Theodore the Oriental; photo 2000, courtesy of Michael Gervers

The information on this encounter, the personal name ʿƎbnä Sänbät and a long inscription on a *mänbärä tabot* in ↗Lalibäla, alluding to a controversy on the Saturday's rest, allow one to state that the question of the Sabbaths' observance, characteristic of Ewosṭatewos' teaching, dates to at least a century before the teaching of the latter and that eastern Təgray was the site in which the controversy took shape.

A copy of the Acts of D. is transmitted in a 18th/19th-cent. manuscript from Däbrä Maryam (Addis Abäba, IES mf. 194), but the text is still unpublished.

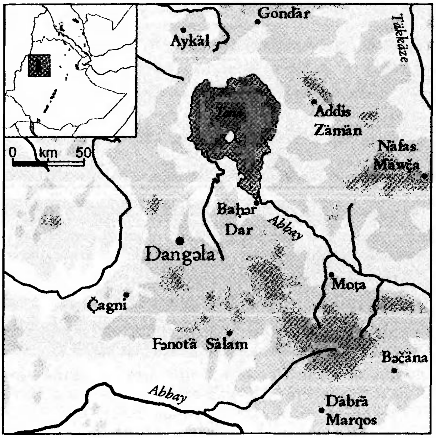
Danəʾel of Tämben ↗Ṣäʿada Ǝmba, ↗Mädḫaninä Ǝgziʾ

Dangəla

D. (ዳንግላ, 10° 16' N, 36° 51' E) is a town in ↗Agäw Mədər, Goǧǧam (currently it is the capital of D. *wäräda* in the Agäw-Awi Administrative Zone) and the name of an Agäw group living there. The town is found 85 km south-west from Baḥər Dar, on the main Addis Abäba – Däbrä Marqos – Baḥər Dar – Gondär road. This is one of the settlements whose emergence accompanied political and commercial developments in Goǧǧam in the 18th and early 19th cent.



The topography of the D. *wäräda* is characterized by a gently elevated plateau gradually decreasing in elevation from the south to north and north-west. The town of D. is situated on land with an average elevation of 2,200 m A.S.L. The D. *wäräda* in general and the D. town in particular have a *wäyna däga* (temperate) climate, with the exception of some areas bordering the Beni Šangul-Gumuz region, which have a *qʷälla* (hot) type of climate.

Agäw elders explain the name D. as deriving from Agäwəñña (↗Awŋi) words *dang* and *ila*. Dang is believed to be a descendant of the first seven founding fathers of D., viz. Ankaša/Hankaša, Banǧa, Azana, Mätäkkäl, Zigam, Čara, and Kʷakura, from elder to younger. One day Dang's brother wanted his company to go hunting. Coming to Dang's house, he asked Dang's wife, *Dang zukama*? ('Is Dang in the house?') Dang's wife replied, *Dang ila* ('Dang is not here'). From then the area where Dang's house was located came to be called Dang-ila. Later, the name of that particular place (the present day D. town) became used also for the region.

According to the Chronicle of *aṣe* Susənyos, *ras* ↗Śəʿəlä Krəstos defeated in D. the Mäčča Oromo, who attacked this and the neighbouring areas; in 1625 D. was raided by Susənyos himself. The vicinity of Gondär promoted slave-trade, and D. became an important slave-hunting area, where the Agäw-captives were sold to the Muslim traders from Sinnār. In the early 19th cent., "Old D." (which probably was the direct precursor of the D. town today divided into "Old D." and "New D." by the river Qesawəsta) was known as a slave trading market and a weekly Saturday market serving as a contact point between agriculturists and craftsmen. The vicinity of Gondär encouraged also the spread of the Amharic language and Christianity; the place was granted as a fief to the court church Gəmǧa Bet Maryam (hence Qäsawəst, lit. 'its [the church's] clergy').

The British authorities established one of their consulates in D. before the march of the Italians into the town in 1936. Apart from its early commercial importance, several factors prompted Britain select this town as the seat of the consulate. Among these are the hospitable climate, and

Britain's desire to control the area drained by the Blue Nile and its tributaries, and also to build a dam at the outlet of lake ↗Ṭana. Following the conquest of the Sudan, consulate policy included diverting south-western and western Ethiopian trade to the British colony there.

The coming of the Italians in 1936 and their five years stay at D. were marked by important changes in the social, economic and political spheres. Having occupied the surrounding provinces, the Italians built a formidable fort at D. and made the former British consulate their military and administrative headquarters, to control and govern the nearby provinces such as Agäw Mədər, Mäčča and Ačäfär. They used the town as a springboard to launch several offensives and campaigns against the patriotic resistance in the above-mentioned districts.

After the Liberation, D. town became the administrative centre of Agäw Mədər *awrağğa* and of the D. *wäräda*. Watered by the Bäläs, Gälgəl Abbay, Ašär, Kilətti, and other rivers, D. *wäräda* brings forth such agricultural products as *ṭef*, millet, maize, nug, barley, peas, chickpeas, potatoes and onions. Domestic animals (including sheep, goats and cattle) and pack animals (donkeys, mules and horses) are bred by the population of the *wäräda*. A variety of trees grows in the *wäyna däga* climatic zone of D., such as juniper, *Millettia ferruginea*, sycamore, olive tree, acacia, and many others. These trees, however, are being replaced by eucalyptus.

Amhara are the dominant ethnic group, constituting 88.1 % and 90.9 % of the total population of the town in 1984 and 1994 Census respectively. The second ethnic group is Agäw (7.7 %) while the share of remaining ethnic groups was only 1.4 % in 1994. The majority of the inhabitants of the town are followers of Orthodox Christianity, with Muslim minorities and a few Protestants. Amharic is the dominant language spoken in the town, followed by Awŋi.

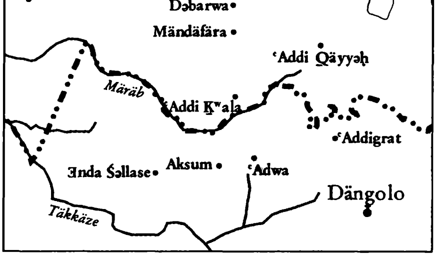
Dängolo

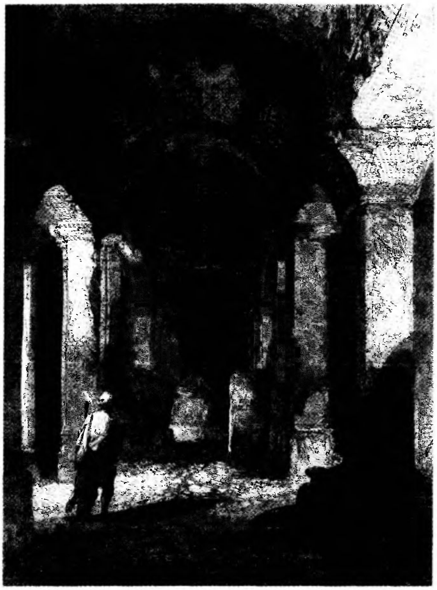
D. (ደንጎሎ, also Dängälo) is the name of a few small settlements in Təgray and Eritrea.

D. in Kələttä Awləᶜalo, Təgray, first appears in 19th-cent. literature due to its ancient rock-hewn church Čerqos Maryam (e.g. LefAbyss vol. 3, 426) – in fact, the first monolithic church to become known in Europe. This cruciform basilica, widely known as Wəqro Čerqos (cp. Plant 1985:9ff.; from Tgn. *wəqro*, 'carved in stone'), lies near the entrance of a mountain pass separating the historic districts of Ḥaramat and of Ṣəraᶜ, close to the ancient trade route leading from the north to the south. The new settlement ↗Wəqro nearby derives its name from the Čerqos church.

According to local tradition, first recorded by Munzinger and by the archaeologist Rassam, the church was founded in the 4th cent. by ↗Abrəha and Aṣbəḥa; Plant (1985:91) places its foundation in the late 6th or 7th cent. Yet, the building is much more recent. It is remarkable for its barrel-vault, a feature which is very rarely observed in Ethiopia (DAE I, 181); and the Aksumite detail acting as the frieze above the columns. From the Napier military expedition of 1867/68, which passed by D., we have a detailed sketch of it.

The church has three aisles, each of them having a separate *tabot*. The nave and apse host *tabots* of St. Čerqos (or Qirqos) and of St. Mary





Central nave of the rock-hewn church of Dängolo, view from the *qəne mahlet* towards the *mäqdäs*; from *The Illustrated London News*, July 18, 1868, 61.

(hence the church's alternative names Maryam Wəq̱ro, Maryam Qirqos), the north aisle is dedicated to St. Michael, the south aisle to St. Gabriel.

Another D. (Ital. "Dongollo"), in Eritrea, acquired some economic importance in the 20th cent. due to its mineral springs. This spa, also called Dängolo La^{c}əlay ('Upper D.'), lies north-east of Ginda^{c} on the road to Massawa in the slopes of the highlands, 966 m A.S.L., near the small plain of Säbarguma. Under the Italian administration, modern facilities were constructed, so that the mineral water of D. became one of the most prominent bottled waters of Eritrea, the term "D." being sometimes used almost as a synonym for 'mineral water'. Its most important competitor is the nearby spa of Säbarguma, of similar importance. In colonial times sisal was also cultivated in D.

A third D., at the foot of the slopes in the lowlands is called D. Taḥtay ('Lower D.'), first developed in the 1930s as the main factory for the Säbarguma mineral water concession. Today it is the seat of Eritrea's Ministry of Defence.

Däng^{w}ära

The D. (Amh. ደንጐራ, also ደንጎራ, *dängora*, Oromo *dongoraa*) is a 1.5 m-high sharp-pointed digging stick made in hard wood (acacia or olive trees), sometimes fitted with an iron tip. To weight it, a bored stone (around 4 kg) is slipped down the upper part. Two men hold it and drive it into the soil in successive blows to a depth of 20–25 cm. They lever up a lump of earth and turn it over, thus tilling 60 m^{2} per hour. The overturned soil is crushed down with a hoe, a hammer, or by hand, as is customary once a plough has been drawn.

This tool is used in Harär among the Somali, the Qottuu and Ittuu Oromo, as well as in Arsi but the Ethiopian plough has supplanted it on flat fields. With a D. it is possible to till narrow terraces, slopes and gardens and to avoid the need to own or rent a pair of oxen. It is wrongly considered by some Ethiopian and European scholars as a 'primitive' tool and sometimes it is confused with a tall forked digging-stick, used by ↗ ənsät farmers (the Gurage *wänäd/wänät*), or for a planting-stick (*hordaa*), used by western Oromo.

Danish Ethiopian Mission

The D.E.M. (Dansk Ethioper Mission) is the youngest of the Scandinavian societies for Christian mission in Ethiopia. It was founded in April 1948 by Johan Sonne Lindblom, a Danish Folk High School teacher and Lutheran pastor from Bornholm. On 21 March 1949, Lindblom obtained permission from *aṣe* ↗Ḥaylä Śəllase I to erect mission schools at Dodola and Ebano in Bale, Harär province.

During the short interval immediately following the revolution of 1974, when the missionaries were forbidden to work in Ethiopia, the society operated an orphanage for Ethiopian refugee children in Jerusalem for a year.

Since 1969 the D.E.M. has closely co-operated with the local ↗Ethiopian Evangelical Church Mekane Iyesus; six Danish missionaries are at present active in Addis Abäba (in technological programs and education), and in Awasa (in the Sidama Literacy Project, Bible translation, and in construction and medical administration). Since 2000, the D.E.M. has had its centre and offices at Christiansfeld, sharing the building with other Danish Lutheran missionary societies (Ydre Missions Bygning).

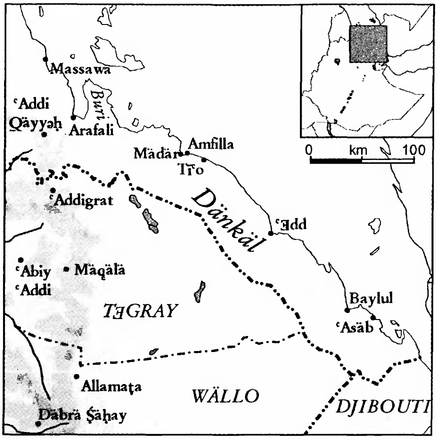
Kirsten Stoffregen Pedersen

Dänkäl

Until 1995 D. (ደንከል) was the administrative name of the southern coastal district of Eritrea, south of the Gulf of Zula and historically linked to the ᶜAfar ↗Dankáli. During the Italian period, the name "Dancália" (*settentrionale* and *meridionale*) was applied to the area mainly inhabited by the ᶜAfar, i.e. from the ↗Buri Peninsula to French Somaliland and to the Ethiopian foothills. The brunt of the modern D. district corresponds to the former *Dancália settentrionale esterna* under the *commissariato di Assab*, which had a representative in ↗Tīᶜo.

Under the ↗British Military Administration the so-called Red Sea Division included the coastal region and the Sämhar Plain. The former Italian division, whose administrative border was the town of Arafali (Iḍāfalo) and the eastern edge of Akkälä Guzay inhabited by the ↗Sāho, was restored during the period of federation with Ethiopia. The Ethiopian government changed the administrative name into "District [*awraǧǧa*] of ᶜAsäb" when Eritrea became a province of the Empire in 1962. A new division of the north in 1987, disregarding the former Eritrean borders, included the former Wällo district of Awsa in a new ᶜAsäb Region. In the independent Eritrea D. was replaced in 1995 by the new administrative region Däbubawi Qäyyəḥ Baḥri.



The D. coast is extremely arid and thinly populated (around 7,000 inhabitants). Miᶜdír (administrative name Mädär), on the Bay of ↗Amfilla, and ↗Baylul are both historical towns, while Tīᶜo and ᶜAsäb were established by the Italians. The Arraᶜtá hills (nicknamed Alpi Dancale or Danachile) consist of a narrow mountainous coastal strip, behind Tīᶜo, and the southern coastal plain of Gālí Māḥa (between Sāroytá and ᶜÍddi [ᶜƎdd]), north of Mabḍá and Bîḍu.

As the name of an ᶜAfar subgroup, the Tgn. term D. originally referred to the Dankáli, but later was used for all the ᶜAfar.

↗ᶜAfar

Lit.: KilHDic 157f.; DIDIER MORIN, *Poésie traditionnelle des Afars*, Paris 1997 (Langues et cultures africaines, 21), 7; IBN SAᶜID, *Géographie d'Abulféda*, tr. by STANISLAS GUYARD, Paris 1883, vol. 2, 128.

Didier Morin

Dankáli

D. (Arab. plural Danākil; the ᶜAfar D. as a collective noun has no plural) is the name traditionally given by the Arabs to the ↗ᶜAfar. It designates the ᶜAfar-speaking tribes that are predominantly located in the desert north of ↗Baylūl, with whom Arab sailors have been historically in contact. Among the Sāho, the ᶜAfar are known as Dankál.

The D. consist of four main sub-clans: Dawuddó (those of Mädär/Miᶜdír and of the island of Sarᶜabbáy are supposed to be historical chiefs of the coast before the Dammohoytá domination, ↗ᶜAdoyammára and ᶜAsahyammára), ᶜUmarto, Fadilto (chiefs of Baylūl who took over the "first" inhabitants, the Ánᶜa and the Ġôḏáw) and Sumâᶜiltó.

Ibn Saᶜīd in the 13th cent. mentions the "Dankal" from the neighbourhood of ↗Sawākin up to the Bāb al-Mandab (he may be confusing the D. and the Ankâla tribes, the latter still present in the ↗Buri peninsula). During the reign of *aṣe* Bäʾədä Maryam in the 15th cent., "the king of D." is mentioned as a neutral tributary during an Ethiopian raid against the ↗Dobaʾa.

As the name of a political entity, D. – "Deuchali" – appears for the first time on ↗Fra Mauro's map from 1460. In the 17th cent., when ↗Mendez passed through Baylūl, this port was still the capital of the "Reino de Dancali".

At the end of the 17th cent. the kingdom was threatened by the local Dammohoytá. They had founded the sultanate of Bîḏu around 1650 and took over Buri a century later. They still occupy the majority of the peninsula. The Chronicle of *aṣe* ↗Susənyos may refer to these events when it reports on Kámil, King of D.; after fighting against his nephew Seḥem (ᶜAfar form of Arabic Šaḥīm), he was defeated and expelled. He then showed allegiance to Susənyos, asking for his protection (the Emperor welcomed him but also demanded tribute). Kámil was apparently the father of Seḥem b. Kámil al-Dankáli, the "master of Baylūl", who received the envoy of the *imām* of Yemen to *aṣe* Fasilädäs, in September 1647. The *Sīrat al-Ḥabaša* provides the last written indication of D. power in Baylūl (van Donzel 1986).

The D. Fādilto maintained the power in Baylūl until the middle of the 19th cent., but were replaced first by the Nassár and then by the Afᶜara, supported by the Mōdaytó of Áwsa, whose *sulṭān* pretended to control the port.

Dañña

D. (Amh.: ዳኛ, Tgn.: *danya*, 'judge, magistrate') is a title that usually denotes all judges from the highest to the lowest ranks, including leading members of traditional councils of elders, both in the past and at present. The term appears as early as in the first half of the 16th cent., in land charters of *aṣe* ↗Ləbnä Dəngəl (CRAxum no. 31, cp. nos. 52, 56). By then, D. is attested as a title for the office of the "keeper, overseer" or "guardian" bestowed by the abbot of the congregation in the Ewosṭatean monasteries (↗Ewosṭateans), e.g., ↗Däbrä Ṣärabi and ↗Däbrä Bizän (BeckHuntAlvar 89 and n. 2, 556).

A alternative term to D., ↗*wämbär*, describes a member of the bench of the judiciary. Exceptions were the Chief Justice (↗*Afä nəguś*) and Vice-Chief Justice or presiding judges (ምክትል፡ አፈ፡ ንጉሥ, *məkəttəl afä nəguś*) of the Supreme Imperial Court until 1974, and ራስ፡ ወምበር (*ras wämbär*) as a senior judge of the same court prior to 1936. Today, judges assigned to the hierarchy or courts are simply referred to as D. with slight variations of spelling in different parts of the country.

The governors of all administrative divisions (levels) would sit in the court of their administrative boundary, with two other judges to adjudicate cases.

D. were formerly designated by either the local or the regional governors as their own *wämbär*. Later, however, they were appointed by the central government. The judge designated for the lowest court is referred to as አጥቢያ፡ ዳኛ (*aṭbiya dañña*; in Amharic ↗*aṭbiya* means 'parish' or 'locality'). Local governors were empowered to set up the lowest court at *aṭbiya* level to adjudicate minor cases. Such courts were operating widely in Ethiopia before the Italian occupation. After an interruption of a number of years, the *aṭbiya dañña* court was re-established by Proclamation no. 90 of 1947. It was, however, by implication abolished by the ↗Civil Procedure Code of 1965.

Local judges were not government employees. They were grant-land holders, *balä gʷəlt*

(↗*Gʷəlt*), or ↗*mälkäñña*, or their representatives. These judges often held office because of their hereditary title. In rare cases, they were chosen from among the landowners of the locality by the governor of the district. Local judges were authorized by the proclamation to handle cases of small claims. Two assessors sat with the local judge when he could not effect a compromise in criminal cases. In civil cases, local judges had original jurisdiction over disputes involving 25 *bərr* or less and in criminal cases over offences punishable with a fine below 25 *bərr*. Appeals from their decisions went to the subdistrict courts.

Daññaččäw Wärqu

D.W. (**ዳኛቸው፡ ወርቁ**; b. 24 February 1936, Däbrä Sina, d. 1 December 1994, Addis Abäba) was a playwright, novelist, poet, university lecturer and translator. Due to his excellent achievements in his elementary education at Abbəyyä school, he was sent to the then famous secondary school at Addis Abäba, Kotäbe. Upon completing his secondary education he joined the Teachers Training School in Addis Abäba and, upon graduation, he joined the Mädḫane ʿAläm Secondary School at Harär, where he taught for several years.

He graduated from the Arts Faculty of Ḫaylä Śəllase I University (↗Addis Ababa University). After teaching at the Department of Ethiopian Languages and Literature for several years, he continued his education and became the first Ethiopian to earn a Masters Degree in Fine Arts from Iowa State University, which also awarded him, years later, with the title of Honorary Fellow of the International Writers Workshop Association of Iowa University.

Returning to Ethiopia, he resumed teaching at Addis Ababa University and later joined the Ethiopian Standards Institute, where he acted as language expert. From that time on he devoted much of his time to creative writing.

D.W.'s talent became evident early – after the success of his first stage work, *Säqäqänəš əsat*, in 1955. However, it was *Adäfrəs* (1969/70) which brought him the highest public appreciation. D.W. published two novels, two plays, a collection of poems and numerous short stories in Amharic and English that appeared in various magazines and newspapers.

D.W.'s academic works are *Yäṣəḥuf ṭəbäb mämmäriya* (1984/85), one of the most profound works that introduced various Amharic styles, and, in co-authorship with Amsalu Aklilu, *Yäʾamarəñña fäliṭočč*, a dictionary of Amharic idiomatic expressions. He also participated in the creation of a dictionary of geographical terms, *Yäʾamarəñña yäğiʾografi mäzgäbä qalat*.

One of his novels, *The Thirteenth Sun*, written in English, was translated into Russian and German because of its high literary standard.

His sudden death was a shock to many Ethiopian readers.

Dänqäz

Situated 30 km south-east of Gondär, D. (ደንቀዝ; s. map for Däbrä San for location) was the site of *aṣe* ↗Zädəngəl's court as early as 1604, but became important only when *aṣe* ↗Susənyos established himself there in 1617–18. The settlement is referred to in the latter's Chronicle as the monarch's ↗*kätäma* and as his *mädina*, or principal place of residence. It was said by the Portuguese Jesuit missionary Manoel de ↗Almeida to have had "as many as eight or nine thousand hearths", which would imply a population of over 50,000 people (BeckHuntAlm 188).

Susənyos's palace was built, according to the chronicler, by a ↗*Banyan* architect called Abdäl Kerim and an Egyptian head-workman called Sädäqa Nəsräni (PerChron 290 [text] = 224 [tr.]). The building was described by Almeida as "a wonder ... and something that had never been seen nor yet imagined" in the country and "would have value and been reckoned a handsome building anywhere" (BeckHuntAlm 188). It was made, he says, of "stone and lime", and had a large subterranean water-tank. The palace was, he explains, one of the first Jesuit-sponsored buildings to be erected with mortar, the use of which had been introduced by a *Banyan*, presumably in Portuguese employ, only a few years earlier, in 1621. There was also a fine basilican royal church, the foundation stone of which was laid by the ↗Jesuits in 1628. Remains of this building, like those of the palace, can be seen to this day.

During its efflorescence, D. was an important place in Ethiopian history: it was at this capital that Susənyos in 1626 announced his adherence to the Roman Catholic faith and there, six years later, that he abdicated in favour of his son *aṣe* ↗Fasilädäs, who then proceeded to establish a new capital, at Gondär.

Däq

D. (ዴቅ) is the largest volcanic island of Lake ↗Ṭana (about 16 km in circumference, 5 km in diameter), situated in its centre. During the dry season, D. is connected to the Narga (↗Narga Śəllase) isle, lying at its western shore. D. is almost entirely flat, the highest land in the centre rises no more than 10 m above the lake. Richly forested, mostly by fig-trees (*bäläs*), and covered by many species of flowers, the island was obliged to contribute hundreds of jars of ↗honey to the royal court. Devoid of wild animals and birds the place is a hatchery for different kinds of mosquitoes, some of them malaria-carriers. A small number of people live on the island in a few dispersed villages. Most of the land once belonged to the ↗Daga Ǝsṭifanos monastery. The main crops cultivated are dwarf millet *dagussa* and *ṭef*, and in limited quantities cotton and coffee.

From the 14th cent. D. served as a deportation destination. As late as 1693, *aṣe* ↗Iyasu I sent people there from ↗Šire as punishment for not defending the monasteries of ↗Waldəbba from the ↗Šanqəlla's plundering raids. According to Rassam (1869, vol. 1, 315), the island was invaded by *aṣe* ↗Tewodros II, who took revenge on its inhabitants for supporting his enemies.

Among the five churches of the island – dedicated to the Virgin Mary, Jesus, St. George, St. John and Arsima Sämaᶜətat – the latter is the best preserved. A circular church, built from rock and mud, it is presently limited to the ↗*mäqdäs* part. The wall-paintings are only visible in the west wall. These date back to the middle of the 18th cent. and are assigned by Cheesman (ChTana 119–45) to the same artist who worked in the Church of the Trinity on the adjacent island ↗Zäge. They seem to follow the iconographical program established at the beginning of the 17th cent. (cp. ↗Däbrä Sina), with the addition of scenes concerning the patron saint of the church, the Armenian virgin Rhipsimē, killed together with her 26 fellow martyrs (*sämaᶜətat*) by order of King Tiridates. In the church several artefacts are preserved: an important manuscript with miniatures dating to the end of the 14th cent. and originally belonging to a Gospel Book, two crosses and a crown of bronze traditionally connected with *aṣe* ↗Yəkunno Amlak, as well as a triptych with scenes representing the life and the martyrdom of St. Rhipsime, painted in the second Gondärine style. Jäger and Pearce (1974:70) mention a triptych of the 16th cent. kept in the church of St. George. During the last ten years, extensive restoration works have been carried out in the church of St. Mary (*Kotä Maryam*). This central tripartite building, dating to the second half of the 16th cent., still shows in the walls of the *mäqdäs* traces of paintings representing the early phase of the first Gondärine style.

Däqqämḥare

The village of D. (ዴቀምሓሬ), also Däqqi Mäḥari (ዴቂ፡ መሓሪ), Decamharè or Decà Maharè in Italian sources (probably following Təgre pronunciation Däqamḥare or Däqa Mäḥare, connected to the plural form ዴቃ; cp. ዴቃ፡ ሰርየ in the same region), is located in Eritrea, 42 km north of Asmära at the edge of the ↗Ḥamasen plateau in Dämbäzan (15°86' N, 38°80' E). As such, it is called also D. Dämbäzan in order to distinguish it from the town of ↗D. Ǝggäla (south from Asmära), which is also occasionally referred too in the literature as Däqqi Mäḥari.

D. is one of the northernmost archaeological sites of the ↗Aksumite culture period documented in the Horn of Africa. Ceramic artefacts (↗Pottery) and architectural rubble are evident on the surface of the site. However, little is known about the latter's functions and extent of occupation. In 1906 Richard G. ↗Sundström was in D. and copied here a Greek stone inscription issued by the Aksumite king ↗Sembrouthes, who set it up as a memorial of his visit to that place "in the year 24" of his reign (Littmann 1907:170; DAE no. 3 [RIE 275]), i.e., according to recent researches, sometime before or around 200 A.D. (s. Fiaccadori 2004). The inscription, which is an important mark of the territorial extension achieved then by the kingdom of ↗Aksum, is now located in the collections of the National Archaelogical Museum of Eritrea (Asmära).

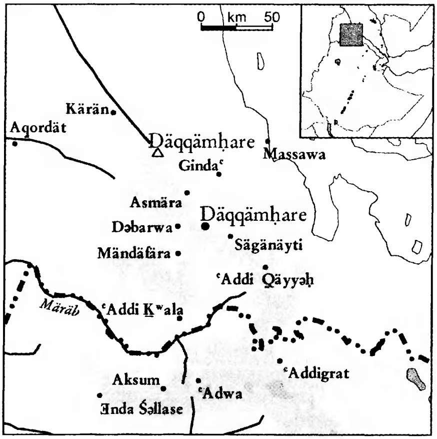
Däqqämḥare

D. (**ደቀምሓሬ**), is a small city in northern Akkälä Guzay, Eritrea, south-east of Asmära, after the historical district also called Däqqämḥare Ǝggäla to avoid confusion with ↗Däqqämḥare in the district of Dämbäzan. It is Decamerè in Ital. sources, this spelling with "a" being probably influenced by the forms Decamharè and Decà Maharè indicating the homonymous village in Dämbäzan. The place-name is derived from Däqqi Mäḥari/Amḥari ('Sons of Mäḥari/Amḥari'), a descent group of ↗Təgrəñña speakers of Ǝggäla in possession of this area. Having been a small agricultural settlement (15th cent.?), D. is virtually unknown in pre-20th cent. sources. It lies on the road from Asmära to Sägänäyti. In D. this is joining a second road, connecting D. via May Ḥabar with the main road to Massawa at ↗Näfasit (the D.-Näfasit road, built in ca. 1935 in preparation of the Italian invasion, being the ancient caravan route of ʿAddi Rəʾəso).

Situated in a plain in the proximity of Asmära with a favourable climate and where important roads cross, D. developed into an important settlement during the late colonial period. An increasing number of Italian nationals moved there during the 1930s, where a new European town was built in 1936–38 (by 1938, out of 12,800 inhabitants it had over 6,000 permanent and 4,600 temporary Italian residents). In 1936 it was the main supply base for the fascist invasion of Ethiopia. Lying close to the major airforce base and aerodrome of ↗Guraʿ, also most of its staff were housed in D.



D. was the seat of the colonial administration of the district (*Residenza*), hosting banks, hotels, restaurants, a cinema, factories, agricultural concessions, as well as a fluctuating commerce. Its dynamic development ceased after World War II. In 1962 the population was only about 6,000. During the campaigns of the Ethiopian central government against the Eritrean People's Liberation Front of 1977–78 and 1991, the town was heavily affected. After Eritrea's independence D. started again to flourish, the government encouraging the establishment of Eritrean companies in D. following the policy of decentralization. It is the administrative centre of the *nəʾus awrağğa* of D., before the administrative reform of 1995 one of four sub-provinces of Akkälä Guzay.

D. is not to be confused with the Däqqi Mäḥari, who were like the Däqqi Täsfa (↗Adkämä Məlgaʾ) an important subgroup of Təgrəñña speakers in Säraye.

Wolbert Smidt

Däqqi

D. (**ደቂ**, lit. 'children' but also 'people', BassDic 772; Gəʿəz: **ደቅ**, *däqq*) is usually followed by an individual's name or a place name, e.g. *Däqqi Akkälä Guzay* ('the people of Akkälä Guzay'). It has two primary uses: as a term referring to a specific group of descendants and as a description of a more loosely linked group of people. The term is used within the ↗Təgrəñña-speaking population. The specific descent group is defined by the context within which the term is used, i.e. by the name put as apical "ancestor" for the group, either implying an extended family, a lineage, or a descent group. In its next capacity, D. is used as a metaphorical kinship term, as in *däqqi käbäsa* ('the people of the highland'), thus embracing the whole Təgrəñña speaking people.

Kjetil Tronvoll

Däqqi Minab

The D.M. (ደቂ፡ ሚናብ) are a ↗Təgrəñña-speaking descent group who claim common ancestry from a certain Minab (Benjamin). Most people of the highlands trace their lineage up to but not beyond that of Čaluq, Maluq and Faluq, who are the great-grandsons of Minab, the apical ancestor of the D.M.

While Čaluq and Maluq are traditionally claimed as the ancestors of the present-day people of ↗Akkälä Guzay and ↗Säraye (*zoba* Däbub in the modern state of Eritrea), Faluq and his sons Dämbäzanoy, Wärädä Məḥrät, Täḵästä Bərḫan, Šəmärṣəm and Šəmärṭəb and their descendants are remembered as the founding fathers of the inhabitants of the present-day Dämbäzan region (today consisting of the communities of ↗ʿAd Täkälezan, Gäbru, Dəgdəg etc.), where Faluq's descendants had *rəst* rights.

From there they spread to ↗Karnäšəm, ↗Däqqi Taššəm, ↗Käbäsa Čəwa (today consisting of Sälaʿə Daʿəro, ʿAddi Gombällo and some other villages), to some parts of ↗Loggo Čəwa (in Zawəlkälkälti, including such places as ʿAddi Zawəl, ʿAddi Hallo, ʿAddi Səldayət, ʿAddi Gäbray etc.; in Ṣəlləma-↗Dəbarwa, ʿAddi Loggo and others), and to ↗Šäwʿattä ʿAnsäba, Lamza, ↗Säḥarti and ↗Wäqärti in Ḥamasen (now largely part of the *zoba* Maʿəkäl). D.M. are even said to have left their mark in some areas of Akkälä Guzay.

The generation-kinship diagram shows the apical ancestor, Minab, and his descendants (cp. ↗Genealogy).

Däqqi Täššəm

The D.T. (ደቂ፡ ተሽም, also Aytäšum, or Atäššəm) are a ↗Təgrəñña-speaking descent group (↗*Däqqi*) who call themselves and their region by the same name. Their ᶜAddi Qʷänṣi-based customary law is also known as *Ḥəggi Däqqi Täššəm* or ↗*Ḥəggi Habtä Sullus Gäbrä K̠rəstos*.

Atäššəm (ca. 1600–50) was the son of Ḥəzbay and father of Täsfaṣen, Gäbrä K̠rəstos, Abrəham, Bəruh, Monqoreyos, Zarṭonay and Musa. Täsfaṣen, the son of Atäššəm, was the founder of two well-known lineages in D.T., namely, Täkkälä and ᶜAggäba, or Täkkälä ᶜAggäba, centred around ↗Ṣäᶜazzäga and Minab, and Zärᶜay, or Minabä Zärᶜay, centred around ↗Hazzäga. Both Hazzäga and Ṣäᶜazzäga, among others, are homes to the descendants of Täsfaṣen Atäššəm, who founded these two hereditary ruling houses of ↗Ḥamasen. Täsfaṣen's eldest sons Minab and Zärᶜay remained in Hazzäga, while his youngest sons Täkkälä and ᶜAggäba moved to Ṣäᶜazzäga. After the death of Täsfaṣen Atäššəm (ca. 1660), Täkkälä, ᶜAggäba, Minab and Zärᶜay all rose to power and retained a claim to the governorship of Ḥamasen. Over the years, the successors of these siblings engaged in constant power struggles and confrontations for rule over Ḥamasen in general and D.T. in particular. At one point *däǧǧač* ↗ Hab Śəllus (Habtä Sullus), the great-great-grandson of Ḥənäšəm ᶜAggäba, and his son Gäbrä K̠rəstos expanded the power of the house of Ṣäᶜazzäga over D.T. and most of Ḥamasen

Genealogical pedigree of the Däqqi Täššəm in Ḥamasen and other parts of the highlands in Eritrea. But the zenith of the power of Ṣäᶜazzäga came under the rule of *baḥri nägaśi* Solomon Täsfaṣen, the grandson of *däǧǧač* Gäbrä Ḵrəstos Habtä Sullus and great-grandfather of *aytä* Täwäldä Mädḫən, father of *däǧǧač* Ḫaylu (s. kinship diagram). Such a rule was contested by *käntiba* Zärᶜay and his son *aytä* Solomon of Hazzäga, both descendants of Zärᶜay, the son of Täsfaṣen Atäššem. This eventually culminated in the well-known feud between Hazzäga and Säᶜazzäga under the leadership of *raᵓəsi* Wäldä Mikaᵓel Solomon and *däǧǧazmač* Ḫaylu Täwäldä Mädḫən, respectively, and resulted in the death of the latter at the battle of Wäkki Dəbba on 17 July 1876 (s. KolTrad).

Nowadays, in the state of Eritrea, D.T. refers to the following Ḥamasen-based villages located in *zoba* Maᵓəkäl: Gäǧərät, Godayəf, Qušät, Ṣäᵓəda Kərstəyan, ᶜAddi Sogdo, Bet Mäḵaᶜə, Wäkki Dəbba, Daᶜəro Qawlos, ᶜAddi Musa, Ṣäᶜəda Ǝmba, Ṣäᶜazzäga, ᶜAddi Gäbru, ᶜAddi Täḵlay, ᶜAddi Qʷänṣi, Hazzäga, ᶜAddi Däbbänä, Šəm Ǧəmnuq, ᶜAddäsfäda, ᶜAddi Habtäsullus, ᶜAddi Šəmagəllä, ᶜAddi Märᶜawi, ᶜAddi Yaᶜəqob, ᶜAddi Abeto, ᶜAddi Bidäl and ᶜAmäṣi.

Dära

D. (ዳራ, Arab. Dārah or Dāra; also Dara) was a region south-east of ↗Däwaro and west of ↗Bale belonging to the Muslim belt or "Muslim fringe" (*aṭ-ṭirāz al-Islāmī*). According to the learned informants of the Egyptian courtier Ibn Faḍlallāh al-ᶜUmarī (d. 749 H. [1349 A.D.]) in the first half of the 14th cent., D. was the weakest and smallest of the seven Muslim trading states (Ifat, Däwaro, Arabäbnī [Arᵓen], Hadiyya, Šarḫa and Bale). It was only a three days' journey in length by three days in breadth, with an army of no more than 2,000 cavalry and infantry. Its inhabitants were described as Ḥanafites. Like in the neighbouring small principality of Bale in the west, their commerce was based only on barter. Repeated in full by the Egyptian encyclopaedist al-Qalqašandī (d. 845 H. [1418 A.D.]), al-ᶜUmarī's statement was shortened by the historian al-Maqrīzī (d. 845 H. [1442 A.D.]). In the 16th cent. the region is mentioned in ᶜArab Faqīh's ↗*Futūḥ al-Ḥabaša*, stating that, after the battle of Zalla (July/August 1532), ↗Aḥmad b. Ibrāhīm al-Ġāzī sent the *ǧarād* Ǧūšah, the father of Bišāra b. Ǧūsah, to block the outlet of Bale at Dāra.

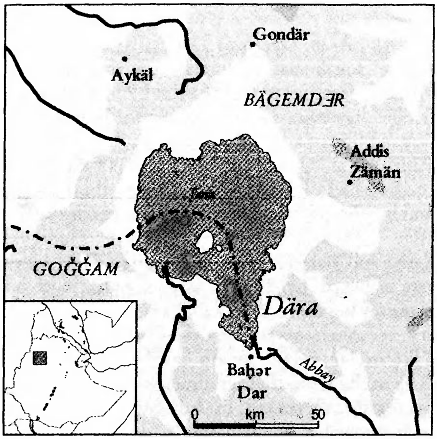
Dära

D. (ዳራ, in Gəᶜəz sources also ዳርኃ, Därḫa, and ዳርሓ, Därḥa) is a region in Bägemdər, located on the south-eastern shores of Lake Ṭana, immediately north of where the Abbay flows out of the lake. It extends north as far approximately as ↗Ṭana Qirqos and is bounded by the regions of Andabet to the east and Fogära to the north.

Traditions from Ṭana Qirqos seem to indicate that Christianity reached D. early, possibly during ↗Zägʷe rule. When *abba* ↗Zäyoḥannəs came to the Lake Ṭana region in the mid-14th cent. to evangelize, he (probably very consciously) made his first stop in D., where the people were already Christians. It was from D. that Zäyoḥannəs moved to settle on ↗Kəbran, and



that Christian influence began to spread to the south-western shores of the lake and into northern Goǧǧam.

In political terms, D. only began to play a more important role from the 16th cent. onwards, when the Christian kingdom's centre of gravity moved from Šäwa to the Lake Ṭana region. As an example, after the decisive battle of ↗Wäyna Däga (21 February 1543), the Christians of D. decimated fleeing contingents of Grañ's defeated army (↗Aḥmad b. Ibrāhīm al-Ġāzī). Monarchs from Śärṣä Dəngəl (r. 1563–97) to Iyasu I (r. 1682–1706) often traversed the area, as we learn from their chronicles, and the same probably holds true for later rulers about whose travels we are less well informed. Yet politically, D. was always eclipsed by ↗Dämbəya north and north-east of Lake Ṭana, where, from Minas (r. 1559–63) onwards, a number of royal residences and, ultimately, the new capital of ↗Gondär were established.

The main settlement of D. today is Wärota (in Gəʿəz sources Qʷärața), where *aṣe* Fasilädäs (r. 1632–67) already had a church built in honour of the female martyr and saint ↗Wälättä Peṭros, buried on nearby ↗Rema island. Historical settlements and areas in D. that repeatedly appear in the chronicles include Ǧäfǧäfa, Tamre and Wäräb.

Michael Kleiner

Darägot

D. (ዳረጎት, also Daharagot, d. ca. 1610) was a military leader and regional governor of the second half of the 16th cent. He held a pre-eminent position, at least since during the reign of *aṣe* Minas (r. 1559–63). Minas's young son and successor, ↗Śärṣä Dəngəl, prudently married D. to his cousin Wälättä Dəngəl in 1567 and appointed him governor of ↗Wag. Thus, he secured the important support of D. and his brother, Wäldä Giyorgis, against rebellious war-lords who seriously endangered Śärṣä Dəngəl's position at that time. All of this transpired during the beginning of D.'s long loyal service to the sovereign. In 1572 he repelled an ↗Oromo invasion in his province of Wag and in 1578 the Emperor used him, already promoted to the office of governor (*nägaš*) of Goǧǧam, against *baḥər nägaš* ↗Yəsḥaq, a rebellious figure in Təgray. In November 1579 D. was sent to Səmen against the local Betä Ǝsraʾəl hereditary ruler ↗Rädaʾi and then again in 1585 against another Fälaša chief called ↗Gʷäšən.

An able general and loyal governor-general, D. was frequently promoted and deployed in the most endangered areas, where his service was needed. When the Turks were threatening ↗Dəbarwa in 1587, D. was made ↗*baḥər nägaš* of Təgray and sent there. Throughout his career D. was successful and victorious in all his assignments. He lived a long life and was still alive in 1607 at the beginning of ↗Susənyos's reign. However, D.'s three sons (Tewodros, Zärʾa Yoḥannəs and Läbasi) were less fortunate and died in their rebellion against the "renegade-king" Susənyos.

Däräsge

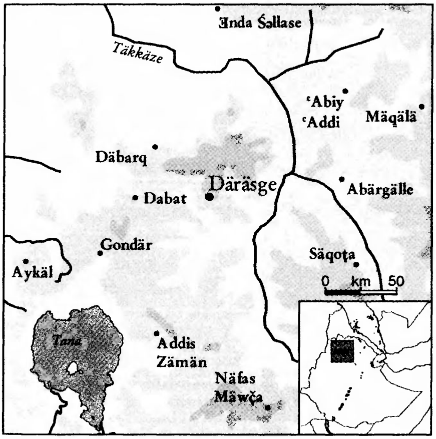
D. (ደራስጌ) is located in the ↗Səmen mountains at 13° 02' N and 38° 11' E. It is about one-and-a-half day's walk from ↗Däbarq, the capital of

Wägära, and lies within Ǧan Amora *wäräda*, former Səmen *awrağğa* (now North Gondär Zone, Amhara *kəlləl*).

D. served as a capital for *däğğazmač* ↗Wəbe Ḫaylä Maryam, the dominant ruler in northern Ethiopia — the provinces of Səmen, Təgray, and the central highland districts of today's Eritrea — from 1830 to 1855.

By 1840 Wəbe had full control of Səmen and Təgray as far north as ↗Märäb Məllaš and was planning to crown himself as *nəguśä nägäśt*, but lacked two key elements. The first was a bishop. In 1841, following special efforts by Wəbe, *abunä* ↗Sälama arrived in ᶜAdwa. To meet the second need, a major church and a residence, Wəbe began to construct a church in D. to host his coronation. In 1849, in a letter to Walter ↗Plowden, the British envoy, Wəbe pleaded for workmen who were knowledgeable in construction. The English translation (RubActa I, 157) reads as follows: "Dejaj Oobey greeting to Mr. Plowden. If you can find five or three workmen if possible at Massowah, if not by sending to your country, builders, or masons, bring them for me. If they wish for lands or appointments, I will give them plenty, if they wish for wages, I would give them wages. And take care of them." Plowden, however, did not succeed in securing the requested workmen.

Some time around 1852 Wəbe founded the church of ↗Däräsge Maryam. He used D. as his capital, although it never took on the characteristics of a town, being too spread out and lacking a centre.



While Wəbe was preparing to crown himself, *däğğazmač* Kaśa of Qʷara (later ↗Tewodros II), was threatening to displace him. In 1855, Kaśa marched to Səmen to meet the combined army of Təgray and Səmen under Wəbe at D. Wəbe was wounded in battle, was later captured by Kaśa. Two days later, on 11 February 1855, the victorious Kaśa was crowned as *nəguśä nägäśt* Tewodros by *abunä* Sälama in the church of Därasge Maryam.

At the battle of D. on 9 February 1855, Kaśa also captured Wəbe's daughter *wäyzaro* ↗Ṭəru Wärq and her two brothers. In 1862 Kaśa married Ṭəru Wärq in a church ceremony. She remained his wife until his death at Mäqdäla.

Däräsge Maryam

D.M. (ደረስጌ፡ ማርያም, 13°01,432' N, 38°05,99' E; 3,096 m A.S.L., also Däbrä Ǝgziʾ, Däbrä Ṣəge) is a church situated 5 km west of the village of ↗Däräsge, in the hardly accessible mountains of ↗Səmen (Ǧan Amora *wäräda*), 50 km south-east of Däbarq.

Located in a graceful mountain valley, D.M. is a circular church constructed during the reign of *däğğazmač* ↗Wəbe Ḫaylä Maryam by the German scientists Georg Wilhelm ↗Schimper and Eduard ↗Zander. It is mentioned in an Ethiopian feudal act written in Amharic during *aṣe* ↗Sahlä Dəngəl's reign and now preserved in London (ms. BritLib Orient. 481, fol. 3b). In 1855, the church was used for *aṣe* ↗Tewodros II's coronation. The church exhibits many well-preserved murals, a rich treasury with abundant church paraphernalia and a library.

Between the two ring-walls surrounding the church, an unusual stone building is situated, *däğğazmač* Wəbe's former "castle" (↗*Gəbbi*); at the eastern entrance of the church lies his grave.

It was at the beginning of 1849 that Wəbe decided to build a church and a palace in his native country of Səmen. Schimper, who had been residing in ᶜAdwa since 1837, acted as a political adviser and translator. Some years later, with regard to Wəbe's plan to erect a church and a palace in this remote region, Schimper wrote (1868:294–98) that he had to build both the church and the "castle" by himself, since Wəbe, who was planning to crown himself as emperor, had no one skilled enough to help him. Although Schimper had not studied architecture before, within five years the construction of a small building "in Byzantine style" was completed.

Wəbe's desire to appoint two *färängočč* (Europeans; ↗*Färänğ*) to supervise the construction seems peculiar at first sight. However, the example of the scarcely known German missionary and carpenter Christian Aischinger from Württemberg, who, as Krapf reported, had to construct the Çərqos Church near ᶜAddigrat for *däğğazmač* ↗Säbagadis Wäldu of Təgray in 1842, shows that such a procedure was not unusual.

On 2 June 1850, Schimper and Zander set out from ᶜAdwa for the Səmen mountains and began preparations for the construction in D.M. On those occasions, many drawings of the mountain area were made by Zander, a talented artist (e.g., he executed the unique painting of Däräsge dating from 1852). According to von Krosigk (1937:117), the inauguration of the church took place during the ↗*Mäsqäl* festival in the same year. On 6 February 1853, von Heuglin came to D.M. and described its construction: "... The plan is borrowed from the political sanctuary of Gondar [↗Däbrä Bərhan Šəllase] ... The building is only of insignificant size. It may be 40 to 50 feet long, 30 to 35 feet deep and 30 feet high. It contains three small chambers with narrow, small windows. The building is one-storey, with a square, still unfinished central bell-tower at its back. The three bells determined to be hung there are gifts from the Apostolic mission of De Jacobis in Massawa and Schimper. The building is constructed of massive trachyte blocks and fully covered with lime ..." (von Heuglin 1857:68ff.). Schimper was also in charge of the wall-paintings, as Markham reported after meeting the two German scientists in the fortress of Mäqdäla on behalf of the British ↗Napier Expedition in 1868: "The German botanist Schimper superintended the floral decorations of the church at Derezgy" (Markham 1869:64). Only few foreign explorers visited the church after Tewodros had transferred his court to ↗Däbrä Tabor.

The church, still surrounded by two well-preserved stone walls, has a huge entrance door on the western side. D.M. is the final point of a holy procession occurring every year on 21 January to worship the patron. A picture of St. Mary with the Child, painted in synthetic ultramarine, can be found at the western entrance. Besides the colour (cp. Marx 2001), the drapery of St. Mary's coat, decorated with rich interlaced ornaments, is unusual. Also remarkable is another mural close to the opposite door, portraying *däğğazmač* Wəbe wearing a crown, accompanied by his wife and *abunä* ↗Sälama, all on a horseback. The library of D.M. remains largely unexplored.

Däräso Ṭabo

Ras D.Ṭ. (ደረሶ፡ ጣቦ) was one of the most outstanding military commanders of the late 19th cent., his name being often cited along with *ras* ↗Alula Ǝngəda and *ras* ↗Gobäna Daçi. A *balabbat* of Q^{w}älla Damot in Goǧǧam, D.T. was chosen by *nəguś* ↗Täklä Haymanot to lead his military campaigns into the Oromo territories across the Abbay.

Following the designation of Täklä Haymanot as *nəguś* of Goggam and Käfa by *aṣe* Yoḥannəs IV in 1881, D.Ṭ., then *däǧǧazmač*, was made *ras* and appointed governor of the Oromo regions of Guduru and Leeqaa. D.Ṭ. then embarked on an extensive campaign to incorporate the territories as far as Ǧimma Abbaa Ǧifaar and Käfa. However, the situation was complicated by the fact that Gobäna, *nəguś* Mənilək's (later *aṣe* Mənilək II's) general, wanted to expand his control at the same time and in the same direction. The Gobäna's seizure of booty that D.Ṭ. had collected led to a tense confrontation between the two generals and eventually drew their superiors into a show of strength.

In 1882 the Battle of ↗Ǝmbabo was fought; Täklä Haymanot was wounded and captured early on in the engagement. D.Ṭ. ignored the order of his captured lord to surrender and fought on with remarkable resilience. However, victory ultimately went to the Šäwans and the course of Ethiopian history was thereby significantly changed, as the succession of Mənilək to the imperial throne was guaranteed. Not much is heard of D.Ṭ. after Ǝmbabo, although he is known to have represented his overlord at the coronation of Mənilək II at Ǝnṭoṭṭo in 1889.

Därg ↗Provisional Military Administrative Council

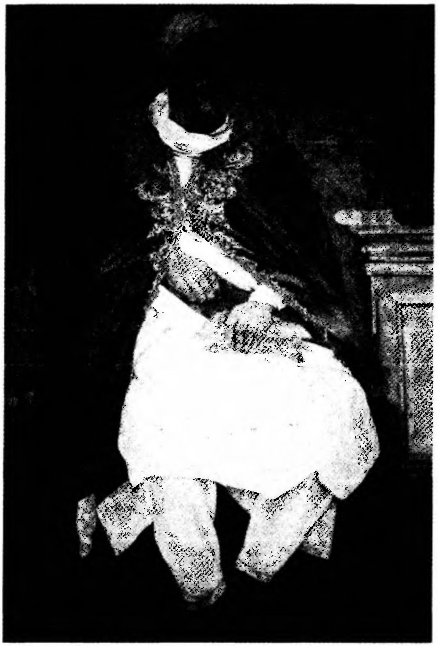
Darge Śahlä Śəllase

Ras D.Ś.Ś. (**ዳርጌ፡ ሣህለ፡ ሥላሴ**, "horse name" **አባ፡ ጌርሳ**, Abba Gersa; b. ca. 1830, d. March 1900) was a prince, royal councillor and provincial governor. Son of *nəguś* ↗Śahlä Śəllase and *wäyzäro* Wärräyega of Hadiyya, D.Ś.Ś. became head of a family branch of the Solomonic dynasty of Šäwa collateral to that of *aṣe* ↗Mənilək II and *ras* ↗Mäkʷännən Wäldä Mikaʾel.

He was born and brought up in Ankobär. Though details of his early life are few, we know that he emerged as a prominent military leader immediately after the death of his father in 1847. In 1847–49 he campaigned in ↗Sälale and the neighbouring districts of the ↗Abbičuu Oromo in collaboration with his younger brother, *abeto* ↗Säyfu Śahlä Śəllase. In 1856, he mobilized men from Mänz on behalf of Säyfu who had refused to submit to *aṣe* ↗Tewodros II; but he surrendered to the Emperor soon after the arrest of Säyfu by their third brother, *märəd azmač* ↗Ḫaylä Mikaʾel.

Tewodros treated him well at first and even appointed him governor of Šäwa, but D.Ś.Ś. was soon accused of intriguing with opponents of the sovereign and, hence, was confined at ↗Mäqdäla. After his release by the British in April 1868, he returned to Šäwa and submitted to Mənilək, who respected him highly and consulted his opinion on major state matters throughout his life. In the early reign of *nəguś* Mənilək, D.Ś.Ś. was appointed governor of ↗Bulga, an office which he held for three years. In 1871, he was made *däǧǧazmač* and was given Sälale and ↗Märḥabete, the former of which he retained until his death. In 1876–77, he fought his nephew, Mäšäša Säyfu, and *wäyzäro* ↗Bafäna, the rebellious consort of Mənilək, who had risen up against Mənilək and held the stronghold of Tamo. The following year, Mənilək promoted D.Ś.Ś. to *ras*.

D.Ś.Ś.'s last military campaign was most probably the conquest of ↗Arsi in 1882–86, in which at least two of his sons also participated. On grounds of advanced age and his chronic rheumatism, he avoided military expeditions and long marches after this event. Mənilək nonetheless entrusted to him the regency of his throne whenever he himself went on military expeditions. His provincial administration seems to have been fair; at least, no insurrections were recorded in Sälale throughout the last three decades of the 19th cent. His conquest of Arsi was, however, devastating, as the resistance of the inhabitants was fierce.



Ras Darge Śahlä Śəllase; oil painting, signed "Šiwunarian", late 19th cent. (?); photo by Mersha Alehegn, courtesy of the National Museum, Addis Abäba

D.Ś.Ś. was rich, religious and conservative, though he is known to have shown no repugnance to Western education and innovations. He befriended a number of Europeans, including ↗Mondon-Vidailhet, ↗Ilg and Appenzeller; he also allowed his royal nephew to send one of his sons, Gugsa (1876–1921), to Europe for education. He built and renovated many churches, his most favourite one being that of ↗Gännätä Giyorgis at Fəčče. He died of illness in March 1900 and was buried with pomp and ceremony in Däbrä Libanos.

Mənilək then split his governorate between two of his sons, *däǧǧazmač* Asfaw Darge and *däǧǧazmač* Täsämma Darge (both of them were political suspects who enjoyed freedom mainly through the protection of their father). Asfaw was a brave military leader who participated in the conquest of Arsi in the 1880s and subjugated ↗Bale as far as Lug in the following decade. However, he often disregarded imperial orders and allegedly aspired to the throne, conseqently, he was severely punished in the late 1890s. A few years after the death of their father, Asfaw was accused of intrigues and confined in the mountain prison of Afqära, where he died, allegedly of an illness, in October 1905. Täsämma was put under surveillance until his death in Addis Abäba three days before his imprisoned brother. Asfaw was survived by a son, *däğğazmač* Zäwde, who proved a capable resistance leader during the Fascist occupation of Ethiopia, and by a daughter, Asädä, who married *ras* ↗Śəyyum Mängäša and earned the title of *ləʿəlt*.

Two other sons of D.Ś.Ś. died earlier: *fitawrari* Šäwaräggäd Darge was killed in a horse-racing accident in June 1882, and *däğğazmač* Dästa Darge, who governed Čälleya,died from an illness in 1892. The latter was a maternal uncle of *aṣe* ↗Ḫaylä Śəllasel, under whose rule a grandson, *däğğazmač* Mammo Śəyyum Dästa, enjoyed high offices. D.Ś.Ś. also had three daughters: Ṣäḥayä Wärq, Askalä Maryam and Tässämma. The first, a resolute and relatively free-spirited woman, was a close associate of Empress ↗Zäwditu and, hence, she came into conflict with *ras* Täfäri Mäkʷännən in 1925 and subsequently died in prison. Perhaps the most influential descendants of *ras* D.Ś.Ś. were Täsämma's son, *ras* ↗Kaśa Ḫaylu, and his sons, *däğğazmač* Abärra Kaśa, · *däğğazmač* Wänd Wässän Kaśa and *ləʿul ras* ↗Aśratä [Maryam] Kaśa.

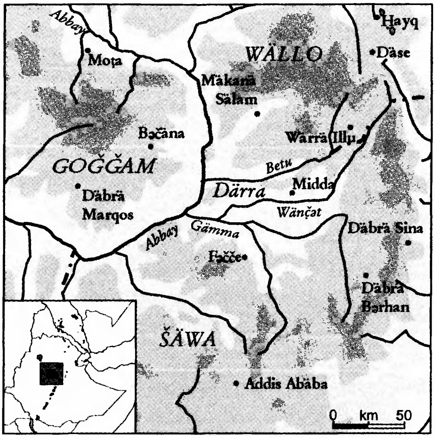
Därra

D. (ደራ) is a border region between Goğğam, Šäwa and Wällo. It is delimited by the River ↗Abbay in the west, the River Betu in the north, and the Rivers ↗Wänčət and ↗Ğämma in the south. D. is typical of the north-central highlands, with table mountains reaching 2,300 m and river gorges dissecting the landscape at 600 m. (There is another location with the same name situated north of the Abbay as it leaves Lake Ṭana.)



The predominantly Oromo population consist of Orthodox Christians and Muslims, but traditional religious practices are also adhered to. The households in D. depend on mixed farming.

Before the Oromo invasions, D. was part of the ↗Wäläqa province of the Christian empire. The Oromo of the ↗Tuulama group settled in D. towards the end of the 16th cent. In the 17th cent., they were attacked several times by imperial forces. The D. Oromo consist of three local Oromo agnate descent groups, the Metta, Aadaa and Tuti. The last Oromo ruler of D., Wolele (wife of the late ruler Hasän Wädaḍ), was defeated in the 1880s by *ras* ↗Darge Śahlä Śəllase, and D. was merged with his province of ↗Sälale. For most of the 20th cent. D. has been part of ↗Märḥabete. Today it is the northernmost Oromo *wäräda*, Gundä Mäsqäl being the *wäräda* capital.

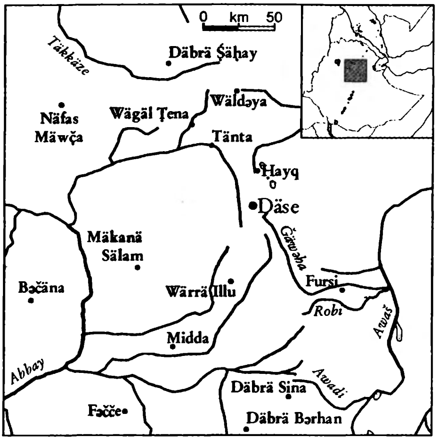
Odd Eirik Arnesen

Däse

D. (ደሴ, lit. 'My Joy'; 2,370 m A.S.L.) is a town in Wällo. It was reportedly founded by *aṣe*



↗Yoḥannəs IV around 1883, who also ordered the Betä Śəllase church to be built there (Chaîne 1913:188f.). The site, formerly known as Wäyra Amba, was already used by ↗Tewodros II as a military camp. During the time of *ras* (later *nəguś*) ↗Mika᾿el Ali the settlement developed to become the regional capital.

The physical environment was favourable for D. Its hilltops formed the ideal site for building a governor's residence. The area had a temperate ↗*wäyna däga* climate. The hinterland had rich volcanic soils, which enabled the farmers to produce surplus crops for the city dwellers. Since D. was located at the crossroads of major trade routes, it became an important trading centre. It was also of strategic importance during *aṣe* ↗Mənilək II's campaign against the Italians, it became a major supply centre for the Ethiopian troops (De Castro 1915, vol. 2, 264). D. was the capital of Wällo province during the reign of *aṣe* ↗Ḫaylä Śəllase I and in the *Därg* period. After 1991 D. became the centre of North Wällo.

Modern D. is composed of several distinct areas. The Säñño Gäbäya disctrict hosts the old market established by *nəguś* Mika᾿el. In the early 20th cent., this market was as great as that of ↗Boru Meda, i.e. was the largest in that part of Ethiopia (Annaratone 1914:128). The Bärbäre Gända is the northward extension of the Sälayəš Säfär west of the main highway extending from Addis Abäba to Asmära. Besides having a number of shops, banks, and offices it has several residential houses. The Aräb Gända is an important area where the first foreigners, probably Arabs, built their settlement. The primary nucleus of D. is Ayəṭäyäf, the banqueting-hall of *nəguś* Mika᾿el, which once accommodated a large crowd (↗*Gəbər*). Around this site an important residential area was formed. Mugad is a market-place that is active throughout the week. Most of the wholesale and retail trade establishments are located here. The Mädḫane ᶜAläm Church is another important point north of Ayəṭäyəf. It was built by order of *ras* Mika᾿el – according to tradition on the site of an earlier church, destroyed by Aḥmad Grañ in the 16th cent. Priests reside around this church and there are many *ṭälla* and *ṭäǧǧ bets* to the west and north of the church. Located in the Hoṭe district in the north-eastern part of D. are hospitals, a nursing school, the regional health headquarters, a cinema hall, the main prison, the Hoṭe Comprehensive High School, the Tigril Fəre Elementary School, the main stadium and the electricity powerhouse. The Robit Gäbäya area houses the second important market. North of it lies the metropolitan's residence and a theological school. Still further north, at the top of a hill, is the Betä Śəllase church. Arära, the city's most lightly populated area, is located in its north-eastern part at the foothills of Azwa Gäde, east of the Borkäna river. Dawdo is a new settlement which has emerged in the northern part of the city to address residential housing shortages.

The population of the town increased significantly in the second half of the 20th cent. While in 1938 it was estimated at 36,000 inhabitants (6,000 Italians; *Guida*), in the Census of 2000 the number of inhabitants was 129,431. According to the 1994 Census, the Däse Zuriya *wäräda* has a total population of 201,433. Details of the infrastructure and living conditions are as follows: the total student enrolment in the various schools comprised of Primary (485), Junior Secondary (261) and Senior Secondary (228). Among housing units, 645 had individual tap-water, 3,532 had tap-water within their compounds, 460 had protected well- and spring-water, 195 had unprotected well- and spring-water. By ca. 1985 9,776 housing units received electricity from the lines that ran from the ↗Qoqa dam to D. Today, many more houses benefit from this arrangement.

Mekete Belachew

Däsk

The name D. (**ደስክ**, 'spot, stain') indiscriminately describes a group of non-Christian priests and worshippers (**ብእሴ፡ ደስክ**, *bəʾəse däsk*) in 15th-cent. Gəʿəz literature. The term may also refer to their deity. It is difficult to elaborate on this topic because all records originate in the stereotyped polemic of the Ethiopian Orthodox Church against the non-Christian medieval cults. According to this polemic, the D. people are identified with demons and their rituals are associated with satanic cults. The oldest records about D. are known from the Acts of ↗Samuʾel of Däbrä Wägäg and from the writings of *aṣe* ↗Zärʾa Yaʿəqob. One of the policies of Zärʾa Yaʿəqob was to condemn the non-Christian practices of his time, which were widespread even in the royal family. D. occurs in his writings accompanied by other representatives of these ancient cults, such as *dino*, *gʷədale*, *mäqawəze*, *marəyan*, *ṭäfänt* and *ṭänqʷaləyan*, and seems to describe a kind of soothsayer or warlock. In later magic literature D. is a name of a ↗demon.

Dästa Damṭäw

Ras D.D. (**ደስታ፡ ዳምጠው**; b. ca. 1893, d. 1937) was a leading politician of the early ↗Ḫaylä Śəllase I era. His father, *fitawrari* Damṭäw, led an official mission of Emperor Mənilək to Russia in 1895 and was one of the commanders who fell at the Battle of ʿAdwa. D.D. grew up at the imperial court and was married to the eldest daughter of Ḫaylä Śəllase, Princess ↗Tänaññä Wärq. In 1928, subsequent to the detention of *däǧǧazmač* ↗Balča by *ras* Täfäri for insubordination, the governorship of the lucrative province of ↗Sidamo was given to D.D. As governor of Sidamo, he led Ethiopian forces on the southern front against the invading Italian army in 1935. His bold offensive was thwarted at the Battle of ↗Genaalee Doriya (12–14 January 1936), which proved a veritable massacre for the Ethiopians. Emboldened by the nearly 1,000 Eritrean ↗*askari* who deserted to his side during that encounter, D.D. continued to defy the Fascist occupation until he was captured in February 1937 and summarily executed. His heroic death inspired one of the poems of the Senegalese poet Léopold Sédar Senghor.

Dästa Darge ↗Darge Śahlä Śəllase

Dästa Səbḥat

Däğğazmač D.S. (ደስታ፡ ስብሓት; d. 1908, Addis Abäba; r. 1902–08) was the son of *ras* ↗Səbḥat Arägawi from the family of ↗Säbagadis Wäldu of ↗ᶜAgamä in eastern Təgray. He is known locally as *šum ᶜagame* Dästa. The title of *däğğazmač* was apparently conferred on him by his father and confirmed by *aṣe* ↗Mənilək II.

In 1890 D.S. was taken hostage by *ras* ↗Mängäša Yoḥannəs of Təgray to enforce his father's submission, but D.S. soon escaped. He repeatedly joined rebellion against both *ras* Mängäša and Mənilək. As a result, in 1893 Mängäša detained Səbḥat Arägawi and D.S. at ↗Ambalage on suspicion of conspiracy. The prisoners were released in 1895 by the Italians. D.S. and his father briefly allied themselves with the Italians before their return to Mənilək's camp on the eve of the battle of ↗ᶜAdwa. Two years later, they stopped fighting their former rival, *ras* Mängäša, while in rebellion against Mənilək's central government, but were defeated and captured. After two more years, in 1902, Mənilək released D.S. and appointed him governor of ᶜAgamä to placate the stiff local rebellion that had led to political instability.

D.S.'s two surviving achievements are the two palaces he built one in ↗ᶜAddigrat, the capital of ᶜAgamä, and the other at Sabaya, to the north. He also renovated the present day church of St. Cyril in ᶜAddigrat. There were other ambitious schemes that seemed to have brought him into conflict with a host of external and internal rivals, including the peasantry. For instance, attracted by the huge ↗salt revenues of eastern Təgray, he tried to divert the flow of the principal south-eastern salt caravan from ↗Ǝndärta to ᶜAgamä. For this purpose, he encouraged Muslim merchant communities to settle and trade in ᶜAddigrat. Subsequently, many Muslims came to live in the southern quarter of the town; the trade route, however, did not divert.

D.S. also tried to dislodge the Italians from considerable territories of ↗Šəmäzana, which he claimed were part of his realm. As a result, D.S. came into conflict with the Italians who began encroaching into some of the bordering districts of ᶜAgamä.

The internal resentment and D.S.'s continued raids into the Italian colony of Eritrea apparently led to his dismissal from office and subsequent detention by Mənilək. He died in confinement.

ᶜAgamä was subsequently merged with the governorate of *däğğazmač* ↗Gäbrä Śəllase Barya Gabər, in addition to Aksum and the ᶜAdwa areas. Gäbrä Śəllase probably took advantage of his high standing in Mənilək's court to facilitate D.S.'s removal from office (this act was achieved in concert with the Italians).

Dästa Tädla Gʷalu

Ras D.T. (ደስታ፡ ተድላ፡ ጓሉ, "horse name" Dässe Abba Wəqaw; d. 1874) was a nobleman, rebel and governor. He was the son of *däğğazmač* ↗Tädla Gʷalu, who rebelled against Tewodros II in the 1860s. Consequently, he was a direct descendant of *ras* ↗Ḫaylu the elder. For some unknown reason, certain sources refer to D.T. as "Dästa Gʷalu".

Equally obscure is the history of D.T.'s youth and upbringing. After the death of his father in 1867, the eldest son, *däğğazmač* Nəguśe Tädla Gʷalu, succeeded to the gubernatorial office of ↗Goğğam, but he was soon replaced by his youngest brother, D.T., who governed Goğğam intermittently until 1874. D.T. submitted to *aṣe* ↗Täklä Giyorgis II in 1869 and was confirmed in his governorate. To ensure his loyalty, he was also given one of the Emperor's half-sisters in marriage.

When Täklä Giyorgis decided to march northwards to subdue Təgray, however, D.T. ignored the Imperial summons to mobilize his men and join the expedition. Täklä Giyorgis turned his force against Goğğam, but he failed to capture D.T. and retired to ↗Däbrä Tabor to make further preparations for his military expedition. D.T.'s rival from a collateral family, Adal Täsämma (later *nəguś* ↗Täklä Haymanot), however, seized him and handed him over to the Emperor. The Emperor appointed Adal governor of Goğğam and gave him another relation in marriage.

In 1871, after the defeat of Täklä Giyorgis by Kaśa, who subsequently crowned himself *aṣe* ↗Yoḥannəs IV, Adal failed to submit to the new sovereign. Yoḥannəs IV freed and reinstated

D.T. as Governor of Goǧǧam with the rank and title of *ras* at the end of 1873. A few months later, however, he was killed by Adal, who then submitted to the Emperor at Sämära (Däbrä Tabor) through the intercession of the clergy and was given Goǧǧam, which he subsequently held for more than a quarter of a century.

Dästa Täklä Wäld

D.T.W. (**ደስታ፡ ተክለ፡ ወልድ**; b. 26 July 1901, Goš Wəha in Wägda, Šäwa, d. 5 September 1985, Addis Abäba) was a scholar of traditional Ethiopian customs and culture.

D.T.W. first received a church education near his home and later in ↗Däbrä Libanos, where he studied church poetry and chant (*qəne* and *zema*) under *aläqa* Kidanä Maryam and *mämhər* Gäbrä Iyäsus, and also biblical interpretation.

From 1923/24 to 1927/28 he was employed by the ↗Bərhanənna Sälam Printing Press as a proof-reader and language consultant for religious books. Later, asked by the renowned scholar *aläqa* ↗Kidanä Wäld Kəfle to join him at the Saint-Lazare Printing Press, D.T.W. moved to Dərre Dawa, where he spent 16 years working in a similar field. After returning to Addis Abäba at the end of this period, he worked for the Bərhanənna Sälam Press and the ↗Artistic Printing Press.

D.T.W.'s greatest achievement and lifework was his **ዐዲስ፡ ያማርኛ፡ መዝገበ፡ ቃላት። በካህናትና፡ በሀገረ፡ ሰብ፡ ቋንቋ** (*ᶜAddis yamarəñña mäzgäbä qalat, bäkahnatənna bähagärä säb qʷanqʷa*, 'A New Dictionary of Amharic, in the Language of the Clergy and the Peasants' = DTWDic), which he wrote on *aṣe* Ḥaylä Śəllase I's order. It was completed in 1957/58 and published by the Artistic Press in 1970. The dictionary consists of 1,284 pages with 523 illustrations and a long introduction on grammar, the history of Amharic and the Ethiopian syllabaries. D.T.W. applied to it the alphabetic order of the consonants of the old Ethiopian *Abugida* syllabary, yet disregarding the traditional order of the vowels; he used a similar system in the Gəᶜəz dictionary by Kidanä Wäld Kəfle, completed by D.T.W. after the author's death (↗*Abugida and hahu*).

Ḏāt Ḥimyam

In the Ethiopic sources, the goddess Ḏ.Ḥ. (ḎT ḤMYM), one of the five supreme deities of the Sabaean pantheon, is mentioned in the final invocations and other formulae of Sabaic and Ethio-Sabaic inscriptions, always in the fourth place, after ᶜṮTR/ᶜSTR (↗ᶜAstär), H(W)BS (Hawbas), ʾLMQH (↗Almaqah) but before ḎT BᶜDN (RIE 1:5–6; 5 B:2; 10:13–14). The vocalization of the main part of her name as Ḥimyam, which is not supported by any source, remains conventional. The traditional identification of Ḏ.Ḥ. with the Sun goddess seems dubious, since it was founded on the now rejected concept of the Divine Triad elaborated by Ditlef Nielsen. However, the attribution of an astral nature to her cannot be excluded. On the territory of the Old Sabaean kingdom in Yemen only one temple of Ḏ.Ḥ. is localized, at the site of Ḫaribat Saᶜūd (ancient Kutāl[um]), to the north-west of Mārib.

In Yemen of the early 1st millennium B.C., during the epoch of the Sabaean expansion, the cult of Ḏ.Ḥ. was brought to some peripheral areas of South Arabian civilization. The indigenous population of north-eastern Ethiopia and inland Ḥaḍramawt even incorporated her in their own pantheons. On the basis of Hadramitic inscriptions found in two temples of Ḏ.Ḥ., which were excavated in 1983–91 at the site of Raybūn (Ḥaḍramawt), some of her functions are ascertained; the goddess was responsible for the regulation of conjugal relations and probably of proprietary rights in land. No sculptural or pictorial representation of her as well as of other South Arabian deities has been found yet. Some vague references to the interdiction of making images of Ḏ.Ḥ. occur in the epigraphic documentation of Raybūn.

In the strongly Sabaean-influenced Ethiopian kingdom of ↗DʿMT (8th–7th cent. B.C.), Ḏ.Ḥ. was worshipped under the names of both ḎT ḤMYM and ḎT ḤMN. The latter form, attested once in royal texts (RIE 9:6–7) and rather often in pre-Aksumite graffiti, might have reflected phonetic and morphological peculiarities of local dialects. This divergence in orthography was obviously connected with the ethnic and social heterogeneity of the inhabitants of DʿMT. On a small altar found in ↗ʿAddi Kramatən two dedications to Ḏ.Ḥ. are discovered; in a carefully engraved Sabaic boustrophedon inscription her name was written as ḎT ḤMYM (RIE 53 I:2), while in a graffito roughly scribbled over it along the frieze the spelling ḎT ḤMN was used (RIE 53 II:1). At the site of ↗Yəḥa, an epithet of Ḏ.Ḥ. seems to have been attested in a fragmentary context (RIE 46: *w-ḏt/ḥmym/ ḏt/…*).

After the decline of DʿMT some centres of the cult of the goddess, known henceforward only as ḎT ḤMN, existed at the site of ↗Fəqya (RIE 71:2; 72 I:2; 73:2; 74; 75:2; 77:2) and in Dəkanamo (RIE 158; 163). Some correspondence may be traced between Ḏ.Ḥ. and the Aksumite deity of earth attested in the pre-Christian inscriptions of ↗ʿEzana as MDR (RIE 185 II:21), ↗Mədr (RIE 188:26) and Γῆ (RIE 270bis:30).

David Ben Solomon Ibn Abi Zimra

Known as RaDBaZ (= Rabbi David Abi Zimra), D. was a leading Talmudic scholar, halakhic authority and kabbalist. Born in Spain in 1479, his family moved to Safed following the exile of the Jews in 1492. He emigrated to Egypt in 1513, settling first in Alexandria and later in Cairo. In 1517 he became the official head of Egyptian Jewry. However, his reputation extended well beyond the borders of that country and he received legal and religious questions from many Jewish communities.

On two separate occasions D. considered the Jewish religious status and identity of the ↗Betä Əsraʾel (Fälaša). In both cases he was asked to rule regarding Jews from 'the land of Cush' brought to Egypt as prisoners. He affirmed the identity of the Betä Əsraʾel as descendants of the Tribe of ↗Dan (↗Eldad Ha-Dani), but noted that their ignorance of rabbinic Jewish law created problems with regard to the legitimacy of their marriages and divorces. His rulings became one the most important Jewish sources on the Betä Əsraʾel and served as the basis for all later Jewish discussions concerning their identity. A third text discussed the flooding of the Nile and its Ethiopian source.

Däwäl

D. (ደወል, 'territory, district, border, frontier') is the term applied in particular to the periphery of a church parish (↗*Aṭbiya*). Sometimes it designates a subdivision within a monastic community: in ↗Waldəbba a group of up to ten monks, living outside the main monastic settlement, is called D.

D. is also the traditional Ethiopian term for the (church) phonolith or "stone bell" (possibly with no connection to the previous meaning, s. LesCDic 145). The D. are usually made from one or several resonant slabs of stone (*yädängiya däwäl*), and sometimes from wood (*yäʾənčät däwäl*) that are usually suspended on a wooden frame within the church compound (cp. Powne 1968, plate 3; DAE III, 46). The bell-ringer (*däwway*) strikes the D. with a round pebble, but in some cases two resonant stones hanging side by side are moved to strike each other. While the stone or wooden D. were common, metal European-type bells, also called D., were occasionally brought to Ethiopia (in exceptional cases, perhaps, even locally made). Among the gifts acquired in Venice by the 1402 Ethiopian embassy was a mechanical clock referred to as *dol* (contracted form of *däwäl*), with a hammer to strike the "bell" (s. Raineri 1999:373). However, regular imports of metal bells probably began at the time of the ↗Jesuits at the earliest and continued through to the 19th cent. (cp. the unique "combined" D. in the yard of St. Gabriel Church in ↗Kəbran, s. HamTana 1, 51, fig. 23, and also the famous chapel of Madḫane ʿAläm church at ↗ʿAdwa, DAE III, 52f.). Some churches used to possess both the traditional D. and the bell (e.g., the old ↗Ǝnda Maryam church of Asmära, DAE II, 195). D. are considered one of the sacred objects in the church. According to ecclesiastical tradition, the use of the D. started at the time of Noah, who is said to have rung the D. at three different times during the day: at dawn for prayer and work, at noon for lunch and in the evening to announce the end of the working day.

Church *Däwäl* of Ṣäʿazzäga in Ḥamasen; photo 1914/15 by Leo Frobenius's expedition; courtesy of the Frobenius-Institut, Frankfurt am Main (07–8213)

In common church practice, D. are used to summon the clergy and worshippers to prayer. Ringing the D. at the beginning and end of church services is also customary. D. were also rung when members of the royal family died. Traditionally, anyone seeking ↗asylum in a church or monastery had to reach the D. and strike it to let the ecclesiastics know that someone was begging for their protection; after the D. was rung no one was allowed to harm him.

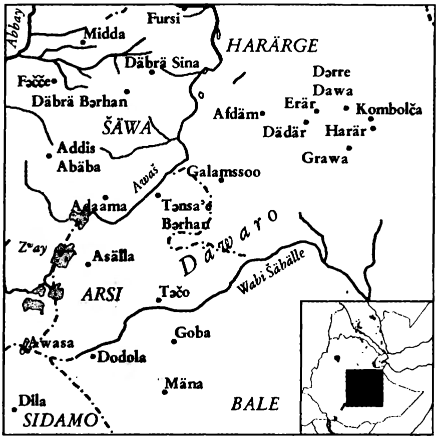
Mersha Alehegne – Denis Nosnitsin

Däwaro

D. (**ደዋሮ**, Arabic داورو, also Dauarro, Davvaro, Dauri, or Dauarri) was one of the seven Muslim trading states in southern Ethiopia which belonged to the belt of Muslim states, fittingly called by the Egyptian courtier al-↗ʿUmarī the "Muslim fringe" (*aṭ-ṭirāz al-islāmī*). This series of Muslim states, namely ↗Ifat, D., ↗Arabäbni (Arʾeñ), ↗Hadiyya, ↗Šarḫa, ↗Bale and ↗Darä, grew up along the coast and inland as far as the lakes, thus, encircling the east and south of the Ethiopian massif. As one of the buffer-states, D. itself, corresponding roughly to the present-day ↗Arsi region in southern Ethiopia, was a long, narrow territory, only five days' journey in length by two days' in width, as described by al-↗ʿUmarī in the first half of the 14th cent. Bordering upon the Bale sultanate in the south, D. was separated from it by the ↗Wabi Šäbälle river and bordered on Ifat on the right bank of the river ↗Awaš. In the east, it reached the edge of the ʿAfar lowlands, in the south-west, it bordered on the small principalities of Šarḫa and Arabäbni (for further information on D., including ↗Dawro where refugees from D. had



settled during the wars of ↗Aḥmad b. Ibrāhīm al-Ġāzī, s. BassHist II, 16, note 2, Cerulli 1971:286f., 290f. and HuntGeogr 87f., 126f., corrected by Taddesse Tamrat 1991:118).

As a major Muslim community of the southern region, the existence of the D. kingdom, in which *abba* ↗Täklä Haymanot reputedly had some influence through missionary activity about 1300, is confirmed both by Ethiopic and Arabic sources. In Ethiopic chronicles it appears first in that of *aṣe* ↗ᶜAmdä Ṣəyon I. According to this source, he subdued Ifat, D., Šarḫa and Bale in the war of 1332, when the territory of D. was ruled by a governor called Ḫaydara, a tributary to the Emperor of Ethiopia. Ḫaydara supported the insurrection of ↗Ṣabraddīn Muḥammad of ᶜAdal, who had planned to defeat the Emperor's troops by attacking them from as many points as possible. ᶜAmdä Ṣəyon I conducted a punitive expedition against the rebels in April 1332. According to the royal chronicle, his campaign was a brilliant success. Defeated and forced to submit, Ṣabraddīn surrendered and was taken prisoner together with his ally Ḫaydara. The region was devastated and D. was placed under Ǧamāladdīn b. Muḥammad b. Manṣūr, a brother of Ṣabraddīn, as ruler tributary to Ethiopia.

Accordingly, D. is described as part of the Emperor's dominion in the "Soldiers' songs" of ᶜAmdä Ṣəyon I as well as those of ↗Zärʾa Yaᶜəqob (Guidi 1889:53–66), who, a hundred years later, consolidated the conquests of his predecessors. He appointed a governor called *awrari* Bäğer over D., and stationed garrison troops called ↗*čäwa* there to strengthen his control.

Of great historical importance was his intermittent struggle with ↗Aḥmad Badlāy b. Saᶜdaddīn, who had been sent with the *amīr* Ḥarb Goš by ↗Ǧamāladdīn b. Bazyū on an expedition to D. After a successful preliminary campaign in the highlands of Šäwa in August 1443, Aḥmad Badlāy and his brother Ḫairaddīn started a new offensive into the Ethiopian part of D. in 1445. This time, however, they were repelled by the Ethiopian army. Zärʾa Yaᶜəqob himself marched against him and defeated him, cutting Aḥmad Badlāy's throat with his lance at the decisive battle of Agbära in D. on 26 December 1445. With the victory over Aḥmad Badlāy, whom the Ethiopians called Arwe ('Snake') Bädlay, the Ethiopians ended the equilibrium between the Muslims and Christians. During the ensuing reign of *aṣe* ↗Bäʾədä Maryam, who put D. under a governor with the prestigious title of *əras* (↗*Ras*), D. remained under imperial rule.

Valuable information on D. also appears in al-ᶜUmarī's sympathetic account. The territory, he states, was under a king who was tributary to the emperor of Ethiopia. Although much smaller than Ifat, D. is said to have possessed a large and powerful army, consisting of around 20,000 cavalry and 15,000 infantry. Its ruler did not, however, have a parasol carried over his head and he and his emirs (↗*Amīr*) were not supported by attendants when walking. Like Ifat, D. produced cereals and fruit and reared horses and beasts of burden. As coinage the inhabitants of D., who were Ḥanafites (↗Ḥanafism), used pieces of iron called ↗*ḥakunu* (or *ḥanuku*). These were the length of a needle but three times as thick. 5,000 of them were needed to purchase a cow and 3,000 for a goat. The same sort of money was used in the neighbouring states of Arabäbni and Hadiyya. Al-ᶜUmarī's valuable report on D. is repeated a century later by the Egyptian encyclopaedist al-Qalqašandī (d. 1418) and by al-Maqrīzī (d. 1442), who simply copies al-ᶜUmarī, although the situation was quite different and D. was at that time under Christian control.

A century later, D. was one of the first provinces to feel the weight of Aḥmad b. Ibrāhīm al-Ġāzī's campaigns. He swept with recruits from the Islamic world across Ethiopia in successive battles. His chronicler ᶜArabfaqīh gives in his ↗*Futūḥ al-ḥabaša* a great deal of topographical information which is quite consistent concerning the limits of D.

After a first unsuccessful raid into the territory sometime before 1527, which ended in disaster, Grañ, together with the vizier ᶜAddalī, started a second campaign against D. in 1527 or 1528. They defeated the Ethiopians at the river Zamīt. After the battle of ↗Šämbəra Kʷäre on 11 March 1529, he attacked D. and ↗Gatur again at the end of 1529 in a campaign which resulted in the battle of Anṭakya (↗Anṣokya) in February/March 1531. One year later, in April/May 1532, Grañ sent ᶜAddalī and *amīr* Ḥusayn b. Abī Bakr al-Ǧaturī to D. to invade and occupy the country and appointed the *gärad* ↗Gūšah as governor of the province. The *šayḫ* Ādam b. Abī Bakr became *qāḍī* there. The importance that Grañ attached to D. is evident from the fact that around 1540 he entrusted its government to his son ↗Naṣraddīn. He, however, was defeated by *aṣe* ↗Gälawdewos in September 1542 and died just after the battle. With Grañ's defeat and death at Zäntära (↗Wäyna Däga) on 22 February 1543 and the dissolution of his empire, control of the area passed to Grañ's nephew and vizier ↗ᶜAbbās b. Aboñ b. Ibrāhīm. He ruled for a short time over D. and the adjacent frontier provinces, but was defeated and killed by Gälawdewos in October 1544. Not long afterwards, around 1547–48, Gälawdewos appointed ↗Fanuᵓel, one of his principal commanders, as governor of D. and the regions dependent on it. At this time, all of D. was overrun and devastated by Oromo tribes, already under the third chief (*luuba*) ↗Kiilolee in the late 1530s or early 1540s, and then again under the fourth chief Biifolee (1546–54). An attempt of *aṣe* ↗Śärṣä Dəngəl to repulse the Oromo tribes in D. and the neighbouring areas, whose migrations and incursions led to major changes on the ethnic map of Ethiopia for more than a century, failed in 1579. Thus, the Muslim statehood had perished in the Horn of Africa, though the religion of Islam and the Muslims remained there.

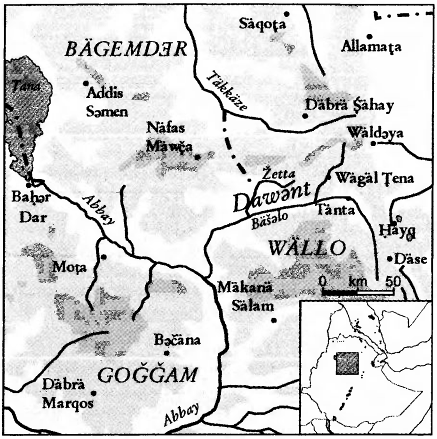
Dawənt

D. (ዳውንት) is a plateau overhanging the northern bank of the Bäšəlo river, interrupted to the west by the Čäčäho defile, continued to the east by the ↗Dälanta plateau and separated from Wadla to the north by the river Žetta. This geographical situation made D. into a passage and a strategic buffer-zone between the ↗Bägemdər and the ↗Wällo regions from the 17th to the 19th cent. In modern Ethiopia, D. has been governed within the Wadla-Dälanta



awrağğa and is now linked with Dälanta as a *wäräda* in North Wällo.

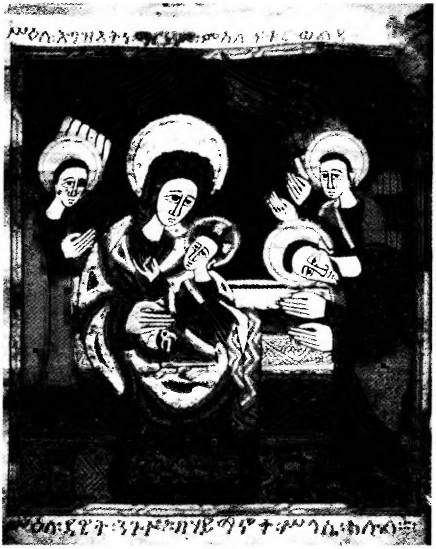
Dawit II

Aṣe D. II (ዳዊት, throne name Qʷäsṭanṭinos; d. 1413) reigned from ca. 1379/80 till 1413. In fact, he was the first Ethiopian emperor by this name, but the local sources often refer to him as D. II (the biblical King David being implied as Dawit I), thus making it difficult to have a consistent reckon of the subsequent emperors with the same name (↗Dawit III). There is no royal chronicle concerning D.'s reign, but the ↗*Täʾammərä Maryam*, translated during his reign, and some other sources provide information on his period.

D. was the son of *aṣe* ↗Säyfä Arʿad and Läzäb Wärqa. His brother ↗Nəwayä Maryam had succeeded to the throne of his father. Then, according to *The History of the Patriarchs of the Egyptian Church* (SawHist), D. seized power with the help of his sister Dəl Sefa. After this coup d'état, the clergy of the empire, especially the monastery of Asbo (↗Däbrä Libanos of Šäwa) and its abbot Tewodros, showed its opposition to the new emperor. D.'s primary supporter was ↗Śäräqä Bərhan, the abbot of ↗Däbrä Ḥayq Ǝsṭifanos. Also D. found support from monasteries in the north of the empire, with Märqorewos of ↗Däbrä Dəmaḥ and Samuʾel of ↗Däbrä Halleluya, to whom he gave lands. This succession struggle may be the reason for some of the uncertainty which exists regarding the exact year of D.'s accession to the throne.

Śäräqä Bərhan was one of the main counsellors of the Emperor. He had influence on royal policy concerning the ↗Ewosṭateans. With a view towards weakening them, D. imprisoned *abba* ↗Filəppos of Däbrä Bizän in Däbrä Ḥayq from 1400 to 1404. In 1404, after the death of Śäräqä Bərhan, D. changed his policy. He released Filəppos and issued a decree prescribing the observance of the ↗Sabbath on Saturday in the Ewosṭatean monasteries. This sudden change seems to be linked to the influence of another of D.'s counsellors, ↗Giyorgis of Sägla. He provided the argumentation for D. to find a solution concerning the ↗Ewosṭateans. He was also a supporter of the cult of St. ↗Mary, following the religious policy of D. His influence in the royal court grew when he became the teacher of the Emperor's children. Later, however, he fell from grace and clashed with his royal patron.

Numerous works are said to have been translated during D.'s reign (s. EMML 1942, 12). He is also credited with bringing a relic of the True Cross to Ethiopia (↗*Mäsqäl*), the icons of the Virgin Mary painted by St. Luke as well as



Aṣe Dawit II bowing before St. Mary; miniature from ms. *Täʾammərä Maryam*, treasury of Amba Gəšän; 15th cent.; photo courtesy of Diana Spencer many other relics (bones of St. George, Arma Christi etc.).

From the territorial point of view, the reign of D. saw the continuation of his predecessors' policy towards the Muslim sultanates, and particularly Ifat, lead by ↗Saᶜdadd n Abū l-Barakāt Muḥammad, who made incursions into the Christian empire. D. pursued him up to Zaylaᶜ, where he killed him. After this, the Emperor established new royal residences in Ifat (Ṭobbya) and in Fäṭägar (Ṭilq). He suppressed a revolt of the ↗Betä Ǝsraᵓel in Səmen. D. maintained limited relations with Egypt, but he sent an embassy to Cairo to celebrate the coming of the new *sulṭān* Barqūq (↗Mamluks).

According to the "short chronicle" (BassÉt 11), D. died as the result of a kick from a horse on 9 *Ṭəqəmt* 1406 A.M. [6 October 1413 A.D.] and is commemorated on this day (BudSaint 135; CoSyn VII 52f.). He was buried in "the country Ṣəyon" (PerrZarY 83f.), but his son ↗Zärᵓa Yaᶜəqob transferred his body to the necropolis of ↗Däbrä Nägʷädgʷad. Later his remains were moved again, to ↗Däbrä Daga Ǝsṭifanos. His son ↗Tewodros succeeded him to the throne.

Dawit III

Aṣe D. III (ዳዊት, regnal name Adbar Sägäd; r. 1716–21), was the son of Iyasu I and the brother of *aṣe* ↗Täklä Haymanot and *aṣe* ↗Bäkaffa. The tradition counting ↗Dawit II as Dawit I (disregarding the biblical king) often refers to D. III as D. II. However, the proper designation of Adbar Sägäd should be D. V, for Dawit was also the throne name of both *aṣe* ↗Ləbna Dəngəl and *aṣe* ↗Baᵓəda Maryam (who was thus Dawit III or IV: s. Fiaccadori in *MiscAethKur*, 63f. and n. 3).

D. III's nickname was "the Singer", which alluded in principle to his namesake, King David of Israel, but also – as a popular pejorative – to his frivolous tendencies. One of the buildings in the Gondär castle compound is known as D.'s Singing House. D. was the son of Iyasu's concubine ↗Qəddəste and was believed to have been his father's favourite son. However, he was preceded to the throne by his older brother Täklä Haymanot, his uncle *aṣe* Tewoflos (1708–11) and by the usurping *aṣe* Yosṭos (1711–16). The shortness of their reigns indicates the turbulence and instability of the period.

Unfortunately, D.'s reign brought little respite. His accession was controlled by troops, possibly the same ↗*wəllaǧ* who determined the succession of his brother Bäkaffa on the occasion of D.'s death. One of his few achievements was the construction and endowment of the church of Aṣṣaṣame Qəddus Mikaᵓel, adjacent to the Gondär castle compound (DombrChr 266; Fiaccadori in *MiscAethKur*, 64 and n. 5). Sectarian conflict was at an intense pitch in D.'s reign. The bishops and the monks of Däbrä Libanos (of "the house of Täklä Haymanot") were champions of the Alexandrian doctrinal tradition. The monks from Goǧǧam (↗Ewosṭateans) championed a doctrine known as ↗*Qəbat*, which had appeared first in the reign of D.'s great-great-grandfather, *aṣe* Susənyos. A new bishop, *abunä* ↗Krəstodolu, arrived in Ethiopia in November 1720. D. then called a council in April 1721 to discuss doctrine. Krəstodolu refused to endorse *Qəbat* and the council apparently followed his lead, until the intervention on 9 April of the royal ↗*Ǧawe* troops, who slaughtered over one hundred Däbrä Libanos monks in the house of the ↗*əč̣č̣äge*, a place which had previously enjoyed the status of sanctuary (↗*Ǝč̣č̣äge bet*). The next day D. proclaimed *Qəbat* as the faith of Ethiopia and died a month later, on 19 May (DombrChr 268ff.). He was buried at Ṭädda (Ṣädda, in Dämbəya).

Dawit III ↗ Baʾədä Maryam

Dawit IV ↗ Ləbnä Dəngəl

Dawit Amanuʾel

D.A. (**ዳዊት፡ አማኑኤል**; b. 1862, d. 1944) is noted as being the main translator of the New Testament into ↗Təgre (published in 1902). In 1877, at about the same time as his father converted to Islam, D.A. became the first evangelical believer from among the ↗Mänsaᶜ people.

D.A. was educated at Gäläb at a school run by the ↗Swedish Evangelical Mission. There, he worked on Bible translation for a number of years together with ↗Täwäldä Mädḫən Gäbrä Mädḫən. In addition to translating, D.A. began a Təgre dictionary and collected a great number of Təgre songs and proverbs. Many of these were later published by Enno Littmann (1910–15). D.A. was also active, serving the Church as a pastor and evangelist and was ordained in 1925.

Dawro

D. is one of the least-documented ethnic groups of south-western Ethiopia. This people belongs to the ↗Ometo (Omotic-speaking) language group and numbers about 280,000. They inhabit a mountainous area (from 800 to 2,900 m A.S.L) north-west of ↗Wälaytta, across the Omo River. D. were formerly known under the name of ↗Kullo, which is now rejected. Currently D. is administered under the North Omo Zone of the Southern Nations, Nationalities and Peoples Regional State.

Until its incorporation into the Ethiopian Empire in 1891, D. was a kingdom, related to Wälaytta and other Ometo-speaking political formations. There is no "conventional" written history of the D., but there are oral traditions about their past, some of which have recently been published (e.g., Elias Awato et al. 1999). These traditions reveal the mixed origins and multi-ethnic relations of D. with neighbouring groups, such as the ↗Käfa, ↗Gamo and Wälaytta. The latter group has a particular affiliation with D. because they share many clan names. One tradition claims that king (or *kati*) Abeto Yero (of the Ṣata clan) was the founder of the kingdom (in the 16th cent.); another tradition mentions Wataro (of the immigrant Kawka clan) as the first king. A road connecting Soddo, Waka and Ǧimma, after crossing the gorges of the Omo river, has to pass three two-metre-high walls – D.'s protection from Wälayta invasions.

Though there is some controversy among D. elders concerning dynastic history, they usually agree that the immigrant Kawka clan took over power from an indigenous clan, establishing a more centralized polity.

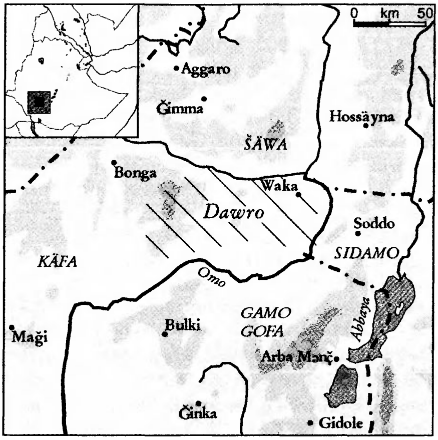
The D. kingdom recognized seven hierarchical offices (in descending order): *kati* or *kawo* (king), *woraba*, *eraša*, *guda*, *dana*, *huduga* and *duga*, each with distinct roles. The kingship was inherited by elder sons from the royal lineage, but all other offices were partly elective. Craftsmen (smiths, potters and tanners) and the *manǧa* (traditionally dependants on forest resources or hunter-gathers) were excluded from the election process. On the basis of personal achievement, slaves could be elected for lower offices.

D. oral history mentions contacts with northern Ethiopia prior to the arrival of *aṣe*

Erecting the centre pole of a house in Dawro; photo 2000, courtesy of the author

↗Mənilək I's troops in 1891. This claim could be part of the common tradition in southern Ethiopia that the most prestigious clans claim descent from northern Ethiopia (cf. Haberland 1981, 1984; Haileyesus Seba 1996).

D. economy is a subsistence agricultural system, based on the cultivation of *ənsät*, maize, *ṭef*, taro and sorghum. Additionally, coffee, cotton, peas, haricot beans, potatoes, sweet potatoes and various types of spices are grown, depending on the climate and agro-ecological zones. Cultivation is still mainly conducted with hand-tools (hoe, digging-stick) and the plough (Data Dea 1997). The D. also practise animal husbandry (cattle, goats, sheep, poultry and equines). Almost all of the crop varieties and livestock breeds are "indigenous".



D. society is traditionally stratified into five groups. In order of their social prestige these are the *malla* (farmers, rulers, landowners), the *wogače* (smiths producing tools, arms and ornaments), the *denča* or degella (tanners), the *manna* (potters) and *manğa* (hunters and forest dwellers). Following the incorporation of D. into the Ethiopian Empire, northerners (mainly Amhara) established a new ruling stratum superimposed on the existing system. This traditional stratification shares some important traits with neighbouring Omotic-speaking communities (Käfa, Wälaytta and Gamo; s. Lange 1982, Haileyesus Seba 1996). Interestingly, in D. the slaves (*aylia*) were classified as *malla* (the term *womano* was used to refer to the non-slave *malla*). The *malla* controlled land and political titles and their descendants still enjoy high social status. However, *malla* economic and political prerogatives were lost in the wake of the 1974 Ethiopian revolution. The *manna* were despised because of their eating of carrion and carcasses of dead animals. They were also avoided for their alleged dangerous supernatural power (*goromote*, or 'evil-eye'). At the bottom of the D. hierarchy were the *manğa*, descendants of hunter-gatherers who still heavily depend on forest resources. In the days of the kingdom they were servicemen for the royal lineage: guards, producers of mats, woodworkers and hunters. Nowadays they are in the process of adopting agriculture (particularly since they were entitled to land ownership after the *Därg*'s land reform), although most of their income still comes from selling firewood and charcoal. Like the *manna*, the *manğa* are despised because of their dietary habit (eating "unclean" things such as monkeys, wild rats and carrion). Whether these two marginalized groups (*manna* and *manğa*) in a comparative perspective can be called "castes" is still the issue of considerable debate (s. Pankhurst 1999).

An analysis of the political structure of pre-Mənilək D. might shed light on the multiple forms of interaction (e.g., related to the circulation of ideas of statehood, the exchange of people through marriage alliances and trans-community cultural representations) not only within the former states of south-western Ethiopia but also extending to the other parts of Ethiopia. A study of traditional social stratification in D. may illuminate early forms of social and political life in Africa regarding "caste" or caste-like organization and political centralization.

Data Dea

Dayr al-Muḥarraq

D.M. (ديرالمحرق) is a monastery situated in the central part of Egypt, on the desert's border, ca. 21 km north-west from Manfalūṭ and 10 km from Qūṣīya (Old Egyptian Qjs, Copt. Kōs or Kōskam, Arab. Qusqām, Gəᶜəz Qʷəsqʷam). It is accordingly called "the cloister of Mount [Ar. *ǧabal*] Qusqām" or, after the patron of its main church, "the cloister of the Virgin". With this venerable tradition D.M. was to become the most famous pilgrimage sites of Egypt. According to the Coptic tradition, D.M. is the southernmost point in the valley of the Nile that the Holy Family reached while on their flight from Herod (Meinardus 1962; Lambelet 1993). Having stayed six months there, they returned, following the instruction received in a dream (Mt 2:19–20).

The monastery claims to have the oldest church in the entire Christian world, in which the first Eucharist was celebrated. A homily ascribed to ↗Theophilos of Alexandria (preserved in Syriac and Arabic, as well as in Ethiopic versions; s. Conti Rossini 1912) tells of the Patriarch who learnt the history of Mount Kōskam while visiting it. In a vision he saw not only the flight of the Holy Family to this site, but also the miraculous events which took place there on 6 *Hatūr* (cp. the *Sənkəssar* reading for 6 *Ḫədar*) as the resurrected Jesus, His Mother, midwife Salome, Mary Magdalene and the Apostles gathered at this place. Jesus consecrated the harbourage as a church in the name of St. Mary and Peter celebrated the liturgy. After this, Jesus baptized the dead parents of the Apostles who, following His behest, appeared in the newly consecrated church. Then a banquette-meal took place, and Jesus predicted the construction of another church on this spot, to be devoted to the Apostles (BudSaint 211f.; Giamberardini 1976:170ff., Mingana 1929:420f.).

The beginnings of D.M. probably date back to the 6th/7th cent. The most ancient parts of the monastery date to the 12th cent.; the traditions connecting it with the Holy Family are attested for the time just after the beginning of the 8th cent. (first in the Homily of Zacharias of Saḫā, s. Giamberardini 1974:53f.). Afterwards, D.M. became rich and influential. Four Coptic Patriarchs came from D.M., as well as two saints: *anbā* Abraham, a Bishop of Fayyūm and Ǧīza (1829–1914) and his scholar-abbot Michael al-Buḥayrī (1847–1923).

During the 13th–18th cent., there was a community of Ethiopian monks in D.M., with their own church devoted to the Apostles (cp. the Homily of Theophilos). Some information on the rules and order of the community, on donations etc. can be found in the colophons of four manuscripts in Paris, BN (ZotBNat nos. 32, 35, 42, 52; s. CerPal), which previously were in the possession of a French bibliophile, Chancellor Pierre Séguier (1588–1672).

Among European travellers who risked their lives to penetrate this region was a Flemish chevalier, Joos van ↗Ghistele. He visited D.M. in 1482–83 and found there around 30 "Ethiopians, Greeks and Jacobites", each having their own area (s. Bauwens-Préaux 1976:95ff.). Johann ↗Wansleben, who visited Egypt in 1664 and 1672–73, reports on the "famous monastery of Moharrak on the Mount Koskâm" and an "Abyssinian monastery of St. Peter and Paul nearby", in which he sojourned for a while and copied Ethiopian manuscripts (s. Horn 1992:38).

For the Ethiopian pilgrims, D.M. was an important station in the Nile valley on their way to ↗Jerusalem (Heyer 1984:144). In Ethiopia itself, churches such as ↗Däbrä Ṣähay Qʷəsqʷam of Gondär and numerous paintings representing the Flight of the Holy Family reflect the significance of the Egyptian Holy Mount (ChojPaint 39–99). However, sometime in the 18th or 19th cent. the Ethiopian monastery of D.M. was abandoned and disappeared. The monks moved to the main cloister of D.M., where they still formed a quarter of the community as late as around 1930. In 1963 there were only two Ethiopians among their Coptic brothers (Meinardus 1965:29). Today, the only remnants of the Ethiopian presence are an altar (*haykal*) dedicated to *abba* ↗Täklä Haymanot in the monastery's St. Mary church and some processional crosses and manuscripts.

Dayr as-Sulṭān

D.S. (دير السلطان, lit. 'Monastery of the Ruler'; Eth. ዴር፡ ሥልጣን, Der Śəlṭan, or ደብረ፡ ሥልጣን, Däbrä Śəlṭan) is a monastery situated on the roof of the Armenian St. Helena Chapel, one of the chapels of the Church of the Holy Sepulchre in ↗Jerusalem. The Ethiopians link its name to the biblical king Solomon, who is believed to have given the site to the Queen of Sheba (↗Makədda); the Copts connect it with Ṣalāḥaddīn, who reportedly bestowed it to the Coptic community after his victory over the Crusader kingdom of Jerusalem in 1187 A.D.

Today, the monastery consists of about 20 small monastic cells, a refectory with narrow sitting area for about 30 persons, a small kitchen with a store room, a cell turned into a shop with religious books and articles, a sacristy and the *betä ləḥem*, where bread for the Eucharist is prepared. In the middle of the monastery courtyard stands the dome of the St. Helena Chapel, around which the liturgical processions of the Ethiopians take place.

To the north, east and south the monastery is surrounded by a wall with two gates, while to the west it borders on the Holy Sepulchre Church proper. On that wall remains of a medieval cloister are visible, while on the southern wall the vaults of the 12th-cent. refectory of the Latin canons of the Holy Sepulchre are partly preserved. The church bells hang in one of the building's empty niches. In the opinion of Vincent and Abel (1914:261–90), the Latin buildings must have already been constructed in 1114 A.D., when patriarch Arnoulphe obliged the canons to accept the rule of St. Augustine and live in communal quarters.

The best-preserved parts of the Latin buildings in our days are within the neighbouring residence of the Coptic archbishop in Jerusalem and the Coptic monastery of St. Anthony the Great. The two small chapels – of the Four Living Creatures (Ezek 1:5, Rev 4:6–8), on the level of D.S., and of St. Michael, on the level of the parvis in front of the entrance gate of the Holy Sepulchre Church – are also well preserved. A passage and a flight of stairs lead from the courtyard of D.S. to the parvis.

Ethiopian ascetes have been present in Jerusalem ever since Ethiopia was Christianized, although not much is known about this early period. Ethiopian pilgrims are mentioned in the letters of St. Paula and St. Eustochium in the 380s (Hilberg 1910–12, Epistulae 46, 55). As Cerulli points out when bringing these quotations, this context is very rhetorical and may simply mean that people from all over the world – and not specifically from Aksum – were then present in Jerusalem as pilgrims (CerPal vol. 1, 1f.).

At different times in the Middle Ages, the community possessed four chapels within the walls of the Church of the Holy Sepulchre (CerPal vol. 1, 59ff.); and Sebald Rieter Junior, who visited Jerusalem in 1479, describes his visit to an Ethiopian monastery in connection with the Cave of David on Mount Zion (Röhricht – Meissner 1884:66).

In 1530 the Ethiopian monastic community in D.S. dwelt at the site where, according to tradition, Abraham found the ram he sacrificed in place of Isaac (Gen 22:13). The French pilgrim Denis Possot visited the location and, upon his return to Paris, wrote that this is "the place where Abraham did his duty of sacrificing Isaac, and the black people called Abyssinians keep the chapel, and there is also an olive tree which is as beautiful as when Abraham was about to offer his sacrifice" (Possot 1890:185f.). Today, an olive tree is still there, surrounded by a stone wall.

The poor state of repair in which the monastery currently appears is due to a long-standing

dispute between the Copts and the Ethiopians over ownership of the property, which makes it illegal for any of the parties to carry out repairs to the site and leaves that responsibility in the hands of the local government. Written testimony concerning that dispute appears as early as in the 18th cent. and all through the 19th and 20th cent. (Stoffregen-Pedersen 1983; 1987–88).

From 1890 to 1970 the Copts kept two chapels locked, thus obliging the Ethiopian community to celebrate mass with the priests using the sacristy as a chapel and the congregation standing outside in the courtyard under the open sky. Efforts by emperors Mənilək II and notably Ḫaylä Śəllase I to regain the keys from the Ottomans (in 1905–06), the Egyptians (1924) and the Jordanians (1961) proved unsuccessful. During the night of Easter 1970, the Ethiopians, with the help of the new Israeli rule in East Jerusalem, broke the locks and again took possession of the two chapels. A final agreement has not yet been reached in the dispute.

From the late 16th cent. until 1891 the Ethiopian community in Jerusalem had no other monasteries but D.S.; today it has seven.

Dayr as-Suryān

D.S. (ديرالسريان, 'monastery of the Syrians'), an Egyptian monastery lying in Wādī n-Naṭrūn (Scetis), was founded about 535 during the conflict between the partisans of Severus of Antioch and the followers of Julian of Halicarnassus (Gaianites). The opponents of Julian left the monastery of Dayr Ambā Bišōy and founded a new one nearby – the monastery of the Mother of God of Ambā Bišōy. In ca. 710 this monastic settlement was acquired by Marûṯâ, a Syrian merchant living in Fusṭāṭ, who offered it to his compatriots, Syrian monks. In 817 D.S. was sacked by the bedouins; ca. 850 the reconstruction began. In 931/32 Moses of Nisibis, the head of the monastery, brought to the monastery about 250 manuscripts from Syria and Mesopotamia: these formed the basis of the richest collection of Syriac manuscripts and of one of the most important monastic libraries of the Middle Ages.

About 1088, during the Seljuk invasion, monks from Palestine and Syria sought refuge at D.S. The year 1254 saw another impact of foreign monks seeking protection from the Mongols. At D.S. – where Copts, Syrian and Ethiopians could easily meet and have fruitful intellectual exchanges – the text of "Ritual of the Passion" underlying the Ethiopic ↗*Gəbra ḥəmamat* is likely to have been elaborated after the mid of the 13th cent., and then translated into Gəᶜəz within the first quarter of the 14th cent. (Proverbio 1998:106ff.). The *terminus ante quem* is provided by the plague that broke out in Egypt in 1347 and, along with famine and bedouin raids, almost completely exterminated the population of the monastery. In 1413 just one monk lived there.

From 1480 to 1516 D.S. again began to flourish, due to the coming of monks from both Lebanon and other Oriental regions. In 1484 D.S.'s monks were dispatched to the coastal monasteries of St. Anthony and St. Paul, formerly destroyed by the nomads and now deserted. The literary activity at D.S. was given an impetus under Abbot Severus/Cyriacus (1494–1509). During this period the Coptic element became dominant: in 1516, from a total of 43 monks, 25 were Egyptian. The 17th cent. saw the total demise of the Syrian monks; Peter Heyling, who was there in 1634, was the last to mention Syrians at D.S.

The reports of 17th-cent. European travellers and missionaries drew the bibliophiles' attention to the numerous Syriac manuscripts preserved in D.S. and by the second half of the 19th cent. almost the entire monastic library was distributed among the European libraries in Rome (↗Biblioteca Apostolica Vaticana), Milan (Biblioteca Ambrosiana), London (↗British

Library) and Paris (↗Bibliothèque Nationale de France). In 1837 Robert Curzon, 14th Baron Zouche (1810–73), one of the protagonists of this chase for manuscripts, encountered Ethiopian monks in the south-eastern corner of the monastery, with a considerable library of their own, and a chapel consecrated in the name of a certain Abū Yāḥnes. The church of the 40 Martyrs of Sebaste was the place where Christodulus, "the head of the Ethiopian Church", was buried in 1624(?). Still in recent times Ethiopian pilgrims used to stay at D.S. on their way to ↗Jerusalem.

Among the other treasures of D.S. one should mention the al-ᶜAḏrāᵓ church, known for its stucco decorations, ebony and ivory-inlay works and murals. In 1991 a (10th-cent.?) picture of the Annunciation was discovered under a 13th-cent. fresco. Under bishop Tawfīlus, D.S. took a leading role in the renewal of the ↗Coptic Church. Outstanding representatives of the renewal, such as Mattā al-Maskīn, the Abbot of Dayr Anbā Maqār (b. 1919), ecumenical Bishop Samuel (1920–81) and Patriarch Shenuda III (b. 1923), were all monks of D.S.

Dayr az-Zāwīya

D.Z. (دير الزاوية, also known as az-Zāwīya or Zāwīyat ad-Dayr) is an Egyptian settlement ca. 13 km south of Asyūṭ on the western bank of the Nile. Near this settlement was a monastery that had been deserted from the second half of the 17th cent., by the time Johann ↗Wansleben visited the site. Today, due to the gradual expansion of D.Z., part of the settlement is located on the site of the former monastery. The patrons of the monastery and its church are said to be a certain Athanasius and Abū Tarbū (Horn 1992:185ff.).

Like other settlements surrounding the Asyūṭ caravan centre, such as Abū Tiǧ, Dayr al-Ǧanādla and Ṭahṭā, D.Z. is one of the places where Coptic monks and priests made African slaves into eunuchs (↗Slavery; ↗Castration) to serve as harem guards (Baer 1969:164). The French traveller Jean Chardin (1643–1713) was the first to report on the Coptic practice of castrating black slaves (s. Scholz 1997:34, 185); D.Z. was first mentioned as a castration centre by Johann Ludwig Burckhardt (1784–1817, s. Meinardus 1969:52). According to Labib (1965:48) and Pankhurst (PankIntro 374) the Ethiopian slaves were brought to Egypt in the Middle Ages through ↗Hadiyya, which was at that time under Muslim rule.

De Jacobis ↗Jacobis, Giustino De

Deacon ↗Diyaqon

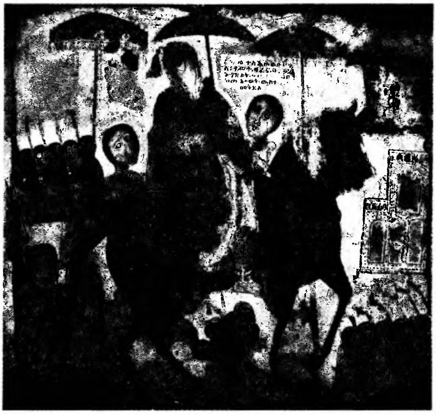
Dəbab

The D. (ደባብ, Gəʿəz for 'large umbrella, baldachin, canopy') was originally a portable dome-shaped shelter which became a symbolic covering for church dignitaries and important people of the East, the Mediterranean world and portions of Africa. In Ethiopia, the D. is still used during liturgical celebrations held in the open air. The D. is habitually used by clergy taking part in processions and it is also held above the ↗*tabot* and above the priest who reads for the community from a holy book. During wedding ceremonies, the bridal couple stands under a D. and in funerary processions the coffin is surrounded by people carrying them. In church schools, when lessons are held outside, it is not uncommon to see the pupils protecting their teacher from the sun with a D.

Since the D. is recorded among the regalia of the ↗Kush and the ↗Käfa, we can assume that it was also an attribute of Aksumite kings, even though the first mention of its use dates from the time of the king ↗Lalibäla (late 12th cent.) in connection with a metropolitan. A version of the ↗*Kəbrä nägäśt* refers to the D. as being indispensable for a royal coronation. Later sources confirm that the official responsible for carrying the D. (Gəʿəz ጸዋሬ፡ ደባብ, *ṣäware dəbab*) was also the recipient of a land grant (Amh. የደባብ፡ ጫኝ፡ መሬት, *yädəbab čañi märet*).

D. are frequently mentioned in the accounts of travellers. Francisco ↗Alvarez reports that *aṣe* ↗Ləbnä Dəngəl showed him four splendid examples which had belonged to his grandfather. Each was so large that it could protect ten people. The king ate, rested and slept under them during his journeys. Also, when the ↗*abun* travelled on a mule, each of his two servants held a tall standing D., as large as those carried for the emperor, but less decorated. Alvarez further observed that a large number of D. were kept in churches housing royal burials. These were collected for a funeral and subsequently left there (in ↗Mäkanä Śəllase he counted 64 of them). *Ḫoǧa* ↗Murād mentions among the gifts for ↗Iyasu I a parasol stitched with silk flowers. Nathaniel ↗Pearce noted that for the funeral of a dignitary every church in the surrounding area was obliged to send its D. for the occasion, and that for the funeral ceremony of ↗Wäldä Śəllase's brother in 1814 no less than 350 D. were displayed.

Old Ethiopian D. supported by very long poles were not collapsible. The upper parts were often domed, trapezoidal or conical with borders of varying widths. They were covered with silk, velvet and thick tapestries in different colours. Traditionally, the gold D. was reserved for the emperor and the *abun*, green was reserved for the ↗*nəburä'əd*, red for other dignitaries, important persons and bridal couples, orange for funerals and black and white for ordinary church and secular officials. D. were often decorated with fringes, small silver bells and silver ornaments forming a rosette or floral pattern. A clay pinnacle of differing forms, with small bells and topped with a cross, are found on the most elaborated pieces. This type of decoration closely resembles the roof of circular Ethiopian churches. At the present time, D. are either large black-cloth mass-produced items or are covered with bright and colourful textiles, adorned with gold and silver embroideries (in particular those used in the liturgy).



Queen Bafäna and her court; cloth mural; Balči, eastern Šäwa, Amanu'el church; second half of the 19th cent.; photo 1993, courtesy of Michael Gervers

In Ethiopian paintings, the D. appears as a royal attribute, particularly for David, Solomon, Alexander the Great and Constantine. The earliest-known representations are found in miniatures from the second half of the 15th cent., mostly in Psalters (i.e. Paris, BN, d'Abbadie 105; and in the collections of Robert McCarthy and Bent Juel-Jensen, ms. Aeth. 40). In three paintings on wood from the late 16th cent., Jesus rides under a D. in the scene depicting the Entry into Jerusalem (Addis Abäba, IES no. 4216; Peabody Museum of Salem, Langmuir 98;

Mäqālä, the Cultural Association of Təgray, no. 132). From the end of the 18th cent., D. frequently appears in realistically treated secular scenes representing events at court, processions, travelling kings and dignitaries. Probably under the influence of this tradition, they were added to some religious themes incorporating Ethiopian daily life (i.e. the Evangelists at their writing desks or the burial of the Virgin Mary).

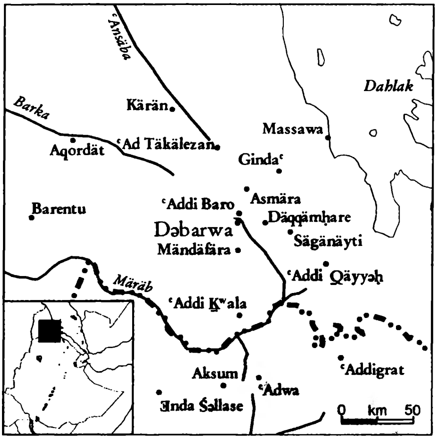
Dəbarwa

D. (ደባርዋ, also Dəbarowa), on the right bank of the Märäb river, 30 km south of Asmära, was the capital of the ↗*baḥər nägaš*. The settlement, which lay on the principal trade route between the interior and the port of ↗Massawa, was described by an early 16th cent. Ethiopian monk to Zorzi as the "chief city" and residence of the *baḥər nägaš* (CrawItin 174f.); Alvares called it the "chief place" of that ruler, and the site of his "principal residences". The "town", Alvares says, was "very good", and "situated on a very high rock" upon which were situated "the King's houses", above the Märäb river. These buildings were laid out "in the manner of a fortress", were guarded by upwards of 300 "mounted men" and visited by "many more" people, who came every day "for business of petitions". Their presence attracted "many young women", also "because the men are well off and are like courtiers". The town consisted of "300 households or more". It possessed a "great market or fair", attended, on Thursdays, by "300 or 400 persons", engaged mainly in barter, and by numerous women, who brought measures for measuring goods, and looked after the traders and their wares. There were also two adjacent, and administratively linked, churches: St. Michael, for men, and Peter and Paul, for women (BeckHuntAlvar vol. 1, 98, 104f., 112, 118f., 125).



D. was occupied by *imām* ↗Aḥmād b. Ibrāhīm al-Ġāzī in 1535, but after his defeat in 1543 resumed its position as the *baḥər nägaš* capital, but fell to the Ottoman Turks, who had seized the port of Massawa in 1557. Their commander, ↗Özdemir *paša*, established a fort at D., with "a long wall and a very high tower", reportedly full of gold and silver objects, precious stones, and costly imported vestments (ConzGal 76, 166). The Turks attempted to use this fort to expand their power into the surrounding area, but were attacked by the then well-armed local population, and obliged temporarily to retreat. The area was subsequently the site of much fighting in which the Turks, at times supported by the rebel *baḥər nägaš* ↗Yəsḥaq, fought against two successive emperors, ↗Minas and ↗Śärṣä Dəngəl. The latter captured the fort in 1576 and razed it to the ground (PankHist I, 67–70; DonMurad 218f.).

Despite this three-sided struggle D. maintained its political and commercial importance for the next two centuries. The French traveller Charles Jacques Poncet observed in 1699 that "whatever comes into Aethiopia by the Red

Sea" passed through this town, which he called the "general magazine of the Indies" (Foster 1949:147), and the Scottish traveller Bruce (BruNile vol. 3, 147) a century later referred to it as the "common passage" between Massawa and Təgray. At that time, according to the Armenian trader *ḫoǧa* ↗Murād, D. paid the emperor an annual tax of 500 ounces of gold (DonMurad 93). However, the town was by then on the decline. In the mid-18th cent., the power of the *baḥər nägaš* was usurped by *ras* ↗Mikaʾel Səḥul, ruler of Təgray, while the town's commercial position was increasingly overshadowed by ↗ʿAdwa (PankHist I, 70ff.). By the end of the 19th cent. the British visitor James Theodore Bent wrote that "a few piles of stones, and almost ruined church, and a few wretched hovels" were all that remained of the *baḥər nägaš*'s former capital (Bent 1896:87).

Dəggʷa

The D. (ደጓ) is the liturgical book of the Ethiopian Church which contains the hymns and troparies for the Divine Office; it is arranged in calendar order and divided according to the seasons of the liturgical year (↗Calendar). The book provides the orders of service for various celebrations – the daily Divine Office, the feasts, Sundays, the saints, the martyrs, the angels – as well as for special occasions, such as the ↗*məḥəlla*, etc.

The origin of the term D. is not clear, nor is the relationship which exists between this book and its function as a book of hymns. Thus far attempts to provide a solution to these questions have not been satisfactory. Even its antiquity is doubted.

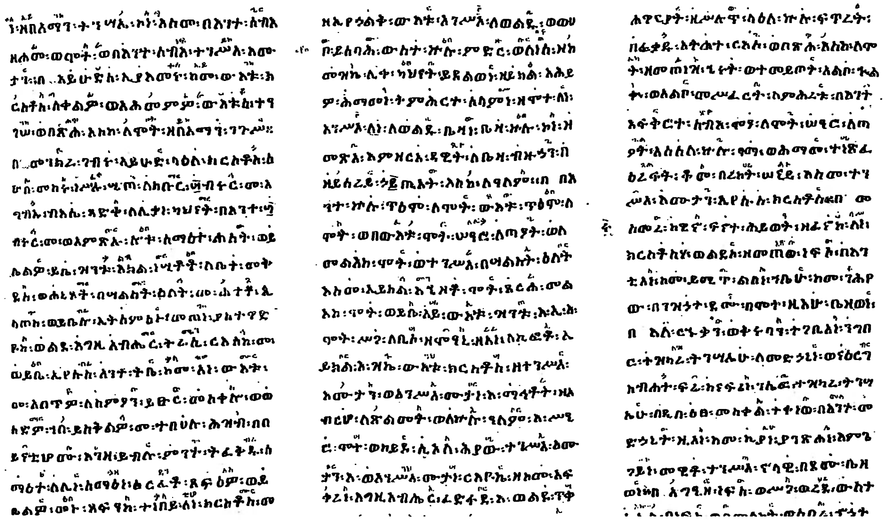
According to Ethiopian tradition, ↗Yared, who came from Aksum, is considered the author and the singer of at least some of the liturgical books used in the Ethiopian Church. Numerous sources link his literary and hymnographic activity to the great historical places and to several of the kings of Aksum. Nevertheless, it seems difficult to attribute to one person the totality of the D. and to date it to the 6th cent., a period when, according to tradition, Yared lived.

The manuscripts give the book various names intended to highlight its characteristics; here are the most significant: መጽሔተ፡ ጥበብ (*mäṣḥetä ṭəbäb*, 'mirror of wisdom'), መዝገብ (*mäzgäb*, 'treasure'), ምእላድ or መድበል (*məʾəllad* or *mädbäl*, 'collection'). Yared is often qualified as *Maḫletay* or *Maḫletawi*, to signify that he is the true composer of the ↗*maḫlet* intended to praise God. The sections (*arʾəst*) of the D. are as follows: *Abun*, *Əsmä läʿaläm*, ↗*ʿƎzəl*, ↗*Mäwäddəs*, *Mäzmur*, ↗*Wazema*, *Säläśt*, ↗*Arbaʿət*, *Bäḫaməstu*, ↗*Əgziʾabəḥer nägśä*, *Yətbaräk*, ↗*Sälam*, ↗*Zäʾamlakəyä*, *Maḫlet*, ↗*Səbḥatä nägh*, ↗*Aryam*, *Zäyəʾəze*, ↗*Mäwaṣəʾt*, *Yəbarəkəwwo*, *Bəsuʿ zäyäläbbu*, *Kəbr yəʾəti*, ↗*Zəmmare* and ↗*ʿƎṭanä mogär*.

Along with the ↗*Ṣomä dəggʷa*, the ↗*Zəmmare*, the ↗*Mäwaśəʾət* and the ↗*Məʿəraf*, the D. is one of the five books of the (sung) Divine Office, known as አምስቱ፡ ጸዋትወ፡ ዜማ (*ammastu ṣäwatəwä zema*, 'the five parts of chant'). It was only after the 18th cent. that, for practical reasons, the section corresponding to Lent was separated, thus becoming the fifth book: the *Ṣomä dəggʷa*.

The D. is considered a genuine Ethiopian production and not a translation or adaptation of imported elements, even though some passages may have come from abroad, either directly or through the intermediary of texts borrowed and adopted by the Church. Therefore, it is not surprising that it finds wider acceptance than any other Ethiopian liturgical book and that the simplicity and depth that spring from the hearts of the Ethiopian Christians are well reflected in D.'s contents.

Undoubtedly, the principal sources of D.'s inspiration are the Bible, to which it constantly alludes, and several other works often alluded to in traditional Ethiopian literature: the Apostolic Tradition, the *Testamentum Domini* (↗*Kidan zäʾəgziʾənä Iyäsus Krəstos*) and others. There is no direct or indirect quotation from "Church Fathers", which, however, does not suggest that patristic literature exerted no influence. On the contrary, such an influence is not limited to Alexandrian theology transmitted in Arabic, because some traces of ancient Greek and Syriac Christian literature are apparent.



Detail from a *Dəggʷa* (with musical notation); Ms. or. quart. 1000, 17th cent. (?); fol. 110a (detail); courtesy of the Staatsbibliothek zu Berlin, Preußischer Kulturbesitz, Orientabteilung

The oldest complete D. in our possession, though without musical notation (↗*Mələkkət*), dates from the 15th cent. (Vat. aeth. 28); more ancient manuscripts contain parts of it (13th cent.: EMML 7078; 14th to 15th cent.: EMML 2095). The oldest part of the D. reflects a more ancient calendar and can be met with in ancient books of homilies. The D. certainly predates the translation of the ↗*Sənkəssar* (15th cent.), even though the latter was subsequently to influence the development of the calendar within the D. Therefore, many reasons lead to conclude that, with the exception of its original core, the D. is a collection of hymns that has been elaborated over the centuries by different authors and adjusted to the needs of varying historical circumstances. In the same way as the development of the many ↗Anaphoras of the Ethiopian liturgy proves to be related to theological controversies that stirred up the country, one can hypothesize that the evolution of the D. was, at least in the beginning, a product of the same controversies concerning the Sabbath and other issues. This is confirmed by the existence of offices dedicated to Yared and to other post-Aksumite saints, an indication of later developments throughout the centuries.

Even though D. is the most important liturgical book of the Ethiopian Church, it is still little studied. In particular, no complete critical edition of this book exists. One has to be content with liturgical editions (that of the Ethiopian Orthodox Täwaḥədo Church is in its second edition) based on recent manuscripts. We also lack a preliminary study that, using a sufficient number of manuscripts from diverse periods, would evaluate the major branches of the tradition and the principal stages of its evolution.

Habtemichael Kidane

Dəgnağan

D. (ድግናጃን, also ደጋዛን, Dägazan, ግዳዣን, Gədažan etc.) is a name of a half-legendary ruler (or rulers?) of ↗Aksum.

Many (but not all) of the Gəᶜəz "king lists" place the name of D. or its variants among the last "legitimate" rulers before the rise of the ↗Zagʷe dynasty; cp. list A: Armaḥ, D. (here Dəgna Zan/Ǧənağan), Anbäsa Wədəm, Dəl Näʾad (CRList 274). In some lists, this sequence is somewhat different; cp. list C: Armaḥ, Ḥəzbä Nañ, D., Anbäsa Wədəm, Dəlnäʾad (ibid. 298); in list B the name Gədᶜa Žan is an obvious duplication of D. (ibid. 283). Yet, only one text states that Gidažan was a son of D. who later ruled as Anbäsa Wədəm (after SerHist 203). D. is sometimes called the father of both Anbäsa Wədəm and ↗Dəlnaʾod.

The time of D.'s reign is uncertain. Different sources connect D. with historical legends related to the little-known period between the fall of Aksum and the restoration of the ↗Solomonic dynasty (ca. 1270, s. ↗Yəkunno Amlak). In the hagiography of ↗Yared D. is a direct predecessor of the ↗Zagʷe dynasty (ca. 1137?), and his pride caused him to loose his crown to his servant Märara. Alternatively, Dägažan or Gidažan is credited with either a 10-month reign before the rise of Gudit (↗Ǝsato), or a 9-year reign (SerHist 203). The "king lists" give the length of D.'s reign as 20 or 12 years (cp. list B, CRList 283 and SerHist 203, MHAlex 136, n. 403).

Ibn Ḥawqal mentions a queen who reigned in Ethiopia for 30 years and had killed "the king of the Ethiopians" – perhaps D. (or Ǧənağan), should this queen from the later 900s be identified with Gudit.

In later sources D. is also reported to have sent an army of "about 100,000" to subdue the lands west of Ethiopia (SerHist 230f.), which, however, perished in the desert. Some of these traditions seem to imply that D. initiated the gradual shift of the political and religious centre of the kingdom from northern Ethiopia to the south. This process, which might have happened sometime in the first half of the 9th cent. (TadTChurch 36), was accompanied by the spread of ↗Christianity among the local population. A note found in the ms. Addis Abäba, National Library, Arch. 15, states: "During his time, he [D.] took 150 priests from Aksum to Amhara, and named them *däbtära*. When he left Təgre he made his capital [↗]Wäynä Däga and had 60 tabernacles [*tabotat*] which accompanied him onto the battlefield ... After him the kingdom passed over to others who were not Israelites" (SerHist 231). In another similar account – referred, however, to Dəlnaʾod in the Vita of ↗Iyäsus Moa (KurMoa 19) – D. is the king who kept the *tabotat* in tents (ደብተር, *däbtär*); and this is supposedly to be the origin of the term ↗*däbtära* for those serving at the altar (Conti Rossini 1917:706f.).

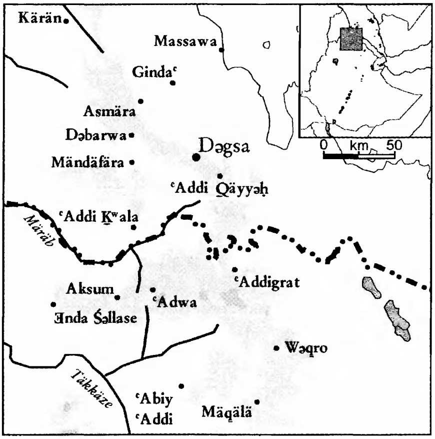
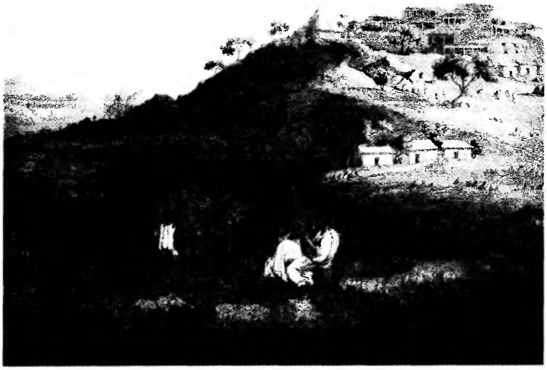
Stuart Munro-Hay

Dəgsa

D. (ድግሳ, Ital. Digsà) is a small town in the Däqqi Dəgna district of ↗Akkälä Guzay, Eritrea (14°59' N, 39°14' E). It is located on the top of a hill and surrounded by a valley. Wäräsänazgi, one of five sons of Dəgna, son of Akkälä, is considered its founding father. D. rose to local importance due to its closeness to ↗Massawa. Together with the nearby village of ↗Ḥalay, D. was the first Christian settlement at





Dəgsa in the early 19th cent.; drawing by Henry Salt

the edge of the highlands on the Akkälä Guzay route from the coast to the Ethiopian highlands. In the 17th cent. it was a fortified market-town.

When the traveller James ↗Bruce took this route, as the mountainous Akkälä Guzay seemed more secure to cross the border to the Ethiopian kingdom than the route via Dəbarwa, he stayed at "Dixan" (a back-formation from Tgn. *Ḥalayən Dəgsan*, 'Ḥalay and D.', Voigt 1999:91), which was at that time a border town between the Ottoman lowlands and the Christian kingdom, with a mixed Christian and Muslim population. The latter, dedicated to the slave trade (Bruce 1791:196ff.), inhabited the upper part of D., on the top of the hill, and were allied with the *nāʾib*. In 1768 D. was burnt in a raid by *ras* Mikaʾel Səḥul against the *nāʾib* (KolTrad 67). In the 19th cent. it was under Christian rule and had a ↗*baḥər nägaš* of its own – around 1805 it was Iyäsus (SalTrav 239), in the 1830s the *šaläqa* Ǝzäraye (AbbSéjour 43). It was from here that *baḥər nägaš* ↗Asgodom Muse of Säfʾa guided "Agaw" ↗Nəguśe Wäldä Mikaʾel to attack ↗Ḥaylu Täwäldä Mädḫən at Ṣäᶜazzäga in 1858.

Together with ↗Sägänäyti, ↗Ak̠rur and ↗Ḥebo, D. was among the first settlements becoming Catholic in 1866 when Fr. ↗Delmonte evangelized in the area (OMahPh 35, 45f.). Today, the majority of the population is Orthodox. During the Italian colonial period D. joined the anti-Italian rebellion of ↗Baḥta Ḥagos of 1894. Later an Italian farming concession was established and the infrastructure developed. ↗Capuchins have built a clinic in D., which also serves the surrounding settlements.

Wolbert Smidt

Dəgum

D. (**ደጉም**) is a site in ↗Gärᶜalta, in the plain of ↗Ḥawzen (s. map for Gärᶜalta), known for its complex of rock-hewn sacral structures, composed of three separate sections (A, B, C). Presently, only C serves as a church (dedicated to St. Mary); according to local informants, two others (Trinity and St. George) were also in use until the mid-20th cent. All three are often referred to as Dəgum Śəllase (Plant's Sellase I-III). The structures share many common features: all are small, oriented, have regular plans and imitate Aksumite foundations (↗Architecture) – both in their planning and architectonic vocabulary. Their dating is problematic (7th-8th cent. according to Plant, 11th–12th cent. according to Lepage, 13th–14th cent. according to Buxton).

Monument A (funeral chapel in Buxton 1971, tomb of a rich family in Jäger–Pearce 1974, *martyrium* in Lepage 1971) is preceded by a rock-cut narthex with pilastered walls and projected façade. It was covered once by a constructed roof and encircled from west and north-west by connected ancillary buildings where Aksumite ↗pottery has been excavated.

The main interior is divided by lintel beams into three aisles; the division into three bays is only marked by ceiling design: rectangles imitating timber construction. The three-partite sanctuary is accessible only from the central nave through a semicircular arch, supported by squared, engaged and composite pears (eastern part in the form of a cylindrical semi-column) with stepped bracket capitals – the only element differing from the Aksumite tradition. The northern room of the sanctuary is a simple square chamber; the southern room has a niche in the eastern wall (60 cm x 42 cm x 35 cm) and ceiling design imitating wooden construction. In the raised central room, four engaged corner pillars are connected by the archivolts, the flat ceiling is decorated by an imitation of two crossed beams. In the centre of the floor, four holes mark the place where once an altar (or, according to Lepage, a reliquary) was installed. The function of the window (61 cm x 59 cm) cut in the eastern wall is uncertain: since behind the eastern part of the church there is a rectangular originally roofed space, accessible from the north via a rock-cut passage, it could serve as an opening for distribution of communion (Gerster) or for delivering the eucharisitic bread from a near-by *betä ləhem*, or as an aperture allowing access to reliquary (Lepage).

Monuments B (church in Lepage) and C (funeral chapel), cut parallel to each other and separated by a stepped passage, are situated about 30 m from A. They are accessible through the constructed chamber which serves as the vestibule of the present church. C is almost an exact copy of A, but more elaborate. Set on a platform, it has an open cut vestibule, a main chamber (used as the ↗*mäqdäs* of the present church), a similarly designed three-partite sanctuary (engaged pillars, arches) and the outer space behind the eastern wall. B, north of C, is a narrow two-level structure. On top level there are three rooms; the third (1.2 m x 0.9 m) with imitations of constructed wooden elements (ceiling, arches, engaged pillars with stepped capitals and bases). The crypt on the lower level is accessible through the entry cut in the floor of the second upper room and by an extra opening, presently covered by stone slabs, in the floor of the third room. It is composed of two connected chambers, the second one with ↗graves. North-east of B there is a small rock-cut baptismal font, with steps on two sides, similar to those discovered at ↗Yəḥa, in ↗Adulis and ↗Mäṭära.

Structure A: sanctuary, view towards east: ceiling with imitation cross beams and arches springing from capitals crowning engaged pillars; photo 2000, courtesy of Michael Gervers

Separate sections of D. (unique as a complex) are comparable with the churches Gärᶜalta Bäraqit Maryam, Ḥawzen Täklä Haymanot, ↗Ṣəraᶜ Abrəha-Aṣbəḥa, Wəqro Čerqos (↗Dängolo).

Dəhay Erətra

D.E. (ድሃይ፡ ኤርትራ, 'Voice of Eritrea') was launched as a Təgrəñña weekly by independence leader ↗Wäldä Ab Wäldä Maryam in Asmära in 1944. During its two years of publication, it had a very short section of international news in addition to local news. It was succeeded by *Unità dell' Eritrea*, the organ of the Independent Front Block published on Wednesdays, which had a circulation of 2,000 and continued until 1949.

After the ↗Eritrean-Ethiopian Federation in 1952, the Democratic Front Block revived D.E. The next year, Ethiopia charged the paper with calling for the overthrow of the Ethiopian government and with publishing state "secrets" about Eritrean tax revenues. The paper and its editors were acquitted by the Eritrean Court on 26 May 1953 and the Eritrean Supreme Court on 19 August 1953. The Emperor's representatives appealed to the Federal (Ethiopian) court. On 8 December 1953, the court overthrew the Eritrean courts and sentenced the paper to a two-year suspension and its editors to imprisonment ranging from three to six years.

Deborah Johnson

Dəḵana

In the 17th-cent. Chronicle of *aṣe* ↗Susənyos D. (ድኻና) appears as one of the sites in which the temporary royal tent stayed (PerChron, chs. 39, 52). At that time a church dedicated to St. Gabriel already existed there. Still today the village (known as Dähana, Daḵana or Dähna) is located in Dämbəya, near Gorgora, on the ᶜAmdä Wärq mount, on the road between ↗Gondär and the northern Ṭana shore.

D. should not be confused with the place called Daḫna (ዳኅና): according to the Acts of ↗Iyäsus Moᵓa, this was a village in the Bägemdər province, 20 km east of the Täkkäze river, famed as the place where the saint was born around 1213. For the latter, other sources report also the form Dahana (ዳሀና).

Richard Pankhurst

Dəlbä Iyasus

D.I. (ድልበ፡ ኢያሱስ) is a figure known from the period between 1682 to 1685. He first appears in the Chronicle of *aṣe* ↗Iyasu I, attending the coronation of the latter on 6 July 1682 (Guilohan 60). One "short chronicle" informs us that D.I. bore the title of "*däǧǧazmač* of Təgre" (BassÉt 167).

Aṣe Iyasu I's official history mentions (without explanation) D.I.'s flight from Gondär and his confinement in "Sarka's castle" (*gəmb zäsarka*, s. Guilohan 87), north of Qʷäläla.

From a quotation in the "short chronicle" we learn that D.I. was related to the royal family. It appears that he was the husband of *aṣe* ↗Yoḥannəs I's grand-daughter princess Wälättä Ḥawaryat, princess Amläkätawit's daughter. *Aṣe* ↗Yosṭos, described as a usurper by the "short chronicles", is none other then D.I.'s and Wäldä Ḥawaryat's son. Consequently Yosṭos is, by means of his female relatives, Yoḥannəs' grandson.

Dimitri Toubkis

Delmonte, Carlo

D. (b. 1827, La Spezia, Italy, d. 19 May 1869, Kärän, Ethiopia) was a ↗Lazarist missionary who continued with the apostolate of Giustino de ↗Jacobis. D. disembarked at Massawa in January 1860, after surviving shipwreck in the Red Sea, and became the first missionary to be appointed to the Vicariate of Abyssinia in 14 years. A good working relationship between D. and his Vicar Apostolic, de Jacobis, immediately developed. Shortly after his arrival, however, de Jacobis died and, following the death of ↗Biancheri, D. was the only remaining missionary.

When Pierre-Louis ↗Bel arrived as the Vicariate's third bishop, D. served him loyally. After Bel's death, D. successfully reconciled the missionaries and the local clergy. He visited *ras* Kaśa Mərč̣a (later *aṣe* Yoḥannəs IV) at ᶜAdwa in 1868. There he also met the deposed *aṣe* ↗Yoḥannəs III who had previously become a Catholic. In early 1869 D. was appointed Vicar Apostolic; however, he died, aged 42, before the news reached him.

Dəlnaʿod

D. (ድልናዖድ) was, according to the Ethiopian "king lists" and a number of legends, the last king of ↗Aksum before the ↗Zagʷe dynasty. Outside of these late texts, he is otherwise unattested. In the lists he usually appears after ↗Dəgnäǧan and Anbäsä Wədəm, who are sometimes designated as his father and brother respectively. In some cases he appears twice, once between Ayzor and Maʾeday, predecessor of ↗Ǝsato and Anbäsä Wədəm, the second time as predecessor of Tärda Gäbäz (eg. CRList, List A), who is supposed to have passed the kingdom on to the Zagʷe. Other sources such as the Acts of *abba* ↗Iyäsus Moʾa, attribute the transferral of power to the Zagʷe to Masobä Wärq, daughter of D., through her marriage to Täklä Haymanot of "the family of Hepaṣa" (Zagʷe). D.'s descendants reportedly lived in hiding, taking the succession up to ↗Yəkunno Amlak.

The lists give D. a reign of 4, 10, 15 or 40 years. If he were really the predecessor of the Zagʷe, one would expect a mid-10th cent. date, but the Acts of Iyäsus Moʾa presents an earlier chronology. Metropolitan ↗Sälama Zäʾazeb ('of the South') "reentered his country" when D. was ruling. Later, in the seventh year of this king, the royal seat is said to have been transferred from Aksum to the east. The king went with Sälama to ↗Ḥayq and built the church of Däbrä Ǝgziʾabḥer. Later, in the year 6362 of the world (862 A.D.), the church of Däbrä Ǝsṭifanos of Ḥayq was built. The arrival of Sälama II, either in or just before the reign of D., is said to have occurred 618 years after the arrival of Frumentius (↗Sälama Käśate Bərhan, usually taken as ca. 340 A.D.). Kur (KurMoa) altered this date to 818, added 350, resulting in a date of 1168 A.D. He also altered the date 6362 to 6662/1167 A.D. – actually 1162 A.D. to reach a date compatible with the short chronology for the Zagʷe dynasty, which suggests that the Zagʷe came to power around 1137 A.D.

Dəmeṭros

D. (ድሜጥሮስ) of Amhara only appears in records dating from 1689 to 1699 and 1709 to 1711, but his career was certainly of longer duration. When first mentioned in the royal chronicles, he was already governor of ↗Šäwa; as governor, he apprehended a rebel who had sought refuge in Šäwa among the Tuulama Oromo. Throughout the 1690s, D. was a confidant of *aṣe* ↗Iyasu I, helping plan attacks on the Tuulama and participating in Iyasu's campaigns into Šäwa. By 1693 he held the title of ↗*ṣähafe lam*; he was also a *däǧǧazmač*. By the end of the decade, however, he had lost favour at court. In March 1699, at the conclusion of yet another campaign against the Tuulama, Iyasu stripped D. of his appointment of *ṣähafe lam* of Šäwa, which he had once again assumed, and divided the government of Šäwa among three men, leaving D. in control only of the district of ↗Märḥabete, his homeland. Within a decade, however, he had regained the governorship of Šäwa, and from mid-1709 to mid-1711, he held the position of *ras* under Tewoflos. Among his descendants were many Šäwan notables, including, reportedly, the wife of ↗Śaḥlä Śəllase.

LaVerle Berry

Dəmeṭros

D. (ድሜጥሮስ) was one of the puppet rulers of the ↗*Zämänä mäsafənt*. When ↗Sälomon II was deposed, *däǧǧazmač* Gugsa and *däǧǧazmač* Alula made D., the son of *abeto* Arqadewos, *nəguś* in Gondär on the 20th *Ḥämle* 1791 A.M. [25 July 1799 A.D.]. He immediately rewarded his benefactors by appointing them to important positions. D.'s reign was interrupted in a matter of months in *Ṭəqəmt*, when messengers from his rival, the perennial contender for the throne ↗Täklä Giyorgis arrived in Gondär from Təgre. They were greeted with rejoicing by the population. According to the chronicler of the period D. suffered further humiliation during this period. He was deposed twice more, once in favour of his rival ↗Täklä Haymanot and "yet a third time ... when he had done nothing wrong" (BlunChr 470).

Dəmeṭros Gäbrä Maryam

D.G.M. (ድሜጥሮስ፡ ገብረ፡ ማርያም; b. 1900, Däqqi Täsfa district, western Säraye, d. 1989, Asmära) was a church administrator and politician. He received basic church education in Däqqi Täsfa. D.G.M. started his career as a secretary to *ras* ↗Kidanä Maryam Gäbrä Mäsqäl of Arräza (Säraye). Later, he studied liturgy and *qəne* poetry in Təgray, Bägemdər and Šäwa. He was ordained priest (*qäsis*) in Addis Abäba in 1929. In the following year, he was appointed ↗*liqä kahənat* of his native district, a post which he retained for almost three decades.

In the late 1940s, D.G.M. joined the Unionist Party of Eritrea (↗*Maḫbär fəqri ḥagär*) and was elected by his home district to the Constituent Assembly in the Spring of 1952, becoming vice-president of the subsequent single-chamber parliament in the following year. As an ardent Unionist, he was said to have worked towards the fall of the Assembly's president, ↗ᶜAlī Muḥammad Mūsā Raday, and the Chief Executive, *däǧǧazmač* ↗Tädla Bayru. Thereafter, he became the most powerful Eritrean politician and, in collaboration with *bətwäddäd* ↗Asfäḥa Wäldä Mikaʾel, he gradually undermined the Federation, which was finally abolished in November 1962. As a result, he became very unpopular in Eritrea. In 1961 and 1962, he narrowly escaped two assassination attempts.

D.G.M. was also active in the Church. He was one of the founders of the ↗Maḫbärä Ḥawaryat association. It became a leading organ in publishing Church books, mobilizing the youth and opening informal discussions with other religions established in Eritrea. D.G.M. also built the church of Mädḫane ᶜAläm in Asmära, where he became dean with the title of መልአከ፡ ሰላም (*mälʾakä sälam*), by which he was better known. In 1963, he was appointed ↗*nəburä əd* of Aksum and in 1969 he rose to the highest civil position of Chief Administrator of the Ethiopian Orthodox Täwaḥədo Church. When the Revolution broke out in 1974, he was arrested and imprisoned by the military regime, along with other high officials and dignitaries. He was later released and continued his activities in the Maḫbärä Ḥawaryat.

Demography ↗Population history

Demons

Terminology

The main difficulty of this topic is to establish an adequate terminology to describe the Ethiopian "supernatural" world. Ethiopian demonology is syncretistic and contains both Semitic monotheistic and Cushitic elements. A very complex, hierarchically organized world of angels, saints, the Devil and an array of ↗spirits (መንፈስ, *mänfäs*, 'spirit') exists between God and man. The term D. describes only the evil, destructive and malignant spirits, and not spirits that are neutral, familiar, benevolent or ambivalent to Ethiopians (↗*Zar*; ውቃቢ, *wəqabi* and ቆሌ, *qolle*). The difficulty in terminology arises because D. is used:

1) as a translation for terms within a similar semantic scope in Ethiopic languages;

2) as an interpretative term for beings and creatures who are only mentioned through their proper names or short descriptions.

In the course of the time, the Jewish-Christian demonology adopted by the Ethiopians was augmented with autochthonous elements, which originated – at least a large number of them – in the confrontation between Ethiopian Christendom and the non-Christian environment. During the "demonization" process, gods, spirits, or even whole castes or ethnic groups of non-Christian populations became D. The priests or worshipers of the ancient cults (↗*Däsk*; ጉዳሌ, *gudale*; ዲኖ, *dino*; ጠፈንት, *ṭäfänt*) were deemed to be D. by the representatives of the Orthodox Church (Mercier 1983–84).

The genuine word for D. in Gəᶜəz is *ganen* (ጋኔን, pl. አጋንንት *aganənt*), which is also used in Təgrəñña and Amharic (also *ganel*). The Arabic loan-word ↗*ǧinn* or *ǧinni* is recognized in almost all modern Ethiopian languages; however, its meaning 'spirit, genie' (s. *ǧənn*, KaneDic 1867) is not identical with the semantics of the Arabic *ǧinn* 'D.' (cp. Təgre 'D., devil', Littmann – Höfner 1962:553).

The Bible

In the O.T. *ganen* renders the Greek word δαιμόνιον, initially with the meaning of 'something demonical' – which describes impure, evil spirits or idols (Is 13:21, 34:14, 65:3; Ps 95:5). "The D. of noonday" (*ganenä qätr*, Ps 90[91]:6) is also known in Ethiopian popular beliefs. Early Jewish literature from the inter-testamental period, which was later adopted by Christians, plays an important role in the organization of this "supernatural" world. The main features of this spiritual plane are: the concentration of evil in the person of the Devil and the quasi-dualistic polarization of the visible and invisible world into a good part, represented by God and his angels, and an evil part, represented by the Devil, the fallen angels and the D. The *Book of* ↗*Jubilees* and the *Book of* ↗*Enoch* emphasize the association of the fallen angels (Gen 6:4) with D. (s. En 6:1f., 19:1, 69:12; *Book of Jubilees* 10; here also *ganen*). Another demon Mästema (Mäśṭəm), who personifies hostility and often identifies with the Devil, is known from the *Book of Jubilees* 10:8, 11:5, 11, 17:16, 18:9, 19:28 etc. as the chief (or angel) of evil spirits. In a later writing ↗*Təʾəzazä sänbät* Mästema also appears as the angel of darkness (Halévy 1902:55).

In the N.T. *ganen* (respectively, *aganənt*) renders the Gr. δαίμων (Mt 8:31; Lk 8:29, Rev 18:2), δαιμόνιον (Mt 9:33; Jn 7:20; 8:48; 10:20 etc.) and πνεῦμα (Mt 8:16; Mk 9:20; Lk 9:39 etc.). In other passages, D. occur in connection with possession and exorcism. D. can "dwell" in people (Mk 5:13–17; Lk 8:2), possess them and are subordinated to the Devil (Satan, Mk 3:22, 23). Jesus and his disciples have the power to drive D. and evil spirits out from possessed people. Only very few D. are known in the N.T. by their names. One of them is Legewon ("Legion"), styled in Mk 5:9 as ጋኔን፡ ሌጌዎን (*ganen Legewon*, 'the D. Legewon') and in Lk 8:30 as ብዙኃን፡ አጋንንት (*bəzuḫan aganənt*, 'numerous D.'). The appearance of D. in the N.T. supports the main ideas of later Ethiopian demonology: D. cause illnesses through possession; such illnesses can be healed through exorcism; D. are hierarchically organized.

Magic literature and popular beliefs

In this kind of literature, and especially in the magic scrolls, the plural *aganənt* describes a class of D. that damage and attack people. The use of *aganənt* in some magical writings like the ↗*Ardəʾət* corresponds to those in the healing and miracle pericopae of the N.T., which are also quoted in many magical prayers and incantations (Grébaut 1939). Besides the *aganənt*, who are representative for all unknown and unmentioned D., there is in Ethiopian popular beliefs a consistent group of individual D., who are responsible for illness: ↗Barya, the D. of epilepsys whose chief is Legewon; Mäggañña, the D. of the threshold and of the closed door, who causes colic; Təgrida, another D. of epilepsy; Wərzəlya, a female D. who causes the death of new-born children; Šotälay, the D. of miscarriage. People in Ethiopia believe that D. cause harm or illness through their eye, i.e. the "evil eye". Therefore, phrases such as ዓይነ፡ አጋንንት (*ᶜaynä aganənt*, 'eye of D.'), ዓይነ፡ ባርያ (*ᶜaynä barya*, 'eye of *barya*') or ዓይነ፡ ጥላ (*ᶜaynä ṭəla*, 'eye of shadow') appear in some magical texts. The being who is believed to harm people by the evil eye is called ↗*Buda*. The world of D. is hierarchically structured. Many magic scrolls mention a "king of D." (ንጉሠ፡ አጋንንት, *nəguśä aganənt*) or the king of a particular kind of D. (ንጉሠ፡ ባርያ, *nəguśä barya* 'king of *barya*') or of a particular illness (ንጉሠ፡ ንዳድ, *nəguśä nədad* 'king of fever').

The means of protection and defence against D. and healing demonic illnesses such as those caused by possession are extremely various. Specialized persons like Orthodox priests (Heyer 1971:203–11), the አጥማቂ (*aṭmaqi*, 'baptizer') or the "D.-pulling" ↗*däbtära* (ጋኔን፡ ሳቢ, *ganen sabi*) deal with possessions. The rites of immersion in water (ጥምቀት, *ṭəmqät*) and the sprinkling (አጠመቀ, *aṭämmäqä*) of a possessed person with holy water are considered efficient means of exorcism. The sign of the cross, amulets and talismans (↗Magic scrolls) are also believed to protect against the attacks of the D.

Another method to render D. inactive is to"seal" them. For this purpose, the magic scrolls use a variety of "seals" (**ማኅተም**, *maḫtäm*; short text, sometimes with illustrations) like the "Seal of the D.", the "Seal of Solomon" (↗*Märbäbtä Sälomon*) or the "Seal of Alexander". A large number of magic texts are known to be efficient in exorcising D.: **ጸሎት፡ በእንተ፡ ማእሰረ፡ አጋንንት** (*Ṣälot bäʾəntä maʾəsärä aganənt*, 'prayer for binding D.'), the ↗*Märbäbtä Sälomon*, the **መጽሔተ፡ሰሎሞን** (*Mäṣḥetä Sälomon*, 'Mirror of Solomon'), the ↗*asmat* prayers etc. The recitation of magic writings like *Bartos*, *Ardəʾət* or *Sayfä mäläkot* can also assist the exorcism of demonic possession (Rodinson 1967:61).

Besides D., spirits with more complex relations to people are known in Ethiopia. Remnants of ancient pre-Christian cults still exist in the peripheral areas of the official institutionalized religions. Such cults are syncretistic and constantly evolving. The spirits from these cults manifest their activity in possessions. The cults of famous spirits like *zar*, *adbar*, *qolle*, *away* and *wəqabi* have no confessional or ethnic boundaries. Other spirits – like *sərʾel* of the Təgrəñña speakers and *ayaana* and ↗*ateetee* among the Oromo – have a limited area of influence. *Adbar* and *qolle* are protective spirits associated with specific places and localities. They can be either good and protect a particular location, or bad and bring illness and poverty to a region. *Away* is a house-spirit that remains very close to a certain family. *Wəqabi* ('protector') is a personal or family spirit who possesses a medium and treats other people through him/her. The specialists who deal with these spirit are mostly mediums like **ባለ፡ ዛር**, (*balä zar*), **ባለ፡ ውቃቢ** (*balä wəqabi*) or **ቃልቻ** (*qalləčča*) who do not exorcise, but appease the spirits through a ↗sacrifice or ↗gifts. Spirits like *zar*, *adbar* and *qolle* are often identified with each other, as well as with the D.: **ዛር፡ ውላጅ** (*zar wəllağ*) is a mongrel of a *zar* and a D.; **የቡዳ፡ ዛር** (*yäbuda zar*) is the spirit who possesses the *Buda*.

Dəmyanos

In the first half of the 15th cent., the monk D. (**ድምያኖስ**) was the abbot of the monastery of ↗Däbrä Sina, in Däqqi Täsfa, a district of Säraye, Eritrea. He was initiated into monastic life by Muse of Däbrä Gʷärzo, a pupil of ↗Absadi of Däbrä Maryam. According to written sources, ↗Yonas, the future leader of the monastic movement known as *däqiqä Ewosṭatewos* (↗Ewosṭateans), received the monastic habit from D., his uncle. This probably occurred around 1417, and the lifetime of D. can be approximately dated between 1381 and 1441. After his death, Yonas became the abbot of Däbrä Sina. At least one manuscript of the hitherto unpublished *Gädlä Dəmyanos* is known.

Dengue fever ↗Diseases

Denmark, relations with

The first hint of Danish interest in the country appears with the Danish-Swedish expedition lead by Carsten Niebuhr, who was sent to ↗Arabia in the 18th cent. (1761–67) by the Danish King. Its members collected some information about "Habesh" from the Arab merchants. Later, the Danish lieutenant Soeren Adolf Arendrup, during a visit to ↗Egypt, joined the Egyptian army and, as its colonel, led a military expedition against Ethiopia. He was killed in battle by the winning troops of *aṣe* ↗Yoḥannəs IV in 1875.

A Danish embassy was erected in Ethiopia through a royal decree of September 1949. The ambassador, who presented his credentials to *aṣe* ↗Ḫaylä Śəllase I on 8 March 1950, resided in Athens. Later residences were in Cairo and, since 1972, Nairobi. To date, D. has never had an ambassador resident in Addis Abäba. However, a consulate operated by a consul-general and two secretaries, functions there. King Frederik IX and Queen Ingrid of D. paid an official visit to Ethiopia in January 1970.

In Eritrea, D. has been represented by a chargé d'affaires since 1997. The Danish embassy is situated in Asmära and staffed by a chargé d'affaires, an embassy secretary and an attaché.

Both countries receive economic support from D. In the year 2000 this amounted to 59.2 million Danish kroner in development aid for Ethiopia.

Dənqənäš Mərça

D.M. (**ድንቅነሽ፡ ምርጫ**, b. 1833, d. 1912) was the daughter of *šum tämben* ↗Mərça and *wäyzaro* Sälas Dəmṣu and the only sister of *aṣe* ↗Yoḥannəs IV. She was well educated, and oral sources refer to her ability in composing poetry of high standard. She was said to be cunning and excessively proud, as her father was reputed to have been. She was first married to *blatta* Gäbrä Kidan Zemo, later *ras bitwäddäd* – one of the earliest followers, companions and confidants of Yoḥannəs – from whom she had a son, *däǧǧazmač* Śəyyum "Abba Gobäz", and three daughters, Aradäčč, Täkkoläčč and Bəzu.

After she divorced Gäbrä Kidan, she married *wag šum* Gobäze Gäbrä Mädḫən in 1867. When Gobäze proclaimed himself as *aṣe* ↗Täklä Giyorgis II in 1868, the title of *ətege* was conferred upon her. When her husband was defeated by her brother Kaśa at the Battle of ↗ʿAsäm in July 1871 and was incarcerated at the stronghold of ↗Amba Sälama, she joined her husband and remained with him until he died. Subsequently, she moved to Mäq̱älä and became one of the most influential counsellors to her brother Yoḥannəs at the Imperial Court.

During the aftermath of the Battle of ↗Mätämma when the political struggle in Təgray was in a turmoil, she championed the cause of her son Śəyyum, who was sent by Mənilək II from Šäwa and was furnished with arms, ammunitions and finance by the Italians to fight against ↗Mängäša and ↗Alula Ǝngəda.

Finally, when Śəyyum refused to accept the command given to him by Mənilək over ʿAgamä and Akkälä Guzay in 1890, he was banished to Harär and died a year later. Overwhelmed by anguish, D.M. retreated to Šire, where she led a quiet life during her remaining years.

Dərgo

D. (**ድርጎ**) is an Amharic term meaning, among other things 'grant' (deriving from the verb *därrägä*, 'to give out'; THMDic 1029). The second meaning of the word is a kind of small measurement (usually one fourth of a ↗*qunna*, synonymous to *ərbo*; DTWDic 386). By extension to its first meaning, the term is applied to the regular supply of food in kind (cereals, honey, butter) given by a king or a lord to his dependants.

The recipients of D. – called *dərgoñña* – could range from poor to those who offered the lord their services at some time, from widows and other people in need of support to lords who waited upon the court begging for appointment or titles. Some of the 19th-cent. regional courts had large numbers of *dərgoññočč*. In addition to this, whenever foreign guests or Ethiopian dignitaries from distant provinces visited the royal or regional courts, they were supplied, for the duration of their stay, with food, beverages, and also with sheep and/or oxen that the guests could slaughter to feed themselves and their followers. This practice, also known as D., is described by different travellers who visited various provinces of northern and central Ethiopia in the 19th cent. In its various forms, D.

Dərgo offered to the leader of an expedition in Gofa; photo 1902 by Emile Brumpt; courtesy of the Musée d'histoire naturelle, Paris

was most probably an old institution going back several centuries, however, it is difficult to say when exactly it emerged due to the lack of sources prior to the 19th cent.

In the 19th-cent. Šäwa D. was administered by the ↗*azzaž*, a major official of the king's and later the emperor's court. After the Battle of ᶜAdwa (1896), since there were increasingly more dignitaries and visitors coming to Ethiopia who were entitled to D., more pressure was put on the court to provide it. One result was that *aṣe* ↗Mənilək II and his Empress decided to found the first hotel in Addis Abäba (Ǝtege Ṭaytu Hotel, originally Ṭaytu's own house). In Addis Abäba D. was also provided to a large number of people including retired palace workers. According to an unpublished source D. was abolished by *ras* Täfäri Mäkʷännən (later Ḫaylä Śəllase I) during the 1920s because of abuses surrounding it. Imperial D. could also be seen mirrored in many noble and provincial courts.

Dərre Dawa

History of Dərre Dawa

The region of D.D. (ድሬ፡ ዳዋ; Somali: Dirirdhabbe, 'Road of War') was already populated by human beings in Mesolithic times, as revealed by rock paintings and Middle-Stone-Age artefacts in the cave of Porc-Épic, only a few kilometres from D.D. The present-day town of D.D. (311 km by rail from ↗Djibouti), however, is of very recent origin. It owes its foundation to a technical problem: when it became impossible to lay the Addis Abäba–Djibouti ↗Railway via Harär because of the steep access to the town, *aṣe* Mənilək II accepted (in a letter dated 5 November 1896) that the first part of the line might finish at a village at the foot of the mountains, which should be named Addis Harär ('New Harär'). The railway reached this location on 24 December 1902, a date which may be considered the day of D.D.'s foundation. The new name, however, did not win recognition. In the long run, the local name D.D. was generally accepted. D.D. most probably derives from Somali *Dir ḍabo* (limit of the ↗Dir confederation of the Somali) and popularly etymologizes in its Amharic form as "hill of uncultivated land".

For financial and diplomatic reasons the railway was not continued until 1909 and the final inauguration of the whole line from Djibouti to Addis Abäba – again delayed by the revolution of 1916 – only took place on 7 June 1917. During all this time, D.D. was practically the terminus of the railway. Because of this, the town profited much and became a "boom city", attracting most of the trade which formerly passed through Harär. By 1902 the Ethiopian government, anticipating the future economic importance of D.D., had already transferred the customs station for trade with the Red Sea from ↗Ǧildessa to D.D.

D.D. developed into two settlements separated by the Däkato River, which was dry for most of the year and became a torrent only when it rained. The north-western part of the town was planned and constructed very regularly, mostly by the engineers of the railway company. At first, this part of the town mostly housed the employees of the railway company, but it later attracted, besides the French, also Greeks, Armenians, other Europeans and Arabs, who opened shops and hotels and founded some industry as well. In 1909 the French ↗Capuchin Mission settled in D.D. At that time, D.D. looked like a French town. The other part of the town, south-east of the river, concentrated around the market and was inhabited mainly by Ethiopian, Somali and a few Arab traders.

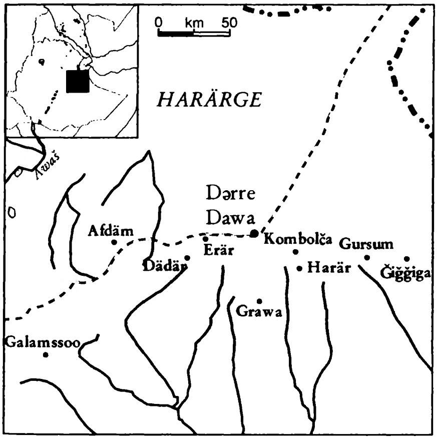
In September 1916 the fleeing troops of *ləǧ* ↗Iyasu took hold of the town. Though *ləǧ* Iyasu's governor there, the Syrian Ḫaṣīb al-Idlibī (↗Ydlibi), assured their security, 400

Europeans left the town and the rail traffic had to be suspended. After the battle of Məˀeso (Məḥeso), the governmental troops from Addis Abäba re-established a regular administration.

During the 1920s, the south-eastern part of the town also started to develop. Its inhabitants were mostly Somali and Oromo, the other Ethiopians playing only a minor role. The population here grew to 3,000, while that of the whole town numbered about 20,000. Between the two World Wars, two hospitals were established in D.D., one by the railway company and another in 1934 by the government. Education on a primary level was provided by a government school, a Catholic mission school and several schools for the different foreign communities in the town (Greek, Italian, Indian).

On 9 May 1936 D.D. was occupied by Italian troops coming from Harär, after Senegalese troops from Djibouti had prevented looting during the period of interregnum. ↗Badoglio and ↗Graziani celebrated their meeting on the railway station of D.D. The Italians constructed several new buildings in D.D., especially for the administration and the Fascist party. They also improved the roads and enlarged the airport so that their military planes could take off from there to bomb the patriot forces in the Gara Mulläta. As for other towns, the Italians conceived a "piano regolatore" for the construction of an Italian town in D.D. However, their occupation ended before they could complete these plans.

In June 1940 the British started to bomb the town and on 29 March 1941 D.D. was liberated by the Allied forces from Harär. The town remained under ↗British Military Administration, being the headquarters for the British Reserved Areas (↗Ogaden), till it was handed over to the Ethiopian government in 1947. In the following decades the town greatly expanded and the population grew to 160,000. The infrastructure was ameliorated and several industrial plants were established.



D.D. again played a role in the Ethio-Somali War of 1977/78. It was besieged by the Somali troops till November 1977, when the Ethiopians, Cubans and Russians under general Vasiliy Petrov took the offensive and pushed the Somali back. In May 1979, 250 Oromo who were detained in the prisons of D.D. were executed by the *Därg* regime.

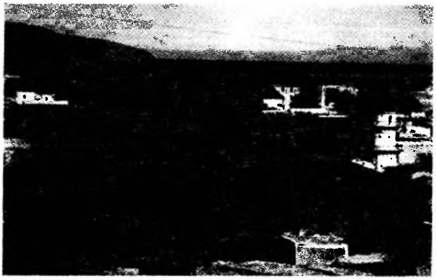
Ewald Wagner

Modern Dərre Dawa

The town of D.D. is located 531 km east of Addis Abäba and 55 km north-west of ↗Harär at an elevation of 1,160 m A.S.L. The town was the capital of the *awrağğa* by the same name, and after 1974 the capital of the *awrağğa* Dərre Dawa–Issa–Gurgura. In 1991 D.D. was included in Oromiyaa, it borders upon the Somali *kəlləl* in the east and the ᶜAfar *kəlləl* in the north. In 1998, the town of D.D. became the capital of the D.D. provisional administration, independent from Oromiyaa, with Amharic as its official language. D.D. is an important trading centre, since it is half way between Djibouti and Addis Abäba and stands at the crossroads of Harär and ᶜAsäb. During the *Därg* period, the Taiwan market merchants (contrabandists) openly sold goods coming "through the desert" from the Djibouti Free Zone in D.D. (GasÉth 134).

Climatically D.D. lies in the *qʷälla* zone. The town's average temperature is about 25.3° C. The mean minimum temperature is 19.1° C, while the mean maximum temperature is 31.4° C. The town has low precipitation, which is unevenly



Dərre Dawa; photo by J. Steinlehner in the early 1930's; from the collection of Ulrich Hartenburg

distributed throughout the year. There are two rainy seasons: a short one between March and April and a long one from July to September. Water is scarce throughout the year, reaching its climax towards the end of the dry season.

According to the 1994 Population and Housing Census, the population of the town of D.D. was 173,188 (plus 86,769 rural population, together amounting to 251,864 in the entire D.D. administration). According to the statistical estimates, the urban population grew up to 229,000 in 2000 and 272,000 in 2004. The religious composition of the population was in 1994 as follows: 63.3% Muslims; 34.3% Orthodox Christians; 1.5% Protestants; 0.7% Catholics; and 0.1% other religions. The ethnic composition of this Council consisted of 48% Oromo; 27% Amhara; 13.9% Somali and 4.5% Gurage.

The sources of drinking water consisted of: taps inside houses (1,259 households); taps in private compounds (3,594); taps in shared compounds (3,514); taps outside compounds (25,577); protected well and spring water (217); unprotected well and spring water (156); river and pond water (5). The census showed that 7,487 housing units had no toilets; 1,662 housing units had private flush-toilets; 10,300 housing units had private pit-latrines; and 13,718 housing units had shared pit-latrines. In the town of D.D. 10,373 housing units had private electricity-reading meters. 20,702 housing units had shared electricity-reading meters; 911 housing units had lanterns; 2,073 housing units used kerosene for lighting and 3,999 housing units had other lighting sources.

The type of tenure for the housing units comprised the following: 13,951 were owner-occupied; 10,216 were rented from *qäbäles*; 1,294 were rented from the Public Housing Agency; 429 were rented from other organizations; and 5,636 were rented from private house owners. In 1994 the town of D.D. had 73,324 immigrants, over half of whom had been in the city for more than ten years.

D.D. is an important cultural centre, one of the major printing presses of the country is located here.

Dərsan

The Gəʿəz verb **ደረሰ** (*däräsä*), which has several Semitic parallels, describes the exegetical or homiletic activity developed by an ecclesiastical interpreter or *därasi*. Consequently, its derivative D. (**ድርሳን**) applies to the written result of this activity, i.e. to a new composition written to explain the sense of the Scriptures. The title D. (commonly translated as 'homily') usually stands for a text devoted to a specific theological argument, whereas the term ↗*tərgʷame* (lit. 'translation') refers by extension to a systematic commentary such as the *catenae patrum*, e.g., *tərgʷame qalat* or *tərgʷame wängelat* ('Commentary on the [Four] Gospels'). Any treatise or homily of a Church father, including the fathers of the Ethiopian Church, who were mostly anonymous, can be called D.

The titles of Ethiopian homilies commonly run according to the following structure: 1) D., 2) the relative *zä-* followed by the name of the author, 3) the preposition *bäʾəntä* followed by the indication of the argument, e.g., **ድርሳን፡ ዘቴዎፍሎስ፡ በእንተ፡ ቅዱስ፡ ዮሐንስ** (*Dərsan zätewoflos bäʾəntä qəddus Yoḥannəs*, 'Homily of Theophilus concerning St. John').

When the argument is a divine personality or a doctrinal concept, the title of the book is made of the word D. in *status constructus*, followed by the personal name of the celebrated religious figure: e.g., ↗*Dərsanä maḥyäwi* ('Homily on the Life-Giver or Healer', i.e., Christ); ↗*Dərsanä śänbät* ('Homily on the Sabbath');

↗*Dərsanä śəllase* ('Homily on the Trinity'); and, in the Betä Ǝsraʾel context, ↗*Dərsanä Abrəham wäsəra bägəbṣ* ('Homily on Abraham and Sarah in Egypt'). The same construction appears in ↗*Dərsanä Raguʾel* ('Homily [in Honour] of [the Archangel] Raguel'), and in ↗*Dərsanä ʿUraʾel* ('Homily [in Honour] of [the Archangel] Uriel'), both containing eschatological revelations and thus belonging to the apocalyptic genre.

The word D. can designate not only a separate text, but also a homiliary, i.e. a collection of texts having a religious figure as the main character: e.g., ↗*Dərsanä Gäbrəʾel*; ↗*Dərsanä Maryam*; ↗*Dərsanä Mikaʾel*; ↗*Dərsanä Rufaʾel*. In this case, different units composing the collection belong to the hagiographic rather than to the homiletic genre, since they contain mostly narratives of miracles (↗*Täʾammər*) performed by a religious figure (↗Hagiography).

The most ancient Ethiopic corpus of homilies is the 6th-cent. ↗*Qerəllos*, so named in honour of Cyril of Alexandria, the author of three treatises opening this patristic collection attested only in Ethiopic. For centuries Ethiopian theology founded its "monophysite" character on these texts, which had been translated from Greek. Among the collections of D., the homilies transmitted by mss. EMML 1763, London BritLib Orient. 8192 (= Strelcyn 56) and EMML 7062 and 8509 deserve special mention both because they are arranged according to the yearly cycle of the liturgical feasts and because they contain various texts partially translated from Greek. Another noteworthy collection is the ↗*Gəbrä ḥəmamat*, the Lectionary for the Passion Week, i.e. a collection of several homilies of Greek and Oriental Church fathers. In this last case a further distinction is made between two words describing the homilies: the more common D. and **ተግሣጽ** (*tägśaṣ*), which means 'admonition' and corresponds to Lat. *paraenesis* (Gr. νοδέτεσις, νουδεσία).

Dərsanä Abrəham wäsara bägəbṣ

D.A. (**ድርሳነ፡ አብርሃም፡ ወሳራ፡ በግብጽ**, 'Homily on Abraham and Sarah in Egypt'), credited to St. ↗Ephrem of Syria, is a Gəʿəz tractate concerning Gen 12:10–20. In many manuscripts (cf., e.g., EMML 1496, of the 14th–15th cent.) it follows the Testaments of Abraham (*Gädlä* ↗*Abrəham*), Isaac (*Gädlä* ↗*Yəsḥaq*), and Jacob (*Gädlä* ↗*Yaʿəqob*), and the four works appear to have formed a single unit. The attribution indicates it was originally a Syriac work (Baumstark 1922:49, n. 3), which was translated into Arabic (GrafLit vol. 1, 426). It was probably translated from Arabic into Gəʿəz in either the 14th or 15th cent. It is one of the most popular works among the ↗Betä Ǝsraʾel. D.A. appears in four manuscripts (nos. 9, 10, 12, 13) in the Faïtlovitch collection housed in the Sarousky Library of Tel Aviv University, and in at least one privately-owned manuscript.

Dərsanä Gäbrəʾel

The D.G. (**ድርሳነ፡ ገብርኤል**, 'Homily [in Honour] of [the Archangel] Gabriel') is a Gəʿəz tractate, depending on Arabic Vorlage, devoted to the nature of the archangel, his glory as a creature of God and his miraculous deeds. It is basically a prayer-book through which believers ask for Gabriel's intercession and other blessings, such as healing. The D.G. contains such elements as ↗*dərsan* in its strict sense (homily), *täʾammər* (↗Miracles), ↗*arke* and ↗*mälkəʾ*. In the title, the term *dərsan* is used in a broader sense as referring to the whole book, as is the case of other Ethiopian works, e.g., the ↗*Dərsanä Mikaʾel*.

The D.G. is traditionally divided into 12 sections for each month of the Ethiopian calendar, beginning with the month of *Taḫśaś*, in which the angel's feast-day falls. The part of the D.G. for the 13th month (*Ṗagʷəmen*) is covered by the

Dərsanä ↗Rufaʾel, as 3 *P̣agʷəmen* is the feast-day of St. Raphael. In some manuscripts the text is divided into seven sections, one for each day of the week, and the miracles are grouped together in a separate section (Vat. Aeth. 82).

Each *dərsan* in the D.G. should be read on the 19th day of the month. Each section commences in the name of the Holy Trinity and preaches Christian ethics, the birth, teaching and crucifixion of Jesus Christ, the glory of Mary, Mary's journey with Jesus through the desert of Egypt, the glory of the angels (the text honours them summarizing their miraculous deeds and justifying them through the Bible). Additionally, the creation of the angels, the fall of Satan and the fall of Adam are included. Each *dərsan* ends by requesting the intercession of the angel and, sometimes, by the saints whom the angel had helped.

We do not know when the D.G. was translated from its Arabic original; but the most ancient ms. (Ṭānāsee 3) dates back to the 18th cent.

Dərsanä maḥyäwi

The D.m. (**ድርሳነ፡ ማሕየዊ**, 'Homily on the Life-Giver or Healer', i.e., Christ) is an anonymous homily on the Passion with no parallels in Arabic literature. In part of the manuscript tradition, its title is *Dərsan maḥyäwi* ('Life-Giving Homily' or 'Healing Homily'): s. among others, ms. London, BritMus Add. 16254, and Paris, BN d'Abbadie 29. This is possibly the right form, the previous one being but a trivialization out of analogy with other well-known titles of Gəʿəz literature (*↗Dərsanä Maryam*, *↗Dərsanä Mikaʾel* etc.). At the beginning, the text also includes the title *Mäṣḥafä* or *Dərsanä ḥəmamatihu wämotu läʾəgziʾənä* ('Book' or 'Homily on the Passion and Death of Our Lord').

The work is divided in seven parts that correspond to reading units for the week days and to the day hours as well (*completorium*, *nocturnae*, *prima*, *tertia*, *sexta*, *nona*, *vesperae*, s. HamTana II, 91). The text is still unpublished.

Ṭānāsee 76 = Dabra Māryām 18.

Gianfrancesco Lusini

Dərsanä Maryam

The title D.M. (**ድርሳነ፡ ማርያም**, 'Homily [in Honour] of Mary') does not refer exclusively to one text, but conventionally indicates a number of homiletic, hagiographic or apocalyptic works sharing the veneration of the Virgin Mary. Written at different times, they were frequently based upon Arabic models. Two works under this title are pre-eminent, both of them translated from Arabic, apparently around the mid- or in the second half of the 14th cent., at the time when the intellectual figure of *abunä* ↗Sälama "the Translator" dominated Gəʿəz literature.

The **ድርሳን፡ በእንተ፡ ዕበየ፡ ክብራ፡ ለእግዝእትነ፡ ማርያም** (*Dərsan baʾəntä ʿəbäyä kəbra läʾəgzəʾətənä maryam*, 'Homily on the magnificence of the honour of our Lady Mary'), also known as the *Vision of Mary*, is attributed to St. John (*Yoḥannəs wäldä Zäbədewos*). According to the explicit, the Virgin Mary herself was the first to have the vision, inspired by her son: *täṣḥəfä raʾəya əgzəʾətənä Maryam zäʾarʾaya wälda* ('The vision of our Lady Mary is finished here, that her son showed her'). Then, Mary appeared to the Evangelist and disclosed to him the things she saw in the places where blessed and damned men respectively would live at the end of time. At least in one case, this religious subject provided the occasion for a cycle of 25 illuminations, transmitted, e.g., in 18th/19th-cent. manuscript of the Biblioteca Forteguerriana of Pistoia (ms. Martini Etiop. no. 5 [Zanutto no. 2]).

There is another important text, which is often transmitted under the title D.M. and properly called **ድርሳን፡ በእንተ፡ እግዝእትነ፡ ማርያም፡ ወበእንተ፡ ቤተ፡ ዘኀደራት፡ ምስለ፡ ፍቁር፡ ወልዳ፡ በደብረ፡ ቁስቃም** (*Dərsan bäʾəntä əgzəʾətənä Maryam wäbäʾəntä bet zäḫadärät məslä fəqur wälda bädäbrä qusqam*, 'Homily on our Lady Mary and the house in which she lived with her beloved son over the Mount Qusqam'), or briefly the *Homily on Mount Qʷəsqʷam*. This text, attributed to patriarch ↗Theophilus of Alexandria (385–412), deserves particular attention, since, according to an Ethiopian tradition, the events told here are connected to the first appearance of ↗Christianity in Ethiopia. This tradition, first and foremost connected with the Egyptian monastery ↗Dayr al-Muḥarraq, was later applied to the Eritrean monastery of Däbrä Siḥät, i.e. ↗Däbrä Sina, as well and is told in the ↗*Dərsanä ʿUra᾽el* and the *Zena Däbrä Sina* ('Story of Däbrä Sina') by Áśrätä Maryam. According to the explicit of this D.M., *wä᾽anä Gerlos sämiʿəyä bäḫabä abba Tä᾽ofilos zäntä nägärä ṣäḥafku* ('I, Cyril, having heard this speech from abba Theophilus, I wrote'), the work was written by a certain Cyril after hearing the story from Theophilus's mouth. Here, the spelling of the Patriarch's name is noteworthy, because the form Tä᾽ofilos could trace back to a tradition older than that reflected by the most common Arabic-derived form Tewoflos.

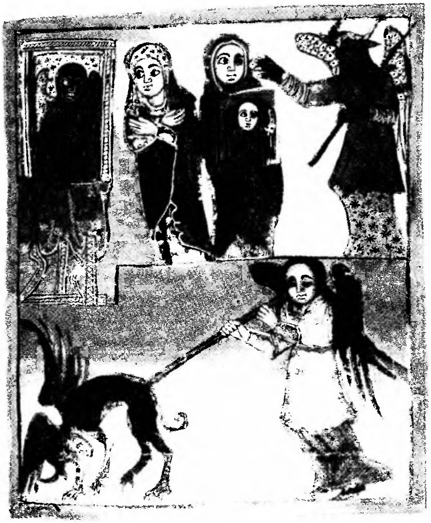
Dərsanä Mika᾽el

The core of the D.M. (ድርሳነ፡ ሚካኤል, 'Homily [in Honour] of [the Archangel] Michael') is a collection of twelve homilies in honour of the Archangel, one for each month of the year. In most manuscripts the texts are ordered as follows: 1. Timothy of Alexandria (*Ḫədar*), 2. Anonymous (*Taḫśaś*), 3. Epiphanius of Cyprus (*Ṭər*), 4. Anonymous (*Yäkkatit*), 5. Homily of a patriarch of Antiochia (*Mäggabit*), 6. Yoḥannəs the Orthodox (*Miyazya*), 7. Yoḥannəs Metropolitan of Ethiopia (*Gənbot*), 8. Yoḥannəs Bishop of Aksum (*Säne*), 9. Yoḥannəs Bishop of Aksum (*Ḥamle*), 10. Anonymous (*Näḥase*), 11. Anonymous (*Mäskäräm*), 12. Anonymous (*Ṭəqəmt*). The attribution of the texts to different authors varies from one manuscript to another. Moreover, a group of manuscripts consistently presents an entirely different distribution of texts: 1. Timothy of Alexandria (*Ḫədar*), 2. Anonymous (*Taḫśaś*), 3. Yoḥannəs Metropolitan of Ethiopia (from *Gənbot* to *Ṭər*), 4.Yoḥannəs Bishop of Aksum (from *Säne* to *Yäkkatit*), 5. Anonymous (from *Yäkkatit* to *Mäggabit*), 6. Yoḥannəs Bishop of Aksum (from *Ḥamle* to *Miyazya*), 7. Homily of a patriarch of Antiochia (from *Mäggabit* to *Gənbot*), 8. Anonymous (from *Näḥase* to *Säne*), 9. Anonymous (from *Ṭəqəmt* to *Ḥamle*), 10. Epiphanius of Cyprus (from *Ṭər* to *Näḥase*), 11. Yoḥannəs the Orthodox (from *Miyazya* to *Mäskäräm*), 12. Anonymous (from *Mäskäräm* to *Ṭəqəmt*).



St. Euphemia delivered from the devil by the Archangel Michael coming out of his icon; miniature from ms. *Dərsanä Mika᾽el*, Mädḫane ʿAläm Church, Mändabba, Lake Ṭana; photo 1993, courtesy of Michael Gervers

The original order is unknown, and so are the reasons for the rearrangement of texts (often provided with original illuminations, especially in the case of 18th-cent. luxurious exemplars, s. Fiaccadori in MiscAethKur, 65ff.). The inner order of the D.M. reflects an Arabic tradition. After the homilies, each monthly lecture contains three shorter texts, which are an original Ethiopic addition to the Arabic Vorlage, arranged according to the following scheme: 1) a miracle of Michael, 2) a story extracted from the ↗*Sənkəssar* and related to an intervention of the Archangel, 3) a ↗*sälam* in his honour. This order changes frequently in the various manuscripts, as does the absence of one or more sections. Among the elements composing the monthly lectures, the miracles are particularly worthy of further study in order to ascertain whether certain texts reflect earlier traditions tracing directly back to Byzantine hagiographic literature. The text of D.M. is yet to be critically edited.

In the middle of the 18th cent. richly decorated manuscripts of D.M. appear. Their miniatures in the so-called Second Gondärine style of painting illustrate miracles of the archangels and the commemorative texts describe the intervention of the archangels on behalf of some biblical and historical figures (e.g., Moses, Constantine the Great). Since in both cases the texts are divided into 12 monthly reading, the usual cycle of pictures includes 24 episodes. They are introduced by a set of the frontispieces usually depicting Michael riding a horse and wearing a sumptuous royal garment, the archangel rescuing the souls from hell and taking them to Paradise, the *Maiestas Domini* or Trinity attended either by him alone or accompanied by 24 Heavenly Priests.

In particularly sumptuous manuscripts, miracles and biblical stories are divided into many episodes displayed on two or three pages. The cycle is closed by a couple of full-paged miniatures representing the last Judgement.

Dərsanä Raguʾel

The D.R. (ድርሳነ፡ ራጉኤል, 'Homily [in Honour] of [the Archangel] Raguʾel') is an original composition belonging to the apocalyptic genre, the most ancient textual kernel of which can be dated to the beginning of the 17th cent. The anonymous preacher reports the vision seen by *aṣe* ↗Ləbnä Dəngəl just before the stability and the peace of his reign were compromised by *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī (Grañ).

In the D.R. the responsibility for the ravages provoked by the appearance of Grañ, and by the consequent Oromo expansion, is attributed to the same Ləbnä Dəngəl, guilty of several sins, especially that of pride. Appearing in a dream to the Emperor, the Virgin Mary discloses the punishments that will fall upon him and the Ethiopian people, but at the same time she guarantees the survival of the Christian monarchy of Solomonic lineage. Next to the Virgin Mary the Archangel Raguel (ራጉኤል፡ መልአከ፡ ብርሃናት, *Raguʾel, mälʾakä bərhanat*, 'Raguʾel, the Announcer of the Lights') stood, pronouncing a number of mysterious prophecies *ex eventu*, especially related to the destiny of Ləbnä Dəngəl's four sons: the first-born ↗Fiqṭor, doomed to die in a battle against the Muslims around 1538–40, the two future emperors ↗Gälawdewos and ↗Minas, and ↗Yaʿəqob, whose family branch ascended the Ethiopian throne starting with *aṣe* Susənyos. Since the ↗Gondärine kingdom, the Archangel Raguʾel became a protector of the royal house; and this role persisted until the end of the 19th cent., when the ↗Ǝnṭoṭṭo Raguʾel church was founded. In fact, a redaction of the D.R., followed by short conclusions in Amharic, can be dated to the reign of Mənilək II. These traditions connecting Ləbnä Dəngəl to the rise of Grañ, the origins of the Oromo and the diffusion of pagan habits are the subject of a 17th-cent. literary cycle in Amharic. It includes the *History of the Galla and of the Vision of Ləbnä Dəngəl*, the *Story of Wäyzäro Agaya* and a short chronological note entitled *The Time Given by the Lord to the Galla is 200 Years* (*Yägalla zämän əgziʾabəḥer yäsäṭṭäw 200 ʿamät näw*, s. Lusini 1991–92; Lusini in: PICES 11, vol. 1).

Dərsanä Rufa'el

D.R. (**ድርሳነ፡ ሩፋኤል**, 'Homily [in Honour] of [the Archangel] Raphael') is a composition traditionally attributed to ↗John Chrysostomos. The original nucleus of the text was translated from Arabic at an uncertain date, possibly towards the end of the 14th cent. The attribution to Chrysostomos appears already in Coptic tradition, with two different versions of the work. In Ethiopia only one text is known, to be read on 3 *an-Nasī*, corresponding to 3 *Ṗagʷəmen* of the Ethiopian calendar.

The true homily is followed by a collection of miracles, distinguished in the manuscripts under the title **ተአምረ፡ ሩፋኤል** (*Täʾammərä Rufaʾel*). This part of the text particularly reveals historical elements, such as the veracious detail of Empress Eudoxia's hostility toward John Chrysostomos. It also reflects important ancient traditions, such as those related to Theodosius I and to his sons and successors Arcadius and Honorius, protagonists of narratives describing many prodigious interventions of St. Raphael. The text is still unpublished.

Dərsanä sänbät

D.S. (**ድርሳነ፡ ሰንበት**, 'Homily on the Sabbath') is a generic title applied to a few works of the classical Ethiopic literature. Composed in the form of a sermon or homily (cp. ↗*Dərsan*), these texts usually belong to the extensive literary production prompted by the polemics on the ↗Sabbath – a cause of violent controversies in Ethiopia.

One of the works styled as D.S. is traditionally attributed to ↗Jacob of Serug (d. 512), the famous Syrian ecclesiastical author. Over ten manuscripts of this D.S. have come to notice so far, almost all dating to the 18th-19th (except for EMML 3200, probably from the 17th) cent. No similar work seems to be attested in the literary corpus of Jacob of Serug as it is known today; this D.S. is most probably a pseudoepigraph, written by an Ethiopian and deliberately attributed to a reputed writer. In the colophon of this D.S. the name of ↗Rətuʿa Haymanot may be occasionally interpolated, rather as an epithet ("Orthodox") of Jacob of Serug (ms. London, BritLib Add. 16,222, s. DillmBodl 22; ms. Tel-Aviv, Faitlovitch n. 34, s. Wurmbrand 1964:346); in fact, a certain Rətuʿa Haymanot is an alleged author of the *Homily on the Sabbaths* (**ድርሳን፡ በእንተ፡ ሰንበታት**, *Dərsan bäʾəntä sänbätat*; s. Lusini 1988; Fiaccadori 1992:XXXI), still another, 13th or 14th-cent. text belonging to the Sabbath polemics.

The D.S. attributed to Jacob of Serug has been partially translated by Max Wurmbrand (1964); the Gəʿəz text was published with an Amharic translation by the Ethiopian Orthodox Täwaḥədo Church (from unspecified manuscripts, s. Gäbrä Kidan Bäzzabbəh et al. 1947; Täsfa Gäbrä Śəllase 1959). The homily can be divided into four parts (cp. Wurmbrand 1964:347ff.), loosely connected to each other and dealing with various topics (the second and the third parts being thematically more coherent than the first and the fourth parts): 1. On the glory and dignity of the Christian Sabbath (**ሰንበተ፡ ክርስቲያን**, *Sänbätä krəstiyan* 'Christian Sabbath [= Sunday]') which is the day of Jesus' resurrection (s. Gäbrä Kidan Bäzzabbəh et al. 1947:47–59, chs. 1–7); 2. Moralistic exhortations for laymen and clergy to lead a pious life; admonitions not to spend the time for amusements during the *sänbätä krəstiyan*, but devote it to the spiritual deeds and devotion to God; instructions on how to pray, to go to church etc. (ibid., 59–93, chs. 8–23); 3. The fate of the souls after death (ibid., 93–107, ch. 24); 4. Exhortations and admonitions for clergy and laymen (ibid., 107–17, chs. 25–29).

Another important question stems from the alleged literary relations and sources of the D.S. Wurmbrand, the first student of the work, argued that the author of the D.S. extensively used such texts as ↗*Tə'əzazä sänbät* and *Mäṣḥafä* ↗*mäla'əkt*, which are known to belong in the ↗Betä Ǝsra'el literature: a portion of *Tə'əzazä sänbät* (s. Halévy 1902:8–13) was embedded into the first part of the D.S., while *Mäṣḥafä mäla'əkt* (s. Halévy 1902:51–56) was almost entirely included into the third part of it (Wurmbrand 1964:348, 353). More recent researches, however, have convincingly demonstrated that the relationship between the D.S. and the Betä Ǝsra'el texts should be reversed (Kaplan 1987). A closer investigation leaves almost no doubt that the D.S. was the source and both *Tə'əzazä sänbät* and *Mäṣḥafä* ↗*mäla'əkt* the recipients: while adapting the portions of the D.S. for their own texts and sake, the Betä Ǝsra'el authors were not always successful in clearing the elements pointing to the original religious denomination of the work (cp. Kaplan 1987:112–22); thus the process of adoption resulted in some inconsistencies and corruptions, which can only be explained if the text of the D.S. is the source.

The content of the D.S. is complex and needs further investigation. Among its peculiarities, there is an account relating how St. Michael, following the order of the personified "Christian Sabbath" (cp. the personified Church, Gäbrä Kidan Bäzzabbəh et al. 1947, ch. 16), take from Sheol all the convicted (who, of course, had observed the Sabbath rest on both days) and exempt them from tortures for the time from Friday evening till Monday (chs. 3–5). There is a long didactic monologue of Jesus Christ with parables addressed to the Israelites (chs. 20–22); in the third part of the D.S. the author explains that everyone's deeds will be "weighed" after death in order to determine where the soul should be sent, good and evil deeds being already registered by the Angel of Light and the Angel of Darkness respectively (ch. 24). The author of the work speaks of two Sabbaths (Saturday and Sunday), yet the Christian one is presented as superior (the preface of the modern church edition of the D.S. underlines the honour of both the Sabbaths).

The date of composition of the D.S. is uncertain: the work may expose, in a smoother way (with no exegetical arguments), the position of those who opposed the practice of Saturday Sabbath (cp. Getatchew Haile 1983:244) – perhaps some time after the reconciliation over this issue in 1450 at the council of ↗Däbrä Məṭmaq. Or else, less probably though, the work could have been written in the earlier stages of the Sabbath-controversy.

The second text entitled D.S. is an anonymous apocalyptic composition presented as God's revelation to Ezra (s. *abba* Täsfa Gäbrä Śəllase 1959:5; cp. Gäbrä Kidan Bäzzabbəh et al. 1947:15 - the attribution to Jacob of Serug is secondary or false); in both Ethiopian editions ch. 19 appears as another short text, with a subtitle: **ድርሳን፡ ዳግም፡ ዘዕዝራ** (*Dərsan dagəm zäʿəzra*, 'The second homily of Ezra'). This D.S. does not correspond to any of the books of Ezra that survived in the Ethiopic tradition, but is likely to form the basis of yet another Betä Ǝsra'el work, the apocalyptic treatise of Ezra (s. Halévy 1902:57–79, 178–95), known from the manuscript acquired by Faitlovich only (cp. Kaplan 1999:116f.). Albeit thematically close to the Apocalypse of ↗Ezra, the D.S. is not identical with it.

Denis Nosnitsin

Dərsanä śəllase

The title D.ś. (ድርሳነ፡ ሥላሴ, 'Homily on the Trinity') conventionally indicates an original text drawn up at an uncertain date, possibly during the 15th cent. Different versions are known with important variants in both selection and distribution of the material. The richness of the textual tradition is reflected by the fluctuation of the title, often attested in forms slightly differing from one manuscript to another. In addition to D.ś. one can find the ዜና፡ ነገሮሙ፡ ለሥላሴ (*Zena nägäromu läśəllase*, 'Story of the Acts of the Trinity'), or more simply ዜና፡ ሥላሴ (*Zena śəllase*, 'The Story of the Trinity'), and መጽሐፈ፡ ሥላሴ (*Mäṣḥafä śəllase*, 'The Book of the Trinity'). Fragments of the D.ś. occur in another work, known under the title ሰይፈ፡ ሥላሴ (*Säyfä śəllase*, 'Sword of the Trinity'; s. Lifchitz 1940:213–38).

The homily itself is divided into 13 reading units, one for each month of the year. It is followed by a collection of miracles, attributed to the awe-inspiring intervention of the Trinity, and by a final doxology divided into seven reading-units, one for each day of the week. The text is still unpublished.

Dərsanä ʿUraʾel

In Ethiopia the renown and the prestige of the Archangel Uriel (ʿUraʾel) are secured by the primary role he plays in such a highly esteemed theological text as the Book of ↗Enoch, in which the archangel appears as the author of revelations. The D.ʿU. (ድርሳነ፡ ዑራኤል, 'Homily [in Honour] of [the Archangel] Uriel') is an original composition belonging to the apocalyptic genre, whose final redaction can be dated to the reign of *aṣe* Mənilək II (1889–1913).

In the proem the work is assigned to a certain Tewodoṭos, "son" of the Archbishops of Bəhnəsa, disciple of Abrokoros, in his turn disciple of Yoḥannəs "the beloved of the Lord" (i.e. John the Evangelist, with his pupil Prochorus). Aided by a number of visions, Yoḥannəs explains to his followers the mystery of the Incarnation, i.e. the union of the two natures of Christ in one single person. The last and longest revelation deals with the Archangel Uriel who, having gathered the blood poured out from the side of Christ on the cross, spread it over different Ethiopian localities, determining in this way their destiny as religious centres. The list of these places sanctified by contact with the blood of Christ is given in an approximately north-south order: Hagärä Nagran, theoretically in Eritrea, Däbrä Damo, Aksum, Lake Ḥayq, Däbrä Abbay, Däbrä Siḥät, i.e. Däbrä Sina in Eritrea, Lasta and an unidentified Däbrä Qopros in Mänzəh or Mänz. Finally, several Šäwan localities are enumerated, among which are Gərarya, where Däbrä Libanos stands, Ǝnṭoṭṭo, Mount Zəqʷala and Lake Zʷay.

The author of the D.ʿU. was a learned clergyman who exploited various works and traditions from Ethiopic literature. His homily shows affinities with the *Mäṣḥafä ↗məsṭirä sämay wämədr* by Bäḥaylä Mikaʾel (15th cent.) and the *Zena Däbrä Sina* by Aśratä Maryam (beginning of the 20th cent.; ↗Däbrä Sina). Under the veil of apocalyptic revelation, the author is arguing against the integration of recently evangelized regions – in particular the religious centres of Šäwa, where the new capital city lays, founded by Mənilək II – into the Christian Ethiopian tradition. The text of the D.ʿU. was edited in 1955 by André Caquot on the basis of one single manuscript belonging to an Ethiopian private collection.

Dervishes ↗Mahdists

Desa

D. (ዴሳ, also *däsa*) is a long-standing and widespread system of communal land tenure in the Eritrean Highlands; it is known also as *šəḥenna* in ↗Akkälä Guzay. Under D., all land found within the territory of a village is conceived as the common property of the community. Land title is based on residence and not on descent, such as in *rəsti* (↗*rəst*). Land title is temporary, its length ranging from three to seven years according to which traditional law is involved.

The right to a share (*gəbri*) pertains to each married male who is permanently resident in the village, has already set up his own household (*təša*), and can give evidence of being a descendant of the common ancestor of the village (*wädäbbat*). As a rule, women do not have the right to a share. However, special rules, varying according to which traditional law and time is considered, apply to unmarried women and widows, as well as to new settlers (*ma'əkälay ʿalet*). Redistribution (*wäräda*) is carried out by village elders (*šəmaggəllä*, *ʿaqʷari*), usually in a group of three or multiples of three, according to a principle of equal treatment among villagers. Plots are selected of comparable size and fertility, and nobody is usually entitled to hold shares in more than one village. People who are not present, or eligible, when a certain *wäräda* takes place, have to wait until the next redistribution. However, some villages, to meet the needs of individuals who may require land in the period between two redistributions, were accustomed to set aside some spare *gəbri* at the time of each allotment.

Deserts and desertification

The word "Desert" refers to arid land with scattered vegetation covered with sand or rocks, where there is very little rain and few plants. Most deserts are the consequence of global atmospheric circulation and have existed since earliest times, fluctuating in response to climatic changes over thousands of years.

Desertification is the process by which land changes into desert. Desertification results from a combination of factors: increased population pressure, extensive deforestation and soil erosion, overgrazing, climatic changes etc. Desertification has become a characteristic of the countries of the ↗Saḥəl south of the Sahara due to both climatic changes and land degradation through human interference.

Strictly speaking there are no real deserts in Ethiopia, except for the ↗ʿAfar Depression, which is one of the hottest and driest places on earth. The ʿAfar Depression is a very wide area covered with salt plains at the northern end of the Great East African Rift system (↗Rift Valley) in Ethiopia. One of the lowest points on earth in the continental land mass is present in northern ʿAfar in the Dallol Depression, specifically called the Kobar Sink. The sink is some 110 m B.S.L., daily temperatures there at times reach a little above 50° C. The nomadic people of the ʿAfar inhabit this region. It is one of the most sparsely populated parts of Ethiopia. For some time in the Cenozoic era, the Red Sea extended to the ʿAfar region (Mohr 1970). When the sea later evaporated, the products of evaporation and the salt remained in much of the ʿAfar lowland plains and depressions. The annual rainfall is much lower than the 100 mm in most of the ʿAfar. As a result of low rainfall, high evaporation and the presence of salt deposits, the region is not favourable for sedentary cultivation. One of the main rivers of Ethiopia, the ↗Awaš, crosses southern and central ʿAfar. Unlike many arid regions, the ʿAfar Depression is characterized by a series of saline lakes (Sebkha) such as Afḍera (↗Giulietti), Asale, Gamari, Afambo and Abbe.

Many peripheral regions of Ethiopia are semi-arid, with an annual rainfall of no more than 500 mm, and an altitude of no more than 1000 m A.S.L. These regions include the western lowlands in the ↗Beni Šangul–Gumuz region and the western Amhara region beyond ↗Gondär, the southern Ethiopian Rift Valley in the ↗Omo valley, the eastern ↗Ogaden region bordering Somalia and the ↗Boorana region to the south, close to the Kenyan border.

Desvages, Alexis

D. was a French printer who came to Ethiopia in 1910. First he served as the technical director of the Imprimerie Éthiopienne, acting upon the orders of the Ethiopian government. In 1913 he founded his own printing house in Addis Abäba, the Imprimerie Alexis Desvages. He launched a weekly journal, *Le ↗Courrier d'Éthiopie*, being its editor until 1924, when he finally returned to ↗France. Between 1914 and 1917 D. was drafted into the army and the newspaper's publication was therefore temporarily stopped. During World WarI, D. also published የጦር፡ ወሬ (*Yäṭor wäre*) – *Les Nouvelles de la Guerre*, a bulletin that consisted of an Amharic translation of the Grand Quartier Général's "communiqués" and other news from the front.

D. was also an occasional editor of manuscripts. The catalogues of early printed Ethiopian books list several pedagogical and religious works. He also printed the *Grammaire amarigna* of Joseph ↗Baeteman (1923).

Alain Rouaud

Deutsche Aksum-Expedition

The DAE conducted in 1906 the first comprehensive survey and test excavations at ↗Aksum, and described many ancient remains visible along the road from ↗Qoḥayto to Aksum.

The origins of the expedition lay in the activity of the German diplomat Friedrich Rosen (1856–1935), who was early in 1905 in Addis Abäba to sign a treaty for the establishment of diplomatic relations between Ethiopia and Germany (12 February 1905). Rosen convinced ↗Mənilək II to allow studies there by suggesting that German research would place Ethiopia into the line of nations with long outstanding history. Later, a team financed by Kaiser Wilhelm II was formed. Headed by the leading Orientalists Enno ↗Littmann, it included the architect Daniel Krencker, the photographer and draughtsman Theodor von ↗Lüpke and the physician Erich Kaschke. Counterpart of Littmann was the governor of Təgray, ↗Gäbrä Śəllase Barya Gabər, who became of great help for the project.

Participants of the Deutsche Aksum-Expedition welcomed by the governor of Təgray *däǧǧazmač* Gäbrä Śəllase (from left to right: von Lüpke, Kaschke, Gäbrä Śəllase with Littmann, Krencker); photo courtesy of Brandenburgisches Landesamt für Denkmalpflege und Archäologisches Landesmuseum, Wünsdorf (No. 63u34/Sep. 231.17)

Between 12 January and 5 April 1906, the mission conducted test excavations at different sites and mapped the most impressive monuments in Aksum, recording also some artefacts and inscriptions. The following monuments, already described by travellers, missionaries and scholars since the 16th cent. were carefully recorded: 1) the "Northern Stele Field" along the May Ḥəǧǧa; 2) the "Southern stele field" at the base of May Qoḥo; 3) the "thrones" in front of Maryam Ṣəyon (↗Aksum Ṣəyon); 4) the ancient foundations of Maryam Ṣəyon; 5) the May Šum cistern; 6) the hypogean tombs of ↗Kaleb (↗Ǝnda Kaleb) and ↗Gäbrä Mäsqäl; 7) the rock sculpture of a lioness at ↗Gobədra.

In 1906 the DAE also collected data on other unnoticed monuments: 1) a megalithic structure (↗Näfas Mawča); 2) a rock shrine (described as a "rock-tomb") at the southwestern side of May Qoḥo; 3) some remains of buildings (↗Ǝnda Mikaʾel, ↗Ǝnda Səmʾon, Täʿaḵa Maryam Maryam, and Ruin A, Ruin B, Ruin C, Ruin D in the western sector of the old town; 4) the "Gudit (or Western) Stele Field" and the so-called "Tomb of Mənilək" on the plain to the south of ↗Betä Giyorgis; 5) two ruins (Ruin E and Ruin F) on the southern side of Betä Giyorgis; 6) the fruit presses at ʿAṣḥafi; 7) ruins at Ǝnda Abba P̣änṭälewon.

The DAE recorded the occurrence of a tumulus near the inscribed stele of ↗ʿEzana in the Southern Stele Field. Unfortunately, this monument was destroyed by the Italian army in 1937.

Finally, the DAE described aspects in the construction techniques of traditional architecture, and as particularly remarkable recorded the following traditional houses and churches at

Aksum and in the surrounding area: 1) the house of *däǧǧazmač* ↗Gäbrä Śəllase, for the complicated structure of the building; 2) the compound of *ras* ↗Mängäša Yoḥannəs, to the south of Ǝnda Iyäsus, for the general structure of the buildings; 3) the church of Ǝnda Iyäsus; 4) the cathedral of Ǝnda Maryam Ṣəyon, for its massive construction and the general structure of the compound; 5) the church of the Four Living Creatures (Arbaʿətu Ǝnsəsa); 6) the camp of *aṣe* Yoḥannəs IV on the top of May Qoḥo hill, for its structure and spatial organization; 7) the church of Abba Liqanos, for the general structure and its internal ceiling; 8) the church of Mary Magdalene, at the base of the hill of Abba Liqanos; 9) the church of Abba P̣änṭälewon.

Unfortunately, some of these buildings – e.g. the churches of Ǝnda Iyäsus and Abba P̣änṭälewon – were demolished during the 20th cent. Other relevant sites recorded by the German Expedition whilst on the way back to Massawa were Qoḥayto, ↗Käskäse, ↗Tokondaʿ, and ↗Mäṭära in Akkälä Guzay, Yəḥa in Təgray. Particularly significant are also the descriptions of the medieval constructed church at ↗Däbrä Damo, and the Old Church of Asmära (↗Ǝnda Maryam). The latter vanished; the description of the DAE is almost the only detailed record remaining.

In 1913 the results were published in four volumes, with 51 plates and 873 pictures. The report provides an exhaustive description of Aksumite architecture and remains still today the main reference work in Aksumite archaeology. The expedition also produced 37 wax cylinders with songs, preserved in their entirety in the Ethnologisches Museum Berlin, whilst archaeological objects are housed in the Antikenmuseum Berlin. In May 2002 the First International Littmann Conference took place in Munich; the proceedings provide additional information on the DAE.

Development issues

The understanding of D. has changed considerably over time. Until the 1960s, D. meant modernization, and included anything that could help the so-called "underdeveloped" countries to catch up with the "developed world".

In Ethiopia under Emperor ↗Ḫaylä Śəllase I, D. projects concerned both large-scale state investments in industrialization, infrastructure, and education; and small scale efforts on the local level. Many areas had local "*ləmat* committees" (from Amh. ልማት, *ləmat*, 'D.') organizing local projects. These committees were under the control of the local nobility and organized the population for "self-help" efforts – as long as they were in the nobility's interest. They sometimes attracted also material or personnel help from foreign donors.

In the 1960s, this concept of a simple time lag in "D." was increasingly criticized as insufficient. "Dependency" became a theoretical explanation for "underdevelopment". Some authors blamed the colonial powers for the poor countries' "underdevelopment", others attempted to show that the very political and economic structure of the "developed" world prevented the D. of the "underdeveloped" countries by preserving dependency and exploitation, and systematically distributing resources unevenly to the advantage of the rich countries. In 1972 Walter Rodney in a book title took the word "underdeveloped" for a verb: *How Europe Underdeveloped Africa*. Dumont (1962) denounced "false start in Africa" at the beginning of the independence period (1960s).

"Community D." became a new branch in the 1960s in Ethiopia, aiming at mobilizing local efforts for self-D. within a community. A Ministry for Community Development was established, which tried to coordinate and support the efforts of "*ləmat* committees" and also initiated larger D. projects. The "*ləmat* farm" in ↗Arba Mənč̣, for example, opened up the area for modern mechanized agriculture – at the expense of the ↗Guǧǧi herders who used the plains as summer grazing grounds. At the same time, the 1960s were also a period of large scale investments in commercial "D. projects".

In the 1970s social and political aspects were more strongly emphasized, and "D." came to mean first of all the productive engagement of local human and natural resources. International Labour Office launched its "Basic Needs Strategy" to mobilize local resources. Rural and agricultural D. was given high priority, and the potential of "Developing countries" to organize and pressurise the rich nations was emphasized. However, in Ethiopia, the application of the concept was again state controlled, and the state worked under the assumption that it knew what was best for the people.

Ecological projects were at the core of "D." in the 1980s. Large amounts of foreign aid were pumped into large scale conservation programmes, supported by the World Food Programme. In theory they were implemented through peasant "self-help" supported by "Food-for-Work" programmes. In practice, however, peasants were coerced into forced labour on state-planned schemes. Consequently the programme was unpopular with the peasants, and few of the structures built survived the fall of the *Därg* in 1991.

"D." has increasingly become synonymous with programmes implemented with foreign aid. In the 1990s foreign aid itself came into a crisis, triggered by the debt trap: too many aid projects had been financed through loans, and loans had been taken too easily, and often been misappropriated. The demands for "Structural adjustment" and the trend towards "Trade, not Aid" also had profound repercussions on the concept of D. "D." became increasingly associated with investments and access to markets. Aid lost priority and significance in terms of political and economic D. Governmental and non-governmental aid organisations turned to new niches. Democratization, human rights and civic organisations were discovered as new areas meriting financial support from outside; D. of human resources – education, skills upgrading, vocational and practical training became new fields of the involvement of non-governmental organizations. Local programmes giving technical assistance to cater for local needs and empowering local self help organisations are preferred aid receivers. International donors also favour programmes to strengthen the emergence of a "civil society" in the receiver countries. In Ethiopia, this message is not lost on those who depend on "D. aid", and civic non-governmental organisations are multiplying and competing for the attention of the foreign donor community. At the same time, there is a multitude of more conventional aid programmes continuing in Ethiopia, especially in the fields of health care, schools, infrastructure and agriculture.

While "D. aid" is being increasingly discredited in the public discourse in Western societies, support for the defence of human rights and of civic groups enjoys more legitimacy at present. In the course of "globalization", the state is gradually relinquishing its competence and responsibility for economic D. The concept has gradually blurred, and it becomes increasingly unclear who and what should be developed, and how.

Devil

Devil in religion and literature

The idea of the D. entered Ethiopia together with the introduction of ↗Christianity into Aksum in the 4th cent. A.D. and the translation of the ↗Bible into Gəᶜəz. At the time of the Christian mission in Ethiopia, the development of the concept of the D. was completed by joining different biblical figures like Satan with personifications of destruction or hostility, and associating it with a universal idea of evil and sin. As the embodiment of evil, the D. (Satan) is the opponent of God and Jesus and head of the ↗demons.

Gəᶜəz uses many terms to describe the biblical D.: **ሰይጣን** (*säyṭan*), **ዲያብሎስ** (*diyabəlos*), **መስቴማ** (*mästema*), **ቤልሖር/ብርያል** (*belḥor/ bəryal*) and even **ጋኔን** (*ganen*). While *säyṭan* – from the Hebrew *śāṭān* ('adversary') through the Aramaic *sāṭānā* or from Arabic *šäyṭān* – translates the Greek words for D. σατᾶν, σατανᾶς and διάβολος (DillmLex 394), *diyabəlos* is the phonetic reproduction of the last Greek term. *Mästema*, taken from the Hebrew *maśṭēmāh* 'animosity', is also used as a name of Satan (*Book of ↗Jubilees* 10, 17ff., 48) and plays an important role in Ethiopian demonology. *Belḥor*, the Ethiopian translation of the Gr. Βελιάρ (from Hebrew *bᵉlīyaᶜal* 'wickedness, depravity') in 2 Cor 6:15 is another name for the D. The form *bəryal* appears in the *Ascension of ↗Isaiah* (DillmLex 507) and often in the magic literature (Euringer 1928:306f.). Both of these forms appear in the *Book of Jubilees* (chs. 1, 15). *Ganen*, the Gəᶜəz term for demon, is only used in a few passages as an equivalent of διάβολος (Jas 4:7; 1 Pet 5:8; 1 Jn 3:8–10). The dragon or the ancient serpent ↗*arwe* or *arwe* ᶜ*abiy* of Rev 12, 20 is identified with the D. (in Rev 20 *ganen säyṭan*).

Säyṭan and *diyabəlos* were borrowed from Gəᶜəz to describe the idea of D. in modern Ethiopian languages. The old Gəᶜəz form occurs as *säyṭan* in Amharic and Təgrəñña, *šeṭan* in Təgre and as *siṭar*, *sēṭān*, *seṭan* and *šeṭan* in the Gurage languages. From Ethiopian languages it was taken as a loanword into Oromo *saitana* 'Satan, Demon, Devil, evil spirit' (Borello 1995:365) or *seeṭana* (TilDic 524).

In the late Gəᶜəz hexaemeric literature and its Amharic commentaries we find another name for the D. – Saṭnaʾel (**ሳጥናኤል**, or also Səṭnaʾel, Səṭna). In writings like ↗*Śənä fəṭrät* he is the first angel created by God who had fallen from heaven because of his pride and arrogance before God and Adam. The *Mäṣḥafä* ↗*məsṭirä sämay wämədr* describes the rebellion of the apostate angel Saṭnaʾel against God, his defeat by the cross of light.

The D. is not only responsible for the temptation of Eve through the serpent but also for a large spectrum of sins and doctrinal errors, among which are heresies (YaqMist I, 182ff.) and black magic (Getatchew Haile 1991:10, 66). Non-Christians like Jews or Moslems are considered by many Christians to be worshippers of Satan.

The literature and practice of magic is an important source for describing the ambivalence of Ethiopian belief in the D. The portrayal of the D. in a ↗*mälkə*ʾ of Saṭnaʾel is of special importance: on the one hand, the D. is called here "holy" or "priest of heaven and earth", and on the other hand, he assists the practice of black magic (Strelcyn 1982). There also exist prayers to the D. in times of sickness or on great ↗feasts like New Year's Day, Christmas, and Easter. The frequency of the plural *säyṭanat* in the magic texts is a mechanism used to transfer the harmful activity of the Christian Satan to many indefinite evil spirits. This development stems from a background of Ethiopian ↗syncretism. The further one moves from the church environment and its theology the more one finds popular religious beliefs characterized by a holistic demonology. As the most powerful of the demons, the D. is conceived as a dark, Negroid type, who dwells in deep waters, woods, and caves and frequents murky hideouts at noon and midnight. He tries to harm people by pushing them into fire, making them sick or by tempting them to sin.

In nominally Christianized or non-Christian areas of Ethiopia the D. can become an evil spirit who causes illness through possession. These types of spirits are known by the Sidama people as *šatāna* (sg. *šatāni*; cf. Hamer 1966:393ff.). This idea is reflected in Gurage and sometimes in other modern Ethiopian languages, where the terms for D. also depict evil spirits (Leslau 1979:576f.; s. Muher *dabilos*).

Orthodox Christianity offers certain defences against the D.: ↗baptism, the sign of cross (YaqMist II, 16, 28f., 224f.), amulets and ↗magic scrolls. The scrolls are inscribed with prophylactic texts such as prayers to bind Satan (Dobberahn 1976:56), "Fanuʾel hymnus" (ibid. 23f.) or the anathematisation of Satan from **ሐጹረ፡ መስቀል** (↗*Ḥaṣurä mäsqäl*, 'Rampart of the Cross'; Lifchitz 1940:167–79, 191–203).

Bogdan Burtea

Devil in Ethiopian art

Ethiopian artists, strictly following the general Christian iconography, depicted the D. in various human or semi-human aspects, according to a widespread belief that he is a polymorphic being. His most popular representation derives from the figure of a satyr and shows him as a hairy creature with the upper body of a man, the legs of a goat, curled horns, pointed ears and a tail which often ends with a serpent's head.

The parts of the D.'s body considered most obscene, his belly, sexual parts and behind, are often oversized, as are his claws. If he has wings they resemble those of an angel or a bat. His face is generally human but marked by animal features, elongated, with large mouth, flared nostrils, exaggerated teeth, bristling hair and a long sharp tongue. His eyes are large and staring, with black pupils, sometimes surrounded by red. In order to avoid their malevolent glare, the D. is represented in profile, a rule which the Ethiopian artists apply consistently with exception of his figure which, from the 18th cent. onward, has dominated the depiction of Hell included into the Last Judgement. He is always a dark figure depicted in a black, grey-blue or green. Sometimes he wears clothing and is armed with a fork or a prod. The description of the D. which in some way may have inspired the artist appears in the ↗*Kidan zäʾəgziʾənä Iyäsus Krəstos*, the *Mäṣḥafä* ↗*Məsṭir* and the ↗Epistles.

The D. appears in some narrative scenes of the New Testament, e.g., in the Descent into Hell (up to the end of the 16th cent.) and above all in the Last Judgement, where he is portrayed defeated, and chained, sometimes lying on his back beneath the feet of Christ or prostrate before him. As a seducer of people and hunter of their souls he is depicted in several miracles from the ↗*Täʾammərä Maryam* and the ↗*Dərsanä Mikaʾel* – for instance, in a story about a woman who consigned her son to the D., or about a man, who, deeply devoted to St. Michael, was punished by a jealous D. with an illness. An unusual figure of a D. with one arm and one leg, described as the angel of darkness, appears in the Crucifixion scene in the Gospel book of Princess ↗Zir Ganela, dated to the beginning of the 15th cent. In certain instances a fully zoomorphic form is adopted for the representation of the D.: a snake in the Temptation of Adam and Eve, a dragon in apocalyptic scenes and, in connection with St. ↗George, a basilisk or a wild bull in the scenes with the other equestrian saints defeating the power of evil (e.g. St. Victor, Mar Beḥnam). Diabolical monsters and demonic figures frequently depict the D. in Ethiopian ↗magic scrolls.

Dias, Ayres

D. (also Diz; b. ca. 1500, Coimbra, d. ca. 1545, Ethiopia) was a half-cast Portuguese soldier (Bermudez 1875, ch. 6) who participated in two expeditions to Ethiopia and served *aṣe* ↗Gälawdewos. After being engaged in the embassy of Rodrigo da ↗Lima (BeckHuntAlvar ch.

113), and probably married in Cananor, India (Correia 1976:371), D. returned to Ethiopia with the military expedition of Christovão da ↗Gama. There he played an important role, skilfully using his experience of the country (with particular regard to knowledge of language and *milieu*). During a halt of the Portuguese army in mid-1542 at ↗Wäfla, he was sent to meet Gälawdewos at his palace of "Mangadafo" (Castanhoso 1936, ch. 17; cp. Mängäfo, Šəwada, HuntGeogr 106, 135); and later accompanied Gälawdewos to Wägära (end of 1542; ConzGal ch. 15). When captain Affonso Caldeira died, D., with strong support from Gälawdewos, was given charge of the Portuguese troops, by then already serving as a private guard of the Emperor (Bermudez 1875, ch. 30); the latter would later say: "I made Ayres Dias great among my people, and gave him valuable estates" (Gälawdewos to João III, s. Whiteway 1902:116). D.'s new position in the country was additionally strengthened by a re-baptism (Bermudez 1875, ch. 39) and adoption of a local name, Marqos. Having participated in at least one further imperial campaign to the land of the "moesteiro de Syão" (ibid. ch. 37) and after numerous clashes with other prominent Portuguese at the court – namely, with Gaspar de ↗Sousa (ibid. ch. 43) – D. was reported dead at the end of the 1540s (ibid. ch. 44).

Andreu Martínez

Diaspora

The term D. (from Gr. διασπορά, 'dispersion' or 'to sow', 'scatter'), originally used in the Septuagint to describe the enslavement, exile and displacement of Jews, was later extended to cover the experiences of other forcibly dispersed populations, including Africans and Armenians. Today D. is often used to describe any population which originates in a land other than that in which it currently resides and whose social, economic and political networks cross the borders of nation-states.

Reconstructing the history of the Ethiopian and Eritrean D. is often made problematic because of terminological uncertainties: Ethiopian Christians are often grouped with those of other Eastern Churches, and slaves (↗Slavery) identified as Ethiopian, Abyssinian, ↗Ḥabaš or Ḥabašī may, in fact, have been from areas in present day Somalia, Djibouti, or the Sudan. Moreover, prior to 1991 most of those in the Eritrean D. were identified as Ethiopians.

Since Ethiopia is located on the edge of the African continent in close proximity to ↗Arabia and the ancient commercial networks up the ↗Red Sea and across the Arabian Sea, it is not surprising that Ethiopians have been dispersed beyond the frontiers of north-east Africa for centuries. In some instances, their movement and eventual settlement in other lands were voluntary, but in most cases Ethiopians were part of the larger forced migration overseas that we associate with the slave trade. More recently, in the last decades of the 20th cent., D. of Ethiopians have swelled the ranks of the so-called "new African diaspora".

Although it is probable that some Ethiopians were enslaved in ancient Egypt, the earliest evidence we have for the existence of overseas Ethiopians relates to the history of Christianity in Ethiopia. Notwithstanding various references to "Ethiopian" pilgrims in ↗Jerusalem in the first centuries following the conversion of the kingdom of ↗Aksum (4th cent.), with the rise of Islam we encounter more suggestive testimonies for the presence of an Ethiopian Christian community in the Holy Land. A letter of the *ḫalīfa* ʿUmar (14 H. [636/37 A.D.]) specifically mentions an Ethiopian community in Jerusalem as one of three resident nations in contradistinction to those who only travelled there as pilgrims (*Correspondence* ... 1868, 38). Indeed, by the rise of Islam, there were also many Ethiopian Christian traders and craftsmen in Arabia (SerHist 192).

During the period of Crusader domination (1099–1187), Ethiopians – as part of a larger Monophysite community – established a monastic community in ↗Cyprus, while still others were settled in Egypt (SerHist 262). In the Holy

Land, Ethiopians were grouped together with other Eastern Christians, but when Ṣalāḥaddīn regained Jerusalem for Islam in 1187, he reportedly recognized their claims as long-time representatives of their own branch of the ↗Coptic Church (s. ↗Dayr as-Sulṭān).

Sorting out individual Eastern Christian sects from the early documentation sometimes makes identification of the Ethiopian D. difficult, but despite these problems and the fact that their group was small, it appears that this was indeed their first significant presence. Certainly, the fact that Ethiopians are named as one of the "nations" of the Holy Land in a document from the second half of the 13th cent. clearly reveals that the Ethiopian D. was well established in Jerusalem. European travellers later attested to this presence, as do the Church of the Holy Sepulchre and the Ethiopian Church that was financed by *aṣe* Mənilək II at the end of the 19th cent.

The community at Jerusalem was atypical, because its members were individuals who, while submitting to Church authority, had been chosen to serve their Church by representing its interests in the cradle of their faith. Most Ethiopians in the D., by contrast, found themselves enslaved in foreign lands and converted to Islam. The Ethiopian slave ↗Bilāl b. Rabāḥ is honoured by Muslims as an early convert to Islam and said to have been the first *mu'aḏḏin*. When reconstructing history of Ethiopian D. in the Islamic world we encounter same sort of definition problems as was the case with the history of Ethiopian Christian community in Jerusalem. As a consequence of the slave trade from their homeland, Ethiopians were scattered across the Islamic world from Arabia to India, Egypt to Zanzibar, where they were commonly known as Ḥabaš or Ḥabašī. In some of the European documentation, however, they are known as Abyssinians. The problem with the latter term is that it encompasses many more peoples than those we would now recognize as belonging into the Christian kingdom of Abyssinia. In this respect, Ḥabaš may more meaningfully correspond to the boundaries of Ethiopia and its people as this term has evolved historically, especially since we know that the Ethiopian slave trade drew primarily upon the border populations of the south and south-west of the country. That said, we must also recognize that the term Ḥabaš probably also included Somali and various Sudanese peoples depending on the historical context in which it was used.

Enslaved Ethiopians played a prominent role as soldiers, concubines and eunuchs in Muslim ↗India. As early as the second quarter of the 13th cent., Ḥabašī slaves had become one of several factors in the military and political arena of the new Turkish Ilyās Šāhī Sultanate of Delhi. During his travels in India (ca. 1333–42), the great Moroccan traveller ↗Ibn Baṭṭūṭa observed many Ḥabašī slaves employed as sailors and soldiers by rulers from north India to Sri Lanka. At Alapur, the governor was a Ḥabašī named Badr, and Ibn Baṭṭūṭa encountered several other important Ḥabašī officials in his travels down the subcontinent.

Ḥabašī also reached the kingdom of Bengal directly by sea and became important as military slaves under Ruknaddīn Barbak Šāh (ca. 1459–74). In 1486, unhappy with the latter's son and successor, they usurped power. They ruled Bengal for seven years before being themselves overthrown as a consequence of the reign of terror imposed by the last Ḥabašī ruler, Šamsaddīn Muẓaffar Šāh (1491–94). In the aftermath of the Ḥabašī interregnum and the rise of the Ḥusayn Šāhī dynasty, the Ḥabašī were expelled from Bengal *en masse*. Over time they drifted to the Deccan, where the rulers of the Bahmanī kingdom had been employing Ḥabašī military forces since earlier in the century and where eventually several Ḥabašī also emerged as major military and political leaders. In the late 15th cent., two Ḥabašī ruled as governors of two of the kingdom's four provinces; another served as minister of revenue under *sulṭān* Šihābaddīn Maḥmūd (ca. 1482–1518). At Bīdar, the Bahmanī capital, there still stands the Habašī Kōt, or fortress, where tombs of prominent Ethiopians are located. Ḥabašī were especially important in the 16th-cent. kingdoms of Aḥmadnagar, Bīǧāpūr and Golconda. The most famous of these influential Ḥabašī figures in the political history of the Deccan was ↗Malik ʿAnbar, who was *wazīr* and virtual ruler of Aḥmadnagar from 1600 to 1626. Following Malik ʿAnbar's death, another Ḥabašī, Ḥamad Ḫān, replaced him as major-domo for the kingdom, while he in turn was followed by Malik ʿAnbar's grandson. During this same period, the Ḥabašī Iḫlāṣ Ḫān (1627–56) served as *wazīr* of Bīǧāpūr.

Related to the renown enjoyed by Ḥabašī military and court officials in the Deccan at this time was the emergence of a Ḥabašī force as the dominant naval power along the coast of western India. Following the defeat of the coastal region of the southern Konkan coast from Gujarāt early in the 16th cent., the ruler of Aḥmadnagar gave a Ḥabašī noble, Siddī Yāqūt, command of the island fort at Ǧanǧīra. For the next two centuries the Siddīs were unchallenged masters of the coasts, whether serving Aḥmadnagar, the Mughals, or their own interests. They maintained their independence until 1870, when they submitted to British overrule.

Ḥabašī were also prominent during the centuries of Muslim domination of northern India in Gujarāt, where they were found as soldiers in the armies of its rulers and as sailors in its ports as early as the 13th cent. During the reign of *sulṭān* Bahādur (ca. 1526–37) there were a reported 5,000 Ḥabašī in Aḥmadābād alone, most of whom were probably prisoners taken in the Muslim invasion of Ethiopia in 1527. According to traditions in the Sind and in Gujarāt, a network of Islamic ↗saints' shrines that are associated with Ḥabašī pioneers in the agate-bead trade to Africa was established during this era (perhaps in the 14th cent.). The most important of these is the shrine of Bava Gor at Ratanpūr in south Gujarāt.

Ethiopian slaves were in high demand in Egypt, as well. Although the prominent Ḥabašī of the ↗Mamluk period were mainly from the Sudan, rather than Ethiopia, during the 19th cent. Ethiopian slaves, mainly women, were desired in Cairo, where they were distinguished by their colour from other African slaves. Many of these women were manumitted and, according to Egyptian records, some inherited their own property, although many lived at the edges of society. One man, Ṣāliḥ al-Ḥabašī, gained his freedom by claiming his free birthplace in Ethiopia and through the assistance of Ethiopian students at the Ǧäbärti college of al-Azhar mosque (Petry 1994). Elsewhere, Ethiopian slaves appear during the 19th cent. at Mecca as concubines, where they introduced ↗*zar* possession. ↗Oromo and ↗Gurage male slaves are also mentioned by European travellers in Arabia during the 19th cent. During this century Ḥabašī were being introduced anew in India at Hyderabad, where they were employed in the Niẓām's military, although over time many of the special African troop that was formed were probably not from Ethiopia. Finally, among the many concubines of the Omani ruler of Zanzibar, Sayyid Saʿīd b. Sulṭān (1804–56), were several Ethiopians.

The European colonial partition of Africa in the late 19th cent., including the survival of Imperial Ethiopian independence, effectively ended the D. caused by the slave trade. No doubt some Ethiopians who travelled abroad as pilgrims did not return, but until the period of Italian hegemony in Ethiopia, when some Ethiopians settled in ↗Italy, the D. phenomenon was dormant.

After ↗World War II some elite Ethiopians began to study abroad and, as opposition to the imperial regime increased, some remained in exile. But the phenomenon of a new D. dates to the 1960s as part of the struggle between imperial Ethiopia and the Eritrean liberation movement. Like earlier forms of D. from Ethiopia, this latest version involves semantic complexities arising from the initial definition of these populations as "refugees". From 1967 thousands of Eritreans fled from imperial troops into the Republic of the Sudan; in 1970 still more refugees crossed the border, this time from an even wider region, including the highland fringes.

The Eritrean D. is normally considered to include those Eritreans who left Ethiopia or Eritrea between 1961 and 1991. Most of them happen to have been refugees, but there also were labour migrants, particularly to the Middle East, and those who moved for education, particularly to Eastern Europe and the former Soviet Union. The term is normally only applied to Eritreans who have settled outside the African continent, thus excluding, for example, over 500,000 Eritreans who fled as refugees to Sudan.

With the Revolution of 1974 and the beginning of the *Därg*'s brutal campaign against Eritrea, hundreds of thousands more sought asylum in the Sudan. As the *Därg* continued to oppress its internal enemies, various groups of Ethiopians soon joined the ranks of Eritreans in the Sudan. In the mid-1980s, drought and forced resettlement schemes caused another 50,000 to leave Ethiopia, so that the total population in the Sudan reached at least 656,000. Much of this population movement was temporary, but uncertainty about political conditions at home caused many thousands of these refugees to remain in the Sudan. Some moved on to Egypt, while still others made their way as secondary refugees to Italy and elsewhere in Europe.

Over 15,000 ↗Betä Ǝsraʾel were taken to Israel, mainly from the Sudan, during the late

1970s and early 1980s. In the 1990s another 35,000 reached Israel directly from Ethiopia. The Refugee Act of 1980 opened the doors of the United States of America to refugees from Ethiopia and Eritrea, who may have numbered at least 100,000 in 1995. While some have returned or visited home, continued political instability in the Horn and establishing roots where they settled have combined to create true D. communities of Ethiopians and Eritreans, not to mention Somali, in a number of countries. In the United States there are major communities in Washington, DC and Los Angeles.

There are no precise data on either the number or the characteristics of the Eritrean D. in most European countries, because Eritreans who arrived before 1991 were registered as Ethiopians. In the Middle East, many Eritreans remained unregistered. Other problems arise from the question of self-definition – some people who originated from Eritrea are unwilling to label themselves, or to be labelled, as Eritreans.

One indicator of the size of the Eritrean D. is the voting figures for the 1993 Referendum for Independence. According to these data, a total of 84,370 votes were cast by Eritreans outside Eritrea, most significantly in Saudi Arabia (37,785), the USA and Canada (14,941), and Germany (6,994). However, these figures only cover those Eritreans eligible to vote – over 18 years of age – and they are some seven years out of date. A more realistic estimate is probably in the region of 200,000.

It is clear that the vast majority of Eritreans outside Africa chose not to return to independent Eritrea after 1991. For many, the decision not to return was mitigated by having obtained permanent residence rights in their countries of settlement. In most of these countries, the Eritrean D. maintains a strong collective national consciousness, encouraged, for example, through community organizations and the celebration of Eritrean national holidays. At the same time there are divisions within the D., particularly on the basis of ethnicity and religion. Both as individuals and as families, but often as communities too, the D. maintains strong links with Eritrea. At an individual or family level, money and other goods are regularly remitted to family members in Eritrea. It is estimated that up to US$300 million was remitted by the D. during 1998.

During the struggle for independence, the D. played a crucial role by financing the ↗Eritrean People's Liberation Front in particular, as well as by contributing medicines, food and other goods. Since Independence, many within the D. have continued to contribute, for example, by making regular financial donations to the State, or more recently by buying state-issued bonds.

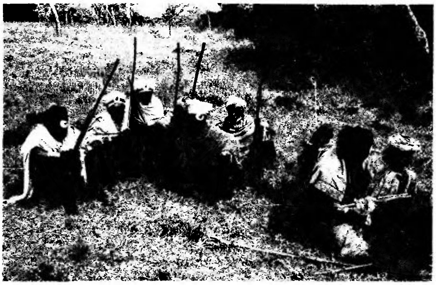
Ḍibaayyuu

Ḍ. (also *ḍibayyu*, *ḍiibayyuu*; cp. the verb *ḍibaafaččuu* 'to make a libation') is an Oromo word which can be translated as 'libation' and/or 'anointment' (TilDic 162, cp. GraggDic 124) depending on the context. Ḍ. are offerings to ↗Waaqa, which are always accompanied by prayers because the offerings alone are not efficacious. Tablino's observation (1999:114, 165) that "d'ibaayu is perhaps the most personal of Gabra prayers" and "therefore subject to considerable variations" in response to the feelings of the offerer of the prayer, is probably true across the Oromo. Ḍ. can be uttered spontaneously or as part of a structured ritual and fea-



Ḍibaayyuu ceremony among the Boorana; the elders swinging their ceremonial stuffs between the knees, while fire is continuously blown; photo 1950/52 by Eike Haberland, courtesy of the Frobenius-Institut, Frankfurt am Main (23–Ha 250–09a)

tures regularly and prominently in Oromo religious activities: daily domestic blessings, all rites of passage, rituals when enterprises such as digging wells or migrations are started or completed, at communal seasonal rituals and by participants in major national rituals.

In crop-growing areas the offering is likely to be of beer (*farsoo*), *bulbulla* (a honey and water drink), ↗*ṭäǧǧ* and in pastoral areas milk and butter. In ↗Boorana, for example, a sheep dedicated for sacrifice may either have milk dribbled along its back or be anointed with butter and sometimes both. The ↗Guǧǧi Oromo perform a ritual: "when the *kayoo* ['fate, luck'] are not good and the cattle become sick, the kraal will be 'anointed with butter', *moona diibafanna*" (van de Loo 1991:213f.).

Didəsqəlya

The Ethiopic D. (ዲድስቅልያ, 'Teaching [of the Apostles]', from Greek διδασκαλία, 'teaching') is a pseudo-apostolic text (Hammerschmidt 1964; Steimer 1992) corresponding to the first seven of the eight books of the "Constitutions of the Apostles" (cf. Metzger 1985-87); besides book VIII, the D. omits book I, 9; II, 48, 52; VII, 13, 18–26, and adds a preface at the beginning (cf. Harden 1920:xciiif.).

Both the Ethiopic D. ("Constitutions of the Apostles", I–VII) and the work generally known as *Didascalia* (cf. CPG I, nos. 1730, 1738) belong to the old Christian literature of canon law, but should not be confused with each other; nor should they be mistaken for the so-called "Teaching of the 318 Nicaean (Fathers)", quite a different text transmitted within the ↗*Haymanotä abäw* and the ↗*Senodos*. The *Didascalia* is likely to have been composed in northern Syria in the first half of the 3rd cent. Lost in the Greek original (apart from few fragments), it is preserved in a Syriac version (cf. Vööbus 1979). Approximately one third is also included in the Latin *Veronese collection*, one of the most important canonico-liturgical collections (in the palimpsest cod. Veronensis LV, copied in the 5th cent. and probably dating to the 2nd half of the 4th cent.; cf. CPG I, no. 1731). In the 4th cent. a Syrian compiler reworked the Greek *Didascalia* into the Greek "Constitutions of the Apostles" I–VI (= Ethiopic D. chs. 1–34 in Harden's 1920 translation), from which we can form an idea of the original Greek text. Book VII of the "Constitutions of the Apostles" (= Ethiopic D. chs. 35–43) was based on the oldest pseudo-apostolic text, the Greek Διδαχή (cf. CPG I, no. 1735), with the addition of a Jewish prayer (chs. 33–38 = Ethiopic D. chs. 36–39), a baptismal order (39–45 = Ethiopic D. chs. 39–42), and a list of the bishops ordained by the Apostles (46 = Ethiopic D. ch. 43).

The Ethiopic D. was most probably translated from an Arabic Vorlage no later than in the 14th cent. There are at least two recensions of the Arabic work known as *ad-Dusqūlīyya* (or *ad-Dasqūlīyya*, or *ad-Disqūlīyya*, cf. Baumstark 1900; 1903; GrafLit vol. 1, 564–69); almost nothing is known on the version in ms. St. Petersburg, State Public Library, Orient. 3 (cf. GrafLit vol. 1, 568, 571; Coquin 1974:171). Like the Ethiopic D., those recensions do not correspond to the Greek, Syriac or Latin *Didascalia*. Yet, they both have the same preface as the Ethiopic D. and parallel the "Constitutions of the Apostles" I–VI (for the 1st recension) or I–VII (the 2nd recension). The 1st Arabic recension is divided into 39 chapters and corresponds to "Constitutions of the Apostles" I–VI, though with omissions (V, 13–16; VI, 7–29), with a significant alteration in the order of the subject-matter and the addition of six chapters. It had already been translated in the 11th cent. from a

Coptic (Boḥairic) Vorlage (cf. GrafLit vol. 1, 565f., against Nau's 1911 hypothesis of a translation from Syriac). The 2nd Arabic recension is found only in the ms. VatLib Borgia Ar. 22 (*olim* K IV 24) from 1348 A.D.; it was translated into Arabic in 1295 A.D. by Abū Isḥāq b. Faḍlallāh from a Coptic (Sahidic) Vorlage of 926 A.D. It is divided into 44 chapters and perfectly parallels the "Constitutions of the Apostles" I–VII.

Notwithstanding Graf (GrafLit vol. 1, 566f.), but in keeping with Harden's statements (1920:xii–xvii), the Ethiopic D. (usually divided into 42 or 43 chs.) shows more similarity to the 2nd recension of the Arabic *Didascalia*. However, a direct derivation has not been proved.

The first 21 chapters of the D. were edited and translated by Pell Platt (1834), from a mutilated 15th-cent. ms. BFBS, 191 Eth. (Cowley 1982:74f.), now in the Cambridge University Library (cf. Beylot — Rodinson 1995:46f.); the French translation by Françon (1911-14) covers the first 30 chapters of ms. BritLib Orient. 799 (WrBriMus 278, no. 365), with references to Orient. 793 (WrBriMus 270, no. 361) and to ms. BN, d'Abbadie 79 (CRAbb 69, no. 44); Harden (1920) has provided a translation of the whole text from ms. BritLib Orient. 752 (WrBriMus 214, no. 321), with occasional references to Pell Platt's (1834) edition and other testimonies in London. An edition of the entire text of the D. is still lacking. Other manuscripts of the D. (apart from minor fragments and quotations in the *Haymanotä abäw* that have no value for the Ethiopic tradition) are: BritLib Orient. 797 and 798 (WrBriMus 277, nos. 363, 364); EMML nos. 675, 950 (also containing an Amharic translation of the text), 1188, 6522 (on the margins of a ↗*Senodos*), 6539, 7608, 7647, 8374, 8412; Stuttgart, Württembergische Landesbibliothek, cod. Orient. fol. 49 (SixDeu 463f., no. 235; noted already in ZanBibl vol. 2, no. 105); Staats- und Universitätsbibliothek Göttingen, MS. Aethiop. 12, which is Hugo Duensing's working draft, copied from the previous one (cf. SixDeu 278f., no. 123); Staatsbibliothek zu Berlin, Or. fol. 595 (cf. DillmBerl 35f., no. 42, mutilated); Ṭānāsee 46 = Kebrān 46 (cf. HamTana I, 191); Ṭānāsee 140 = Dāgā Esṭifānos 29 (cf. SixTana III, 156).

Like other pseudo-apostolic works, the D. is attributed to St. Clement. Starting at least from the 14th cent., and mostly in the 15th cent., the identification and the canonical status of the "Books of Clement" (↗*Qalemənṭos*) – as well as other controversies, such as the observance of the Saturday-Sabbath, also prescribed by the D. (cf. Getatchew Haile 1988) – were discussed in Ethiopic works on the basis of authoritative evidence, above the D., the *Senodos* (cf. Bausi 1992:51–67) and the ↗*Kidan zäᵓəgziᵓənä Iyäsus Krəstos*, played an important role. This is the case, in particular, for the *Mäṣḥafä* ↗*məśṭir* by Giyorgis of Sägla, the *Mäṣḥafä* ↗*milad* and the *Mäṣḥafä* ↗*bərhan* inspired by *aṣe* Zärᵓa Yaᶜəqob (cf. Wendt 1964) and some hagiographical works.

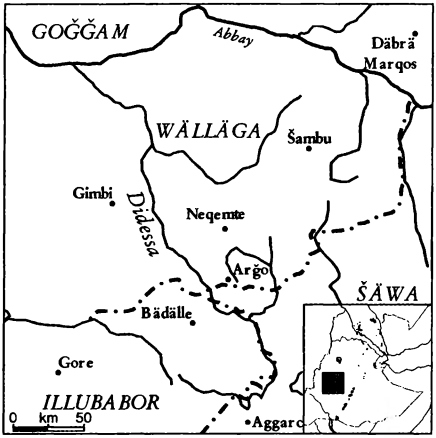
Alessandro Bausi

Didessa

The D. (ዲዴሳ, Orom. Dhidheessaa) is the main left-bank tributary of the ↗Abbay, originating between Dämbi and ↗Gore at an altitude of over 3,000 m A.S.L. in the forested mountains of ↗Limmu. It runs for more than 400 km swinging north to join the ↗Nile, carving on the way a deep canyon between the highlands of ↗Wälläga to the north and east and ↗Illubabor to the south and west. The southern part of its basin (28,130 km², s. *Guida*) includes the rainiest region in Ethiopia, where, over ten months, precipitation exceeds 2.2 m.

Interrupted by falls (Angär, Bereda), its flow is augmented from the right by the Angär river, a tributary draining the mountains which overlook the ↗Guduru plateaux. The discharge of this outlet is erratic, leaping from 20 m³/sec in May to 220 m³/sec in September, with great effect upon the flow of the D. (Daniel 1977). Densely populated by the Oromo, the highlands around Arğo (2,440 m) are widely cultivated. Scattered among cereal fields are clusters of hamlets and villages nestling among ↗*ənsät* and coffee plants. One thousand metres below and downstream, dry forests and bushes form grazing ground for agro-pastoralists, mainly ↗Gumuz, who practice extensive burning.

This hot and paludal valley formerly separated East Wälläga from West Wälläga. Since the 1960s, the expansion of the coffee harvest has led to the development of the road network from ↗Leqemt to ↗Gimbi, ↗Asosa and ↗Gambella to the west and from Arğo to Ğimma to the south. These roads cross the D. canyon at its deepest section and create an opening to the Illubabor enclave.



In 1976, the Relief Commission started a large mechanized commercial farm project in the D. valley, mainly to provide grain for relief purposes. The farm expanded into the lands of the Gumuz, Berta and other pastoralists which generated local conflicts and confrontations.

Didessa ↗ Mao

Digaluu

D. (Digalo) was a powerful Oromo group that belonged to the ↗Baarentuu confederacy. One branch of D. migrated to the north while the other remained behind in the south, especially in the region of ↗Boorana. During the 16th-cent. pastoral Oromo migration, the D. spearheaded the movement into the central and northern part of the historical Ethiopian empire. The D. fought repeatedly against the soldiers of *aṣe* ↗Susənyos, whom they defeated and by whom in turn they were defeated on a number of occasions. They settled among the Christian ↗Amhara population in Bägemdər and the surrounding areas, by whom they were absorbed and assimilated. By the beginning of the 18th cent. the D. who had migrated to the north and central parts of Abyssinia had ceased to be part of the Oromo nation and had become Amharic-speaking Christians, an integral part of the Ethiopian society. However, the other branch of the D., who remained behind in the region of ↗Sidama during the 16th cent. are important members of the Boorana (Bassi 1990:262), the core of the Oromo nation.

Digil

The D. belong to the Sab branch of the ↗Somali people. Unlike other Somali clans, the D. are agriculturalists and are looked down upon by the nomads.

In the early 17th cent., the D. moved into southern Somalia from the ↗Ogaden but a few D.-related groups remained in south-east Ethiopia. They settled into the fertile agricultural region between the Juba (↗Ganaalee) and ↗Wabi Šäbälle rivers. Since then, the D. have relied on a mixed economy of camel husbandry, cattle raising, and cultivation. Traditionally, the D. have battled with the Raḫanween over commercial and religious matters and with nomads who sought to encroach on their territories.

Because of their inferior status, the D. have not played a major role in Somali politics. After ↗World War II, the D. supported a local political organization called the Patriotic Union (EPU). On 25 March 1947, the EPU transformed itself into the Hizbia Digil Mirifle Somalia, which gained 13 seats in the 1956 Legislative Assembly elections but only three seats in the 1969 elections.

The term D. has also been used somewhat loosely for several Somali-related dialects of inter-riverine Somalia spoken both by the D. and other groups (s. Moreno 1955 for ↗May, Lamberti 1986 for the dialects of the ↗Garre, the Tunni, the Dabarre, and the Jiiddu).

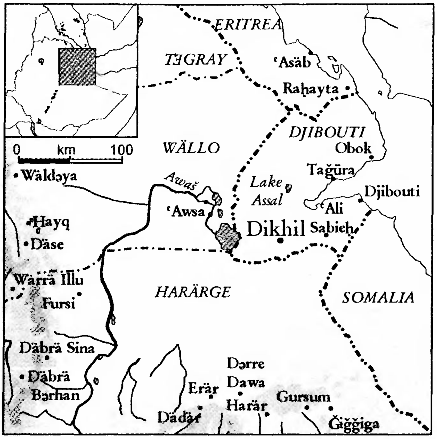
Thomas P. Ofcansky

Dikhil



Built on a small hilltop at the entrance to the plain where the Wadi Abᵓatu runs, the administrative and military post of D. (Diḫil) was founded in 1928 for the security of the southern borders of what was then French Somaliland (↗Djibouti). The town of D. is located 30 km east of the Ethiopian border (↗ᶜAwsa) and 52 km north of the Addis Abäba–Djibouti Railway (11° 11' N 42° 37' E). It holds a strategic position because of its control of the Hanle depression, one of the principal passages between Ethiopia and Djibouti. Before the arrival of the French, D. with its date-palm plantations and wells, was one of the stations along the caravan route which connected the rich province of ᶜAwsa with the natural salts of Lake ↗Assal and the port of ↗Tağūra.

The indigenous population of the region are the ↗ᶜAfar and the ↗Somali. Besides, there are numerous Arab and Ethiopian merchants attracted by the growing importance of trade with Ethiopia. D., which is located 120 km from the capital of Djibouti and is connected to it by an asphalt road, is also the administrative centre of a large administrative district of the same name and has taken the lead in the development of the region, where pastoral and agricultural activities still dominate. In the 1990s it became the fourth-biggest town in Djibouti, with a population of ca. 10,000 people, having a crucial position along the route between the port of Djibouti and Addis Abäba. It is used by many tourists as a starting point for excursions to Lake Abbe on the border of Ethiopia, famous for its large population of pink flamingos.

Ḏikr

In Islamic mysticism (*taṣawwuf* i.e. 'Sufism'), Ḏ. (ذكر, from the verb *ḏakara* 'to mention, to remember') is an exercise of religious piety, consisting in the recollection of God through repetition of His names or laudatory formulae. Generally meaning 'memory', Ḏ. derives its religious signification from Qurʾānic prescriptions such as: "You who believe, remember God with all your memory" (*sūra* 33:40). This form of prayer is distinct from the daily obligatory *ṣalāt*. Ḏ. can be practised either solitarily and in a whisper, especially in a spiritual retreat (*ḫalwa*), or collectively and loudly during the weekly ritual gatherings (sg. *ḥaḍra*). Besides the invocation of the names of God (e.g. *al-karīm* 'the Generous'; *ar-raḥmān war-raḥīm* 'the Clement, the Merciful'; *huwa* 'He', or simply the final consonant *h*), the most common sentences pronounced in Ḏ. are : *lā ilāha illā llāh* 'there is no god but God'; *al-ḥamdu lillāh* 'Praise be to God'; *Allāhu akbar* 'God is the Greatest'. According to the preferences of each congregation (*ṭarīqa*), Ḏ. is performed in a specific ritual order, with peculiar breathings and physical movements. In the *ḥaḍra* ritual, Ḏ. is usually associated with the recitation of litanies (*awrād*, pl. of *wird*, used as sg. by Ethiopian Muslims) or spiritual poems (*manẓūma*).

In Ethiopia Ḏ. (Harari *zikri*, Somali *digri*) formulae may be recited to cure people afflicted by evil spirits (e.g., ↗*zar*). The frontier between ecstasy sought in Ḏ. and possession rituals may thus appear rather blurred, even though religious leaders strongly assert the distinction between both practices.

Ḏikr in Harär: Zikri

Zikri is the Harari equivalent to Ḏ., but in ↗Harär the term refers not only to the various forms of ritual recitation and their ceremonial contexts, but also to the individual devotional songs performed during the Ḏ. rituals. Among the ceremonial traditions developed by Ethiopian Muslims, *zikri* is quite a significant one, developed in the city that has been for centuries the main centre of ↗Islam in East Africa.

Zikri rituals are the result of a peculiar historical process during which ceremonial and doctrinal traits coming from the Arab countries were assimilated and transformed within the Harari culture. The rituals take place in the local Muslim shrines, in the *Nabi Gār* (lit. 'House of the Prophet'), during weddings and funeral mournings, in private houses or in the streets of the town. In the sacred places, weekly gatherings are held on the nights from Thursday to Friday, but also numerous other occasions such as the festivities of the Islamic ↗calendar or the anniversaries of the major saints are celebrated.

The religious hymns performed during the ceremonies probably originated from the repertoire of *qaṣīdas* brought to Harär from Arab countries, and still today most of the *zikri* performed are in Arabic. Additionally, a rich body of texts in Harari (and several other local languages, above all ↗Oromiffa) has developed. These texts play a relevant role in ↗Harari literature.

On the musical level, *zikri* songs are characterized by male responsorial singing, accompa-

Zikri ritual in Harär (right: reading from the *Mawlūd*, left: singing *zikri*), photos 2000 by Simone Tarsitani, courtesy of Archivi di Etnomusicologia, Accademia Nazionale di Santa Cecilia, Rome nied by large kettle-drums (*karabu*) and pairs of wooden blocks (*kabal*). The large number of melodies, which bear no resemblance to either the Arab music or the neighbouring musical cultures, is generally based on portions of the diatonic scale, with ranges varying from a major third to the octave. The singing is almost strictly syllabic and generally monodic. Nevertheless certain elements of the performance should be taken into account: these include the heterophonic processes generated by the combination of several melodic variations sung at the same time and the overlapping of the soloist's voice with the chorus at the end of every stanza.

The rhythmic accompaniment is based on three main models: the *qaṣīda karabu*, the *quç quç* and a family of rhythms that has several forms named *ḥarat čala, sūt čala, asra siddist čala* etc. These models are quite far from the Arab rhythms and derive to some extent from elements of the local musical pagan cults. They have different functions relating to the rituals and to the moments of performance. The *qaṣīda karabu*, based on a binary form and played continuously, is suitable for dancing. The *quç quç* and the *čala* family, based on more complex patterns arranged depending on the text, are characterized by the interruption of the rhythmic part during the solo singing section, thus allowing the participants to follow more carefully the meaning of the religious lyrics.

Four main categories of *zikri* can be distinguished. The *zikris* performed during the ceremonial reading of the ↗*Mawlūd*, mainly accompanied by the *qaṣīda karabu*, are the most common and are currently performed on the occasion of weddings and of the most important celebrations in the shrines. The *zikris* of the *Nabi Gār*, usually with lyrics in Harari, are accompanied by the *quç quç* and the *čala* rhythms. These hymns are the most peculiar of the Harari culture and they seem to have developed in order to fulfil the teaching needs of the distinctive devotional place they are performed in. The *zikris* for the households in mourning (*amūta gār*) are similar to the ones of the *Nabi Gār*, but their texts are related to the funerary occasion and are typically performed by a man – singing and playing *karabu* – and a choir of women responding to him. The last category is that of the female *zikris*. These are generally performed during weddings or during the mourning time, accompanied by the small drum used by the women or only sung. Women rarely sing *zikris* in the shrines.

Dilgāmis

D. (دلجامس) was the last *sulṭān* of the ↗Maḫzūmī dynasty in ↗Šäwa and ruled in the years 1263–69, 1278–79 and 1280–85. When he came to power after the abdication of his brother Girām Gazʾi on 6 December 1263, the dynasty was already in total turmoil: several lines of the family strove for supremacy. Rebellions of tribes and towns followed one after the other and droughts and plagues became the consequence.

In his first years, D. was quite successful. In 1264/65 he killed the prince of ↗Mora. In 1266/67 he subdued several notables (*umarāʾ wuzarāʾ wa-salāṭīn*) who must have been in opposition to him before, and in 1269 he killed the prince of ↗Ǧidāya. But then, on 2 October 1269, Dilmārra b. Mālzarra, who belonged to another line of the Maḫzūmī family, made himself *sulṭān*. Perhaps a fight with the people of Degun, which had occurred shortly before, was not successful. The deposed D. did not give up till he and his brothers were taken prisoners in June/July 1276 after losing a battle at Abut.

The problems with which Dilmārra was confronted were almost the same as those of D. More than that: with the newly established ↗Walašmaᶜ dynasty in ↗Ifat, an enemy appeared who was more dangerous than the petty tribal chieftains. First, Dilmārra tried to neutralize the new menace by marrying a Walašmaᶜ princess in 1271. That gave him only a short reprieve. At the end of 1276, Walašmaᶜ and his son ᶜAlī appeared in Šäwa. Dilmārra had to flee from one place to the next and finally to the Christian Emperor.

The chaos all over, this gave D. the chance to regain the throne in July/August 1278. The change of government did not hinder the

Walašmaᶜ from continuing their conquest. D. had to fight on different fronts: against the Walašmaᶜ, against ᶜAbdallāḥ b. Ǧanāḥ, a remote relative of his own family who made himself *sulṭān* for nine months (May/June 1279 – January/February 1280), against Dilmārra who returned in April/May 1280, but was taken prisoner and killed by the Walašmaᶜ in May 1283, and against several other rebels. The final end came in July/August 1285. Walašmaᶜ entered Šäwa again, deposed the Maḫzūmī and killed the entire family.

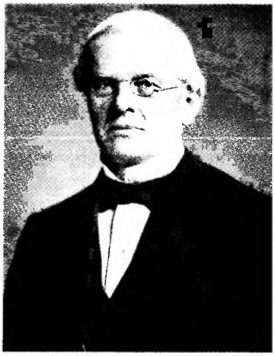
Ewald Wagner

Dillmann, Christian Friedrich August

D. (b. 25 April 1823, Illingen, Germany, d. 4 July 1894, Berlin) was one of the most prominent Ethiopisants of the 19th cent.; oftentimes he is even referred to as the founder of modern-day ↗Ethiopian Studies. Various aspects of Gəᶜəz philology were at the centre of D.'s scholarly endeavours. A considerable number of his works in this field have not been superseded and quite a few of them are still indispensable for the philologist and the historian alike.

D. was a Protestant theologian by training. From 1840–45 he studied in Tübingen, where Heinrich von ↗Ewald probably first inspired to him an interest in Gəᶜəz and Ethiopian things. After an interlude of half a year of service as a curate, D. in 1846 received a Ph.D. from Tübingen University. Thereafter, he devoted his life entirely to scholarly work in the two fields of Ethiopian and Old Testament Studies. D. spent the years 1846–48 in Paris, London and Oxford, where he studied the local Ethiopian manuscript collections. The immediate outcome of these researches were his two model catalogues of the Ethiopian manuscripts in London's British Museum (↗British Library) and Oxford's ↗Bodleian Library (1847, 1848). After his return to Tübingen in 1848, D. became an instructor for O.T. and Oriental Languages at the Theological Seminar. In 1853, still in Tübingen, he was promoted to the rank of professor and thereafter held positions at the Universities of Kiel (1854), Gießen (1864) and, finally, Berlin (1869), where he spent the rest of his life. It was also in Berlin that D. in 1878 published the third and last of his great manuscript catalogues, a description of the Ethiopian collection in the German capital's Royal Library (today: Staatsbibliothek zu Berlin).



Christian Friedrich August Dillmann; from Hammerschmidt 1988

D.'s intensive work with Ethiopian manuscripts, be it in the elaboration of catalogues or in the preparation of text editions (see below), made him keenly aware of the lack of adequate philological tools for the study of Gəᶜəz. At the same time, this work offered him an opportunity to gather and excerpt much textual material. This laid the basis for D.'s own attempts to remedy the situation and to provide such tools. Within less than a decade, he published a Gəᶜəz grammar (1857), a monumental Gəᶜəz-Latin dictionary (1865) and a Gəᶜəz chrestomathy (1866), thereby single-handedly creating an apparatus of Gəᶜəz philology. All three of these works have been reprinted well into the 20th cent.

From the outset D.'s philological groundwork was no arid exercise undertaken for its own sake, but stimulated by an interest in Gəᶜəz literature and intended to facilitate its exploration. This is amply demonstrated by the numerous and often richly annotated text-editions which D. published throughout his career. In his selection of texts D.'s theological roots are easily discernible. As is well known, the O.T. canon of the Ethiopian Orthodox Church traditionally comprises a number of books absent from the canons of the Western and Greek churches. Evidently these "apocryphal" books are of particular interest to the Ethiopianist and the O.T. scholar alike. It therefore seems consistent that D. published editions of the three most important ones from among these "O.T. apocrypha". In 1851 the *Mäṣḥafä Henok* (s.

↗Enoch) was D.'s first Ethiopic text edition, complemented in 1853 by a translation and a commentary. The Gəᶜəz version of the *Book of ↗Jubilees*, of which he had already given a translation in the *Jahrbücher der biblischen Wissenschaft* (2, 1849/50, 230–56; 3, 1850/51, 1–96), was published in 1859, and the *Ascension of ↗Isaiah* followed suit in 1877.

With respect to the standard O.T. in Gəᶜəz, D. had set himself the task of publishing all its books in critical annotated editions. According to his plan, this was to be achieved in five volumes. Vol. 1, the Gəᶜəz Octateuch, appeared as early as 1853. Over the years, however, the immense task proved to be beyond even D.'s capacities. Already vol. 2, comprising the Books of Samuel and Kings, had to be published in two instalments in 1861 and 1871, and the projected vols. 3 and 4 never materialized. Vol. 5, comprising the deuterocanonical books (*Baruch, Epistola Jeremiae, Tobith, Judith, Ecclesiasticus, Sapientia, Esdrae Apocalypsis, Esdras Graecus*), appeared only posthumously in 1894. In 1879, however, stepping outside his comprehensive scheme, D. had already published the Gəᶜəz version of Joel in a collective publication devoted to this prophet. Beyond the biblical books, D. translated the *Gädlä ↗Adam* (*Jahrbücher der biblischen Wissenschaft* 5, 1852/53; 1853) and in his *Chrestomathia Aethiopica* offered editions of a number of shorter religious texts in Gəᶜəz.

Also in the field of O.T. studies proper, D. counted among the leading scholars of his day. His main contribution in this domain were a series of commentaries on major O.T. books (the whole Pentateuch, Job, Isaiah). All of these commentaries saw reprints during D.'s lifetime, those on Genesis and Isaiah even multiple ones. D., moreover, left a manuscript version of an O.T. theology, which Rudolf Kittel posthumously (1895) published as *Handbuch der alttestamentlichen Theologie*.

As a virtual pioneer in Gəᶜəz philology, D. almost inevitably had to devote the greater part of his work to the basic tasks sketched above: manuscript description, creation of philological tools, publication of a corpus of texts. He was not, however, as a matter of principle averse to historical synthesis and interpretation. Hammerschmidt (1968:20) claims that D., early in his career, even conceived the idea of writing a comprehensive history of Ethiopia. Such a work never materialised, but D. published a number of shorter studies on the history of ↗Aksum and on the early Solomonic period, such as, e.g., "Über die Anfänge des Axumitischen Reiches" (1853; ^{2}1878/79) and "Die Kriegstaten des Königs ᶜAmda-Ṣion gegen die Muslim" (1883).

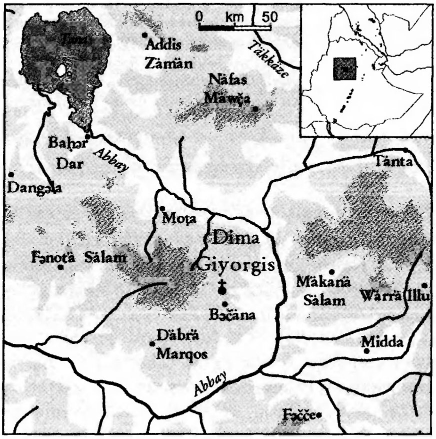
Michael Kleiner

Dima Giyorgis

The monastery of D.G. (ዲማ፡ ጊዮርጊስ, known also as Däbrä Dima or Däbrä Dəmaḥ [not to be confused with ↗Däbrä Dəmaḥ in Eritrea]) is located in Ǝnnämay *wäräda* (former ↗Bəčäna *awrağğa*) 8 km from Bəčäna, between the rivers Gäd and Ziya, in Goğğam. The word *dima* is traditionally believed to be derived from Gəᶜəz ድማኅ (*dəmaḥ*, 'head, skull'). It is said to refer to the honour and prestige of the monastery or its head-like form on top of a cliff.

D.G. is believed to have been founded by *abba* Bäkimos of Däbrä Asbo (↗Däbrä Libanos). According to a local legend, he drove away a female demon Ǝmmäwəlad and performed many miracles, including one involving a super natural heavenly light, hence his name ↗Täkäśtä Bərhan ('light has been revealed'). He evangelized the area and founded a church dedicated to St.Mary in a cave at Dima (ca. 1376), which was raised to the status of a ↗*gädam* by *aṣe* ↗DawitII in 1395. Täkäśtä Bərhan's successor as abbot, *abba* Ṭomos, visited the royal court in the time of *aṣe* ↗Yəsḥaq and returned with the ↗*tabot* of George of Lydda. The position of D.G. was changed to that of a ↗*däbr* (cp. Cerulli 1943:1f.). *Aṣe* Ləbnä Dəngəl confirmed the autonomous status of D.G. During the period of incursions led by ↗Aḥmad b. Ibrāhīm al-Ġāzī (Grañ), the monastery was not destroyed, but the monks had to flee. In 1655, under *abba* Wäldä Giyorgis, a new church was built to replace the cave-church (called Qädamit Maryam). In the following centuries D.G. remained an ardent supporter of the ↗*Qəbat* faction. D.G.'s connection to Däbrä Libanos of Šäwa was always close.

In the time of the struggle against the Italians, D.G. was a centre of resistance. In 1938 the monastery was bombed, leaving the church undamaged but inflicting many casualties among the monks. At a major battle in 1939, the Italian forces led by Major Dabobo were defeated at D.G.



Dima Giyorgis, entrance gate; photo courtesy of the IES

As the locality was administered by *däǧǧazmač* Ṣäḥayä Ǝnq^{w}ä Śəllase (1960–68), D.G. lost its administrative and judicial rights and revenues. This led to an exodus of clerics as its prestige waned. D.G. was a prestigious centre of traditional education, specializing in ↗*qəne* poetry and ↗*tərg^{w}ame* interpretation; the treasury of the monastery is reported to be unusually rich (manuscripts, paintings on wood, liturgical vestments, paraphernalia, s. Henze 1977; particularly interesting is a Gospels manuscript, richly illustrated and very close to ms. BritLib, Orient. 510, ChojPaint 68).

Dimbo Garbaa ↗Lidia Garbaa

Dime

Dime language

D. is an ↗Omotic language of the Eastern subfamily (BendLang) spoken by 5,587 people in the district of Salamago in the southern Omo zone, 120 km from the administrative centre, Ǧinka. The D. speakers refer to their language as *Dim aaf* (also *Dim af*, *Dim ko af*, 'D. of mouth' or 'mouth of D.'). The two mutually intelligible dialects of D. are Garfa and Uṣa. Most of the D. speakers are bilingual or multilingual, since they interact with the neighbouring speakers of other languages, such as Bodi (↗Meʾen), ↗Basketo, ↗Gofa, ↗Amharic etc. (Mulugeta Seyoum 1998:1f.; 1999). Fleming

(1990) argues that there are D. speakers outside the D. land who are refugees in Basketo and the ↗Aari mountains, plus the few D. Amhara who have travelled elsewhere.

The consonant phonemes of D. include: stops (*p*, *b*, *t*, *d*, *k*, *g*, ʾ), fricatives (*f*, *s*, *z*, *š*, *ž*, *x*, *y*, *kx*, *ʁ*, *h*), affricates (*ts*, *č*, *ğ*), nasals (*m*, *n*), liquids (*l*, *r*), ejectives and implosives (*p̣*, *ṣ*, *tṣ*, *ṭ*, *č̣*, *q*, *ɗ*) and glides (*w*, *y*). It has a total of 33 consonant and 9 vowel phonemes. The vowels are front (*i*, *e*, *ε*), central (*ɨ*, *ə*) and back (*u*, *o*, *ɔ*, *a*). Except for the central vowels and the lax front and back vowels *ε* and *ɔ*, the other five vowels have their long counterparts. In pre-vowel position, the non-geminated bilabial consonants *p* and *b* occur as *ɸ* and *β* respectively.

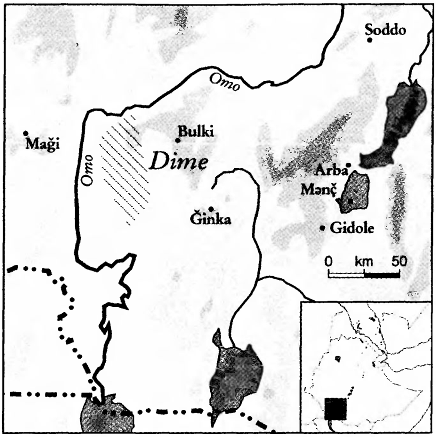
In D., word-medial and word-final clusters of two consonants do occur, while initial clusters do not occur in the words of the language. The following are the syllable types of D. (where C means consonant and V vowel): CV, CVC, CVV, CVVC, CVCC, CVVCC. The first two are considered as light syllables, while the other four types heavy.

Gemination is phonemic and results in minimal pairs in D., for instance, *ʾime*, 'breast' vs. *ʾimme*, 'give him', *guluu*, 'an owned land' vs. *gulluu*, 'a nucleus of wood' etc. However, gemination is not as common as in ↗Amharic and never occurs at word-initial position. The tones (high and low) are also phonemic. Examples of minimal pairs are: *góɸú* (high-high), 'navel' vs. *góɸù* (high-low), 'ribs' vs. *gòɸú* (low-high), 'pressed' (Mulugeta Seyoum 2002).

Plurals are usually formed by adding affixes to the noun stems. For instance, the following nouns use the plural suffix *af*: *gostu*, 'man' – *gostaf*, 'men', *diibi*, 'rain' – *diibaf*, 'rains'. The definite nouns are marked with the suffix *-is*, e.g., *gostafis*, 'the men'. The direct object is indicated by the suffix *-im* attached to the stem of the object noun, while the indirect object and benefactive are indicated by the suffix *-in*. The following is an example: *atu naʁ-im der-in baʾat*/I water-obj goat-to took-I/'I took water to goat'.

Fleming (1990) pointed out that the basic verb in D. is normally positive and active, as opposed to negative and passive, in its unmarked state. Normally, negation has to be marked by a special suffix and so does passivity.

The ten basic vocabulary items of D. are:



wokkəl	'one'	*maḥse*	'blood'
qəstən	'two'	*ʾiyyi*	'sun'
ṣeet	'three'	*ʾirfii*	'moon'
nunu	'fire'	*ʿáfé*	'teeth/mouth'
nəyay	'water'	*ɗootu*	'leg'

Mulugeta Seyoum

Dime ethnography

The D. are an indigenous population of sedentary agriculturalists, living in a relatively isolated outlier of the highlands of southern Ethiopia around the mountain Ğimša (or "Mount Smith"), in the large bend of the ↗Omo River. According to official statistics of 1994, they numbered around 6,200 people. Neighbours of the D. are the Surmic-speaking Bodi (↗Meʾen) to the south and the ↗Basketo and ↗Gofa at some distance to the east. The Omo River is their north-western border.

Like the ↗Dizi, who live across the Omo to their south-west, the D. were an independent, hierarchically organized society of chiefdoms,

Dime market of Goldo; photo 1950/52 by Eike Haberland, courtesy of the Frobenius-Institut, Frankfurt am Main (23–Ha071–11)

based on agriculture and cattle-raising. They were also one of the few remaining Ethiopian societies that until the late 1970s retained the traditional art of iron-smelting, carried out in 1.5-m-high earthen furnaces. The iron was used for spears, plough points and various other tools and sold to their neighbours.

Following their inclusion in the Ethiopian political economy after 1898, the relatively prosperous D. were heavily hit by the northern occupation, due to a particularly exploitative type of ↗*gäbbar* system established among them. Northern (mostly Amhara) settlers became the new administrators and lords of the D., although they became strongly assimilated to D. society and language. Many D. were enslaved and disappeared to the north. They were also vulnerable to frequent attacks and raids on life and property (cattle) from the Bodi agro-pastoralists, from whom they were not protected by the Imperial police or army – the latter had even disarmed the local D. highland population.

Since the early years of the 20th cent., D. has been a society in crisis and demographic decline, due to violence, disease, economic decline and emigration. In recent decades there has been some stabilization of their numbers.

D. now survive as subsistence farmers in a relatively fertile but precarious highland zone, in an uneasy relationship with the Bodi. They cultivate on terraced fields. Their main products are sorghum, *ṭef*, maize, *ənsät*, root crops, beans, bananas and coffee. Due to a lack of roads and transport, there is little or no connection to outside markets. Most "D. Amhara" people have also left the D. country in recent years. The Bodi have encroached on D. territory, virtually annexing it (Gärfa and Irka areas), and D. in the lower-lying areas bordering the Bodi have become their 'clients'.

Dīnār

D. (دينار) is the name of the standard gold coin in the Arab world. It was known and also sparsely used in medieval Ethiopia as attested by Arab literary sources of the 13th cent. as well as by stray finds.

When *aṣe* ↗Ḫaylä Śəllase I devised his first ↗currency reform in 1931, it was planned to be backed by gold. This might be the reason why the largest of the new coins was projected as a piece inscribed "1 Dinar". However, in the course of the international monetary crisis, the plan of a gold standard had to be abandoned and the coin did not go into circulation, only a few trial strikes (on silver planchets of half-*bərrs*) being known.

Dir

Dir language

D. (Northern Somali, "Northern Somali in its proper sense", also called Isaaq) designates a group of Somali dialects spoken in the extreme north-western part of the Somali-speaking territory: the ↗Djibouti Republic, the three regions forming the former British Somaliland: Waqooyi Galbeed, Togɖeer and Sanaag of the Democratic Republic of ↗Somalia, as well as in eastern Ethiopia along the frontier with north-west Somalia (s. map in Lamberti 1986a:33). The D. cluster consists of three dialect groups, namely: (1) that spoken by the ↗ᶜIssa (Ciise) in Djibouti and in the district of Zaylaᶜ (Waqooyi Galbeed); (2) the one spoken by the ↗Gadabuursi (Geedabuursi) in the Somali region of Waqooyi Galbeed; and (3) D. dialect proper spoken in the Somali regions of Waqooyi Galbeed, Togɖeer and Sanaag as well as in eastern Ethiopia in the south of the frontier with north-west Somalia.

Among these dialects D. proper is the one with by far the greatest number of speakers, and which has received the most attention in scholarly literature. It may be the best analysed Somali dialect in general. This also explains why in the past the D. dialects have often been identified with D. proper (cf. Cerulli 1919; Moreno 1955:iii–iv). The D. cluster is part of the so-called "Northern Somali" dialects (cf. Lamberti 1986b:13–16, 1986a:30ff.), roughly corresponding to Andrzejewski's (1971) "Common Somali". The "Northern Somali" is a cluster of relatively homogeneous dialects (Lamberti 1988).

The northern Somali dialects differ from the other Somali dialects spoken in central and southern Somalia and along its central and southern coast, as well as in Kenya. The main peculiarities of the Northern Somali dialects are the presence of the pharyngeal phonemes /ᶜ/ and /ḥ/, i.e., *c* and *x* in Somali orthography, a clear distinction between /q/ and /ḵ/, i.e., *q* and *kh*, plurals of monosyllabic masculine nouns with partial reduplication (e.g., *sanan*, 'noses' from *san*), the occurrence of *-koo*/*-too* as one of the demonstratives, an opposition between inclusive 1st pers. pl. *innaga*, 'we (but not you)' and exclusive 1st pers. pl. *annaga*, 'we and you', etc. (for more details see Lamberti 1986a:49–57). Among the peculiarities that distinguish the D. dialects from the rest of Northern Somali the following should be pointed out:

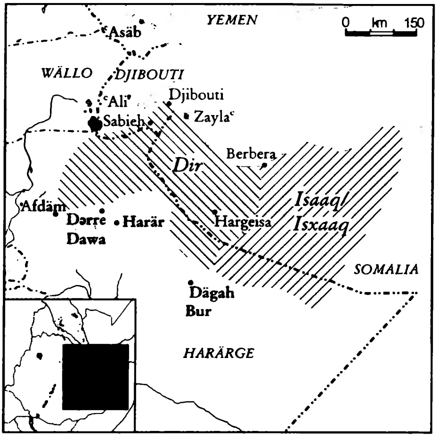
1. the phoneme /ɖ/ always maintains its realization as [ɖ] even between vowels and word-finally, while in the rest of Northern Somali it is realized either as retroflex [ɽ] or as plain [r] intervocalically, cf. Dir *wuu yi*[ɖ]*i* 'he said' vs. the rest of Northern Somali *wuu yi*[ɽ]*i* or *wuu/waa yi*[r]*i*;
2. the more restricted distribution of the plural morpheme *-yaal*, that occurs only in non-monosyllabic masculine nouns ending in a vowel;
3. in negated sentences the negation merges with the subject pronouns in a different way to what it does in the other Northern Somali dialects.

Pers.	Dir	rest of Northern Somali	meaning
1st sg.	*ma-ˀaan*	*ma/ maan/ ma-ˀaan-an*	'I did/do not'
2nd sg.	*ma-ˀaad*	*ma/ maad/ maad-an/ ma-ˀaad-an*	'You did/do not ...', etc.
3rd masc. sg.	*ma-ˀuu*	*ma/ muu/ maas/ ma-ˀuus-an*	
3rd fem. sg./3rd pl.	*ma-ˀay*	*ma/ may/ may-na/ may-n-an*	
1st pl.	*ma-ˀaannu*	*ma/ maan/ maan-an/ ma-ˀaan-an*	
2nd pl.	*ma-ˀaaydin*	*ma/ maad/ maydn-an/ ma-ˀayd-an*	

Language samples

Ten-word list: *koow*, 'one'; *laba*, 'two'; *saddeḥ* (*saddex*), 'three'; *biyo*, 'water'; *dab*, 'fire'; *qorraḥ* (*qorrax*), 'sun'; *bil*, 'moon'; *ɖiig* (*dhiig*), 'blood'; *ᶜarrab* (*carrab*), 'tongue'; *ilig*, 'tooth'.

Personal pronouns: 1st pers. sg. *ani-ga* (I/me), 2nd pers. sg. *adi-ga*, 'thou/thee'; 3rd pers. masc.



sg. *isa-ga*, 'he/him'; 3rd pers. fem. sg. *iya-da*, 'she/her'; 1st pers. pl. (incl.) *inna-ga*, 'we/us'; 1st pers. pl. (excl.) *anna-ga*, 'we/us'; 2nd pers. pl. *idin-ka*, 'you'; 3rd pers. pl. *iya-ga*, 'they/them'.

Demonstratives are highly developed in distinguishing different degrees of nearness/farness (here only the masc. forms are given): *-ka* the common article, *-kii* the remote article, *-kan* and *-ka-kan*, 'this' (near to the speaker), *-kaa* and *-kaas*, 'that', *-koo*, 'that' (in the middle distance) and *-keer*, 'that' (in the far distance).

The copula is *waa* ,'is/are'.

The most important works on the D. dialect include Reinisch's (1900–03) contribution with a comprehensive dictionary (Somali–German/German–Somali), numerous texts provided with German translation and a noteworthy grammar for the time; papers by von Tiling (1918, 1919–20, 1925) on morphology; Bell's (1953) textbook; and in the second half of the 20th cent. above all the contribution of Andrzejewski (cp. Lamberti 1986c). Mention should also be made of Hetzron's work on northern Somali syntax; and of a comparative description of the northern Somali dialects by Lamberti (1988).

Marcello Lamberti

Dir ethnography

The D., the oldest of four pastoral ↗Somali clan families (others include ↗Daarood, ↗Isaaq and ↗Hawiye), are divided into the ↗ᶜIssa (ᶜIise), ↗Gadabuursi and Biyamaal clans. The ᶜIssa and Gadabuursi, most of whom are camel herders, live in northwest Somalia, Djibouti, and eastern Ethiopia. The Biyamaal, who are largely cattle herders and farmers, inhabit the area between ↗Mogadishu and ↗Merca.

Various traditions provide an explanation for the name of D. It might have been the apical ancestor of the ᶜIssa, Akiššo, Gurgurá, Bursúg, and G. (Bader 1999:242). The D., as opposed to the Daarood sub-grouping, are also collaterally descended, with the Hawiye, from a common ancestor, Irrir, son of Soomaali. According to this genealogy, Soomaali is the brother of Sab, father of the ↗Digil tribal confederation. The "noble" Somali are the sons of Soomaali (or- which has also a substitute called Samaale).

D. history began in the 10th cent., when ancestors of the D. occupied the region along the Gulf of Aden coast between ↗Tağūra and ↗Cape Gardafui. Somali tradition maintains that *šayḫ* Daarood Ismāᶜīl travelled from Arabia, settled among the D., and married a D. woman. Their offspring established the Daarood clan.

The ᶜIssa occupy the region where the boundaries of Ethiopia, Djibouti, and Somalia converge and extend inland as far as Dərre Dawa. During the Ogaden War (1977–78), many ᶜIssa fought against Ethiopia. ᶜIssa also participated in the struggle against the Siad (Siyaad) Barre regime (1969–91).

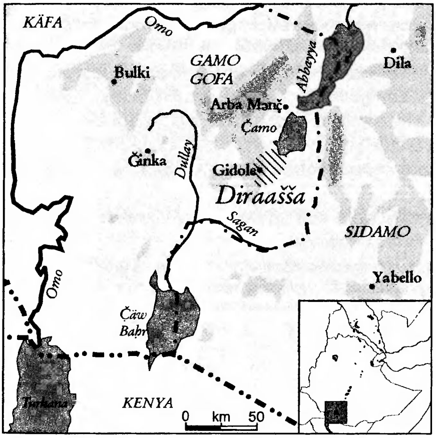
Diraašša

Diraašša language

Genetically D. (diraašša, ɗirayta, Gidole, Gardulla) belongs to the ↗Konsoid group within Lowland East Cushitic. This affinity is attested in terms of shared lexicon (Bender 1971; Black 1973), as well as common phonological and grammatical features (Black 1973). Konsoid's nearest Lowland East Cushitic relative is ↗Oromo and apart from a shared stock of vocabulary, this relationship is apparent in both noun and verb morphology. Of special note here is the innovative group development (Hayward 1986) whereby a derivative of the 1st pers. sg. subject pronoun replaced the earlier complement form, which had involved suppletion; thus, Oromo *an-i(n)* 'I' : *na*, 'me'; D. *antu*, 'I' : *an* 'me'; cf. Proto-Lowland East Cushitic **an-i/u*, 'I' : **yi/u* 'me'.

Certain peculiar features of the Konsoid group are attributed to close contact with and substratum influences of speakers of the northern ↗Dullay languages, who now neighbour them to the west, but may once have inhabited the Konsoid territory (Black 1975). One well-remarked feature of the northern Dullay-Konsoid *Sprachbund* is the shared loss of phonemic voicing contrasts in plain obstruents, so that the Proto-Lowland East Cushitic oppositions **p* : **b*, **t* : **d*, **k* : **g*, **s* : **z* underwent neutralization.



Certain properties of D. itself have attracted the attention of linguists. One such property is its case-marking, which, while reflecting its East Cushitic ancestry (with a marked nominative in -*i* contrasting with an unmarked absolutive form of wide syntactic distribution), has been much obscured by a reduction of word-final short vowels to "shadow vocoids" and by the employment of a focus-system that shifts the nominal predicate or complement forms (in absolutive form) to the front of the sentence by a clefting operation (Tosco 1996; Hayward 1986, 1998). Another feature arising out of the focus-system is that affirmative declarative paradigms of verbs come in three sets, the occurrence of which correlates with the scope of focus being either the subject, the complement, or the entire predicate (Hayward 1986, Hayward – Saeed 1984).

Richard J. Hayward

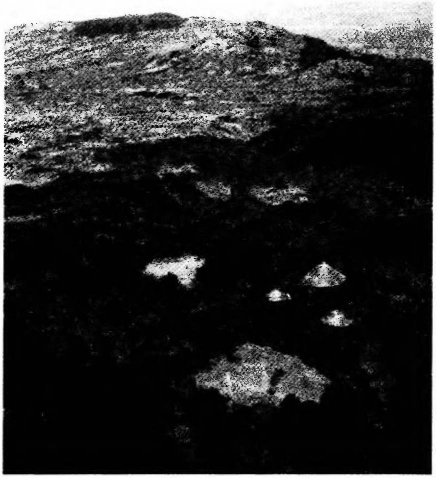
Diraašša ethnography

The D. inhabit today the area to the east of the ridge of the ↗Gardula Mountain down to the southern shore of Lake ↗Çamo. Before the conquest by the northern-Ethiopian armies the D. also occupied the Gumayde-highland in the ↗Rift Valley. During *aṣe* ↗Mənilək's reign, however, the district was divided between the soldiers of merit of the northern-Ethiopian army. Even the central territory of the D. (*kitoole*) and the ridge area were turned into an Amhara settlement zone. In the latter region the winners established there the ↗*kätäma* of Gardula on top of the mountain, which remained till the time of the Italian conquest (↗Italian war 1935) the most southern political and military centre of the Empire. Under the Italians, the administrative centre was moved about 300 m lower down to ↗Gidole (cp. *kitoole*).

In spite of those drastic changes the D. managed to preserve many of their cultural peculiarities (primarily to the south of Gidole) up to the Revolution of 1974. The ethnographical publications on the D. have, however, been rather limited – in contrast to those on, for example, the neighbouring ↗Konso – to very few narrow fields of research.

The urban-like centres of the southern *kitoole* region, divided into wards, belong along with those of ↗Burǧi, Konso and ↗Očollo to the cultural peculiarities of the area. The agricultural achievements of the D. can also be compared to those of Konso. Even if today the intensive land cultivation in many of the parts of the D. habitat belongs rather to the past, it was the D. who managed to develop Gidole into one of the most important agricultural markets in the southern part of the Rift Valley. The intensified agriculture was and is ensured and supported by differentiated handicraft products, manufactured by full-time ↗craftsmen (*hawḍa*). Their quality tools can even today compete with industrial products, even though the latter can be obtained at the Gidole market at a cheaper price. Even leather-working, having almost vanished in the rest of south-west Ethiopia, is still flourishing here.

One of the traits of the D. deserves to be emphasized. While most of the ethnic groups of the Burǧi-Konso cluster (a part of which the D. are also considered to be) have acephalous social structures, among the D. a dominant lineage (under the numerous lineages of nine clans) emerged in the course of the 19th cent. at the latest. Up to the Revolution of 1974, from this lineage emerged the hereditary priestly chief of the D., called *ɗaam*(*a*). In order to preserve the lineage of the *ɗaam*(*a*) institution even a *ɗaam*(*a*)'s chief widow (*haaʾet*) could take up the function of such a priestly chief – even though the society was patrilineally organized. The authority of the *ɗaam*(*a*) was mainly based on their power over the rain and epidemic diseases. They were acknowledged as rainmakers far outside their own territory among the neighbouring ethnic groups. Many of the *ɗaam*(*a*) features can be compared to those of the ↗sacred kingdom.



Diraašša landscape; photo 1999, courtesy of Hermann Amborn

Into recent times there has undoubtly been a certain rivalry between the egalitarian currents and centralization tendencies; D. society has at least tried to control the power by religious restrictions and an extremely complex system of political offices.

Diseases

D. can be defined as a physical and/or psychological state of condition in which the well-being of an individual is disturbed. Illness and health respectively are culturally defined. The distinction between a D. and other kinds of misfortune is often not clearly made.

In traditional concepts of D. various causes for the outbreak of D., natural and supernatural, are taken into consideration. D. are frequently seen as an expression of the will of God, but also as a response to the action of ambiguous or malevolent spirits and powers (↗*Buda*; ↗Possession cults; ↗*Zar*) or poisonous animals. For example hepatitis as well as a fungus of the head skin are believed to be caused by a bird or bat flying overhead. Immoral behaviour can predestine a person to divine punishment or certain spiritual affected D. In some traditional concepts of misfortune and D., even the bad deeds of ancestors can cause D. Traditional pathology includes some culture-specific D. not recognized by modern medicine, e.g., *q^{w}äräñña*, which is caused by spirit possession and includes symptoms like chronic stomach pain, listlessness and malaise (cp. Young 1975), *moñbagañ*, a headache with neurologic symptoms, and *hono qärä*, explained as a permanent pregnancy which has turned to bone. But beside these spiritual explanations the infectious character of some disease is traditionally known. For modern pathology e.g. s. Longe –Blanchfield 2002.

The Ethiopian and Eritrean population suffered in its history from a wide range of D., the risk of affection in lowlands being higher than in the highlands. The dangers caused by the environment were aggravated by the consequences of wars and instability. The population was afflicted by several ↗epidemics, many of which followed in the wake of ↗famine, and in some cases led to ↗migration from the more affected areas. In the following only a sample of physical D. is treated.

Nowadays Ethiopia is the country with one the highest rates of child and maternal deaths in Eastern Africa (in 2003, rates of child deaths in Ethiopia were recorded at 107 ‰; in Djibouti the rate was 117 ‰, in Somalia 126 ‰; Mozambique leads the statistics with 201 ‰). The same applies to protein-energy malnutrition and to long-term development retardation of survivors. Infections of respiratory organs and intestines with malnutrition are the main D., besides tropical D. (e.g. malaria; ↗bilharziasis) which lead to many deaths in Ethiopia and Eritrea.

Among the D. which were and still are common in Ethiopia and Eritrea, one can list diarreahea, intestinal parasites, hepatitis, different eye D., meningitis, tubercolosis, dengue, smallpox, cholera, typhus, dysentry, ↗syphilis, ↗malaria and influenza. Today the human immunodefiency virus (↗HIV) became one of the biggest problems in the whole region. Unique diseases to Ethiopia include: relapsing fever, neurolathyrism, podoconiosis, fistula, epidemic fluorosis. Relapsing fever, caused by *Borrelia recurrentis* and transmitted by lice, is highly endemic in Ethiopia. It is likely that there are at least 10,000 cases annually, more than in any other country. It tends to be found in the highlands from August to December.

Neurolathyrism is a spastic paraparesis caused by a neurotoxin in a grass pea (lathyrus sativus), commonly known as guaya. Epidemics have been reported during famine times. In the Gondär area of Lake Ṭana, rates up to 3 % have been reported from certain villages, with an overall rate as 1.7/100,000, level also comparable to India and Bangladesh.

Podoconiosis is a non-filarial form of elephantiasis and can be found in highland areas with underlying basalt rock. A survey of 250,000 people in the fertile highlands showed that 27.2/1000 over age 15 were affected. It is possible that over 500,000 Ethiopians are affected. This is related to farming while barefoot. Ultra-fine particles of aluminum silicate in the clay soil enters the skin, along with silica, alumina, and iron. There is no treatment, but the use of footwear is thought to be protective.

The rate of fistula, a consequence of obstructed labour, in Ethiopia is 55/100,000 births, believed to be the highest in the world. The Fistula Hospital in Addis Abäba operates on over 1000 cases per year.

Epidemic fluorosis is common in the Ethiopian rift system, including the Ethiopian rift valley. 64 % of people living in Wonği for over 20 years had physical impairments consistent with this, including myelopathy and radiculopathy due to excessive fluoride in the water.

Diarrhea

Many D. are accompanied by diarrhea (Amh., Tgn. ተቅማጥ, *täqmaṭ*, also ውጽአት, *wəṣʾat*; Oromo *garaa kaasuu* or *gatteesuma*), which is a condition characterized by frequent bowel movements and feces that are soft or watery, and that may contain blood, pus, or mucus. It prevents the body from absorbing necessary water and salts into the bloodstream, which may lead to dehydration. D. can be acute or chronic.

Diarrheal D. have long been established as a leading cause of morbidity and mortality. In Ethiopia, the high mortality rate of children under 5 years is to approximately 40 % attributable to acute childhood diarrhea. According to the 2000 Demographic and Health Survey 13 % of the children having diarrhea were brought to a health provider and 44.9 % were treated by fluids, oral rehydration salts or homemade rehydration fluids and plant elixirs (e.g. ↗*kosso*). The survey reports that 84.5 % of the mothers in three Gondär villages believed that milk teeth extraction (especially of the lower incisors; called *gəg*) is useful in the treatment of diarrhea. 70 % of the children surveyed had undergone this procedure.

Intestinal parasites

Intestinal parasites or worm D. (Amh. የትል፡ በሽታ, *yätəl bäššəta*; Tgn. ሕማም፡ ሓሰኻ, *ḥəmam ḥasäka*) are rather common both in Ethiopia and Eritrea. The prevalence of A. lumbricoides infection and tapeworm infection is highest in the lowlands while the prevalence of Trichuris trichiura is equal for the highlands, temperate areas and lowlands.

The Ascaris worm is a round worm that lives in the small intestine. The infection, ascariasis, is the most common human worm infection. Children are infected more often than adults and mostly in the rural areas of both countries.

Two strains of the parasitic tapeworm (cestodes) are particularly dangerous to humans: taenia saginatus (beef tapeworm) and taenia solium (pork tapeworm). Cattle serve as the intermediate hosts while humans serve as the definitive host. Beef tapeworm is common, especially in Ethiopia, where raw or uncooked beef (*kətfo*; ↗Food) is eaten with some spices.

These worms are not an immediate health threat, although they can grow large enough to block the intestinal tract. It is also possible for tapeworms to lodge in the appendix, resulting in appendicitis. In rare cases, these parasites have also been known to infect the brain, skeletal muscles, the cerebellum, and the heart. Symptoms of infections include fits, personality changes, and paralysis. Cooking beef completely through can prevent infection.

Pumpkin seeds are used locally in Eritrea as traditional medicine to treat tapeworm. These seeds are said to be very rich in oil and proteins. But the mechanism is still unknown. For all worm D. *kosso* is used as a traditional remedy.

Dracunculiasis, or guinea worm disease, is a disabling infection caused by the nematode parasite *Dracunculus medinensis*. People become infected when they drink water containing tiny crustaceans, called copepods or "water fleas", that act as intermediate hosts of the organism and harbour infective larvae.

In Ethiopia *Drancunculiasis* is endemic in villages of the Bume (Ñaŋatom) of Gambella Region and the south-west region neighboured to the endemic East Sudanese area. The D. typically reappears every year during the agricultural season. In 1994 WHO reported 1252 cases in Ethiopia. Eritrea is not endemic for *dracunculiasis*. Mostly the females (2/3 of the prevalence) are highly affected in the age of 20–30 years. Water procured from water-holes drug in dry river beds provides an ideal medium for the transmission of this worm.

The worm mostly emerges from the feet, causing an intensely painful oedema, a blister and then an ulcer. Perforation of the skin is accompanied by fever, nausea and vomiting. Infected persons frequently remain sick for several months.

Onchocerciasis is the world's second leading infectious cause of blindness. In Africa *Onchocerciasis* is often called "river blindness" because of its most extreme manifestation and because the blackfly vector abounds in fertile riverside areas, which frequently remain uninhabited for fear of infection. *Onchocerciasis* is caused by *Onchocerca volvulus*, a parasitic worm that lives for up to 14 years in the human body. Each adult female worm, thin but more than a half metre in length, produces millions of microfilariae (microscopic larvae) that migrate throughout the body and give rise to a variety of symptoms: serious visual impairment, including blindness; rashes, lesions, intense itching and depigmentation of the skin; lymphadenitis, which results in hanging groins and elephantiasis of the genitals; and general debilitation. *Onchocerciasis* manifestations begin to occur in persons one to three years after the injection of infective larvae. Microfilariae produced in one person are carried to another by the blackfly, which in southwest Ethiopia belongs to the *Simulium damnosum sensu* and *Simulium ethiopiense* species complex. The blackfly lays its eggs in the water of fast-flowing rivers, Gälgəl Gibe and Goǧäb. Some seven million people are feared to be affected by the disease in western Ethiopia, Gambella, Təgray and the southern regions. In 1987 an ivermectin's manufacturer pledged to provide at no cost all the drug necessary for as long as necessary to overcome *Onchocerciasis* as a public health problem.

Hepatitis

Hepatitis (የወፍ፡ በሽታ, *yäwäf bäššəta*, lit. 'bird disease', s. above) is very common in Ethiopia. About 100 % have antibiotics to hepatitis A (transmitted by fecal-oral route) by age 15. Approximately 10–13 % of the population are carriers of the hepatitis B surface antigen. This is felt to be due to locally acquired transmission, and not mother-to-child transmission.

Heart diseases

Rheumatic heart disease due to consequences of rheumatic fever is the most common form of heart disease in young people and adults. Myocardial infarction is becoming more common, with several admissions per week at Black Lion Hospital.

Eye diseases

Eye disease like Trachoma and Conjunctivitis were very frequent during history. According to traveller's reports compiled by Pankhurst (PankEcon 628f.) especially the north-eastern lowlands and the Ṭana region were affected by eye infections while the highlands as well as the Oromo areas were struck less. The living environment of a great number of Ethiopians still today support eye problems. Factors are e.g. dust, smoke and insufficient hygiene. The rate of blindness in Ethiopia is 1.5 %. 80 % of this due to preventable or curable D. The most frequent cause for blindness is Trachoma (40 %). Another frequent cause is *Onchocerciasis* (s. above).

Tuberculosis

While Tuberculosis (TB) is not often reported in history, the 1988–90 TB (*yäsamba nägärsa*) survey found that there was a 1.4 % annual risk of infection. It is likely that this has increased in recent years due to the prevalence of HIV.

Meningitis

Ethiopia is located at the eastern end of the African meningitis belt. Since 1935 outbreaks of Meningitis are reported. Epidemics of the bacterium Meningococcus (Neisseria meningitidis, group A) occur most frequently in Amhara, Gambella, Somali, Təgray and Southern regions with sometimes up to thousands of affected people including a big number of fatalities. The infection is transmitted by mucus from nose and throat affects of the fluid and membranes covering the brain and spinal cord.

Dengue

Dengue is the most important mosquito-borne viral disease affecting humans; its global distribution is comparable to that of malaria, and an estimated 2.5 billion people live in areas at risk for epidemic transmission. D. is primarily a disease of the tropics, and the viruses that cause it are maintained in a cycle that involves humans and *Aedes aegypti* or *Aedes albopictus*, a domestic, day-biting mosquito that prefers to feed on humans. Infection with D. viruses produces a spectrum of clinical illness ranging from a nonspecific viral syndrome to severe and fatal hemorrhagic disease. The acute form of D. is characterized by sudden onset of fever, headache, myalgia, rash, nausea, and vomiting. The first reported epidemics of dengue fever occurred in 1779–80 in Asia, Africa, and North America. There is high prevalence of dengue in the Eritrean provinces Southern and Northern Red Sea, but the actual and potential distribution of *Aedes aegypti* covers both countries, Eritrea and Ethiopia. Epidemic D. has increased dramatically, especially in East Africa, since 1980.

No D. vaccine is available. Recently, however, attenuated candidate vaccine viruses have been developed in Thailand. These vaccines are safe and immunogenic when given in various formulations, including a quadrivalent vaccine for all four D. virus serotypes. Mosquito control is the only way to reduce the incidence of D. around the world.

Venereal diseases

UNAIDS estimates that 3 million Ethiopians are infected with ↗HIV (or AIDS), an adult rate of 10.6 %. This rate is no. 16 in the world, but the number is no. 3 in the world after South Africa and India.

Other sexually transmitted D. are, e.g., Syphilis and Gonorrhea (ጨብጥ, *čäbṭ*). The latter is very common. It is traditionally often attributed to urinating under a full moon.

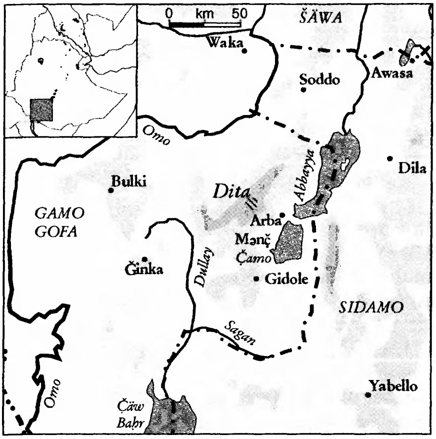
Dita

D. is one of over 55 *dereta* (sg. *dere*), traditional autonomous units of the ↗Gamo people. The people of D. occupy a central location in the Gamo Mountains (s. VSAe III, map 6; Bureau 1981, maps 1–3; Olmstead 1997:23). D. was one of the many small Gamo kingdoms prior to its conquest. Inhabitants of D. were in the past known to have been fierce mountain warriors. They subjugated a number of their neighbouring *dereta* and used the population of the defeated *dereta* for agricultural labour.

In D., as in other Gamo *dereta,* land is meticulously used. The complementarity of primary and secondary homes, of pastures and fields, of mountain and low-escarpment crop production, of the political and religious structures, of assemblies and kings are, as among most of the Gamo, a regular feature of D. life. As in other Gamo areas, the division of agricultural land between pasture and fields is crucial. This division is supplemented by groves of ↗bamboo and other hard wood grown along valleys and between various fields. Fields are owned by heads of families, and pastures communally, but with ritual and administrative responsibility of people referred to as "fathers of the pasture". In addition to fields and communal pastures, families maintain their own meadows and groves of bamboo and other woods. D. agriculture, like that of other mountain Gamo, is highly developed (VSAe III, 382). Terraced cultivation is very widespread (Jackson 1970:16f.), as is manure cultivation, in D. as well as in the rest of Gamo.

As is common among the Gamo, bamboo-craft, cotton-spinning and weaving and fibre-work for hats and sacks and raincoats, both from fibre and horsetail, are the main non-agricultural skills. All mountain-Gamo cultures, including D., can be referred to as bamboo cultures as bamboo plays a central role in their lives. Houses, fences, barns, water-containers, containers of various shapes, crop-measuring containers, clubs and trays, are made from bamboo. Some parts of weaving-tools are also made from bamboo.

The D., like the Bonke and Ganta Gamo to their south and south-east, the Gamo of Qogo, ↗Dokko, ↗Dorze and Çillaše to their north and the Zalla further to the south-west, are famous for their thick warm cotton blankets known as *bulluko.* The *bulluko* and other lesser blankets of the D. and Bonke are much in



demand in the markets of ↗Sidamo, ↗Gide'o, Guğğiland, Arsi Nägälle and Wälaytta. During the Imperial days, such blankets of various grades, together with a ram, were considered suitable gifts for officials in power. To this day they remain the preferred items for gifts and bribes. These blankets are worn for prestige and to reflect titles.

One can relate the D. tradition of weaving to the history of cotton and the development of weaving in this part of Ethiopia prior to the 19th-cent. conquest and one can understand one of the logics behind the use of spun cotton yarn, *šalo*, as currency together with iron bars in the markets covering a large area from Zala in the south to Borodda in the north and from Dawro across the Omo in the west to Koyra across the lakes in the east. Other Gamo speak about the beauty of D. women, but say that they are not good to marry because they have no skills other than spinning cotton. They particularly say that they are not good for carrying manure to the fields. This cultural stereotype partly testifies to a long tradition of weaving and it is wrong to conclude that weaving was introduced only after the Conquest and that the Dorze are the only weavers among the Gamo. This confusion arises mainly from Addis Abäba, where all Gamo are referred to as Dorze.

The existence of secondary homes (*motsa*) in the hot lowlands is linked to growing lowland crops, mainly cotton. Sheepskin products and thick cotton blankets are essential clothing for high altitudes.

In D., as in the rest of Gamo, potters, tanners and ironsmiths make various products. These categories of craftsmen have separate cemeteries and do not cultivate land. Their houses are situated on the side of paths, usually with a little land for a small garden. It is a taboo to contract marriage and consume food with craftsmen.

As in the rest of Gamo, land and people are linked in many ways. The landscape is dotted with sacred groves, graveyards, sacrificial spots and places of assembly (which form a central sacred place). Many taboos are observed which preserve the sacred and productive feature of the land. Regular animal and food sacrifices on fields, pastures and the homesteads are thought to perpetuate social and natural harmony. The D. are affiliated to their land through their links to neighbourhood sacred assembly places – *guta dubbuša* – and to the main assembly place, which incorporates elected officials of each neighbourhood who together form the *dere* assembly. Their affiliation with other Gamo is effected through allegiance to religious leaders whose spiritual province cuts across *dere* units and this is hierarchically ordered. *Dere* affiliation to larger Gamo is also effected through a rain province, which includes a constellation of *dereta.* Affiliation of the units of a *dere* is also effected by an entitlement each family unit has to ritual and/or trading stalls it has in the market place.

Diu

D. (also Dio; 62,101 inhabitants in 1991) is an island off the southern point of Gujarāt, India. Throughout the 15th cent., especially under Muẓaffar Ḫān, D. flourished as a major port of the Gujarāti state, with a notable fleet. From 1510 it became the seat of the governors of Surat and under Malik Ayāz a fort and harbour defences were built there (Harrison in EI², vol. 2, 322). In 1535 the viceroy Nuno da Cunha made a treaty with Bahādur Šāh, the *sulṭān* of Khambhat, for the use of the port by ↗Portugal. Despite several attacks by Ottomans and Arabs, the Portuguese, who by 1541 had completed their massive fort, would remain masters of the island until 1961, when it became a union territory with Ḍamān.

D. enjoyed a glorious period during the 16th cent. and part of the 17th cent., becoming one of the main sources of income for the *Estado da India*. The Portuguese, through the system of *cartazes* or passes, dominated the formidable trade that had in D. (and the nearby port of Surat) one of its main axes, connecting ports such as ↗Goa, Cochin, Malacca, Aden, Jiddah, Kilwa, Melinde, Mombasa, ↗Sawākin and ↗Zaylaᶜ. The major exports of D. were the textiles produced in the inland regions of Gujarāt, the port also serving as an exchange centre for products from abroad (spices, opium, silk). The trade was managed by Muslims and the Hindu cast of the *Baniya* ("baneanes" in the Portuguese sources; s. ↗Banyan).

The Ethiopian highlands, through the ports of ↗Massawa and Zaylaᶜ, were engaged in this commerce, exporting to D. slaves, wax, butter, civet and ivory and importing Indian textiles. A population of Ethiopian ("abexins") slaves is reported in Portuguese sources to have lived in D. and in the neighbouring area in the early 16th cent. (↗Diaspora). One of the leading captains in the army of Bahādur Šāh was a "Capitão Abexim chamado Juzarcão" (Couto 1947, vol. 1, 22f. et passim, vol. 2, 8; Correa 1864:477 et passim). Within this context, seeing D. as a convenient gateway to the Ethiopian coasts, around 1600 the ↗Jesuits set up a residence there (Guerreiro 1611:270v.; BecRASO XI, 30, 38f.).

With the establishment of British and Dutch trading posts in Surat in the early 17th cent. and the creation of the Bombay Presidency in the early 19th cent., D. lost control over most of its trade routes and its commercial importance vanished.

Andreu Martínez

Diyaqon

In the ↗Ethiopian Orthodox Täwaḥədo Church D. (ዲያቆን 'Deacon') is the first of three ranks of clergy ordained by a metropolitan. Each priest (↗*Qäsis*) had to serve first as a D. In order to secure the succession of enough priests, a large number of boys were ordained D., since most of them, having reached puberty, became "impure" and entered a layman life. Just a small number continued their career in the Church as priests. Thus, the D.'s service is often considered a preparation for the priesthood, especially if the father of a young D. is himself a priest.

The ordination as a D. entitles the candidate to participation in the Divine Liturgy (↗*Qəddase*). In fact, as in all Oriental Churches, the D. has a special position, for his presence and participation in the service are mandatory. Usually at least two priests and three D. are needed for the liturgy.

The D.'s clothing consists of a shoulder-collar made of brocade with five long strips of cloth, a *qämis*, cap and a ↗crown. It is the D.'s duty to bake the bread for the ↗Eucharist and to make raisin wine in the *betä ləḥem* hut, while praying special prayers. D. also accompany the procession of the priests to the church, carrying the holy elements. In addition, the D. have to provide the ↗incense and charcoal for the censer. During the liturgy they respond to the priests, which requires some reading skills and a knowledge of the Psalms, prayers and their melodies (↗*Zema*) by heart.

The canonic regulations concerning the office of the D. are described in ch. 7 of the ↗*Fətḥa nägäśt*. In the ↗*Didəsqəlya*, one finds a detailed description of the D.'s tasks, responsibilities and liturgical functions, as well as of the procedure of his ordination by the bishop. According to the *Didəsqəlya*, it is the role of a D. to fulfil the bishop's commands. He is obliged to give relief to the needy (strangers, widows, orphans as well as the poor and the sick), to visit catechumens in their houses, to prepare the dead for burial, to search the coastline for the corpses of the shipwrecked, and to expel the unworthy from the services. It is the D.'s duty to add the "Proclamation" ("Those who feel hatred against their brother shall reconcile ...", s. Harden 1920:70, Beylot 1984).

The office of the sub-D. (**ንፍቀ፡ ዲያቆን**, *nəfqä diyaqon*), although not abolished in Canon Law (see *Fətḥa nägäśt*, ch. 8; cp. Beylot 1984:102), is rarely found today. In practice, one of the three D. acts as a sub-deacon. In the important churches there is still the office of the **ሊቀ፡ ዲያቆናት** (*liqä diyaqonat*, 'archdeacon', s. ↗*Liq*; cf. Kropp 1998:311), normally an ordained priest, whose main task is to supervise the D. and priests performing the liturgy.

Friedrich Heyer

Dizi

Dizi language

A south-western Ethiopian Omotic language of the ↗Dizoid family, also known as Maǧi, so named from the principal town of the speakers. This variety was chosen as a basis for the name of the family because it is the most prominent one of the three (v. also Nayi, Šeko). The self-name is *dizi nuu*(*g*) 'D. word'. The town of Maǧi has nothing to do with the Swahili word *maǧi* 'water', being derived from D. *maašt* 'a high place' (the town being atop a huge mesa; for this and other nomenclature information s. Bender 2000:143, 239 notes 1, 2). According to *Ethnologue* (Grimes 1996:261), there were about 18,000 D. speakers in 1982. D., Šeko, and Nayi are about equally distant from each other in terms of basic lexicon. The family is perhaps closer to the ↗Aroid family (Bender 2000 finds numerous grammatical similarities linking Dizoid and Aroid) than to the major *Ta/Ne* family of Omotic languages: with the latter, the basic lexical correspondence of D. is about 13 % against an internal *Ta/Ne* average of about 41 %.

Among the published sources for D., there are two grammatical sketches: Allan 1976 and Toselli 1939, the latter being predominantly devoted to verbal paradigms. Conti Rossini 1937 includes a brief sketch, drawing on Toselli's notes. More recent work includes Aklilu Yilma 1994, Breeze 1989, Claudi 1985, and Claudi and Serzisko 1985. In addition, there are a few minor articles and substantial unpublished fieldnotes from Edward Allan, M. Lionel Bender, Harold Fleming, James Keefer and William Muldrow. Bender 2000 (ch. 6) contains a grammatical summary of the major categories in D. There is no known written literature in D.

D. fits the standard Omotic syntactic type, having basic Subject-Object-Verb order. Phonologically, as several authors have noted (s. Aklilu Yilma 1994 and Breeze 1989), there are striking phonological similarities between Dizoid and ↗Benç̌ (Gimira); these are probably contactual in origin. While D. is surrounded by Nilo-Saharan ↗Surmic languages, Šeko and Nayi are neighbours of Gimira. The segmental phonemes of D. (synthesized from Aklilu Yilma 1994, Allan 1976, Breeze 1989) are:

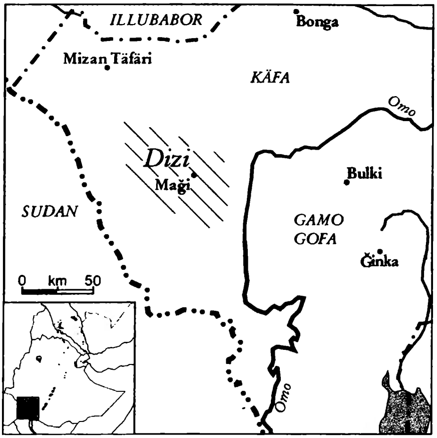
labials: *b*, *f*, *m*, *w*
denti-alveolars: *t*, *ts*, *ṭ*, *ṭṣ*,*d*, *s*, *z*, *n*, *l*, *r*
palatals: *č*, *č̣*, *š*, *ž*, *y*
retroflexes (Ǧaba dialect): *ç̌*, *ç̌'*, *ş̌*, *ẓ*
velars: *k*, *q*, *g*
glottal: *h*
vowels: *i*, *e*, *ə*, *a*, *o*, *u*
doubtful: *ʾy*

The vowel /*e*/ is often realized as [ɛ]. There are three levels of tone (high ´, low `, mid unmarked), rarely lexical but important grammatically. Stress is usually initial. Geminate consonants do not occur, but all vowels except *ə* may be long or short. Syllabic nasals (underlined herein) are a feature linking Dizoid and Benç̌; they are usually final, but may be initial. /*f*, *l*, *r*/ do not occur word-finally.

Sample lexical items from Allan fieldnotes (1974) are:

'one'	*qòy*	'moon'	*àtsm̩*
'two'	*taàgn̩*	'sun'	*caži*
'three'	*kàdú*	'blood'	*yàrm*
'fire'	*àlu*	'tongue'	*yàbl̩*
'water'	*áí*	'tooth'	*àžu*

Grammatical formatives to follow are taken from Bender (2000) and various fieldnotes.



The self-standing independent pronouns are: sg. 1st/2nd/3rd pers. masc./3rd pers. fem. *(y)ìnú/ yètù/ízú/íží*, pl. 1st/2nd/3rd pers. *ínú/ ítí/íší*. The resemblance of some of these to Nilotic is taken up in Bender 2000 (ch. 9) along with a lengthy discussion of their role in the development of Omotic pronouns, which appear to be quite aberrant in Afrasian. Demonstratives are 'this' masc./fem. *a+a/a+en*, 'that' masc./fem. *ɛk+e/ ɛk+ɛn*. A sample of interrogatives forms which have been recorded is: *íkí* 'who?'; *nákí, yir* 'what?'; *irga* 'where?'; *iram* 'why?'; *as*(*i*) 'how?'; *ais*(*i*) 'how much?'. Keefer (1968 notes) says D. has an interrogative marker *+i* suffixed to single words and *+ni* to sentences. Copula and connective citations include existence/locative *ist-*, possessive *ist-~yaf-*, identity/attributive *ti-~ki-~am-* (last of these = 'become'), negative *kay*, copulative *ka* ('and').

M. Lionel Bender

Dizi ethnography

The D. are one of the most ancient Omotic-speaking peoples in south-west Ethiopia, located in the rainy Maği mountains, at ca. 2,200 m A.S.L. They are a sedentary agricultural people numbering about 22,000, living in dispersed homesteads and cultivating barley, wheat, sorghum, *ṭef*, *ənsät*, lentils, cabbages and coffee (cash crop). They also practise apiculture. Until the conquest of the south-west in *aṣe* Mənilək II's time, they were a relatively prosperous peasant population, organized in local chiefdoms lead by hereditary chiefs, and then numbered an estimated 80,000–90,000 people. They formed an extremely complex hierarchical society with great internal differentiation (Haberland 1993; Deguchi 1996), including "castes" of hunters and craftsmen. Their agricultural system was intensive and made use of intricate terracing of fields. They had a ritual bond (centred on "rain making") with the lowland-dwelling pastoral neighbours, the Tirmaga and ↗Čai, who are later migrants into the Maği area and to whom they gradually lost their lowland cultivation sites.

The D. chiefly families (and presumably the common people as well) have a mixed origin from indigenous groups east and west of the Lower Omo River. Some of their chiefs trace descent from the "Təgre", perhaps Təgray Orthodox Christians who came to the area several centuries ago. (Some old material items, like the church bell, the ↗*tabot*, and certain northern types of horse-whip and saddle are adduced as evidence of this.) Another chiefly group is linked to the Bodi (↗Meʾen) agropastoralists east across the Omo; still another to the Šeko (↗Moča) people to the north-west.

The D. where incorporated into the Ethiopian empire in 1898 when *aṣe* Mənilək's troops under *ras* ↗Wäldä Giyorgis Abboyyä passed through the area and founded the two villages (*kätämas*) of Bero and Maği, where northern traders and administrators came to settle. The D. area was at the remote edge of the empire and became a classic frontier zone for adventurers, big-game hunters, slave raiders and ivory and cattle traders (including Kenyan Swahili).

Like the ↗Benç̌, the D. were seriously affected by their subjection to the feudal system of the northern Ethiopian administrators and settlers (mainly Wällo Amhara), who dominated the indigenous authority structure, made the local economy subservient to their aims (↗*gäbbar* system) and over the years led thousands away as slaves. Decline in numbers and subversion of their production system led to disintegration and poverty within D. society.

Dizi chief Adiburği Adikyaz during the annual *bergu sèli* ritual; photo 1992, courtesy of the author

Under the *Därg* government, the D. political structure and culture received the final blow when their chiefs were dishonoured, humiliated and robbed of cultural insignia, with their economic development lagging behind. Relations of the D. with their ↗Suri (Ç̣ai and Tirma) neighbours have deteriorated significantly in the past fifteen years, leading to many violent incidents.

Jon G. Abbink

Dizoid

The term D. was coined by Fleming (1976:300) for a distinct linguistic group within the then newly recognized ↗Omotic family; earlier Bender (1971) employed the equivalent term "Majoid". The group comprises three languages: ↗Dizi (Maği), Šeko (↗Šakačo), and ↗Nayi (Naʾo). The first two of these have three dialects apiece, respectively: Ğaba, Adikas, Maği; and Dorša, Bulla, and Daan. The continuity of the last-named is reported as under threat on account of being no longer spoken by the young generation. The 18,000 speakers of ↗Dizi are found around Maği (Grimes 1996:264). Šeko speakers, numbering 23,000 are located further to the north-east closer to ↗Bonga, in areas occupied by speakers of ↗Käfa and in proximity to ↗Dawro speakers. The speakers of all these languages are primarily subsistence farmers.

All too little research has been directed towards the D. languages. After the earlier work by Italians (Conti Rossini 1925, 1937; Chiomio 1941; and, most especially, Toselli 1939), we find no substantial advance until Allan's brief sketch of Dizi phonology and grammar in 1976. Subsequently, for most of the new substantive information gained concerning the languages of this group we are indebted to the field researchers of one man, Aklilu Yilma (1988a, 1988b, 1988c, 1989, 1990, 1994b), though additional valuable – as yet unpublished – field materials were also collected by Fleming together with Aklilu Yilma during 1990. Ch. 7 of Bender (2000) represents a very useful comparative survey and summary of the present state of our knowledge of D. morphology.

Apart from the high group-internal lexicostatistic score of 58 % (Grimes 1996:264), certain very obvious phonological features furnish a priori convincing arguments for a distinct D. entity. Thus: 1. all its members exhibit moraic nasals which are tone-bearing, and occur not only as syllable codas but both pre- and postconsonantally, e.g. Dizi: *tàagŋ̄*, 'two', *kùbḿ̩*, 'four' (Allan in BendNonSLang 381), *kūšm̩̄bē*, 'small black ant', *ç̂ĩrns*, 'green' (Aklilu Yilma 1988a); 2. in spite of the frequent occurrence of consonant clusters, geminate consonants, such a salient feature of the Ethio-Eritrean language area, appear to be singularly rare, if not entirely lacking; 3. Šeko and Nayi, and the Dizi dialects of Ğaba and Adikas, have series of retroflex sibilant phonemes, e.g. Šeko: *ùt͡ṣù*, 'five' *qōẓ*, 'be strong’ (Aklilu Yilma 1988a); Ǧaba: *aṣu*, ‘foot’, *ket͡ṣ’u*, ‘cold’ (Fleming – Aklilu Yilma 1990); 4. all three languages have a sixth short (central) vowel e.g., Šeko: *nə́ṣtā*, ‘husband’, *wə̄skīn*, ‘when?’ (Aklilu Yilma 1988a); 5. there are labialized and palatalized consonants in syllable onsets (alternatively analyzable as components of light diphthongs), e.g. Adikas: *lyámtṣī*, ‘spleen’, *hyálù*, ‘finger’, *čuážù*, ‘snake’, *šùán*, ‘bald’ (Fleming – Aklilu Yilma 1990).

As far as geminate consonants (s. above 2.) are concerned, sequences of heteromorphemic nasals with identical place specifications occur, and since one or other of these is necessarily moraic, the phonetic result simulates a geminate, e.g. Nayi: *kēiń-ǹ̩*, ‘the bitch’ (Aklilu Yilma 1994b:3). Aklilu’s sketch of Nayi does, however, also contain one or two monomorphemic items containing geminate sonorants.

With the exception of 4., however, these features, which from a general Omotic, or indeed Ethiopian, perspective are unusual, are also shared by Benčnon Gimira (↗Benč), another language of this linguistically rich corner of south-west Ethiopia, and it has been suggested that this might indicate a genetic affinity (Breeze 1988, Aklilu Yilma 1994a). Nevertheless, innovative morphology seen in Gimira, most notably in the shared re-analysis of its 1st pers. sg. and 2nd pers. sg. personal pronouns firmly establishes that language as a member of the *Ta/Ne* group of Omotic. This means that the phonological similarities can only be accounted for as an areal phenomenon – in the case of certain features, it is perhaps appropriate to think of an areal retention from Ancestral Omotic.

At the time of the pioneer lexicostatistic survey and classification of Ethiopian languages (s. Bender 1971, Fleming in BendNonSLang), the D. group was constituted one of the primary branches of North Omotic – the other branch comprised the so-called *Ta/Ne* languages. Very recently, however, this position has been reassessed by Bender (2000:230f.), who now finds D. to have a closer affinity to the Aroid languages – erstwhile “South-Omotic”. Possibly the strongest among the features that can be considered as uniquely shared D. – Aroid innovations are: 1. a conjunction *ka*, *ke*, ‘and’, e.g. Nayi: *hā:s-kā nēās-kā*, ‘this and that’ (Aklilu Yilma 1994b:13), Dizi: *yīnū kā yētū kā*, ‘I and you’ (Allan 1976:390), cf. ↗Dime (an Aroid language): *its-ub-ka wuč̣-ub-ka*, ‘I eat and I drink’ (Fleming 1990:574); 2. an interrogative item *as*, *aas*, ‘how’, e.g. Nayi: *á:sé*, ‘how?’ (Aklilu Yilma 1994:4), Šeko: *á:z*, ‘how?’ (Aklilu Yilma 1988a), ↗Aari (an Aroid language): *a̤s-ní*, ‘how?’ (Hayward 1990). The earlier classification, however, also had its merits in terms of explaining certain other features that appear to be shared only with the *Ta/Ne* languages. Thus: 1. an accusative marker in *–n*, as opposed to the *-m* accusative of Aroid; 2. a nominative marker *-i*, which is found also in ↗Ometo and Gimira, but is quite absent from Aroid; 3. a palatal formative in derived feminine (often [definite]) nominals, e.g., Nayi: *kēiń-ǹ̩*, ‘the bitch’ (cf *kēónù*, ‘dog’), *kōíbn* ‘the hen’ (cf *kōbù*, ‘cock’), cf. ↗Gamo (an Ometo language): *kan-íy-o*, ‘the bitch’ (cf *kan-á*, ‘dog’), ↗Käfa (a Gonga language): *buš-e*, ‘bitch’, (cf *buš-o*, ‘boy’) (Daniel Aberra 1999:25). What is certainly true is the fact that D. preserves various archaic – and hence explanatory – features within Omotic grammar. The most obvious of these is its pronominal system; cf. discussion in Bender (2000:197ff.). Another feature that has been claimed to be archaic is a *-k* formative marking perfect aspect in verbs. Relics of this velar formative are found very widely across Omotic, but only in Dizi is still a fully functional grammatical element (Hayward 1996).

Djibouti

I. Geography

D. (République de Djibouti, جمهورية جيبوتي, Ǧumhūriya Ǧībūtī), called so after its seaport capital, is the smallest state in the ↗Horn of Africa. Covering some 23,000 km², D. has a population of about 700,000 (in 2003; additionally, there is a temporary refugee population of up to 300,000). The country of D. extends to inland frontiers, on average 88 km, from the northern and southern shores of the Gulf of ↗Taǧūra, a narrow inlet of the Gulf of Aden. The region contains the western shore of the ↗Bāb al-Mandab, a strategic 27-km-wide strait joining the Gulf of Aden to the ↗Red Sea, thus, via ↗Suez, linking the Atlantic to Indo-Pacific commerce. Besides the sea, ↗Ethiopia, Somaliland (having de-facto independence from ↗Somalia) and ↗Eritrea bound D. today. The country's greatly indented Red Sea coast stretches some 800 km from ↗Ras Dumera in the north to Loyada in the south.

Once called by Europeans "the valley of hell", D. is a land of permanent intense heat and drought. The Somali call the terrain *guban* (burnt land). The land consists, in part, of arid, rugged highlands, often 900 m or more in elevation, with peaks rising to 1,600 and 2,000 m A.S.L. (e.g., Mt. Mūsā ᶜĀli, 2,063 m A.S.L.). Basaltic steppe and desert plains having salt lakes and normally dry streams comprise the rest of the country. In its north-eastern third, the land is a tropical desert; the remainder is tropical steppe with a coastal desert fringe. Grass and herbaceous plants, such as thorn-bush, grow singly and in patches, awaiting seasonal rainfall, about 51 cm annually in the mountain heights and 13 cm in the deserts. Only a few mountainous heights sport continuous vegetative cover. At the end of the briefly seasonal flow in watercourses, herds of livestock depend on permanent wells. No surface rivers from the Ethiopian highlands penetrate as far as D. The only ↗forest in D. is the Day Forest.

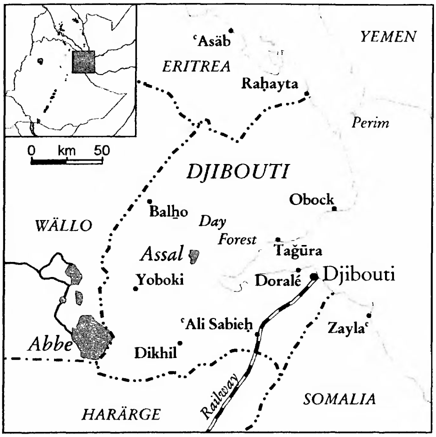
II. Peoples and languages

D. contains two indigenous ethno-linguistic groups, the ↗ᶜAfar (nearly 60 % of the population) and the ↗Somali (ca. 30 % of the population). The remaining part of the population is formed by the Arabs (ca. 11 %) and a small French minority (ca. 2.4 %). Over one million ᶜAfar live in Ethiopia, Eritrea and D., with perhaps 200,000 in D. self. The Somali, in the main, belong to the ↗ᶜIssa (Ciise) clan of the ↗Dir clan-family, which covers the southern two-thirds of D. and adjacent areas of Somalia and Ethiopia. Each people is united by its own links of language, culture, Islam and patrilineal kinship – reckoned through a person's father's line.

ᶜAfar and Somali have separate, patrilineally segmented descent groups. These are clan-families, putatively descended from a common ancestor and each segmented into a number of clans, having segmented lineages and sub-lineages. In recent decades, the clan-families have become less important than they traditionally were in everyday activities, but constitute a rallying-point for political parties and movements.

Whether among the ᶜAfar, Somali or Arabs, the religion of D. is Islam. The Somali and ᶜAfar generally follow the Sunnī tradition. Ṣūfī brotherhoods play a prominent role. Local Muslim saint's days associated with each of the two peoples are popular. Among the Somali, various devout Dervish (↗Muḥammad ᶜAbdallāh Ḥasan) orders have their own particular observance, alongside universal ones, such as the Prophet's birthday. Among the ᶜAfar, remnants of the pre-Islamic cosmology of their sky-father deity Wak (↗Waaqa) are evident, including days for animal sacrifice and rain-making ceremonies.

Islam in the Horn has both orthodox and localized versions, with orthodoxy emanating



from the cities and towns, where the mosques and their religious schools are located. As elsewhere in the world, Islam accommodates local practices. For the orthodox, religious and community activities are governed by the ↗*šarīʿa*. Pilgrimage and scheduled prayer and fasting, such as during *Ramaḍān*, are prescribed. Islam does not transcend ethnicity and thus does not impose a unity on different Muslim peoples, for example, on the warring ʿAfar and Somali.

The Somali ʿIssa, and their close kin to the east, the ↗Gadabuursi clan, in their related genealogies tell of an ancestral ennoblement in that the separate eponymous ancestor of each clan was a holy man from Arabia. For the Dir ʿIssa, their particular sainted ancestor, ʿAqīl b. Abī Ṭālib (Somali: Caqil Abuu Taalib), has several laudatory hymns in his honour and his shrine is in D., where he is said to have appeared miraculously. Such evolving "received histories" of these two clans constitute a social charter for the still on-going processes of their Islamization. Islamic Arabian society is the ultimate prestigious reference group for Somali. Islamization processes and their charters, in which Somali clans trace putative patrilineal descent from Arabia, and thereby outside their own ethnicity, become the foundation upon which the Somali reconstruct their native culture and its encompassing cosmology—something all the world's peoples continuously reconstruct.

As among most of the peoples of the Horn, adult status for the ʿAfar and Somali requires a genital operation, with or without ceremony, usually in childhood. For ʿAfar and Somali, males are circumcised and females undergo excision of the clitoris (clitoridectomy) and infibulation (excision of the labia majora and sewing up of the vagina until marriage). Some Djiboutians do not cut girls beyond the clitoridectomy (s. ↗Circumcision).

Such multiple bonds do not prevent strife within ethnic groups, especially among the Somali. Each people speaks an Eastern ↗Cushitic language, respectively, ʿAfar and Somali (the latter is generally called ʿIssa in D.). Educated ʿAfar and Somali speak ↗French. Such Somali are thus linguistically and culturally distinct from other Somali elites, who speak either English or Italian, depending on their particular colonial history. Arabic is used in religion. The Somali language of D. belongs to the "common-dialect" group, found in much of Somalia and used in radio and television. In 1972, the government introduced Latin script for the Somali language and made it "national language"; ʿAfar soon followed, in both respects.

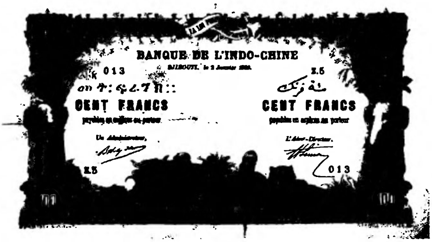
The education in D. is carried out in the two official languages (French and Arabic) and the two national ones (the first language of instruction is usually ʿAfar or Somali, the primary school education is carried out in French, with Arabic being added starting from the secondary school level). Until after ↗World War II, French Catholic missionaries provided the infrequent formal education, outside of Qurʾānic schools. A growing number of government schools use a French-style curriculum. In 1966 all of D. had 5,200 pupils in government and mission schools. Until this time, secondary schools were little developed. Throughout the 1960s, much education focused on manual training. Practical training of a limited kind is given to many pastoralists, who frequently must supplement their livelihood with seasonal working in the city or on the railroad. In 2000, the Pôle universitaire de Djibouti, a new university based on different already existing institutions of higher learning, opened.

III. History

During the past 150 years, direct and indirect interventions in the Horn of Africa by outside countries have steadily increased the technological intensity and socio-economic consequences of war in the region. These twin realities have repercussions in the recent or current conflicts between Eritrea and Ethiopia, Somalia and Ethiopia, Sudan and Eritrea, Somali factions and, in D., ᶜAfar and Somali. Intervention in the Horn by outside imperialist states resulted from the Franco-British development of the Suez Canal. Overnight, the Horn of Africa and the Bāb al-Mandab changed from a world backwater to a strategic choke-point of global commercial and naval traffic. The French opening of the Suez Canal in 1869 and later British control of this strategic artery of global transportation changed the region's peoples from little-contemplated isolates to foci of Great-Power concern. The canal became the pivot for European domination of most of Asia, the eastern half of Africa and the Indo-Pacific seas.

As European powers competed for strategic dominance, coaling stations for steamships and maritime bases for warships provided competitive advantage. Thus, European colonies became necessary. These included Italian Eritrea and ↗Italian Somaliland; British Aden, ↗British Somaliland and the British coast of Sudan; and French Somaliland, which countered British regional hegemony. Recently, the Soviets and Americans competed through their client states of Ethiopia and Somalia for hegemony in this strategic region. France continues its historical independent global projection of power from D.

In 1839 Great Britain occupied Aden on the eastern shore of the Bāb al-Mandab, while its arch-rival, France, began expeditions, from the western shore, to the interior Amhara kingdom of Šäwa, culminating in a Franco–Amhara treaty in 1842. In 1861, as France began its conquest of Indo-China, it cultivated good relations with ᶜAfar leaders around the port of ↗Obock on the Gulf of Taǧūra. The following year, a treaty with the ᶜAfar *sulṭān* of Taǧūra, Dīnī Aḥmad Abū Bakr, ceded to France the area of what is today northern D. (called the "Territoire d'Obock). The first commercial concession was accorded there to Denis de Revoyre in 1872, followed by Pierre Arnoux; together they founded the Compagnie franco-éthiopienne in 1880. During 1881–83, Frenchmen opened four trading companies at Obock, including a coaling-station and a French settlement. Although the Obock ventures failed commercially, France's deepening colonial wars during the 1880s in Indo-China and Madagascar required a French coaling-station and base. in 1883, Léonce ↗Lagarde was nominated. He decided to move the seat of the colonial administration to D., becoming "governor of D." in 1884. However, the diverse territories controlled by France in the area (the Territoire d'Obock, the protectorates of Taǧūra, Gobaad, Ghoubbet-el-Kharab, of the ᶜIssa and the port of D.), remained administratively separated. An Anglo-French treaty of 1888 divided the land of the Dir-ᶜIssa between French Obock and the adjacent emerging British Somaliland. The ᶜIssa around D. had signed a treaty with France in 1885.



First banknote issued for Djibouti and the Franco-Ethiopian railway (first tranche: 1 May 1909); 100 Francs, with legend in French, Amharic and Arabic

In 1892 France astutely abandoned its former centre in ᶜAfar, Obock, and transferred it southwards, across the Gulf of Taǧūra, to ᶜIssa D. On 20 May 1896 the different territories were united as the "Côte française des Somalis et dependences". By 1899, the newly prosperous port city had 10,000 inhabitants, as it drained trade from nearby older ports. Planning began for a French railroad to Addis Abäba (↗Railways), the new capital of Ethiopia, recently unified and expanded under the Amhara. In 1894, the French governor of D. colony had signed a treaty with his carefully cultivated friend, *aṣe* ↗Mənilək II, making D. city the designated port for the country's growing foreign commerce and communications. In its foreign relations, the Ethiopian government necessarily became Francophone.

Out of D., construction of the French railway progressed slowly. Legal trade in arms grew and illegal trade in slaves bound for the Near East prospered. The works started in 1897. The railway entered Addis Abäba in 1917, thus eliminating all remaining transport of freight by camel caravans to ports other than D. Commerce waxed in the city during the 1920s, while in the colony's hinterland, the ᶜAfar and ᶜIssa continued their fighting. By 1935, France had ended most open fighting between the two peoples and, occasionally, against French troops.

France proclaimed its neutrality during the ↗Italian war of 1935–36, even though Laval gave 20% of the shares to Italy (↗Hoare-Laval plan). From D., France sent troops to occupy the strategic Ethiopian railway terminal at ↗Dərre Dawa and, later, via its railway and port, rescued Emperor ↗Ḫaylä Śəllase I and his government from the advancing Italian Army. From D., France had previously aided its Ethiopian friends, who had defeated France's Italian adversaries in 1896 at the battle of ᶜAdwa.

From D., the French materially aided the Ethiopian resistance against their Italian occupiers and French military agents filtered into Ethiopia. The Italo-French armistice of April 1940, however, required the demilitarization of D. With D. neutralized, Italy conquered British Somaliland in August 1940. Thereupon, Great Britain began a naval blockade of ↗Africa Orientale Italiana and then Vichy-oriented D. Beginning in January 1941, a British counterattack with Empire forces blitzed through Italian and British Somaliland and liberated Addis Abäba in April. The British considered invading French Somaliland with its 8,000 veteran troops, but continued the effective blockade instead. Vichy-French Somaliland surrendered to British and Free French forces on 23 December 1942.

French Somaliland became an Overseas Territory of France (Territoire française d'outremer, TOM) in 1946. This made its inhabitants French citizens who could elect and send their own members of parliament to Paris. In part because of pressures from pan-Somali nationalists, and a bloody demonstration during President de Gaulle's official visit, in 1966 de Gaulle announced a referendum, held in 1967, to determine the future of the colony. This referendum reaffirmed the desire of the majority of the population (58.3 %) to remain part of the French Republic. The colony was renamed the Territoire Français des Afar et des Issa (TFAI, under the rule of Ali Aref Bourhan). Movements for independence, especially among the Somali, continued, however, and, after Somalia claimed large territories of D. in 1975, a new referendum was held on 8 May 1977, this time with 98.8 % voting for independence. Thus, the new state named République de D. emerged on 27 June 1977.

IV. Government and political system

D. was formerly a land made politically stable by the French Army. Today, however, this country is embroiled in the conflicts of the region. President Hassan Gouled "Aptidon" (in modern orthography Xasan Guleed Aptidoon), an ᶜIssa, became the first head-of-state in 1977. In 1981 D. formally became a one-party state headed by a directly elected president, the unitary party being the Rassemblement popolaire pour le progres (RPP). Aptidon was re-elected in 1981 and again in 1987. The ᶜAfar minority felt excluded from the political process. In 1991 an ᶜAfar-based armed rebellion led by the Front pour la restauration de l'unité et de la démocracie (FRUD) gained control of much of the countryside. On 4 September 1992 Aptidon presented a multi-party constitution, ratified by the citizenry. In 1993, Aptidon achieved a fourth term in D.'s first multiparty presidential election. The ᶜAfar opposition largely boycotted the election.

Aged 83, Aptidon resigned in 1999, and a new president, Ismaël Omar Guelleh, was elected as the RPP candidate. Delita Mohamed Dileita has been the head of goverment sine 2001 (when he replaced Barkat Gourad Hamdaou). The political power is thus shared by a Somali president and an ᶜAfar prime minister, with cabinet posts roughly devided. However, it is the ᶜIssa who dominate the government and the ruling party. In the elections of 2003, the 65 national assembly seats were taken by the four-party-block, the Union pour la majorité présidentielle (UMP), the FRUD opposition headed by Aḥmad Dīnī received no representation.

ᶜAfar-ᶜIssa fighting continues, despite a treaty in 2000 to end this strife. However, so long as the French military remains in D., the partitioning of the country along ethnic lines remains unlikely. D. consists of three regions which are divided into the following administrative disticts (cercles): the City of Djibouti (Ville de Djibouti, Région de Djibouti-Capitale), ↗Ali Sabieh (Région de Somali-Issa), ↗Dikhil, ↗Obock, Tağūra and since 2000 Arta (the last four forming together Région d'Afar and covering ca. 87% of the territory of the state). Recently, a new Arta district was created. Following the new decentralization policy, regional councils have been created, administering the districts with a high degree of autonomy.

D. served as France's base of operations during the 1991 Gulf War, provides the transportation link to Réunion and French Polynesia, site of France's nuclear tests until 1996, and otherwise supports France's status as a second-line power with a global reach. For France's projection of power in the Indian Ocean, D. became all the more important after the closing of French naval and air bases at Diego-Suarez (Anstiranana) in the Malagasy Republic. Across Africa, France has about 10,000 veteran troops. Since 1964, France has intervened on average every other year in strife in Francophone Africa, which it considers its post-colonial sphere of influence. D. is France's most strategic African bastion. In 2001 the USA opened a base in D.

V. Economy

D.'s commercial revenues come mainly from its transit trade as the rail-head of the Chemin de fer djibouto-éthiopien (CDÉ), the railway linking Ethiopia to some of its seaborne commerce, and also from servicing of ships calling at its port. Until the second Ethio-Eritrean war of the late 1990s, Ethiopia used ᶜAsäb as its main port. Serving as a French base generates revenue outside the commercial sphere for D. The national currency is the Djibouti franc. It is tied to the United States dollar with the rate fixed since 1973 at 177.72 Djibouti francs for US$ 1.

D.'s economy is dependent on subsidies from France, and most food is imported. Production of marine ↗salt is the only important industry. A large camel market has long been in the city. Some date palms are tended at oases. Only 10 % of the land is suitable for permanent grazing, with about 25 % of the population engaged in pastoralism. Some Djiboutians practice fishing. A few garden farms are irrigated on the outskirts of the city. For a few years after independence, substantial foreign aid caused a spurt in industrial growth, which has since declined owing in part to an overdependence on costly imports of materials. Industry related to food and beverages employs perhaps 80 % of the wage workforce. Apart from grazing, little economic activity occurs outside of the city and its environs. An average Djiboutian spends 60 % of per capita budget for ↗*č̣at* flewn into the city daily from Dərre Dawa. According to a 2002 estimate, the gross domestic product level was at $ 619,000,000.

VI. State symbols

The national anthem of D., The Flag Song, was adopted upon independence from France on 27 June 1977. Its lyrics (Somali) are by Aden Elmi and the melody is by Abdi Robleh. The flag consists of three fields, a white isosceles triangle based on the hoist side and two horizontal stripes, blue and green. White represents peace, green is the colour of earth and blue is the colour of the sea and the sky. The red star in the center of the white triangle symbolizes unity. The coat of arms shows a shield, two hands holding swords and a spear topped by a red star inside of a green wreath.

Frederick C. Gamst

Djibouti city

D., now the capital of the Republic of Djibouti, was founded on 6 March 1888 by the Governor Léonce ↗Lagarde. In 1896 D. officially became the main town of French Somaliland as an important port supplanting both ↗Zaylaᶜ and ↗Tağūra. Today D. counts approximately 500,000 inhabitants, about three fourths of the population of the country. In the second half, especially in the last decades, of the 20th cent., this capital accumulated all the functions (eco-

Djibouti Parliament; view from the old fishing port; from Kulik 1983:55

nomic, banking, military, administrative) and is experiencing demographic explosion.

A paved road links D. to the heavy-duty ᶜAsäb–Addis Abäba highway, but a road into Somaliland is no longer fully passable. A metre-gauge railway operates to Addis Abäba (↗Railways). D. has an international airline and ship transport. Since 1949, the city has contained a free port. The harbour is enclosed by land, dredged to 40–65 feet, and accommodates up to ten ships along two moles. Modern fuelling services and a floating dry dock are facilities of this strategic port. The city uses subterranean water sources. It has an annual average temperature of 32° C, but summer temperatures rise beyond 43° C.

Beside ↗ᶜAfar (ca. 35 % of the population) and ↗Somali, the city has some 10,000 Arabs. An upper class of Arabs owns much of the real estate, controls much of the commerce and now lives in the European quarter. Other Arabs are small traders and manual labourers. Over the years, French presence has ranged up to 10,000 persons, depending on the number of troops based there. Some 1,000 Indo-Pakistanis, Greeks and others live in the city. From time to time, large numbers of refugees from Ethiopia and Somalia have burdened the government and citizens of D. Since 1977 (Ogaden war), D. has accommodated, according to the rhythm of the political sudden starts or the climatic accidents which strike the Horn of Africa, thousands of refugees (Somali, Ethiopians and ᶜAfar). This floating population makes impossible any precise census.

The old city centre, with its Yemeni-style buildings and their arcades framing the streets, houses the administrative, banking and commercial core of D. Barges keep arriving and leaving at the Mahmoud Harbi square (also Place Menelik), the architectural ensemble of which is dominated by the minaret of the Hamoudi mosque. The economic heart of the city is the Marabout square. It is here where the modern installations for a deep-water port, docks and warehouses are located. And it is here where the railway station – the end-junction of the Addis Abäba–Djibouti Railway – is located.

Lying on one of the world's main maritime routes, the port of D. became, thanks to the railway, one of the important import/export outlets for Ethiopia. The abundant international trade through the port also ensures the stability of the local currency, the D. franc (based on US dollars).

D. is surrounded by various sceneries. The Serpent Plateau and the Peninsula of Héron are covered by exquisite residences and green gardens. To the south lies the vast plain, which was in the past occupied by numerous salt-works and in recent times has become the subject of many urbanization programs (which resulted in appearance of the towns of Stade, Arhiba, Einguela etc). Until the 1980s Wadi Ambouli with its gardens, farms and palm-plantations separated the urban area from the arid hills where nomads live. There, three dwelling zones ("les quartiers" or *balbala* 1, 2 and 3) then emerged. These problematic districts, located between the sea and the communication-axis between the capital and the rest of the country, change little by little, thanks to international assistance (which allows the construction of mosques and educational establishments).

The Dubai Port Authoritiy, which now manages the port of D., is planning a new deep-water port with a container terminal in Dorale (8 km north from the capital).

D. has many economic problems, the central being insufficient water and electricity supply, as well as increasing numbers of the unemployed and the homeless.

Dᶜmt

D. (Daᶜəmat or Daᶜamat, vocalization unknown) is mentioned ten times in six Sabaic pre-Aksumite royal inscriptions, to be dated approximately to the 8th–7th cent. B.C.:

1) in the royal titles "N.N., the *mukarrib* of D.": cp. RIE 3:1 [*mkr*]*b/dᶜmt*; RIE 9:1 *m*[*krb/*]*dᶜmt*, and "N.N., the *mukarrib* of D. and SBʾ": cp. RIE 5A:1, 8:1–2, 10:4–5 *mkrb / dᶜmt / wsbʾ*;

2) in the formula "when they [i.e., the king and the queen] reigned [or: "attained sovereignty"] over D., its eastern and western parts", s. RIE 5 A:2–B:1 *ywm /* [*mlkw / dᶜ*]*mt / mśrqhy / wmᶜrbhy*, RIE 9:3–4 *ywm / mlkw / dᶜmt /* [*m*]*śrqhy / wmᶜrbhy*, RIE 2:1 *mlkw / dᶜmt / mśrqhy / wmᶜrbhy*; cp. also RIE 8:3–4 *ywm / hḥdsw / ᶜ... ỉ mlkw / rbḥ / dᶜmt / mś*[*rqhy*] */ wmᶜrbhy*, RIE 10:7–8 *ywmy / mlkw / dᶜmt.*

D. must have been the name of a people settling in the region of ↗Aksum (where the inscriptions RIE 2, 3, 5 were found) and southern Təgray, between Mäqälä and ᶜAddigrat (RIE 8 was discovered at Addi Gälämo, RIE 9, 10 at ↗Ǝnda Abba Gärima, ᶜAddi Kawəḥ) or the name of this territory. The rulers of D. bear the title *mlkn* ('the king') and *mkrb* (here meaning uncertain), their names LMN, RBḤ and RDʾM appear to be of Semitic origin. Only the rulers bearing the title "*mukarrib* of DᶜMT and SBʾ" call themselves *ygᶜḏyn* "he of [the tribe?] YGᶜḎ" (RIE 5 A:1, 8:1, 10:2–4), which is obviously of the same root as "Gəᶜəz", the language name (cp. ↗Agᶜazi). The kingdom seems to have been rather short-lived; how long it flourished and when it broke down is unknown. Script and style of the D. inscriptions are highly influenced by Old South Arabian culture.

Dobaʾa

D. (ዶባእ) is the name of a territory on the north-eastern borders of ↗Təgray which extended as far as the ᶜAfar-inhabited lowlands. It was visited, in the early 1520s, by the Portuguese traveller Francisco ↗Alvares, who reports that the area measured five days journey in length, and possessed "very fine cows, which cannot be numbered ..., and the largest that can be found in the world" (BeckHuntAlvar 187). Later, in 1679, *aṣe* ↗Yoḥannəs I incorporated this or another territory of the same name administratively into Təgray province.

According to the *gädl* of ↗Märqorewos (Conti Rossini 1904:18 [text]) Doba (ዶባ) and Wäfla were two lowland peoples who, headed by a certain Yehya, fought against the local Christian chiefs in the days of *aṣe* Lalibäla (ca. 1186–25).

The name D. is also used for the non-Semitic group described by Henry ↗Salt as "Negroes", which was attacked, and defeated, by *aṣe* ↗Baᶜədä Maryam in a famous expedition of the 15th cent.

Dobbi

D. (or Dobi) is the self-designation of a ↗Gurage ethnic group speaking the ↗Gogot language and often referred to as Gogot. The origin of the term "D." is uncertain. It means 'nettle' in D. and is used as a metaphor for the bravery of the D. warriors. D. is also the name of a village on the road to ↗Butağira.

Most of the D. live in an area which is called Dobbi–Säbat–Gogot. In addition, there is a small diaspora of Gogot-speakers in Addis Abäba (Dənbäru Alämu 1994/95:42). The Dobbi-Säbat-Gogot area stretches from the Rinzaf River in the south to the Mulg mountain or the region of Wägära in the north-west. The Akemuğa River forms the north-eastern border. Adjacent to the D. area live the Kəstane (↗Soddo) in the north, the ↗Mäsqan in the east and south, and the ↗Muḥər as well as the ↗Wälläne in the north-west and west. The Dobbi-Säbat-Gogot consist of the following larger ethnic units: D., Sägännät (Mähal Amba), Qäčən Amba, Lemamär, Gogga and Arguman. These units again are divided into several other smaller units (ibid. 43f.).

There are almost no written records on the Dobbi-Säbat-Gogot. According to Dənbäru Alämu (1994/95:42) the region was mentioned in the Chronicle of *aṣe* Zärʾa Yaʿəqob for the first time. Consequently there is no information on the ethnogenesis of the people. According to oral traditions, the Dobbi-Säbat-Gogot are, like other Gurage groups, not native to the area they inhabit now. It is believed that there were several migrations of people into this area which resulted in the establishment of the Dobbi-Säbat-Gogot. The first migration probably took place in the time of *azmač* Səbḥat, who settled in Aymälläl. Some of his followers moved on and settled the today's area of the Dobbi-Säbat-Gogot. Later, during the time of Zärʾa Yaʿəqob (r. 1434–68) and Aḥmad b. Ibrāhīm al-Ġāzī (Grañ; ca. 1506–43), other migrants from northern Ethiopia should have entered this area as well (ibid. 44f.). It is also believed that people from other Gurage groups became members of the Dobbi-Säbat-Gogot, such as the Särṭo lineage of the ↗Zay (ibid. 46) or the Dənäččo from Wälläne. Furthermore, some groups from Dobbi-Säbat-Gogot became incorporated into other Gurage groups. Consequently, there exists a close interethnic relationship between the D. and the surrounding Gurage. However, the close relationship between the Kəstane and the Dobbi-Säbat-Gogot as mentioned in Lapiso Getahun Dəlebo (1990/91:190), does not exist today and is not mentioned in the collected oral traditions. In former times, however, there were many quarrels and local conflicts between neighbouring Gurage groups, in particular regarding the ownership and usage of land. One means for the settlement of these and further conflicts became the traditional judicial practices of the region, which are called *yädobbi gogot sera* or *yäsənano sera*. Members of the *yädobbi gogot sera* are the Mäsqan and Səlṭi alongside the D. The place of the assembly of elders of these groups is located at Färagäzañä inside the Mäsqan area (Dənbäru Alämu 1994/95:139).

The D. are Ethiopian Orthodox. They are farmers who depend on *ənsät* as their staple food. In addition, they plant wheat, barley and maize and own a few cattle. The main market place of Dobbi-Säbat-Gogot is near the village of D. The market is held on Mondays and visited by most of the surrounding Gurage groups. There is a primary school near the market.

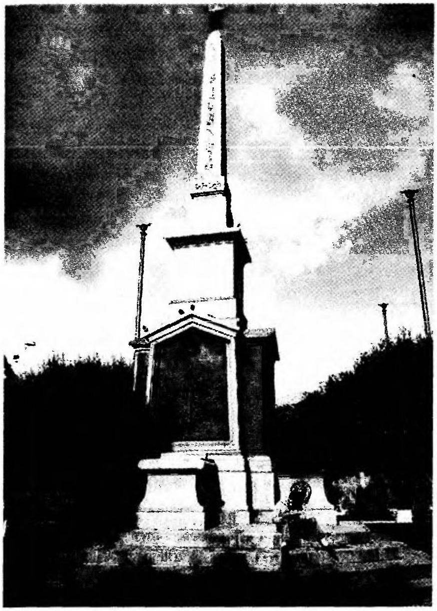
Ronny Meyer

Dogʿali, battle of

On 25-26 January 1887 Ethiopian forces, for the first time, inflicted a painful defeat on European imperialists at D. (ዶግዓሊ, ital. Dógali). This settlement lies some 25 km from ↗Massawa, which the Italians had captured in February 1885. *Ras* ↗Alula Ǝngəda, leading the army he had assembled in his new capital of Asmära, tried on the first day to storm the Italian trenches in the water source of Sahati (also known as Saʿaṭi), and sustained heavy losses. The next day, at D. Alula ambushed an Italian battalion heading towards Saḥati. Some 500 Italian soldiers, practically the whole battalion, were killed and only 80 wounded managed to escape. The news came as a shock to Italy. On 5 June 1887 a monument (originally an ancient Egyptian obelisk unearthed in Rome in 1883) was inaugurated in a main square in Rome, which was then renamed Piazza dei Cinquecento, i.e. 'the square of the [fallen] five hundred' (from this location, in front of the Termini Station, the obelisk was moved to a garden area next to the Therms of Diocletian in 1925). The shock helped Francesco Crispi, an imperialist hard-liner, to power.

The British sent an envoy, Gerald H. Portal, to *aṣe* Yoḥannəs IV, blaming Alula for a brutal massacre and demanding his removal from Asmära and the ↗Märäb Məllaš. Yoḥannəs refused and blamed the Italians for illegally penetrating Alula's territory. The June 1884 ↗Hewett Treaty had recognized that Massawa proper was supposed to be managed by the British, but inland Saʿati was never mentioned.

However, as relations with the Italians soon deteriorated – a large Italian army landed in late 1887 and advanced beyond Saʿati – Yoḥannəs grew angry with Alula for the D. incident. Alula's



The Dogʿali obelisk for the memory of the battle; Rome, Via delle Terme di Diocleziano; photo courtesy of Enrico Castelli

rivals at court blamed him for over-reacting to Italian encroachment. They also blamed him for pursuing a spectacular victory after his late-1886 campaign against the Mahdist town of ↗Kassala had failed. Unable to storm the entrenched Italians, *aṣe* Yoḥannəs, in May 1888 decided to evacuate eastern Eritrea and march to face the Sudanese Mahdists. He also decided in July to call Alula from Asmära to accompany him to the fateful battle of ↗Mätämma. Alula's removal from the capital of the Märäb Məllaš led directly to a smooth Italian occupation of Eritrea.

But while Yoḥannəs and his men were facing the Italians and the Mahdī, *nəguś* Mənilək of Šäwa had an easier time. In the very same January 1887 he defeated the army of the *amīr* of Harär and his man, *ras* ↗Mäkʷännən Wäldä Mikaʾəl, established a Šäwan government over the Ogaden. Building his power in the south, conquering huge populations and territories, Mənilək would finally check the Italians in the north in the second, and much more decisive, victory of ↗ʿAdwa, March 1896.

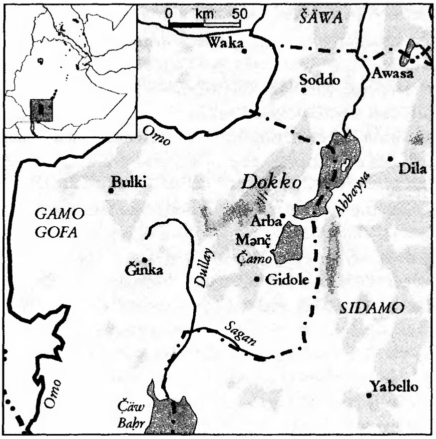
Dokko

D. (also Doko) is a local unit (*dere*) of the ↗Gamo. Its approximately 20,000 residents occupying an area of about 110 km², located a few kilometres west of the small town of ↗Ç̌ença, at an altitude of approximately 3,000 m A.S.L. (Cartledge 1995:33). The majority of the people of D. are farmers. Women carry manure to the fields and men sow the seed and hoe the land. Nowadays most families also include at least one member who works as a weaver, either locally or in one of the urban centres throughout Ethiopia. Hidework and metalwork are carried out by a group of marginalized minorities called *degala*.

D. is composed of two smaller communities, or *dere*, known as D.-Mašo and D.-Gämbela, which in turn divide into yet smaller communities called Mašo, Šale, Woiśʾo, Eleze, Gedeno, Dambo, Yoira, Ç̌ento, and Kale, Šaye, Elo, Zolo, Upper Loš, Lower Loš, Śʾida, Dalo, Zadʾa respectively. Each of these *dere* of D. has their own particular version of the sacrifices and initiations found throughout the Gamo highlands Sacrificers are called *eqqa* and the senior *dere* sacrificer is known as *kawo*. Initiates in the smallest scale of *dere* are called *halaqa*, while those for



either D. Mašo or D. Gämbela are called *hudhugha*, and those for the whole of D. are called *dana*. The form of the *halaqa* initiations in the *deres* of D. Mašo and D. Gämbela is significantly different, with the D. Mašo form taking place over two years and the initiate becoming a symbolic 'wife', while in D. Gämbela the initiations take place over a few months and initiate becomes a symbolic "warrior" (Freeman 1999).

Many people in D. are nominally Orthodox Täwaḥədo Christians, although Orthodoxy is not as strong as it is in other parts of the highlands, such as in ↗Dorze and Ele. In recent years the Protestant church has attracted a large following in D.–Gämbela, but it has been less successful in D.–Mašo.

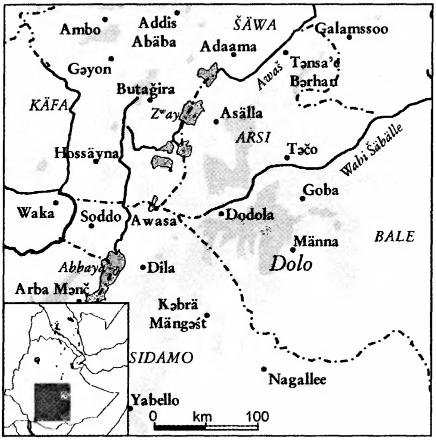
Dolo

D. (ዶሎ, after 1974 ድሎ, Dəlo) was an *awrağğa* of the Bale province, which was re-established in 1960 out of Harärge. At present it belongs to the Bale zone, a subdivision of the *kəlləl* Oromiyaa.

Its capital, known today as Männa (or Mäsəllo/Məsəllo, 1,340 m A.S.L.), is situated 110 km to the south of Gobba and is currently the chief town of the *wäräda* Männa – Haränna Buluq. The site, a former stop on a caravan route, had in 1938 about 100 inhabitants. Later on, the settlement developed into a secondary administrative centre and a local market. In the Ethiopian Empire, the town was the capital of the *awrağğa* of D. and the *wäräda* of Dəlu.

To the north of the town, the Afro-alpine lawns, the forests of *koso* (*heeto*) and the dense groves of podocarpus of Haränna hosted between 1963 and 1967 the rebellion of ↗Waqo Gutu. Consequently, between 1970 and 1984, the population of the Dəlo *awrağğa* grew by 25 %, only a third of the growth rate of the whole of Ethiopia. An increase in the density noticed by 2000 was, however, only a quarter if compared to the national average. The low areas around are still under dispute between the Oromo and Somali and between stock-breeders and sedentarized peoples.



The town is dominated in the north by the formidable escarpment of the Sanetti plateau (3,000 m–4,000 m A.S.L.), crowned by the volcanic solid masses of Mounts Batu and Tulluu-Diimtu (4,307 m A.S.L.). These mountains, often hidden by the clouds, are crossed by the highest road in Africa and shelter rare species of animals and plants, some of them protected. The tourists who visit the national park of Bale, one of the major attractions in Ethiopia, stay in Gobba and hardly ever venture to the south beyond the ↗Wälmäl river and towards Nägäle (Nagallee) Boräna. To the south of D. there is a green-forested steppe used by stock-breeders. In February–March 2000, with no rains during the short wet season, the forests of the mountains of Bale were subject to enormous fires that were partially contained with South-African and German co-operation.

Dolo

D. (ዶሎ, also ዶሎ፡ ኦዶ Dolo Odo, Doolow; 23,595 inhabitants, 221 m A.S.L.) is the name of a town (4° 11' N, 42° 04' E) and a *wäräda* in the south of the Somali *kəlləl*, Liiban Administrative Zone (earlier it belonged to Boräna *awrağğa*, Sidamo province). The town lies near the Somali border, on a small hill overlooking the confluence of the ↗Ganaalee and the Dawa Parma where they form the Juba (↗Ganaalee). On the opposite bank of the Juba, the Somali twin-town of Doolow is situated. D. is also close to the Kenyan town of Mandera, where the borders of Somalia, Ethiopia and Kenya meet. These three states share a territory that is disputed between Somali and Oromo stock-breeders.

A small Ethiopian military station, D. was conquered in 1910 and populated as of 1938 by 200 inhabitants. In October 1935, the town was devastated by the troops of General ↗Graziani, who then proceeded to take over ↗Nagallee (the capital of Boräna) in January 1936.

D. sheltered an important Ethiopian garrison during the war against the Western Somalia Liberation Front. This city remained one of the back-bases during the Ethiopian military interventions in Somalia. In the 1980s, camps of Somali refugees were placed around D., contributing to the increase in its population.

Dominicans

D. is the name used to designate the three orders of St. Dominic (1170–1221). Here we will deal only with the first order (Friars Preachers, Lat. Ordo Praedicatorum), the one with a proper missionary vocation.

The D. follow the three traditional monastic vows (obedience, chastity and poverty), but have also clear goals of preaching and "salvation of the souls", as well as learning and teaching. Thus, the history of the Order includes outstanding theologians (Peter Lombard, Thomas Aquinas, Tomás and Juan de Torquemada, the latter having played an important role in the Bull of Union with Copts and Ethiopians; s. ↗Florence, Council of), several saints and important missionaries.

The first contacts with the Orient and with Christian Ethiopia came shortly after the foundation of the order. Under Pope Gregory IX (r. 1227–41) an ambitious project of conversion of the "heretics" was launched in which the D., together with the ↗Franciscans, became a main bulwark. Around 1237, the prior of the D. convent in Jerusalem, Philip, was contacted by Ignatius II, Jacobite Patriarch of Antiochia, who out of rivalry with Alexandria named a certain Thomas metropolitan of the Ethiopian church. The issue, however, did not go much farther than arousing the opposition of the D. and the Catholic community (CerPal 62ff.; Richard 1998:56f.), eager not to provoke any discontent in Egypt. By the second half of the century, evidence seems to indicate D. having reached Ethiopia, although never establishing permanent missions (Richard 1976:325f.).

In the next century, with the pontificate of John XXII (1316–34) and a renewed spirit of Crusade, a formidable expansion of mendicant orders to the Far East took place. Henceforth, the attempts to contact Ethiopia became numerous, in most of the cases through the newly-created D. archdiocese of Sulṭāniyyah in Persia, the jurisdiction of which extended nominally to "Ethiopia" (Bull of erection *Redemptor noster*, 1 April 1318). Around 1315–16 the preachers Guillaume Adam, Archbishop of Sulṭāniyya, and Raymond Etienne reached the island of Socotra (Yemen), where a Nestorian (↗Nestorianism) community still existed, with the intention to visit Christian Ethiopia (Richard 1998:114, 1976:328; Conti Rossini 1940:98).

Later, the D. Jordanus Catalani (fl. 1302–30), nominated bishop of Quilon (Malabar, then a suffragan of Sulṭānīya), was entrusted with a mission to the Ethiopian ruler, but never succeeded (cp. with Golubovitch 1919:356). In his book *Mirabilia descripta* (c. 1330), he made one of the first identifications between the ↗Prester John and the Christian Ethiopian ruler (Jourdanus Catalani 1925:86–89). At the beginning of the 15th cent., another friar, John of Sulṭāniyyah, attempted a similar trip (CerPal 207–13). From this period dates also the work of the friar Pietro Ranzano (Palermo, ca. 1428–92), who wrote up the famous account of Pietro ↗Rombulo's travels. (On historiographical discussion around these medieval contacts with Christian Ethiopia, cp. Lefevre 1945:366–71 with Conti Rossini 1940:98.)

The last evidence of D. relating to Ethiopia goes back to the Portuguese expansion to India. Early in the 16th cent., during his trip to Massawa, the governor ↗Albuquerque referred – wrongly – to Ethiopian monks wearing the habit of "sam domingos" (Albuquerque 1884:224). Later, in 1539, the Pseudo-Patriarch ↗Bermudez was at the head of a mission to convert the "Preste", together with Brother Pedro Coelho and three other D. friars (Bermudez 1875:7; s. also Santos 1609:28). The friars never reached Ethiopia, but the project seems to have initially benefited from the support of the Pope (s. Paul III's letter, in: Schurhammer 1962, doc. 2880a). Finally, much turmoil was aroused by two D. with their books, published whilst the ↗Jesuit mission was fully active, and in part to diminish its achievements: the Tuscan Serafino Razzi (1577), whose stories were included in an important chronicle of the Orient (s. Santos 1609:13–23), and the Spanish Luis de ↗Urreta (1610) related various phantastic stories on D. saints, convents and influence in Ethiopia (s. Conti Rossini 1940:78–91; Van den Oudenrijn 1946). Although much discredited, these works are testimony to the vitality of old D. traditions on Christian Ethiopia. They were also to play – especially Urreta's – an important role in fostering serious Jesuit historiography on the country, starting with Pedro ↗Paez.

Andreu Martínez

Donga

The D. constitute nine peasant associations of the Kačabiira *wäräda* in the present zone of Kambaata-Alaaba-Ṭimbaaro. They border the ↗Dubamo in the north, the ↗Ṭimbaaro in the west, the ↗Wälaytta and Baadawwaačč̣o-↗Hadiyya in the south and the ↗Kambaata in the east. The D. peasants are intensive cultivators, mainly growing *Ensete ventricosum* (↗ *ənsät*) as a staple food and coffee as a cash crop. Their first language is a dialect of Kambaata, but many of them also speak the Hadiyya language.

After the turbulence of ↗Aḥmad b. Ibrāhīm al-Ġāzī's wars, a number of clans (*säbat bet*, 'seven houses') started establishing a federation, which gained some regional importance under the leadership of a hero called Hanagassa during the first half of the 17th cent. From the early 19th cent. onwards, the D. were politically dominated by the Sooro-Hadiyya, invading from the north, but they were able to maintain a royal institution (*woma*) and an ethnic identity of their own.

Lit.: BrKam 49, 53f., 127, 196.

Ulrich Braukämper

Dongola

The medieval Nubian kingdom of Makuria was sometimes known in neighbouring lands by the name of its capital, D. It lies on the east bank, just below the foot of the great bend, of the ↗Nile. Today it is often called Old D. to distinguish it from the 19th-cent. colonial town of New D. on the west bank near the opposite end of the district within which Dongolese Nubian is presently spoken.

D. entered the historical record in 652 A.D. as the site of a major battle in which the Nubians repulsed the invading forces of Islam. During the same period, Makuria absorbed the northern Nubian realm of Nobatia; for half a millennium to follow D. was the capital of a "United Kingdom of Nubia" that extended from Aswān to beyond the Fourth Cataract. After a difficult transitional era in which Islam replaced Christianity in the 14th and 15th cent., D. became the seat of a line of district governors within the northern province of the large ↗Funǧ kingdom of Sinnār. The civil wars of the later 18th cent., however, virtually emptied the town.

D. figured prominently in the itineraries of travellers who chose to follow the Nile route between Egypt and Ethiopia; because the district could not easily be avoided, the good will of its governor was vital. Actual contemporary descriptions of the town, however, are rare, late and less than satisfactory. To Krump (1710:248), from across the river it was "a beautiful place on a hill, built so that each house adjoins the one higher up. I have never seen a place which, in my opinion, could be made into a better fortress than Dongola". Poncet (s. Foster 1949:99f.) actually entered D. in 1698 and reported that the "houses are ill built and the streets half deserted and fill'd with heaps of sand ... The castle is in the very centre of the town. It is large and spacious, but the fortifications are inconsiderable". Happily, since 1964 an extended series of excavations at D. by a team of Polish archaeologists promises to open whole new levels of understanding as their annual discoveries build toward a synthesis and become more widely accessible.

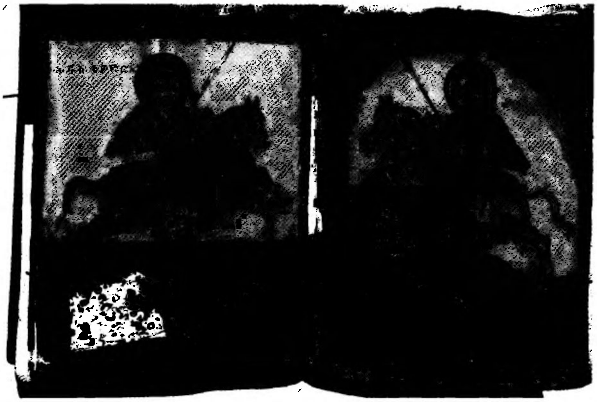
Donors

Representations of D., kings, queens, nobles and churchmen are to be found in manuscripts, on wall-paintings, paintings on wood, and crosses. They are portrayed separately or in connection with a holy intercessor, in the first place St. Mary, the Crucified Christ, the Archangel Mikaʾel, the Trinity and the saints, most often *abba* ↗Täklä Haymanot and ↗George of Lydda. Only in rare instances is a portrait of a D. attached to a narrative biblical scene or to an episode from the life of a saint. As a supplicant the D. is depicted in an attitude of reverence, either kneeling and bowing to the ground or lying face down (proskynesis).

The way the D. approach their intercessors in the pictures differs. With a few exceptions, in representations occurring up to the early 18th cent. their figures appear in two clearly distinct registers: a holy protector occupies the large, upper part of the composition, a D. the lower and narrow part. From the mid-18th cent. this division gradually disappears until finally both figures are shown on the same picture. Sometimes the idea of protection is underlined – the



Equestrian saints with donors: St. Theodore (Tewodros) with *abunä* Mälkä Ṣediq and St. Mercury (Marqorewos) with Zämmäda Maryam; miniatures from a 18th cent. *Täʾammərä Maryam*, fols. 3v-4r; Maryam Tənsaʾe, Śəllase church; photo 2004, courtesy of Michael Gervers

supplicant embraces the bar of the Cross, touches the cloak of the Virgin Mary or grasps the garment of a saint. From the end of the 18th cent. representations appear in which the D. are supported by their holy intercessors, an iconographic formula which originates from the scene depicting Christ saving Adam and Eve from Hell.

Ethiopian representations of D. are never portraits in the real sense, but conventional images. Deprived of individual features, they are regularly accompanied by an inscription bearing the D.'s name. If for some reason the name is replaced by another – a common procedure in manuscripts – the image remains unchanged. It should also be noted that usually the portraits depict in detail various pieces of garments, weapons or jewellery of the represented persons and are thus an important source of information on everyday life in Ethiopia.

In Ethiopia, as everywhere in the Christian world, a donor-portrait commemorates both the donation and the person responsible for it. Its association with the representation of a holy intercessor emphasizes the pious nature of the donation, while also providing the D. with the assurance of heavenly protection – an idea which is strongly projected in Ethiopian images.

The oldest known portrait of a D., from the end of the 13th cent., is in the church of ↗Gännätä Maryam and shows *aṣe* ↗Yəkunno Amlak on the throne, flanked by two dignitaries (s. SerHist 291; Lepage 1975, fig. 3). In the Gospel Book of Iyäsus Moʾa (↗Däbrä Ḥayq Əsṭifanos), from the same period, the abbot is depicted on a separate miniature under an arch, while in the Gospel Book which belonged to his successor Krəstos Täsfanä (Addis Ababa, IES, ms. A5, cf. Chojnacki 2000 and TadTChurch 158f., pl.2), the owner is portrayed together with his three predecessors.

In the ↗*Gädlä sämaʿətat* written in the middle of the 15th cent. for Prince Yəmrəḥannä Əgziʾ (monastery of ↗Däbrä Maryam, Qʷäḥayn), he and his wife Amätä Ləʿul, accompanied by a group of attendants, are represented in two miniatures facing each other. The governor of the northern provinces of Ethiopia at the end of the 15th cent., ↗Bəlen Sägäd, is portrayed as a horseman in a Psalter which probably belonged to him (ms. BN, d'Abbadie 105). The 15th-cent. ms. of ↗*Täʾammərä Maryam* from the monastery of Gəšän Maryam (↗Amba Gəšän) contains six miniatures which represent *aṣe* ↗Dawit II adoring the Virgin Mary, this act being shown in several stages from standing to making a deep bow.

The custom of including the representation of a D. in a holy image became widespread in the second half of the 18th cent. It seems that among Ethiopian royal persons, *aṣe* ↗Bäkaffa and Məntəwwab (↗Bərhan Mogäsa) especially were interested in being depicted as supplicants, cf. e.g. the ms. London, BritLib, Or 715, fol. 133v, 134r; the wall-painting in Närga Śəllase church; and the processional cross, IES, no. 4193. From the end of the 18th cent. representations of D. accompanied by several members of their families, and in the case of the rulers by large courts, became part of the iconographic programmes decorating the socle of the eastern wall of the ↗*mäqdäs*.

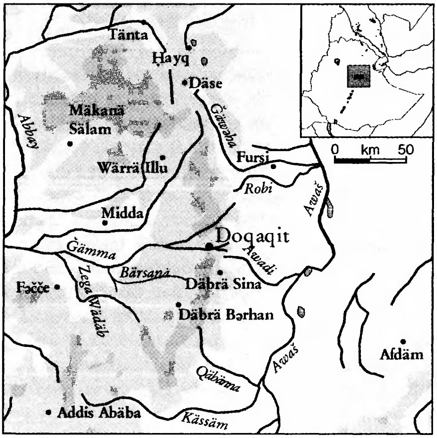
Ewa Balicka-Witakowska

Doqaqit

D. (ዶቃቂት), a mountainous locality in Yəfat, 35 km north-east of Däbrä Bərhan, was one of several short-lived capitals of ↗Šäwa. Believed to have been first occupied by *abeto* ↗Nägaśi Krəstos Wärädä Qal, the founder of the modern Šäwan dynasty, it was established by the latter's son *märədazmač* ↗Səbəstyanos (r. 1705–20), who, however, also resided at other settlements, among them ↗Ayne and ↗Ḥarr Amba.



The growth of D., according to local traditions, also owed much to his son *märʾədazmač* ↗Abbəyye, who founded the church of Mikaʾel and supplied it with a *tabot* stolen from his father's church at Ayne. His own son, *märʾədazmač* ↗Amməḫa Iyäsus, also for a time resided at D., which was his first capital, but later abandoned it in favour of Astit, and later ↗Ankobär, which was to remain the capital of Šäwa until the late 19th cent.

Richard Pankhurst

Dorho: Mäṣḥafä dorho

The name M.d. (መጽሐፈ፡ ዶርሆ, 'The Book of the Cock') is given to the first of nine texts bearing the title ድርሳን፡ ወትምህርት፡ ዘአበዊነ፡ ሐዋርያት፡ ቅዱሳን (*Dərsan wätəmhərt zäʾabäwinä ḥawaryat qəddusan*, 'Homily and Teaching of our Fathers the Holy Apostles'). All these pieces, including the M.d., can be found in the Holy Week's Lectionary (↗*Gəbrä ḥəmamat*), sometimes even in the Miracles of Jesus (↗*Täʾammərä Iyäsus*), either together or scattered separately (s. Cowley 1985).

The M.d. is a short apocryphal passion narrative, possibly translated into Gəʿəz from an ancient Greek original, upon which the newly discovered Arabic version is also depending via a hitherto unknown Coptic translation (Lucchesi 2005:92). Unattested in other Oriental Churches, the work seems to have been known to the Copts in the 17th and 18th cent. (Thévenot 1665:502; cp. Colombo 1996:254). Like the *Dərsan* in which it belongs, the M.d. does not appear in Ethiopic manuscripts before the beginning of the 16th cent. Its text may have been produced earlier, during the epoch marked by the conducive literary activity of *abunä* ↗Salama "the Translator" (ca. 1348–86; Piovanelli 2003:435f., Lucchesi 2005:91f.).

The narrative focuses on the last three days of Jesus' life and chiefly on his betrayal by Judas: Jesus tells his disciples that one of them will betray him and Judas is indicated as betrayer by "a pillar of stone". Jesus then goes to Bethany to the house of Simon the leper and his wife Akrosena, who prepares a meal of roast cock for him. Following the episode of the unction at Bethany and the washing of the feet, the proper story of the cock begins. Jesus announces that he is going to spend the night on the Mount of Olives and Judas goes to inform the Jews of Jerusalem about this. In the meanwhile, Jesus revives the cock and sends it after Judas; the bird listens to the talk, returns and tells Jesus about the conspiracy. The mission of the cock is completed and Jesus sends it to heaven for a thousand years. The text closes with a long prayer of Jesus addressed to the Father.

The sources of the M.d. are to be sought in the four canonical Gospels – especially Matthew, Luke and John – and some apocryphal or legendary traditions. Likewise, the *Dərsan* is closely dependent upon the canonical Gospel of John and the *Tä'ammərä Iyäsus* (a direct translation from the Arabic apocryphal Gospel of John), which has in turn suggested a "Johannine inspiration" for the M.d. as well.

Although a fragment of the M.d. (= 4, 1-6) published by Chaîne (1905) on the basis of one single manuscript has long been familiar to scholars and in spite of the place the work enjoys in the Ethiopian liturgy, the antiquity of the material it preserves has only recently been recognized: there is now evidence to suggest that the original narrative of the M.d. is rather an apocryphal text from Late Antiquity written in or around Jerusalem in the 5th or 6th cent. A.D. (Piovanelli 2003, listing 25 mss.).

Gérard Colin

Dori Gugsa

Ras D.G. (ዶሪ፡ ጉግሳ) was son and, briefly, successor to his father, *ras* ↗Gugsa Märsa. His birth-date is unknown, but he ruled from February to May 1831, when he died. His immediate predecessor was *ras* ↗Marəye, another son of Gugsa. Marəye was killed at the battle of Däbrä Abbay, one of the climactic battles of the ↗*Zämänä mäsafənt*, in which the forces of the Wärräsek (↗Yäǧǧu) rulers of Däbrä Tabor, supported by armies from Goǧǧam and Səmen, confronted and defeated an army led by *däǧǧazmač* ↗Säbagadis Wäldu of Təgray. D.G. had been appointed by his father to rule the Wällo districts of Wəčale and Wärrä Himano. His rule is reported to have been benevolent (Conti Rossini 1916). Later he was appointed over Damot. There was tension between him and each of the brothers, Yəmam and Marəye, who preceded him as ruler, but his choice to succeed Marəye was quick and smooth. During his brief rule he made his mark as a ruler of compassion, who disciplined his army not to oppress the poor. He appointed ↗Iyasu IV to the Solomonic throne.

Donald Crummey

Dorn, Johannes Albrecht Bernhard

D. (in Russia known also as Boris Andreevitch Dorn; b. 11 May 1805, Scheuerfeld, Sachsen-Koburg, d. 1881, St. Petersburg), a prominent Orientalist, finished gymnasium in 1822. He studied philology and theology at the Universities of Halle and Leipzig, which implied courses in Hebrew and Arabic, as well as Syriac. He independently learned Persian, Pashto, Turkish, Sanskrit and Gəʿəz. In 1825 the University of Leipzig awarded him the degree of Doctor of Theology and Philosophy for his dissertation on the Ethiopic translation of the Psalter (*De Psalterio aethiopico commentatio*, Lipsiae 1825). There was a special chapter in it devoted to Ethiopic multi-radical verbs (*De verbis Aethiopum plurilitteris*).

Johannes Albrecht Bernhard Dorn; from Kračkovskij 1955: 88

In 1826 Kharkov University established its own chair of Oriental languages. Dorn was invited there as a staff professor. During his stay there (1829–35), he taught Arabic, Persian, Turkish, Sanskrit, Hebrew and Gəᶜəz.

D. was the first (and throughout the 19th cent., the only) professor in Russia who taught Gəᶜəz. In 1835 he was transferred to St. Petersburg and remained there for the rest of his life. In 1836 D. completed the first scholarly description of Ethiopian manuscripts of the Institute of Oriental Languages of the Ministry of Foreign Affairs and of the Imperial Public Library. D.'s scholarly and teaching activities in St. Petersburg were extensive and diverse and in many of his academic undertakings he was a pioneer in Russia. However, Ethiopian studies were not D.'s main interest, his principal achievements were in the field of Afghan studies.

D. was considered by the Russians as a Russian scholar, and both in the pre-revolutionary Russian *Brockhaus* and *Ephron* encyclopaedias and in the *Large Soviet Encyclopaedia* D. was invariably referred to in the way he had been named by his Russian contemporaries and colleagues: Boris Andreevitch Dorn. From 1839 he was an adjunct fellow, from 1842 a Member Extraordinary of the Academy and Director of the Asian Museum and from 1852 a full member of the Imperial Academy of Sciences in St. Petersburg. He died in St. Petersburg and was buried at Smolenskoye Lutheran cemetery.

Dorsa/Dorša ↗ Šeko

Dorze

Dorze language

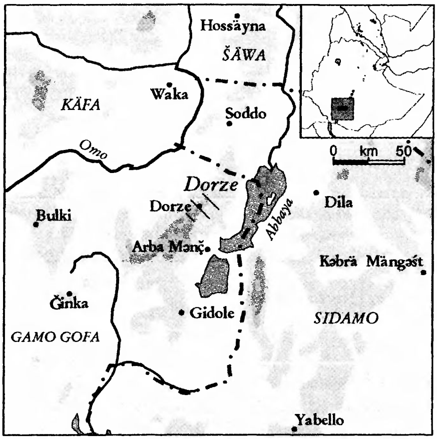
D. belongs to the North-Ometo branch of the Omotic language family. It is spoken by about 29,000 people (1994 census), of which some 6,300 live in and around ↗Çenča town, which is considered to be the centre of the community (CSA 1996:119). It has a larger number of speakers outside the home area: about 23,000 (CSA 1998:67).

D. has 97 % and 94 % lexical correspondence with ↗Malo and ↗Gamo respectively, which, together with ↗Dawro, ↗Gofa, ↗Očollo and ↗Wälaytta, form the North-Ometo cluster.

In nouns, morphological distinction is made for definiteness (only for masculine nouns by the morpheme -*z*-, as in *naʾa* 'a child' versus *naázi* 'the child/boy', while feminine definite and indefinite are unmarked), number, of which only the plural is marked by the suffix -*t*-, while singular is unmarked, e.g. *naʾa* 'a child' vs. *naitá* 'children', and case. The structurally important cases are nominative and accusative. The case suffixes simultaneously express gender and number. Thus nominative masculine and all plural nouns are marked by *–í*, while nominative feminine is marked by *–á*.

As modifying categories, adjectives must occur in their citation form without reflecting the gender and/or number of the noun they modify. In inchoative derivations, adjectives may take verbal inflection, while in noun phrases, where the head noun is dropped, they occur with nominal inflection such as number and case.

D., like most North-Ometo languages, has a rich verbal morphology. Tense-aspect (present, past and future), negation and mood (imperative and optative) are marked on the verb. With the



exception of the future form, the verb is further marked with subject co-indexing morphemes.

Independent 1st, 2nd and 3rd (masc. and fem.) sg. subject pronouns are: *taáni, neéni, ˀízí, ˀízá*. The plural subject pronouns for 1st, 2nd and 3rd person are: *núní, ˀínte, ˀhistí*. The corresponding singular and plural object pronouns are respectively, *taána, neéna, ˀíza, ˀízo* and *nuúna, ˀíntena, hísta*. Possessive pronouns are illustrated next with the noun *naˀa* (shortened to *na* in fast speech): *tá na*, 'my child', *né na*, 'your child', *ˀíza na*, 'his child', *ˀízi na*, 'her child', *nú na*, 'our child', *ˀísta na*, 'your child', *ˀeéta na*, 'their child'. Interrogative pronouns include: *ˀoóni*, 'who', *ˀoóna*, 'whom', *ˀaabi*, 'what (Nom.)', *ˀai*, 'what (Acc.)', *ˀawde*, 'when', *ˀainage*, 'how much' and *ˀaizana*, 'why'.

D. has a typical head-final syntax with Subject-Object-Verb order in simple declarative sentences, e.g. *kanázi ˀašó míres* 'dog:DEF-MASC-ACC meat:INDEF:ACC eat-PAST-3rd:MASC-PAST'). Accordingly, in phrases the modifier precedes the head (e.g. *ˀórde káfo*, 'big bird'), dependent clauses precede main clauses and the language uses only suffixes and no prefixes.

The standard ten-word list for D. is: *ˀissí/ˀistá*, 'one', *namˀá*, 'two', *heedzá*, 'three', *tama*, 'fire', *haats*, 'water', *ˀagína*, 'moon', *ˀawa*, 'sun', *suts*, 'blood', *ˀinsˀársa*, 'tongue', *ˀačča*, 'tooth'.

Azeb Amha

Dorze ethnography

The D. are one of over 55 *dereta* (sg. *dere*), traditional "autonomous units" of ↗Gamo. It is also the name of a settlement (6°16' N, 37°33' E) and its constituent neighbourhoods, *guta*.

As understood by the Gamo people, D. is neither a language nor an ethnonym, although many scholars do use it as the latter (Garretson 2000). In Addis Abäba it is also popularly used as an ethnonym denoting a person of Gamo origin, usually making a living in the city by ↗weaving (there is a district of Addis Abäba is known as Dorze Säfär). Previously, settlement and neighbourhood names were often erroneously used to denote ethnic groups and languages, followed by government documents. This is the case with the last two censuses, where the Gamo are labelled as a sub-group of ↗Wälaytta and the D. as an ethnic group (CSA 1996).

There are 14 D. *guta* (or *qomme*) neighbourhoods, such as Bodo, Amarra, Laka, Matso, Holˀo, Maldo, Dˀartse, Hirpo, Haizo, Aira, Gimbilo, Woqate and Godiye (Olmstead – Halperin 1976; Sperber in USCES). Each *guta* has its own assembly place (VSAe III), which is attended by "fathers of the land". Three of the *guta* assembly places, however, serve as the *dere* assembly places for Dorze: those of Amarra, Laka and Bodo. The first fire of *mäsqäl* (D. *máskala*, VSAe III, 205), the New Year festival, was traditionally lit at the Amarra and Laka assembly places, followed by fires lit at other assembly places depending on their seniority (cf. Sperber in PICES 5). Rituals of *sofe*, marking the end of seclusion of a bride and groom, used to be initiated in Laka and now take place at the Bodo market. Currently, the church of *abba* ↗Täklä Haymanot occupies part of the location. The construction of churches in sacred groves is suggestive of the "triumphalism" of the Ethiopian Orthodox Church's belief over the traditional practices in D. and other Gamo areas.

The Bodo market of D. is held on Mondays and Thursdays. Being one of the largest markets of southern Ethiopia, it attracts traders from all over the Gamo highlands, Amaro, Sidamo and from as far as Kambaata and Addis Abäba. It is from Bodo that much home-woven cloth is transported to markets in central and southern Ethiopia. The Bodo market and its *dubbuša* ('public place') assembly are central to the D. The smooth running of exchange in the market and order are observed by this assembly, which is attended by "heads" (*halaqa*) from all over the neighbouring Gamo territories. Cases involving members of other *dereta* can only be handled together in the presence of the *halaqa* of that respective *dere*. Currently, however, police also involve themselves in this (cf. Forster et al. 1969, Jackson et al. 1971 on the markets of northern Gamo).

An interesting fact about Bodo and some other Gamo markets is that the market space is owned by families and is inheritable. For instance, families and other Gamo *dereta* such as Očollo own the annual meat-slaughtering spot in Bodo market. Families own *sofe* grounds and spaces for stalls where women sell *dana* beer. Anyone who forgets the exact location of their *sofe* grounds must, for example, pay elders with a sheep for being reminded. The market assembly place is another site permanently owned by the assembled "fathers of the land".

As in all of Gamo, mountain pastures, sacred groves, rivers and spaces where peace treaties have been concluded, as well as assembly places and markets are administered under the patronage of families that are responsible for performing rituals, as well as taking care of them (cf. Tadesse Wolde in PICES 11).

The D. have one of the Gamo ↗*tabots* of old times, known as Gergesa (devoted to St. ↗George of Lydda), which is said to originate from the early centuries A.D. However, researchers date Gamo churches back to the 15th cent. (Bureau 1976:298, 300; Caquot 1955:109f.). The Gamo *tabots* are believed to have been there since ancient times. This is reflected in deep genealogical traditions of some *qeso* ('priest') families that claim that their ancestors brought these *tabots* and became the keepers of the Christian faith, as well as in the senior position these families enjoy in these areas. The D., like other Gamo, make their living from agriculture, growing *ənsät*, barley, wheat, peas etc. for food and bamboo and other trees for construction, from mountain pastoralism, trading and migrant weaving. Young children sometimes accompany a kinsperson on weaving journeys to help with spinning. In earlier days, the D. traded in all commodities, including firearms and ammunition. Today, they participate in long-distance trade between home and Addis Abäba and also act as members of the network of mountain-markets in Gamo country. Their other expertise, which is shared by nearly all Gamo in the bamboo belt, is their skilful use of bamboo for cutlery, for fences of different kinds and for the construction of ↗houses (cf. Olmstead 1972:27ff., Forster 1969).

The D. consider themselves to be "descendants of Tenkele", a man they sing about in self-praise. D. men spend much time as migrant weavers within Gamo and southern and central Ethiopia (mainly Addis Abäba). Meanwhile, women keep house, do farming, care for children, travel in the mountains to other Gamo markets to trade or accompany their husbands on their migrations (cf. Forster et al. 1969 on the economy of the Gamo Highlands; Burley in PICES 5b for the genesis of Gamo weaving in Addis Abäba). Ownership and inheritance in D. follow the patri-lineages with a bias towards the eldest, as in all of Gamo.

Wolde Gossa Tadesse

Doum palm

The D.p., or dioecious fan palm (*Hyphaene thebaica*), grows up to 15 m and can be recognized by dichotomy of its stem, which forms up to 16 crowns. It belongs to the family of *Palmae*

Doum palms in Gaš-Setit; photo 1997, courtesy of Wolbert Smidt

and subfamily of *Borassoideae* and can be found throughout northern Africa (e.g. in Ethiopia, Eritrea and the Sudan, but also in Egypt and east Tanzania) where it grows in forests along rivers and wadis.

Its leaves, fruits and timber are highly valued by the Eritrean and Ethiopian populations and exploited for commercial, ritual and personal purposes. Women use its dried leaves to pleat mats, various household utensils (baskets, containers for storing staples, cosmetics and valuables, trays for serving food, coffee-pots and coffee-cup holders, milking-vessels, fans for fires, food coverings, grain containers and chicken baskets), clothing and for decorative handicrafts (wrist-bands, bed-screens and mattress-coverings), some of which are intervowen with goat-leather strips, cloth, beads, cowries and coloured fibres. The mats play an important role as a building material, e.g., for the traditional dome-shaped houses of the Təgre-speaking people of Eritrea. They are also used as floor-coverings to sit on, as prayer-mats and for women's ritual smoke-baths. These mats have a hole in the middle for the smoke to penetrate and ritually clean or cure the woman's body. Dried D.p. leaves are also the raw material for ropes, which are knotted into nets that serve as carriers for, e.g., jerrycans, food and firewood.

A ritually tied bundle of D.p. leaves sat above the entrance of a Beğa house indicates the birth of a child. The smooth, shiny orange-brown fruit, when ripe, is an important source of carbohydrates, niacin and iron. The pulp, which is extremely hard and tastes like gingerbread, is eaten by the children as a snack and is used as animal fodder during the dry season. Because of its hard and dry texture, the D.p. fruit is easy to preserve and therefore stockpiled for times of food shortages or famines. The hard kernel is skillfully crafted and used as a container for antimony – a popular eye – cosmetic and an antiseptic treatment for the eyes of newborn babies (↗Cosmetics).

In 1927 Italian colonists started to manufacture buttons from the D.p. kernels for export to Europe. The kernel is also known as a popular children's toy. D.p. trunks, when deposited on river shores as drift-wood, are used for constructing and stabilizing river-bed and river-bank wells. For women and men alike, especially those from the Eritrean lowlands, the D.p. products are an important (trading) asset and constitute a major source of income.

Kerstin Volker-Saad

Drinks

D. – both alcoholic and non-alcoholic – and drinking are an integral part of the culture and social life of the large majority of Ethiopians from the elite to the lowest classes: meeting one another without offering or taking a D. of some sort is unthinkable.

D. in Ethiopia could be categorized in a number of ways, but here we limit ourselves to D. as nutrition, as an item in ritual and as an aspect of socializing. In this category fall most of the alcoholic D. There is a wide divergence according to region, religion, social standing and wealth as to what D. are consumed and by whom. Notable is the fact that all traditional, non-imported D. in Ethiopia are prepared, served or sold by women, including **አረቂ** (*aräqi*, 'arrack, anise liquor') or **ካቲካላ** (*katikala*, 'homemade arrack').

Ethiopia has indigenous D. of both the alcoholic and non-alcoholic kind. Among the non-alcoholic D., ↗coffee and ↗tea are without doubt the most important ones. Among other D. as part of the diet one can mention (sour) milk, tea, **ብርዝ** (*bərz*, unfermented honey-mead), **ቅራሪ** (*qərrari*, a weak *ṭälla*-like beverage), local beer (**ጠላ**,

↗*ṭälla* and ቦርዴ, *borde*, especially in southern Ethiopia) and increasingly also honey-wine (ጠጅ, ↗*ṭäǧǧ*). ↗Blood is also drunk, often mixed with milk, especially among the southern pastoralists, except when they are Muslims.

Non-alcoholic drinks

Coffee is a daily D. among most people in the highlands, but is ritually used in some contexts, such as the Wällo ↗*wädaǧǧa*, and among various southern peoples, e.g. the Boorana, Garii, and Maçça Oromo. One example is the "coffee slaughter" ceremony (↗*Buuna qallaa*; s. Bartels 1983:287f.; Getachew Kassa 1990). Coffee is usually freshly roasted and ground, but among certain southern groups the leaves of the coffee-plant are boiled in water with spices, or the beans are eaten with butter. The Ethiopian Orthodox Täwaḥədo Church initially rejected the drinking of coffee, although not on any doctrinaire grounds.

Tea in Ethiopia was originally an imported, rather expensive D. which became common only fairly recently; it is prepared with much sugar and a variety of spices. In addition, in the fasting periods, D. made with flax, safflower, linseed and fenugreek are consumed.

To convalescing young mothers and sick people, D. like አጥሚት (*aṭmit*, 'gruel') are given. There exists a great variety, but ingredients – in varying composition – are milk, fine ↗*ənsät* flour, barley flour, *əmmər*-wheat flour, butter, honey, eggs and spices such as fenugreek.

There is also a large domestic market for soft D., and local factories are licensed producers of Coca Cola, Pepsi and other varieties.

Alcoholic drinks

Alcoholic beverages have seen a rapid expansion in the 20th cent., in both their production and use. The use of alcohol has been known in Ethiopia from time immemorial across a wide variety of ethno-cultural groups in the country, especially in the form of fermented D. (local beer) on the basis of grain. In Islamic areas the alcoholic D. are predictably less widespread. The stronger alcoholic D. are the distilled types. The distillation process, yielding strong liquor like *aräqi*, is a recent innovation, probably imported from abroad – or copied from resident Greeks or Armenians – during *aṣe* Mənilək II's reign. The Ethiopian Orthodox Täwaḥədo Church and its priests did not officially reject the use of alcohol, in contrast to Islam, and priests join in drinking, but usually the Church has pleaded for moderation in its use.

Among the most common alcoholic beverages across the country are *ṭäǧǧ* and local beer, e.g. *ṭälla* and *farso* (in the Oromo area) or *borde*, a fluid grain porridge. *Ṭälla* and *ṭäǧǧ* are known under various names, differing according to language or ethno-region; e.g. in Təgray and Eritrea *ṭälla* is called ሰዋ (*səwwa*). The *ṭälla* beer is made from either barley, corn, wheat, sorghum or a mixture of these. *Ṭäǧǧ* is the typical Ethiopian honey-wine or mead, made of water, honey (and occasionally sugar in the cruder blends) and a fermenting leaf (↗*gešo*). In popular bars it was, and often still is, served in long-necked ብርሌ (*bərəlle*), old perfume bottles, a custom dating from the late 19th cent. The best *ṭäǧǧ* is considered to be the filtered kind. *Ṭäǧǧ* or *daadhii* (in Oromo) has become the most popular D. of many Ethiopians, not only in the towns but also in countryside bars. In parts of southern Ethiopia there are similar indigenous types of fermented honey-wine, e.g. *boke*. In the early 20th cent. there has been a notable expansion of bars and drinking-houses in urban Ethiopia, especially Addis Abäba, and strong alcoholic beverages – both indigenous and imported – are rapidly gaining ground as popular status D.

There is a large variety of local alcoholic beers in Ethiopia, among them: ኰረፌ (*kʷäräfe*) in the Gondär area, made from barley, and አሚት (*amit*) in the Gurage area (lighter in alcoholic content, made from ↗*ṭef* and germinated/roasted barley). In the south of the country, the local beers *farso* and *borde* are usually made from fermented maize, sorghum and sometimes barley (or a mixture of them), and are typical for the Southwest. *Borde* is a thick, nutritious and heavy beer. Its alcoholic content is estimated to be around 6–10%. The production (and sale) of the traditional beer is always controlled by women. Producing it is a laborious process, taking from eight to ten days. This *borde* beer is not only drunk at social gatherings, but is also an essential element in collective work-parties in rural areas in the south, as is attested by many ethnographies (e.g. Donham 1994:130). It is also sold in special bars in the provincial towns. Among several groups, alcoholic D., especially the local beer, are used and consumed in ceremonies such as name-giving, the initiation of new fields and certain harvest rituals. But in contrast to coffee and milk, alcohol has not assumed major ritual functions in the life of Ethiopian peoples.

The strongest alcoholic D. are *aräqi* and *katikala* (similar, but different), home-made distilled D. originating in the highland areas of Ethiopia, but now spread to most rural areas as well. They are made on the basis of germinated grains, especially maize or finger-millet, sometimes mixed with wheat and with added agents like sugar and the fermenting leaf *gešo* (Belachew Desta 1977).

There are also imported and local factory-produced varieties of *aräqi*, but these are not considered as good as the home-made ones, e.g. the variety from the town of Däbrä Sina. They are consumed in urban areas by the wealthier upper- and middle-class people. The range of alcoholic D. in Ethiopia has expanded rapidly, both by local production of gin, ouzo, ↗wine, vermouth, cognac, champagne, etc., and by import. Here, whisky is the most prestigious strong beverage. There are also several large local beer-factories in Ethiopia, such as St. George, Bäddäle, Meta and in Eritrea Zäbib and Melotti. Most of the local factories which used to belong to the state have been privatized and sold to French groups.

Alcoholic D. are mostly consumed during festive occasions such as weddings, certain religious holidays and other ceremonies, but also on market days throughout the country. Christian religious festivals, the breaking of fasts and Saints' days, as well as life-cycle rituals (baptisms, weddings, funerals) are not complete without the consumption of (alcoholic) D., in particular *ṭälla*. Due to the recent expansion of Evangelical Christianity in parts of the country, notably in the South, alcoholic D. (including *borde*) are getting more competition from non-alcoholic ones made from sugar-cane or roasted barley. Travellers often take *bässo*, roast barley-flour, consumed after mixing with water. The local, *borde*-like beer made of sorghum and/or maize, known under different names in various regions (esp. in the South), is not only drunk at social gatherings, but is also an essential element in collective work-parties in rural areas, which are based on reciprocity (exchange of labour for beer, but also in the sense of "taking turns", in coming to work on some-one's land and inviting others to work). These beer work-parties are found among many groups, from the Kunama in Eritrea to the Suri in the Maǧi area. The wife (or wives) of a man whose land is to be prepared or harvested, gets the job-order for preparing the beer. Women themselves also can order work-parties, providing their own beer. In urban areas, strong alcoholic beverages – both indigenous and imported, especially whisky – are rapidly gaining ground as popular status D., and urban weddings without whisky are not considered good.

In most towns and villages the bars are often the principal or only public meeting-places. This in itself is conducive to the over-consumption of alcoholic beverages. In addition, the consumption of alcohol in rural settings often tends to "substitute" for people's (esp. males') food intake, and alcoholism seems to be on the rise. In general, very little research has been done in Ethiopia on alcoholic D., their use, abuse and social context.

Drugs

D., which form part of an extensive, and well developed, local pharmacopoeia based principally on plants, have played a significant role in Ethiopian life. The country's two best-known hallucinant narcotics are derived from the fruit of the *Datura stramonium*, or Thorn apple, and from the leaves of the *Catha edulis*. The former, widely used in the highlands, is variously known as **አጠፋርስ** (*aṭäfarəs*) or **ዕፀ፡ ፋርስ** (*ʿəṣ́ä fars*, lit. 'plant of Persia', from which country the plant is said to have originated), and **አስተናግር** (*astänaggər*, lit. 'what helps to speak'; Strelcyn 1968:60; 1973:147). This drug was traditionally used by Ethiopian Church scholars, to assist them in memorisation (Cacciapuoti 1941:302; Lemordant 1959:12f.; Rodinson 1967:59; Strelcyn 1968:60, 1973:147). *Catha edulis*, locally known as ↗*čat*, was formerly mainly chewed by Muslims in the Harär area, and by the neighbouring Somali, but its cultivation has now spread to other regions, where it is also widely consumed by Christians. *Čat* is today a major export to Djibouti, Yemen, and even parts of Europe (Griaule 1930:153; Mercier 1980/82:143–79).

Perhaps the best known of Ethiopia's numerous purgative drugs is ↗*koso* (*Hagenia abyssinica*), which constituted the most important of a number of medicines used in the traditional treatment of tapeworm. Infestation with this parasite was common in the Ethiopian highlands on account of the widespread practice of eating raw meat. An extremely bitter infusion of the flowers of the *kosso* tree was widely employed to expel the worm, but usually failed to do so entirely, with the result that it grew again from the head, thus necessitating the taking of *kosso* literally every two or so months (Pankhurst 1969:323–34).

The most widely used imported drugs were traditionally those employed for the treatment of ↗syphilis, a complaint which was not uncommon in many parts of the country. Such medicines, some of which were already used in urban centres in the 17th, 18th and early 19th cent., included sarsaparilla and mercury compounds, both of which were frequently administered in association with sudorific treatment and vapour baths, known in Amharic as **ወሻባ** (*wäšäba*). Prominent among later 19th cent. medicines for syphilis were silver nitrate and copper sulphate, which were replaced in the early 20th cent. by Salvasan (Pankhurst 1973:210–15).

"The more extensive use of foreign drugs was popularized, and greatly facilitated, by the coming of European diplomats, traders and missionaries, as well as Arab and Indian merchants. Imported medicines were dispensed, in late 19th and early 20th cent., at the Italian, British and French Legations in Addis Abäba, as well as at the Russian Red Cross hospital, which latter began to function in 1896. Foreign drugs were by then also sold at Addis Abäba's principal French, Indian and other foreign groceries. These handled a wide range of "modern" medicines, such as iodide of potassium, Ricord's pills, quinine, castor oil, Epsom salts, laudanum, and phenic acid, as well as a considerable number of balms, and antiseptic cotton (Mérab 1912:41). The first Addis Abäba pharmacy, "Dr Mérab's Pharmacie la Géorgie", was founded in 1910, and the second, established by a German, Walter Zahn, in 1914, after which "modern" drugs and medicines gradually spread to the principal towns, and in the course of time to a number of provincial hospitals and clinics. (Pankhurst 1965:114–60).

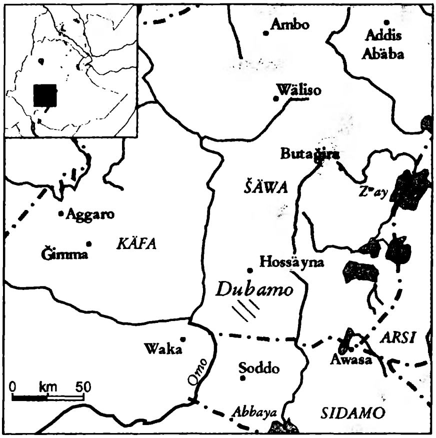
Dubamo

The D. inhabit the southern part of the Sooro *wäräda* in the region of ↗Hadiyya (today Hadiyya Zone), bordering ↗Ṭimbaaro in the south. The centre of their settlement is the highland area of Danta, after which they are sometimes named. Like the neighbouring Donga, they were organized in a small kingship whose rulers claim descent from "King Solomoon" of Gondär, i.e. from Amharic nobility. The D. consist of seven original clans and some groups which immigrated in the 18th and 19th cent. from ↗Boša and Hadiyya. They formerly spoke a dialect of ↗Kambaata, but, following the political domination of their area by the Sooro since the beginning of the 19th cent., they



subsequently underwent a linguistic change to Hadiyya. A minority still speaks Kambaata as a first or second language.

The D. are intensive cultivators of *Ensete ventricosum* (↗*Ǝnsät*) and barley and they were formerly famous for their horse- breeding. Numerous relics of Orthodox ↗Christianity could be traced back to the time when the Kambaata area was part of the Ethiopian Empire before the mid-17th cent. In the syncretic religion which then evolved among the D., the medium of the spirit Hawzulla gained a supra-regional importance. After ↗Mənilək II's conquest in the late 1880s, many D. converted to Orthodox Christianity and, from the 1970s onwards, Protestantism became their primary confession. After the introduction of the federal system in the 1990s they increasingly developed a consciousness of individual cultural identity within Hadiyya Zone, resulting in the foundation of a political party called "Denta, Debamo and Kitchenchia Democratic Organization".

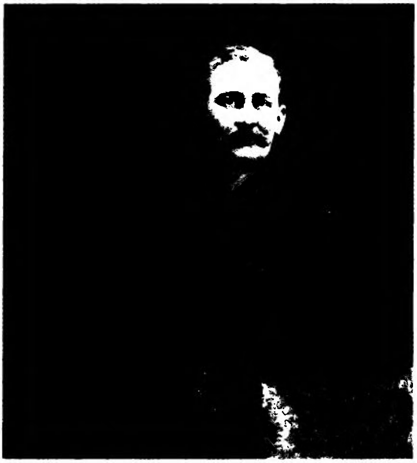
Ulrich Braukämper

Duchesne-Fournet, Jean

Born in the Normandy from a family involved in national political life (his father was a senator), D. (b. 1875; d. 1904) studied in the School of Oriental Languages (↗INALCO) and political science, and in the Colonial School in Paris. More specifically concerned with economic questions, he travelled to Romania, Russia and to South America, where he studied the problem of labour, later publishing his findings as *La main-d'œuvre dans les Guyanes* (1905).

Entrusted by the French Government with a scientific mission in Ethiopia (geography; geology, anthropology and zoology), D. left Djibouti with his team (composed of Lieutenant Octave Ernest Collat, Sergeant-Major Fontenaud, L. Lahure, Henri Arsandaux, Goffin and Moreau) and in 1901 reached ↗Addis Abäba, then Lake ↗Ṭana, passing through Goğğam, Damot and Agäw Mədər, before going back to Addis Abäba in 1903. But D. died before he could write the account of his mission. In his memory, his associates used their own log-books to outline the story of the expedition, entitled *Mission en Ethiopie* (*1901–1903*), and published it in 1908–09 under the name of D. The trip was described by Henri Froidevaux ("Histoire du voyage", vol. 1, 1–236), while Collat wrote a study on the Ethiopian economy ("L'Éthiopie économique", vol. 1, 237–88), Arsandaux provided a geological analysis ("Contribution à l'étude des roches de l'Est africain", vol. 2, 1–100), Pierre Lesne described the entomological collection ("Coléoptères recueillis en Abyssinie par la mission Duchesne-Fournet", vol. 2, 101–14), R. Verneau provided an anthropological study ("Anthropologie et ethnographie", vol. 2, 115–356) and Charles Régismanset wrote a bibliographical review ("Bibliographie abyssine", vol. 2, 357–88). J. Blanchard gave a study of eight manuscripts



Jean Duchesne-Fournet; from Duchesne-Fournet 1909 brought from Ethiopia and now preserved in the ↗Bibliothèque Nationale de France in Paris. He translated one of them: the Acts of ↗Täklä Haymanot ("Notes sur les manuscrits rapportés d'Abyssinie", vol. 1, 289–432; "Vie de Takla Haymanot", vol. 1, 340–431).

Marie-Laure Derat

Duensing, Hugo

D. (b. 15 April 1877, Hannover, d. 1961, Goslar near Göttingen) was a German Protestant theologian, pastor and orientalist, who on several occasions contributed to Ethiopian studies in the fields of history and Gəʿəz ecclesiastical literature. D. made his debut with two short but carefully worked historical studies. In his Ph.D. thesis (1900), he assessed the historical value of the ↗*Sənkəssar* and in 1904 he published and analysed a letter of *aṣe* ↗Gälawdewos to Pope Paul III. Virtually no information is available about D.'s life and career between 1900 and 1926, when he became a pastor in Goslar. It seems most likely that at least since 1906, when he earned his theological licentiate, D. had already held one or several pastoral positions elsewhere. Such an assumption also helps to explain why D. published only three original contributions to Ethiopian studies between 1906 and 1926 (cf. bibl.); in addition, however, he wrote a considerable number of thorough reviews. In any case, D.'s publications after 1904 testify to a shift in his interest away from history to ecclesiastical literature. His *opus magnum* in this field is the edition of the Gəʿəz version of the so-called "Canons of Hippolytus" (1946). Towards the end of his life D. worked on an edition of the Gəʿəz ↗*Didəsqəlya*. He did not, however, live to finish this work. His notes are kept in the Göttingen University Library (Cod. Ms. Aethiop.12).

Michael Kleiner

Dufton, Henry

D. (b. Yorkshire, d. Ethiopia, 28 May 1868) was a British traveller who visited Ethiopia in 1862–63 and 1867–68. The son of a wealthy cloth-merchant in Leeds, he entered Ethiopia on his first visit by way of Gədaref, on the Sudan frontier, and he left via ʿAdwa and Massawa. During these travels he inspected *aṣe* ↗Tewodros II's colony of European craftsmen at Gafat, and in his *Narrative of a Journey through Abyssinia* describes their cannon-making (Dufton 1867:84ff.). He draws a sympathetic picture of the monarch, whom he regards as a "true patriot" and "crusader", and tells of his road-making, legal and church reform, opposition to polygamy and the slave trade and concern for the poor. D. nevertheless supported the British expedition to ↗Mäqdäla. He declared Tewodros "the first and only patriot Abyssinia ever saw, as well as the last" (116), and prophesized that the Emperor, "if hard pressed by us, rather than fall into our hands, ... would certainly put an end to his life" (297). He joined the expedition's intelligence department. D., who had earlier supervised road-building near the coast, was mortally wounded on 28 May 1868 by Šohos (↗Sāho) in the Kumayli pass, 20 km from the port of Zulla (Markham 1869:80, 385f.).

Dulbahante ↗Daarood

Dullay

Dullay dialect cluster

The D. dialect cluster is constituted by eleven members: Dihina (Tihina, Digənti), Dobase (Đoopase, Gowäze), Lohu (Loohu), Mašolle (Mašəle, Mašile), Gaba (Kaapa), Gawwada (Gäwwada, Kawwaaɗa), Gergere (Gärgärä, Qärqärte), Gollango (Kollanko, Wällängo), Gorrose (Gorräse, Korrose), Harso (Harse, Wäraze) and Ṣamakko (Ṣamay, Kule).

This group represents one of the main branches of East Cushitic. The degree of mutual intelligibility is high. A possible sub-dialectal grouping is between Harso-Dobase-Lohu-Mašolle, Gawwada-Gollango-Gergere and Ṣamakko-Gaba. The D. dialects are spoken in the highlands between Konso-Gidole and the plane of the Wäyto (or D.) River. Ṣamakko is the only variety spoken in a lowland area on the west side of the Wäyto.

Black (in BendNonSLang) shows the first data on the D. group (called Werizoid). Amborn, Minker and Sasse (1982) marked a big progress in the knowledge of this cluster-describing Harso, Dobase, Gollango and, to a lesser extent, Ṣamakko and Gawwada. Hayward (1989) represents the best descriptive and comparative work on Ṣamakko.

Due to cultural contact, bilingualism in Konso and Gidole is high for the varieties spoken in the highlands; Ṣamakko are often bilingual in ↗Hamar-Banna and ↗Arbore. Oromo and Amharic are also very influential in all the D. speaking area. No D. dialect is endangered by neighbouring languages. The Ongota (or Birale) people speak Ṣamakko in place of their traditional language.

Below are some characteristics of the D. dialect cluster:

The series of glottalized sounds /ɓ/, /ɗ/, /c̣/, /g/, /ṣ/ or /ṭ/; the pharyngeals /ḥ/ and /ᶜ/ (pre- or postglottalized in Ṣamakko: [*zaᶜ’ko*]~[*za’ᶜko*] ‘heart’. The vowel system is the Cushitic one based on five short and five long cardinal vowels. Each word hosts one phonemic tone and one accent. These can fall on different syllables.

Masculine and feminine nouns end in *-o* and *-e*, respectively. Singulative suffixes contain -(V)k-, -(V)t-(~-(V)c-) and/or -(V)n-, -(V)m- (ex. *-ko*, *-atto*, *-itte*/*-ičče*, *-anko*, *-ano*, *-umo*). The plural noun suffixes are *-e* and *-aɗɗe*.

Attribution is expressed by ordinary and verbal adjectives. Most of the numerals have a D. origin. Ṣamakko follows a traditional system based on the human body. The tense suffixes are: *-i* past, *-a* present, *-na* future. The negative/subordinate forms are respectively *-a*, *-i* and *-ni*. Verbal derivation is highly productive. Nominal and verbal focus markers are *k-* and *t-* respectively. Subject clitics are used (except in Ṣamakko), but not if the subject is in focus. The D. dialects are Subject-Object-Verb. Modifiers follow their head.

Below is a word-list of some D. dialects:

	Harso	Dobase	Gollango	Gawwada	Ṣamakko
‘one’	*to’o*	*to’o*	*to’o*	*to’o*	*dookko*
‘two’	*lakki*	*lammay*	*lakki*	*lakki*	*lakki*
‘three’	*ezzaḥ*	*sise*	*ḥizzeḥ*	*iseḥ*	*zeḥ*
‘fire’	*hac̣c̣e*	*hac̣c̣e*	*hatte*	*xatte*	*katte*
‘water’	*anɗe*	*anɗe*	*‘anɗe*	*‘anɗe*	*‘anɗe*
‘sun’	*hallikko*	*hallikko*	*hallikko*	*kallikko*	*kallikko*
‘moon’	*le‘o*	*le‘o*	*le‘‘o*	*le‘ayyo*	*le‘ˣ’o*
‘blood’	*c̣axte*	*c̣axte*	*qeekte*	*čaxte*	*čegde*
‘tongue’	*arrapko*	*arrapko*	*arraapko*	*arrapko*	*arrapko*
‘teeth’	*ilge*	*ilge*	*ilke*	*ilqe*	*’ilge*
‘I’	*ano*	*ano*	*ano*	*ano*	*ano*
‘you’	*aco*	*aco*	*ato*	*ato*	*ato*
‘he’	*uso*	*uso*	*uso*	*uso*	*ufo*
‘she’	*ise*	*ise*	*ise*	*ise*	*ise*
‘we’	*ino*	*ino*	*ine*	*ine*	*ine*
‘you’ (pl.)	*huno*	*huno*	*hune*	*xune*	*atunde*
‘they’	*isino*	*usuno*	*usunɗe*	*usunɗe*	*ufuni*
‘this’ (masc./ fem.)	*husi/c̣isi*	*husi/c̣isi*	*husi/ tisi*	*xusi/ tisi*	*kutta/ titta*
‘that’ (masc./ fem.)	*hussa/ c̣issa*	*hussa/ c̣issa*	*hussa/tissa*	*xussa/issa*	*kussa/ tissa*
‘where?’	*aha*	*aha*	*aha*	*aha*	*ahaa*
‘How?’	*male*	*male*	*malá*	*malaa*	*mala*
‘who?’	*yaḥa*	*yaḥa*	*yaḥa*	*yaḥa*	*yahaa*
‘what?’	*mo’o*	*mo’o*	*mo’o*	*mo’o*	*Mo*

There is no written literature in any D. variety.

The description of the D. group is at a germinal state. Some varieties are extremely poorly described or completely unknown. Due to lack of comparative data, their internal subgrouping, the degree of influence played by neighbouring languages and their position in East Cushitic are still uncertain matters.

on the Language of the S'aamakko", *Journal of Afroasiatic Languages* 1, 1989, 1–53; GRAZIANO SAVÀ, *Field Material on Tsamakko*, ms., 1999.

Graziano Savà

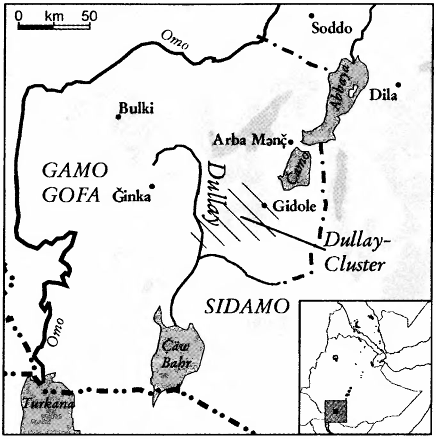
Dullay ethnography

The term D. is used to refer to the community of D.-speakers, who are in fact a group of culturally closely related ethnic entities. The D. inhabit today the west and the south of the Gardula Dobase mountain region in the south of the Ethiopian Rift valley. In the course of history these groups, mainly characterized by acephalous social structures, underwent numerous fissions and fusions. Today one can name the following separate groups: Dihina, Dobase, Gaba, ↗Gawwada, Gergere, Gollango, Gorrose, Ḥarso and ↗Ṣamay.

All D. are sedentary agriculturists. Ṣamako are the only group to have started concentrating on cattle-keeping instead of pure land cultivation, during the last 80 years. The other groups proceed with their once highly developed intensive agricultural practice (with sorghum and ↗ənsät as main crops and balanced cattle-raising) – in spite of the drastic social and economic changes brought about by the north-Ethiopian conquest – and they still manage to maintain it successfully in modified forms under modern requirements. Formerly in Gollango, for example, dammed-up water was channelled. In order to dig out this channel, rocks had to be blasted in places by local smiths.

Nowadays, the clan system with nine exogamous patrilineal clans is the most important social institution. The clans are subdivided into lineages. The lineage regulates marriage arrangements and in this way takes care of the continuum of the living, the ↗ancestors and the unborn. Lineages also control the availability of land. Certain lineage founders are believed to have been born in a supernatural way. Their descendants carry out spiritual (priestly) functions in the community. Some of them gain more than religious influence and even act politically. During the imperial era their influence could be especially high through their appointment as ↗*balabbats*.

The organization in generation groups (similar to the ↗*gaadaa* structure of the Konso) collapsed as a result of critical demographic and economic changes. The process began during the famines and epidemics which followed the radical political changes of late 19th cent. and ended in the middle of the 20th cent., when the last of the D., Gawwada, abandoned the *gaadaa* system. However, even today *gaadaa* terminology is used to define a person more closely. Many of the *gaadaa* functions remained as well, though most of them became hereditary.



Another socio-political order consists of territorial units. Their main function is their effective responsibility for labour and the organization of working gangs. In addition, committees are elected to regulate the internal matters of such territorial units.

Agrarian intensification was only possible because, concomitantly with its development, a division of work took place, namely the emergence of full-time artisans (*hawḍo* and *orre*). Without professional craftsmen and their products, the agriculturists would be forced to give up intensified cultivation. A case in point are the Ṣamako, who, after some of their craftsmen-lineages, had died out, shifted largely to cattle-breeding. Craftsmen constitute a socially distinct group (with endogamy rules, avoidance regulations etc.). This has been mostly misinterpreted by anthropologists as scorn. The D. example shows that such an opinion cannot be maintained. The division of work did not lead to marginalization of craftsmen, but to the development of mutually independent groups (tillers and craftsmen).

With the D. there is no religious ceremony of any communal importance without a *hawḍo* or *orre* officiating. The craftsmen are mostly

Dullay market, in the foreground a boy carrying a roof attachment; photo 1999, courtesy of the author

engaged in ceremonies concerning the whole country, while the lineage-elders are responsible for ancestral duties. Only the *hawḍo* are able to pray directly to god (*haallikko*). Lineage-elders of the agriculturalists, by their genealogical links with the first ancestors, represent the continuity side of the society. The craftsmen with their activities introduce a special dynamic principle into society. In the myths, the first craftsman was a demiurge and his descendants continue to be creative to this day. Through their crafts and their trade connections they bring society in contact with new and stimulating elements from the outside.

Hermann Amborn

Dungur

The archaeological site of D. (ዱንጕር, also Dəngur, lit. Tgn. for 'impassable road; path full of stones') is located on the western edge of the city of ↗Aksum in ↗Təgray. Archaeological investigations led by Salvatore M. Puglisi in 1939 (Puglisi 1941) and then by Francis Anfray in 1966–68 (Anfray 1968 and 1972) indicated the existence of two ancient Aksumite structures, including one interpreted to be a "villa" and "castle", dating to the 6th or rather 7th cent. A.D. (Munro Hay 1989:30f.). In spite of these imposing remains, with appendices revealed by sondages north and east of the "castle", neither the site's function nor its relation to other homogeneous areas are yet clearly understood in detail. In local traditions D. is associated with "the palace of the Queen of Sheba" (↗Makədda).

The "villa" was of typical Aksumite form, 15 m square, with nine rooms, the three central ones (east to west) containing circular column-bases; in the centre of each side, in rough masonry without corner blocks, was a recess or re-entrant and the walls were rebated on the outside (Munro Hay 1989:30).

The "castle", in D. ʿAddi Kilte (about 250 m west of the "villa"), is approximately 3,000 m^3 and is built of stones in mud-mortar, with fine masonry evident in corner blocks and staircases; it included a central edifice, multiple interior courtyards, elaborate staircases, baked-brick ovens and approximately 40 individual rooms. Stone piers that may have served as bases for pillars or crossbeams and the existence of stairwells suggests that it once contained no less than two stories (Anfray 1972:68ff., pls. I, II).

Both structures at D. may have served as élite residences (Anfray 1981): especially the "castle", similar in its general form to what is known of the "palaces" of Täʾak̠a Maryam, ↗Ǝnda Səmʿon and ↗Ǝnda Mikaʾel documented at Aksum by the ↗Deutsche Aksum-Expedition (MHAksum 118–25; Phillippson 2001:273, 379). Such multiple élite complexes were all designed on a symmetrical plan, with blocks of square or rectangular rooms and open courtyards surrounding a central pavilion-like structure built on a raised podium with staircases.

Matthew C. Curtis – Red.

Dye, William McEntyre

D. (b. 26 January 1831, Washington County, PN, d. November 1899, Muskegon, MI) was a US-American colonel in Egyptian service, who played a leading role during the ↗Egyptian-Ethiopian War of 1875–76. A graduate of West Point, he had served in the US army as a Brigadier-General, and in 1868 was a witness in the treaty with the Sioux. In late 1873, he accepted the offer to serve in Egypt in the "Abyssinian Campaign", like around 50 other American officers, most of whom had fought in the Civil War on the Unionist side. D. became the assistant chief of staff of General ↗Loring and was wounded during the battle of ↗Gura^{c} in March 1876.

His book *Moslem Egypt and Christian Abyssinia* (1880) is an important source on the war. His harsh criticism of Loring and Muḥammad Ratīb, the Commander-in-Chief, provoked the publication of an account of the War by Loring himself.

After his return from Egypt in 1879, D. became the chief of police of Washington, D.C., and in 1888, for eleven years, chief military advisor to the Korean government.

Wolbert Smidt

Dyes

D., both local and imported, had a notable impact on Ethiopia's traditional material culture. The earliest references to such ↗colours are in the *Periplus of the Erythraean Sea*. It refers to the import at Adulis of lac, i.e. the Indian red insect dye, perhaps used to beautify women's nails and feet; and of "mallow", or yellow, cloth (Huntingford 1980:22). Imported colour, then as later, thus took two basically different forms: D. for local colouring, and already-coloured material.

D. in one way or another were widely used. Harari and other Muslim men and women often wore red or other brightly-coloured clothing, made from either imported or locally-made cloth (Johnston 1844, vol. 1, 165; HarAeth vol. 1, 364, 385; Burton 1894, vol. 1, 144; vol. 2, 17). Christians of both sexes were garbed mainly in white, but their ሻማ (*šamma*), or wraps, were in many cases adorned with coloured woven borders. These were made from imported thread often unravelled from foreign cloth (Parkyns 1853, vol. 2, 41). Clothes were also dyed black, frequently with earth, as a sign of mourning (HarAeth vol. 3, 161). Monks – and pilgrims – often wore yellow (BeckHuntAlvar 70; BruNile, vol. 5, 372; CecZeila, vol. 1, 293).

Some carpets made from the wool and hair of sheep and goats were locally dyed, red and light blue, but more owed their decoration to the natural colours of white, brown and black sheep (Valentia 1809, vol. 3, 162; Salt 1814:426). Baskets, including መሶብ (*mäsob*) were woven from brightly coloured, locally dyed straw, while the inner roofs of some churches were similarly decorated with coloured reeds (BeckHuntAlvar 337; Burton 1895, vol. 2, 281; Cohen 1920:22). Some wood-work, at least by the 20th cent., was likewise painted in bright hews. Locally tanned, and also imported, leather was often dyed in many different colours, mainly for the production of saddle-cloths (Mérab 1927–29, vol. 3:402). D. were also used as cosmetics: to beautify women's eyes and eyebrows, to brighten, or darken, their hair, and in the tattooing of necks and foreheads, as well as hands and feet (Burton 1895, vol. 2, 17; Mérab 1927–29, vol. 3, 388).

D. employed for colouring in Ethiopia included a wide range of vegetable substances, among them charcoal and soot; crushed stones; and imported chemicals and colours (for recent enumeration s. Strelcyn 1968 and 1973, and Tournerie 1986:31–139.)

Dynasties

The term is used, in Ethiopia as elsewhere, for a succession of rulers, of the same family or line, and, by extension, the historical period in which they lived.

Traditional Ethiopian ↗historiography, for the empire as a whole, recognises six broad dynastic periods (also reflected in the traditional "king lists"; ↗Genealogy):

1) from Adam to Ǝbnä Ḥakim, or ↗Mənilək I;
2) from Ǝbnä Ḥakim to ↗Bazen, whose reign at Aksum coincided with the birth of Christ;
3) from Bazen to the brothers ↗Abrəha and Aṣbəha, the first Aksumite rulers to adopt Christianity;
4) from Abrəha and Aṣbəha to the ↗Zagʷe rulers (of the late 10th cent.);
5) the Zagʷe rulers to *aṣe* ↗Yəkunno Amlak (1270–1285), the first of the Solomonic line;
6) the Solomonic rulers, from Yəkunno Amlak to modern times.

The kings from Ǝbnä Ḥakim to the Zagʷe are known almost exclusively from traditional king lists, which give no details of dynastic relationships. Additional information on Aksumite rulers can, however, be gleaned from their coins (↗Coinage) and ↗inscriptions, but these bear virtually no resemblance to the king lists.

The Zagʷe rulers are conventionally described as a "usurping" dynasty, though three of them, Lalibäla, Yəmraḥannä Krəstos and Nä'akkʷəto Lä'ab, were canonized by the Ethiopian Church. The only other rulers so honoured are Abrəha and Aṣbəha. All five are the subjects of Acts (↗*Gädl*), containing much traditional information.

Traditional historiography claims that Yəkunno Amlak was a descendant of ↗Dəlnaʿod, the last Aksumite king, and hence a descendant of Mənilək I, son of King Solomon and the Queen of Sheba. Yəkunno Amlak was therefore considered the "restorer" of the Solomonic line. This claim is formulated in the ↗*Kəbrä nägäśt*, and affirmed in many chronicles. There is, however, no evidence that Aksumite rulers ever claimed Solomonic descent, or that there was in fact a continuous blood lineage from Solomon and the Queen of Sheba to Emperor ↗Ḫaylä Śəllase I. Yəkunno Amlak is therefore now generally considered by scholars as the founder of an entirely new D. (TadTChurch 66ff.).

The reigns of the post-Zagʷe period are better documented than those of earlier monarchs. Most Solomonic rulers produced chronicles. These begin with *aṣe* ↗ʿAmdä Ṣəyon I, and continue almost without interruption to Empress ↗Zäwditu (d. 1930). Royal descent was not always from father to son, but to almost anyone within the "Solomonic" family, though usually, but not necessarily, by male descent. Only one interruption to the ruling line is recognized: the usurper ↗Yosṭos (1711–16). Several rulers, such as ↗Bäkaffa, Məntəwwab (↗Bərhan Mogäsa), and her son and grandson may, however, be considered to form a "dynasty within a dynasty".

Though traditional Ethiopian historiography was primarily concerned with imperial rulers, virtually all the polities of the region had their own D. Some were independent; others at times appointed by the imperial state. Such D. included the ↗Walašmaʿ D., founded in Ifat, by *sulṭān* ʿUmar b. Dunyā-huz, in the late 13th cent.; the ʿAdal D. established by *sulṭān* ↗Ṣabraddīn, two centuries later (MaqIlmam); the ↗ʿAlī b. Dā'ūd D. of the late 17th cent., which developed within the city of Harär (Cerulli 1942; Tedeschi in PICES 4); and the ʿAfar D. of *sulṭān* ↗Kāmil ad-Dankālī which was already flourishing in the early 17th cent. Other D. included those of Däwaro, Aräbabni, Bale, Šarka, Därha, and Wälaytta, in the south; Hadiyya and Ǝnnarya, in the south-west; and, in the west, Ǧangäro and Käfa, both founded in the 15th cent., as well as Leqa and Ǧimma, by ↗Bakaree and ↗Abbaa Ǧifaar respectively, in the early 19th cent. (Bieber 1920–23, vol. 1, 1–120).

Local, or subordinate, D. also existed within the Christian state. One of the most remarkable, that of the *wag šum*, or chiefs of ↗Wag, claimed descent and privileges, inherited from the old Zagʷe rulers of the area. Other important D. were those of Šäwa, and Wällo/Yäǧǧu. The former was founded, in the 1690s, by ↗Nägaśi Krəstos Wärädä Qal, whose uninterrupted line ran directly to *nəguś* Śahlä Śəllase of Šäwa (1813–47), and to his grandson, *aṣe* Mənilək II (LevWax 22). The ↗Yäǧǧu D., founded by Gʷangul in the 18th cent., likewise comprised seven rulers, ending with *ras* ↗Ali Alula (d. 1866), the last ruler of Bägemdər prior to *aṣe* ↗Tewodros II (TrIslam 110). Prominent rulers of many other areas, lived and reigned, however, without establishing D. This was the case in Təgray, for example, with such notable figures as *ras* ↗Mika᾿el Səḥul, *ras* ↗Wäldä Śəllase, *däǧǧazmač* ↗Säbagadis Wäldu and *däǧǧazmač* ↗Wəbe Ḫaylä Maryam.

E

Easter ↗ Fasika

Ebana

E. was an early-5th-cent. king of ↗Aksum, known from his ↗coinage alone. This bears, inscribed in Greek on the reverse: *Ebana basileus* ('King E.'). Here he appears wearing a tiara (obv.) or headcloth (rev.), and robes with either the curving V-neck above a round collar or the early version of the humped style, the front part of the V-neck projecting forward to join the similarly projecting collar. His name, formerly misread as *Esbael* or *Anaeb* (due to the blundered impression that also results from palaeographic peculiarities, certain letter forms being used for a variety of alphabetic characters), may be derived from a Semitic word designating a (sacred) stone, yet with a Christian connotation (cf. Mt 3:9, 1 Pet 2:5). Thanks to the large Yemenite hoards buried in the time of ↗Kaleb, E. happens to be the king of whom the most Aksumite-type gold coins are known (more than 700 pieces). However, the number of dies involved in their minting suggests no significantly higher production than under his immediate predecessors or successors. The king's name is written in two halves on the left and right of his head; as on the coins of his predecessor (attributed to Eon or Noe), on the obv. the much debated Greek + BAX + ACA + BAC + CIN (with variants) should be read *basileus* (*choras*) *Abassinōn* ('king of the [land of] Abyssinians'). The frequency of E.'s silver coins lies within normal limits; on the reverse they display a characteristic central lozenge, partially gilded, the extremities of which form a cross-crosslet with the eight letters of the legend *basileus* 'king' interspersed in four groups of two each – thus symbolizing the universal rule of the Christian empire. The contemporary copper coinage was struck anonymously.

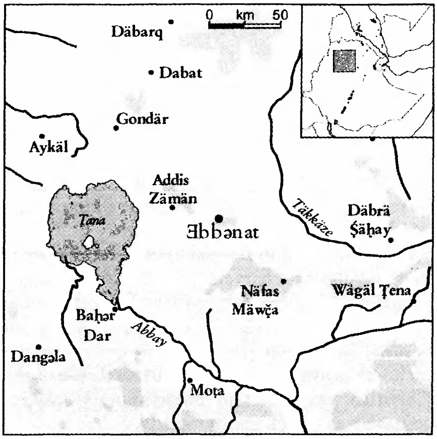
Ebäṭi ↗Dorze

Ǝbbənat

Ǝ. (**እብናት**, 38°2'N, 12°7'E, 2,120 m A.S.L.) is a small town located in Ǝ. *wäräda*, the former Libo *awrağğa*, in southern ↗Gondär. It is the *awrağğa* capital and hosts a major regional market for Libo and the surrounding regions. According to the 2000 Census, the town of Ǝ. has a population of 12,812. With the opening of the Addis Zämän – Däbrä Tabor road, Ǝ. has today become much more accessible by road throughout the year; before this, people had to walk and use pack-animals to reach Ǝ.'s market.

Other than being a regional market centre, very little was known about Ǝ. until 1984, when a feeding-camp/shelter for victims of the 1984/85 Ethiopian ↗famine was established at Ǝ. Ethiopia's largest famine relief camp, it was supported by governmental and non-governmental relief organizations. At the height of the drought period, it is estimated that as many as 60,000 people fleeing Gondär, Wällo and Təgray were sheltered in Ǝ. The camp entered headlines after



the incident of 28–29 April 1985 when Mälaku Täfärra, the party Secretary for the Gondär region, ordered the people to be forcefully ousted and dispsersed (reportedly by gunpoint) and the camp to be burnt down. The negative publicity of the incident created a near governmental crisis in Ethiopia. The camp was retaken in use two weeks later, on 11 May.

Mulatu Wubneh

Ǝbnä Ḥakim ↗Mənilək I

Ǝččäge

Ǝ. (**እጨጌ**) is the title given to the abbot of ↗Däbrä Libanos monastery in Šäwa. It is not clear when and how the title first came into use; most probably, the title is as old as the monastery itself. It is important to point out that Ǝ. is also the title used to designate the administrative head of the ↗Ethiopian Orthodox (Täwaḥədo) Church, the native Ethiopian appointed by the emperor.

According to tradition, the ruler gave this position to the abbot of Däbrä Libanos because of the role Däbrä Libanos's first abbot, *abunä* ↗Täklä Haymanot, played in the establishment or restoration of the Solomonic dynasty in 1270, when *aṣe* ↗Yəkunno Amlak ascended to the throne. In truth, however, this authority lay with the abbot of Däbrä Ḥayq Ǝsṭifanos in the Amhara province – who bore the title ↗*ʿaqqabe säʿat* – long before Däbrä Libanos rose to power, and did so even during the reign of Yəkunno Amlak. It therefore seems more accurate to say that when the centre of political power moved from Amhara to Šäwa so did the centre of church power, with Däbrä Libanos assuming leadership from Däbrä Ḥayq Ǝsṭifanos.

A lavish ceremony bestowed the abbot of Däbrä Libanos, already titled Ǝ. (or **እጨ**, *əččä*), with authority to head the Ethiopian Orthodox Church in a lavish ceremony. The directive of the ceremony, a copy of which we have from the time of *aṣe* ↗Śärṣä Dəngəl (1563–96) and which is largely corroborated by the royal chronicles, is detailed as follows: "When the Ǝ. is installed, the king arrays him, at (the royal upper chamber called) *rasge bet*, with two calico shirts, a *šabori/šobari* shirt, (a pair of) white trousers, and a *šämäṭ* (white?) turban. The king sits in a tent; and they seat the (Ǝ.) on a throne before the king, with a carpet for his feet. The king, for his part, wraps a sash round the head of the Ǝ. and crowns him (with a golden coronet). The Ǝ. blesses the king and rises up (to leave. As he is leaving,) the king accompanies him as far as the gate of his palace. The Ǝ. is mounted on the king's mule and is seen off with drum and flute, (accompanied) by a multitude of people ... If a court case is ever brought against the Ǝ. or he brings one, (the proceedings) take place while he is sitting. He is daily provided at his house by the palace with a gelded steer, mead, and bread" (Varenbergh 1915–16:20, 36; Guidi 1922:80).

Once officially installed, the Ǝ. was authorized to administer matters relating to the national church. It is possible that the word used to designate the abbot was just *əččä*, to which the suffix ↗*ge* was then added (as it was added to ↗*aṣe*) when the abbot took on the leadership of the entire church.

Unlike that of the metropolitan, the office of the Ǝ. was not conferred by divine or ritual ordination. The Ǝ. was a political appointee who could be replaced at the will of the monarch. Although conflicts between metropolitans (↗*Abun*; ↗*Pappas*) and Ǝ. did occur, in general the two authorities worked together harmoniously because their spheres of authority were relatively well defined and understood. The role of the metropolitan was limited to sacramental matters, such as the anointing of monarchs, the ordination of priests and deacons, and the consecration of ↗*tabot*s, whereas administrative responsibilities and dealing with issues such as the settlement of disputes among the clergy, including theological controversies, were handled by the Ǝ. who, because he was a native who spoke the language, could better understand the issues and follow the arguments. Although rare, there have in fact been instances in which a theological stand of the metropolitan was questioned by the monks and the Ǝ. and ultimately rejected.

Kidanä Wäldä Kəfle claims (KWKDic 457, cf. "Ḥaṣ̌ege") that the Ǝ. played the role of bishop (anointing, ordaining and consecrating) in the metropolitan's absence. However, there are no historical sources, other than the Vita of *abunä* Täklä Haymanot, corroborating this assertion even though the church was without a metropolitan for extended periods of time (s. ↗*Eppisqoppos*).

The decision to place a native Ethiopian in the position of the Ǝ. may have resulted from the fact that the metropolitan, the titular head of the Ethiopian Orthodox Church, being a Copt from Egypt, rarely spoke the local language and was therefore unable to communicate with the local Christian community, including the clergy and the palace. Seen this way, the position of Ǝ. was an alternative to a native metropolitan.

It is also possible to see the Church as a state within the Ethiopian state, requiring a ruler for its domain – an Ǝ. – parallel to the emperor, *aṣege*, "ruler of the land". In fact, the two titles could be etymologically related as they are similar in significance. Because having an Ǝ. was as much a sign of autonomy as having a monarch, it might be expected that the head of a politically autonomous region would appoint a separate Ǝ. to administer the church in his/her dominion. This is precisely what the region of ↗Lasta did in the 17th cent.

The close association of the abbot (Ǝ.) of Däbrä Libanos with the palace, and its practical replacement by the ↗*ʿAqqabe Säʿat*, a title that became purely honorary, seems to have started with the movement of the state's centre to the west (Dämoz, Ǝnfraz and Gondär). The history of the rulers of the Gondärine kingdom shows, furthermore, that the Ǝ "of Däbrä Libanos" could come from any monastery and would reside close to the Royal Palace.

The secular authority associated with the office of Ǝ. has now been unofficially discarded. Since 1951, the head of the Ethiopian Orthodox Täwaḥədo Church has been an ordained native, thus removing the primary reason the post was originally created for.

Getatchew Haile

Ǝč̣č̣äge Bet

Ǝ.B. (**እጨጌ፡ ቤት**) was the name given to the house of the ↗*əč̣č̣äge*, or head of the monks, in ↗Gondär, and by extension to the area around it. This area, which lay west of the palace compound, resembled the district known as Abunä Bet, or area inhabited by the *abun*, or Metropolitan (↗*Abunä*), in that it was under ecclesiastical control. The Ǝ.B., which was surrounded by a high wall, thus constituted a place of ↗asylum, in which criminals were free from both civil jurisdiction and military interference. "No one, even if guilty of murder", could be apprehended in the area, the early 19th-cent. British traveller William Coffin reports. This immunity from trouble made the quarter a desirable locality in which to reside (Pierce 1831, vol. 1, 234). Wilhelm Rüppell stated that many persons of wealth and influence had therefore sought to live in the area (1840:76, 81f.), which, by the early 19th cent., comprised some 200 houses, some of the finest in the city, with a population, we may assume, of around 1,300 inhabitants. The immunity was, however, not alway respected, as Arnauld d'Abbadie noted in the 1840s (AbbSéjour).

Richard Pankhurst

Ecological zones

"Ecology" has a complex and sometimes confusing meaning. Today, its highest acceptance as a scientific term might be found in a most general definition as being "the interactions of organisms with each other, their biotic and abiotic environments, and the outcome of these interactions" (Dictionary of Human Geography 2000:193). "Ecological zones" is based rather on a geo-ecological than a bio-ecological idea of modelling the space: "zones" is used for subdivisions of a geographical space, in which physical conditions are similar or equal (s. Leser 1997:1019). E.z. are primarily defined by a certain rainfall and temperature regime. But locally, geological, pedological and hydrological features can modify the ecological conditions to a certain extent.

Beyond a strictly physical definition of E.z. ecological zones, Ethiopia has a well-accepted model of so-called "agro-ecological zones", corresponding largely with traditional concepts of space. Within this model the physical conditions, especially the climate (and altitude) of a certain area, generate a typical vegetation and – dependent on this – a typical or dominant land-use in the area.

The broad variety of E.z. in Ethiopia specifically results from its topography, i.e. lowlands lying even under sea level up to mountains of more than 4,600 m A.S.L. There are basically six (agro-)ecological zones in Ethiopia (Hurni 1995: 9): **በረሃ**, *bäräha* [also **በረኻ**, *bäräk̲a*] (below 500 m A.S.L.; less than 300 mm average amount of rainfall), ↗*qʷälla* (500 m to 1,500 m A.S.L.; 300 mm to 1,400 mm), ↗*wäyna däga* (1,500 m to 2,300 m A.S.L.; 300 to 2,200 mm), ↗*däga* (2,300 m to 3,200 m A.S.L.; 900 to 2,200 mm), **ውርጭ** (*wərč̣*, lit. 'frost'; 3,200 m to 3,700 m A.S.L.; 900 mm to 2,200 mm), high *wərč̣* (more than 3,700 m A.S.L.; more than 1,400 mm). In Šäwa there are also the E.z. of *meda* and gʷ*assa*. Depending on the mean annual rainfall and evaporation, some of these zones can be subdivided into two or even three different sub-zones (dry/moist/wet).

Soils and natural vegetation: from *bäräha* to high *wərč̣*, soils change from yellow sandy (*bäräha*, *qʷälla*) to red (*wäyna däga*), brown (*wäyna däga* and *däga*) and black types (*wərč̣*, high *wərč̣*). According to the variations in climate, the natural vegetation varies from ↗Acacia bushes and trees (*bäräha*, *qʷälla*, parts of *wäyna däga*) to cordia, ficus, ↗bamboo (*wäyna däga*), on to ↗juniper, hagenia (↗koso), podocarpus (*däga*) and on to heather, hypericum or St. John's wort (*wərč̣*) and mountain grassland (high *wərč̣*).

From the lowest to the highest zones the mean temperatures differ greatly, in the Səmen Mountains even snowfall being possible. Rainfall for the most part is relatively high in the middle and upper zones because of topographical effects. In general, the annual rainfall is higher in southern and western than in northern Ethiopia. The variation of temperatures throughout the year increases from south to north, as does the rainfall variability. Hence, the risk of drought is higher in the northern than in the southern highlands, but is generally high in the semi-arid and arid lowlands (*bäräha* and *qʷälla*). Besides the desert and semi-desert climates, there exists quite a significant difference between dry and rainy season, varying regionally from about four to eight months per annum.

Land-use can be divided mainly into two types: 1) agriculture, first and foremost on the basis of the "ox-plough-complex", 2) cattle-breeding, partly as a nomadic or semi-nomadic system, sometimes combined with certain basic agriculture. In general, land-use is linked heavily to the surrounding physical environment (water supply, temperatures, soils), but there are various modifications of this because of ethnic/cultural or politico-economical particularities.

1) Agriculture is predominantly found between ca. 1,000 m and 3,500 m A.S.L. (*qʷälla* up to *wərč̣*). The most productive zones are *wäyna däga* and the lower parts of the *däga*, with two or even three harvests a year. Irrigation in general is not very common. Irrigated land often can be found in areas with low annual rainfall and/or high evaporation (especially *qʷälla* and *bäräha*), particularly along riversides and in valleys, and also in areas with market-orientated production. The most important crops are: cotton, fruits, sugar-cane (irrigated *bäräha* and *qʷälla*), sorghum, ↗*ṭəf* (*qʷälla*), maize, ↗*ənsät*, ↗coffee, various cereals and vegetables (*wäyna däga*), barley, wheat, pulses (*däga*), barley (*wərč̣*).

2) Cattle-breeding is – beyond the agricultural areas, where it is an integrating part of the system – concentrated in the less productive parts of the lowlands (*bäräha*, *qʷälla*) and highlands (*wərč̣* and high *wərč̣*). In the highlands, small cattle, especially sheep, are dominant.

Economy

Economy until 1941

Ethiopian civilization, throughout its recorded history, was essentially rural, and based on a subsistence E. ↗Pastoralism and ↗plough agriculture emerged at an early period. The existence of pastoralism is evinced by the representation of zebu, or hump-back and other cattle in prehistoric rock paintings, while the emergence of ↗agriculture is evident from the depiction of sprigs of wheat or other cereals on Aksumite ↗currency (Phillipson 1998:33–49).

Significant urban settlements, notably at ↗Yǝḥa, can, however, be traced to at least half a millennium B.C. The ensuing Aksumite period witnessed the issue of currency for several centuries, as well as the development of an ancient market E. This was based primarily on the export of ↗ivory and ↗gold and the import of textiles and manufactured goods, as well as on the use of money, partly for local trade, but, more importantly perhaps, for international commerce, as evident from the use on the coins of Greek, then the principal language of Red Sea trade (↗Coinage; MHAksum 166–95).

There is, however, every reason to suppose that barter predominated in the Aksumite kingdom, and the early 6th cent. Egyptian merchant and monk ↗Cosmas Indicopleustes reported the use, in the gold-producing areas to the west of Aksum, of "primitive money", notably bars of ↗salt (↗*Amole*) and pieces of iron (↗Currency, traditional). Both articles continued to circulate instead of money up to the early 20th cent. (PankIntro 16–44).

Evidence for the earlier Solomonic period, embodied in the writings of the Portuguese traveller Francisco Alvares and others, indicates that Ethiopia was then largely self-sufficient, whether regarded from the point of view of the empire as a whole, the province, the village, or even the individual household. This was scarcely surprising in view of the mountainous character of the land, and the existence of several large malaria-infested rivers, impassable except at the height of the dry season. Spatial differences, notably between areas of different elevation, nevertheless led to a certain amount of local trade, carried out largely in small local markets, usually held weekly. There was, in addition, a sizeable import-export trade, based on caravans plying between the interior and the coast (and the Sudan frontier). This commerce was carried out mainly by travelling merchants, mostly Muslims (↗Ǧäbärti), who organized long-distance caravans, and bought and sold at the country's more important weekly fairs.

Many remarkably beautiful artefacts, including icons, crosses and illustrated manuscripts, were produced for the church, as well as for a succession of emperors, who took a keen interest in innovation. ↗Handicraft activity as a whole tended, however, to be limited. It was largely carried out by ↗marginalized people, mainly ↗blacksmiths, ↗weavers and potters (↗pottery), many drawn from religious minorities, among them Muslims and ↗Betä Ǝsraʾel.

Agricultural prosperity and the growth of a market economy were hampered throughout this period by three harmful institutions: 1) "moving capitals", which militated against urbanization, 2) an unpaid soldiery, which constituted a serious and highly destructive burden on the countryside, and 3) local customs posts, which acted as an impediment to long-distance commercial trade. The establishment of ↗Gondär as the capital in 1636 led to some urbanization and the resultant commercialization of agriculture in the area. The advent, in the late 18th cent., of the silver ↗Maria Theresia thaler, which came in the course of trade also to some extent facilitated commerce throughout most of the country. On the other hand, frequent civil wars, particularly after the decline of the ↗Gondärine kingdom in the mid-18th cent., were detrimental to the E., as was the hostile foreign control of the coast (PankIntro; AbPrince 44–72).

Despite the great transformation in international transport resulting from the European industrial revolution and some upsurge in trade, the Ethiopian E. remained remarkably static throughout most of the 19th cent. Progress was seriously hampered by internal disunity and political instability as well as by fighting against external enemies: the ↗British in 1867/68, the ↗Egyptians in 1875/76, the ↗Mahdists in the late 1880s and the Italians, in 1895/96. The coming of the Italians to ↗Massawa in 1885, and the establishment of the Italian colony of ↗Eritrea in 1890 led, however, to some modernization and internationalization of the E. in the north and a significant growth in the Italian-dominated import-export trade, which extended across the frontier into independent Ethiopia itself. Foreign imports also increased in the east of the country, where there was growing importation, much of it by Indian merchants in the Harär area, of American and other foreign factory-produced textiles (↗India, relations with). Trade with the rich gold- and ivory-producing lands south of the Blue Nile was also expanded. This period was likewise noted for a considerable, and expanding, import of ↗fire-arms, as well as by extensive hunting of wild ↗animals and the export of their ivory and skins.

Modernization in the country at large was subsequently facilitated by the innovations of the ↗Mənilək II period, as well as by the foundation in 1887, and the subsequent steady growth of a new capital, ↗Addis Abäba, which exercised a hitherto unprecedented demand for foreign imports, and services. The last decades of the century witnessed tax reform and the curtailing of looting by the soldiers, as well at the introduction of a new, multi-denominational currency, postage stamps and the beginning of a ↗postal system and ↗telegraphic and telephonic systems. Reforms of importance to economic life in the early 20th cent. included the founding of the first bank, the Bank of Abyssinia (↗Banking system), the opening of the first modern schools, notably the Mənilək II School, and, above all, the establishment of the Addis Abäba–Djibouti ↗railway, which gave a considerable fillip to trade (PankEcon 478–86).

Further, if limited, modernization of the economy took place in the ↗Zäwditu–↗Ḫaylä Śəllase I period, which was characterized by more road-building, the coming of the radio and the aeroplane, and increasing numbers of cars and lorries, as well as by the curtailing of local customs posts, the limited monetarization of the tax structure (↗Taxation), the development of some commercialized agriculture, particularly along the railway line, and the first beginnings of light industry: the establishing of a few small brick and alcoholic-drink factories (↗Drinks), the founding of a printing-press (↗Printing), tailoring with the help of Singer sewing machines and the setting up of bakeries, hotels, restaurants etc. These developments were, however, materially hindered by fluctuations in the world price of silver, which rendered the Maria Theresia thaler an unsatisfactory currency, and later by the Great Economic Depression of the 1930s (PankEcon 486ff., 696–715).

Despite the above innovations, Ethiopia, on the eve of the Italian fascist invasion, was, however, still an overwhelmingly agricultural country. Its economy was predominantly based on subsistence and characterized by barter, "primitive money", weekly markets and long-distance caravans, but with only a small, though emergent, modern sector.

The ensuing Fascist occupation, which for the first time brought the greater part of the whole Horn of Africa under one administration (↗Africa Orientale Italiana), was accompanied by unprecedented government expenditure and investment. The immediate need for "pacification", as well as long-term economic considerations, caused the Italian government to devote an excessive part of its budget to road-building, on which for a time as many as 60,000 Italian workmen were engaged. The basis of an empire-wide road network was thus established, but at the expense of gravely restricting most other fields of economic activity. The need to cater for a growing Italian population, which exceeded 130,000, led to the construction of numerous "European-type" houses in Addis Abäba and the main regional capitals. ↗Urbanization was thus greatly accelerated on the basis of strict racial segregation. Some 20,000 Ethiopian citizens of the capital were moved to a specially designated "native quarter"; the movement of the remainder was, however, arrested by the outbreak of the European war. A policy of large-scale European settlement by Italian peasants and workers was envisaged, but was largely frustrated, in part due to military opposition by the Ethiopian patriots, and in part on account of the Fascist administration's near bankruptcy. Attempts to replace the silver Maria Theresia thaler by Italian paper money, the xenophobic expulsion of long-established Indian merchants and the establishment of highly bureaucratic, and corrupt, state trading corporations led to a serious disruption of economic activity (Haile Mariam Larebo 1994; Pankhurst 1971b).

Richard Pankhurst

Modern economy

After 1941 Ethiopia's E. continued to be based mainly on agriculture and in some parts of the country on pastoralism. The networks of local and regional markets stayed to become the main means of distribution of trade goods. Ethiopia's main exports to the rest of the world were dominated by cereals and pulses in the immediate post-war years till they were overtaken by ↗coffee later. In 1944 Ethiopia exported about 33,000 tons of cereals and pulses, which more than doubled to 67,000 in 1946 and 148,000 tons two years later in 1948. Cereals alone constituted a little less than half of this export and reached about 10 % of total exports at its peak (cp. Addis Ababa Chamber of Commerce 1954). The difficulties of the agricultural sector in terms of supplying sufficient food for its increasing population started to be more and more apparent in the last decade of the imperial regime, culminating in the ↗famine of 1972/73, and have been going downhill since then. Currently Ethiopia faces a food deficit estimated at more than 25 % of its minimum requirement at the best of times, or an average of about 700,000 tons of food every year.

Shortly after the end of occupation, in 1944–45, the imperial government, with technical support from the "United States Technical Project Mission in Ethiopia" elaborated a ten year "program of industrial development" with the aim of accelerating economic growth and development in a wide area of economic activity. The programme included exploitation of the country's water resources (particularly in the Lake Ṭana and Blue Nile area) to foster agricultural development and the power requirements for industrialization, a five year programme for agricultural development, a plan for improvement in infrastructure (particularly roads, telecommunication and the ↗ᶜAsäb port development) and an elaborate ten-year plan for the expansion of education. Although Ethiopia did not get most of the resources it needed to implement this plan, it nonetheless served as the first clear attempt at establishing a long-term development strategy (subsequently a series of 5-year-plans was elaborated).

The partial implementation of some of the elements of this programme, along with detailed policy guidelines to encourage domestic and foreign private investment in all areas, the modernization of administration and the justice system, and other similar measures contributed to an impressive economic performance in the first decade after the war. Productive activity, interrupted by the war, revived both in agriculture and industry. A number of industrial enterprises were established, largely by foreign interests. Partly owing to the improvements in communications and largely because of the continuation of the Second World War in other parts of the world, which generated a very high international demand for primary products, Ethiopia's exports rose steadily, thereby facilitating essential imports and creating a generally favourable balance-of-payments position. Still, broadly speaking, this period can be characterized as a period of political consolidation and economic reconstruction. By the end of the 1940s no more than 63 industrial establishments were operational, with an estimated total capital of 16 million Ethiopian *bərr* and employing a little less than 5,800 persons (approximate numbers; Eshetu Chole 2004b:ch. 3).

Ten years after the implementation of this first programme, the structure of production in the country has changed very little. In 1954, agriculture constituted about 75 % of Ethiopia's Gross National Product (GNP), while industry accounted for about 6 % and services accounted for the remaining 19 % of national output. The combined foreign-trade sector was about 18 % of GDP, of which exports account for about 9.2 % and imports about 8.8 % of GDP. Earnings per capita or the income of the average Ethiopian in 1954 was about 102 Ethiopian dollars per year. This is roughly equivalent to about 277 *bərr* or about US$ 112 in 1980/81 constant prices. In terms of employment, in 1954 about 90 % of the Ethiopian active labour force was living in rural areas, engaged in agricultural activity, while the remaining 10 % lived in urban areas, engaged in various non-agricultural activities, of which over 8 % is involved in the service sector (exchange rate: at that time, one US-$ was slightly above two Ethiopian dollars [changed to Ethiopian ↗*bərr* later; ↗Currency]).

The 1950s showed a much better industrial performance and can be characterized as the origins of Ethiopian industrialization. Between 1953 and 1957 alone, manufacturing production nearly doubled, while industrial employment increased by more than 40 % (Eshetu Chole 2004a: 35). Gross output in manufacturing grew by an impressive rate of 15.8 % per year in 1951–60 (CSO 1963), while the broad industry category was growing by 12.5 % per year in 1954–59. This is actually the highest growth rate registered since systematic data has started to be collected. Exports at this time were also growing at a healthy 8.8 % per annum, while imports were growing at about 8.4 %, enabling the country to maintain a healthy balance-of-payments position. In addition to manufacturing, the trade and transport sector also registered a healthy performance during this time, growing at an annual average rate of about 11 %. The volume of domestic savings directed to productive purposes and the inflow of foreign investment contributed to this healthy economic performance. Total investment in the second half of the 1950s averaged 80 million Ethiopian *bərr* per year, out of which net investment outside agriculture amounted to 50 million Ethiopian *bərr*. Overall, GDP was growing at about 5 % per year, while population was growing at a moderate rate of about 1.5 %, implying a per-capita output growth of about 2.5 % per annum during the second half of the 1950s.

The second half of the 1950s is also significant, for it was during this period that the First Five Year Plan (FFYP) was prepared and launched. Although the FFYP was prepared in 1954/55 with the help of Yugoslav experts, it was officially launched in 1957 signalizing the first serious attempt to consciously plan the course of the country's economic development. The plan put heavy emphasis in developing the country's infrastructure along with investment in processing industries financed by a combination of foreign capital and government direct investment. Accordingly, of the total investment planned for 1957–61, the plan allotted about 45 % for transport and communications and about 11 % for manufacturing industry. Although the growth in manufacturing output during the plan period was impressive, the sector's performance was short of what was envisaged in the plan even though investment in the sector was much higher than what was envisioned.

The 1960s saw two more five-year plans. The second five-year plan (1963–67) put emphasis in developing the industrial sector, including mining and electricity, along with the development of commercial agriculture and transport. The third five-year plan, again with heavy emphasis on agriculture, was expected to cover the 1968–73 period, although it was later extended by one year and most of the plan targets revised later to a sluggish performance in the beginning of the plan period. Overall manufacturing performance during the first half of the 1960s was quite healthy and similar to the second half the 1950s. According to some estimates, manufacturing output at current prices doubled between 1960–65, while it grew by about 17 % per year in constant prices. Manufacturing employment also grew rather rapidly during this period, increasing from about 28,000 in 1961 to more than 48,000 in 1965 (s. Eshetu Chole 2004a:44). This period also saw a promising growth in commercial agriculture, which continued to register a sharp increase in the second half of the 1960s, only to be snuffed out with a change in government following the 1974 ↗Revolution (↗Provisional Military Administrative Council).

The modest achievement in economic performance during the first two plan periods, however, could not be sustained during the third plan period in the second half of the 1960s and early 70s. Economic performance in all sectors not only failed to reach the plan targets by far, but was significantly lower than what was achieved during the first two plan periods. In the second half of the 1960s, the growth in industrial production was significantly reduced to about half the level of the 1950s growing at about 8 % per annum, which was further reduced to only 5.5 % in 1970–73 at the eve of the fall of the imperial regime. However, exports were actually growing at a much faster rate of 10.9 % per annum during this period mainly because of the export boom of the early 70s. Employment creation in manufacturing was also reduced to a trickle of less than 2,000 jobs per year at a period when larger and larger number of educated youth were joining the labor force. Still, growth in the non-agricultural sector, which showed a per capita income growth of about 4.3 % per year during the entire period of the 1960s and early 1970s was significantly better when compared with the performance of the agricultural sector.

Growth in the agriculture sector slowed down below the rate of growth of population in rural areas. The relatively healthy performance in agriculture registered during the early to mid 1960s following the quick expansion of commercial agriculture could not compensate for the sluggish performance of the predominantly peasant sector, which was stifled by moribund agrarian institutions that simply refused to change. Particularly, the unheeded calls for moderate land reform, which the imperial government simply failed to implement owing to pressures from the conservative landed aristocracy, proved to be the main weakness of the system, that led to its violent overthrow. Average growth in agriculture and allied activities was about 2.3 % per year in the first half and 2.2 % in the second half of the 1960s. It dropped even further to 1.3 % in the final three years of the imperial period from 1971 to 1973. During 1960–73, the last 13 years of the imperial period, value added in agriculture increased by a mere 2.1 % per annum. As a consequence, earnings per capita of the agricultural population declined by about one-tenth of one per cent (0.1 %) per year during these 13 years.

This sluggish performance in the various sectors of the E. combined to provide a weak macroeconomic performance during the 1960s and early 1970s compared to the 1950s. Gross domestic product grew at an average of 3.7 % from 1960–73 while the rate of growth of population significantly increased to 2.2 % per annum, providing rather weak earnings-per-capita growth of about 1.5 % per year during the entire period.

Partly owing to the rather rapid growth in manufacturing in the 1950s and early 1960s and an appreciable expansion of the service sector, there was a small but noticeable change in the structure of production in the 1960s. In 1960/61 agriculture's share in the GDP was reduced to 69.2 %, while industry increased its share from about 6.2 % in 1954 to about 10.8 %. The service sector accounted for the remaining 20 %. By the end of the imperial period in 1972/73, agriculture's share in national output had declined to about 54.6 %, while the share of the industrial sector had more than doubled to 15.4 % of GDP and services jumped to 30 % of gross output.

Despite this modest growth in the share of industry and services in national output, however, there has not been a significant shift in the structure of employment. By the end of the imperial period, over 85 % of the population was still living in rural areas, engaged in agriculture, while the remaining 15 % lived in urban areas, engaged in non-agricultural activities, predominantly in the service sector. The spatial distribution of population between urban and rural areas has remained more or less the same up until now. The significant increase in population during this period from an estimated 17.5 million in 1950 to about 30 million by the end of the imperial period without any meaningful urbanization has meant increasing pressure on the agricultural resources of the country. In addition to the soil degradation (↗environment) resulting from traditional farming practices, population pressure on the rural E. has led to a continuous decline in the available land for cultivation. Per-capita land holding, for example, declined from about 0.28 hectares in 1960/61 to 0.13 hectare in 1979/80. It is this absence of alternative employment for the growing rural population, combined with the absence of meaningful modernization of the sector that made life increasingly more difficult for the Ethiopian peasant population and made a growing fraction of the rural population dependent on food aid for its mere survival.

The inability of the government to implement political and economic reforms, particularly in relation to the institutional rigidities that suffocated the agricultural sector – culminating in the embarrassing famine of 1972/73 – led to the overthrow of the imperial regime. The desperate rural condition, combined with weak overall economic performance, generated a simmering dissatisfaction among the population in general and an open revolt among the radical intelligentsia in particular. The *Därg* regime (↗Provisional Military Administration Council), taking power in 1974, promised faster economic growth and structural transformation. Prosperity for the masses was to be achieved via a radical land reform and a state-led industrialization drive along the lines pursued by the Soviet Union (↗Russia, relations with) and the socialist Eastern Bloc. Unfortunately for Ethiopia, economic growth and structural transformation proved to be elusive. The Ethiopian E. deteriorated from bad to worse in the 1970s and 80s.

In the 17 years of the *Därg* era, economic growth declined to 1.9 % per year, while population was growing at about 2.8 % per year, reducing earnings per capita by 0.9 % annually. Although the radical land-reform programme of the *Därg* provided usufruct rights to peasants and was expected to encourage agricultural production, the associated socialist policies of fixing agricultural prices at a low level to provide cheap food for the urban population and support "socialist industrialization" and the quota system that forced peasants to supply their produce to state trading agencies, proved to be more powerful disincentives to agricultural production. Growth in agricultural production during the entire *Därg* period was only 0.6 % per year, while the agrarian population was increasing at a very high rate of 2.8 %, leading to a decline in rural earnings per capita of about 2.2 % per year during the entire 17 years of its rule. The embarrassing famine of 1972/73, which was used by the *Därg* as an indictment against the imperial regime, resurfaced with vengeance in the infamous 1984/85 famine that killed over a million peasants. The promised structural transformation of the E. did not materialize either. By the end of the *Därg* period, agriculture still dominated economic activity despite its weak performance. Although there were attempts at state-led industrialization during this period, the 3.6 % annual growth in the value added of the industrial sector was less than half what was obtained during the imperial period. In fact, considering almost any economic indicator, the *Därg* period was an unmitigated disaster for the Ethiopian E. With the break-up of the Soviet Union and the collapse of international socialism, the *Därg* introduced all kinds of reforms in its "mixed E." policy in 1990. However, these reforms were too little and certainly too late to save the government from demise in 1991.

Economic performance improved quite a bit with a change in government in 1991. The new government of the Ethiopian People's Revolutionary Democratic Front (EPRDF) implemented a number of market-friendly reforms and reversed a number of the suffocating policies and practices of the *Därg* era, including abolishing the quota-delivery system in agriculture, lifting the ceiling on private investment and even venturing into the privatization of some of the state-owned enterprises. New policies were introduced to encourage private investment with a package of incentives that were broadly similar to the incentives provided by the imperial government in the 1960s. The government also issued a broad development strategy known as Agriculture Development Led Industrialization (ADLI) to highlight its commitment to increase productivity in the agriculture sector as the core of its development programme. The government, however, maintained the land policy of the *Därg* by keeping ownership of urban and rural land exclusively to the state. Instead of introducing institutional reforms associated with land ownership, the government sought to increase agricultural output and productivity by implementing a massive extension programme that provides modern technology (particularly fertilizers and improved seeds) to small-holder farmers.

These reforms did help in improving economic performance, but not significantly enough to address the key problem of the structural rigidity of the Ethiopian E. Agricultural output increased by about 1.7 % per annum between 1991 and 2003, which helped to slow down the rate of decline in per-capita agricultural output, but failed to push it to a positive territory. Despite strong efforts by the government to improve the agricultural sector, the growth rate in agriculture was slower during this period compared with what was achieved in the last 13 years of the imperial period. Per-capita output in agriculture continued to decline by about 1 % per year during this period. The growth in industrial production also recovered marginally to 5.6 % from the 3.6 % registered during the *Därg* period, although it was significantly lower than what was achieved during the imperial period.

Two notable but interrelated improvements in investment and the foreign-trade sector can be observed. The government's ability successfully to mobilize foreign funds in the form of foreign aid and loans has enabled the E. to increase its gross domestic investment compared with the previous two regimes. The foreign-trade sector has also expanded quite significantly during the EPRDF period. Gross fixed investment as a percentage of GDP has increased from around 12.5 % during the three decades since the 1960s to over 16 % during the 13 years of the EPRDF period. However, as alluded to earlier, this increase in investment was not financed from domestic sources. Gross domestic savings decreased from over 11 % during the imperial period to about 6.3 % during the *Därg*, further declining to a mere 4.1 % during the EPRDF era. A combination of the ready availability of foreign finance helped the growth of imports, while an adjustment in the exchange rate among other liberalization measures helped the expansion of exports. Exports as a percentage of GDP increased to about 15 % in 2001/02, while imports grew to an enormous 33.8 % of GDP in 2001/02, compared with a high of 11 % in the early 1970s and about 12 % by the end of the *Därg* period. Such a huge expansion of imports without a commensurate increase in exports has meant a deterioration in the balance-of-payments position of the country.

Considering the key issue of structural change, the Ethiopian E. has made little progress. In 1950 90 % of the estimated 17.5 million population was making a difficult living in subsistence agriculture. Over 50 years later, in 2002, the population has increased to over 65 million and 85 % of this population still lives in subsistence agriculture with significantly depleted natural resources. In real terms, with earnings per capita of 273 *bərr*, the average Ethiopian is not better off than in 1954 when per capita income was 277 *bərr*. More significantly, the earnings per capita for the agricultural population in 2001/02 were only 133 *bərr* per year in 1980/81 prices or about 12 U.S. cents per day at today's prices.

Despite numerous attempts by succeeding governments at structural transformation over the past half century, the basic features of the economy largely remained the same. Lack of structural change in agriculture combined with high population growth has made a once ↗food-surplus country into a nation that requires continuous food aid for the survival of a significant portion of its massive peasant population.

↗Agriculture; ↗Trade

Economy of the Colonia Eritrea

Italian colonialism in Eritrea proved to be contradictory as regards the colonizers' attitude towards the traditional socio-economic structure of the population. The pre-colonial economic power of local chiefs and nobles, based on taxation and land rental, was slightly reduced. On the one hand, the colonial system of monetary taxation preserved the share of tributes that the chiefs collected from the peasantry. At the same time, the colonial government limited the confiscation of land, especially in the plateau, because of the fear of native rebellions, thus respecting property rights. On the other hand, the official abolition of slavery contributed to lessening the obligations that serfs were compelled to fulfil towards their masters. However, although increased economic opportunities became available to serfs during Italian colonization, the pattern of social relationship between serfs and masters was not deeply affected.

In fact, Italians tried to integrate the natives into a superimposed capitalist colonial system, without restructuring the basis of the traditional socio-economic system. The Italians imposed in Eritrea a centralized economic system based on the exploitation of raw materials and on commerce. Until the 1930s, the colonizers devoted their main efforts to agriculture. But, as Eritrea proved to be a resource-poor country, both private and state capital investments were always lacking. The agricultural legislation, passed in 1903–09 and revised in 1926 and 1931, on the one hand, respected the traditional communal land-holding system (↗Land tenure; ↗*Däsʾa*) on the plateau, but suppressed kinship ownership (↗*Rəst*), thus promoting the birth of an individual private form of land possession. On the other hand, the colonial state defined the rural areas that had to be considered government lands (↗Terra demaniale) and offered them in concession in order to develop capitalistic mechanized farming, especially in the eastern and western lowlands.

The Italians encouraged pre-colonial subsistence farming on the plateau, while they introduced veterinary medicine to improve the health and productivity of livestock and tried to encourage horticulture and fruit-growing. Land expropriations hit Eritrean peasants who practised traditional farming, preventing them from fulfilling their fiscal duties, so that many peasants had to work as waged rural labourers for Italian settlers (e.g., in the concession of

↗ᶜEla Bärᶜəd). From 1926 the colonial government decided to forbid further confiscation on the highland and to limit the number of farming concessions in the lowlands, which were meant to produce new export-oriented crops, such as cotton and coffee. In 1931 Eritreans were granted concessions because the colonial state hoped to avoid the scantiness of Italian settlers and to increase the poor record of agricultural productivity. However, the expansion of capitalistic agriculture, as in the Täsänäy dam (20,000 ha), was unsuccessful, restrained by the modest contribution of Italian public capital, as well as by the shortage of confiscated lands (from 1907 to 1939, the lands granted in concession decreased from 6,483 to 4,479 ha in the plateau, while the decrease in the lowlands ranged from 4,569 to 1,564 ha). In 1941 the cultivated lands in the whole colony amounted to 53,930 ha, with a total output of 28,950 tons. In fact, despite the livestock's improvement, Eritrea was never self-sufficient, either in foodstuffs or in cotton textiles depending on external trade.

About 60 % of the total trade of the colony was with Italy and was essentially based on the exchange between Eritrean raw materials and Italian industrial products. The terms of trade were unequal, as Italian products were protected by the *ad valorem* tax. Commercial relations with the neighbouring countries involved Ethiopia, the Sudan and Saudi Arabia. Italy considered northern Ethiopia as belonging to her economic sphere of influence and the commercial importance of Eritrea consisted in draining a considerable share of Ethiopian import/export trades, about 25 %. In any case, the lack of the commercial balance of Eritrea was striking, as exports represented 37 % of the terms of trade in 1925, declining to 25 % in 1935. Local public revenues were only sufficient to meet in part the administrative expenses that were therefore covered by annual fixed subsidies from the government of Rome (about 22,5 million lire for the period 1929–33).

Eritrea essentially represented for the metropolis a reservoir of resources for the colonial army. Recruitment into the auxiliary troops was voluntary, elevated ranks, high salaries and privileges – i.e. exemption from traditional duties and pensions – being offered. Eritrean soldiers were appreciated for their loyalty and skills and were recruited for the military pacification of other Italian possessions: they served in Somalia from 1906 and in Libya from 1912 and 1932. Regarding the social effects of the recruitment, it appears clear – from demographic evidence – that it determined a shortage of labour that was resolved by the hiring of northern Ethiopian and Yemenite immigrants.

Until the beginning of the 1930s the industries in Eritrea only 56 consisted of business institutions, mainly connected with the processing of raw materials. Capitalistic industrial development was limited and salt-mining in Massawa and ᶜAsäb proved to be one of the few profitable extractive industries. According to the protectionist economic policy, Italian private capital invested in Eritrea demanded concessionary rights and was encouraged through duty exemptions. Nevertheless, concession companies invested the bulk of their capital in trade rather than in production or in the exploitation of raw-material resources. For a more suitable exploitation of the colony's resources, the Italians established a telecommunication system and built the necessary infrastructures for a well-developed transport system: telegraph, postal and telephone systems and an extended rail and road network (354 km for a total investment of 100 million lire; ↗Railways). This communication network connected the urban centres of Eritrea and allowed new forms of mobility for the population.

These public works were spurred when Italy decided to conquer Ethiopia. Thanks to the strategic positions, Eritrea was a suitable military springboard and, from 1932, preparations for war were continuous. Besides, there had been political manoeuvring to gain the support of northern Ethiopians since the late 1920s. After the Ethiopian conquest, Eritrea was joined to Ethiopia and to ↗Italian Somaliland to form the ↗Africa Orientale Italiana (AOI). 'Greater Eritrea' (including Təgray) became a centre of a flourishing war-economy. However, during the following British occupation (↗British Military Administration) and the ↗Ethiopian-Eritrean Federation, Eritrean industry witnessed continuous decline (more cp. the article ↗Eritrea).

Ecumenical dialogue

The ↗Ethiopian Orthodox Täwaḥədo Church has been a full member of the World Council of Churches (WCC) since its inauguration in Amsterdam in 1948. However, it has only been active in the ecumenical movement within the family of the Oriental Orthodox Churches. Each member of this group of independent churches – Coptic, Armenian, Syriac, Ethiopian and Indian (Malankara) – is in communion with each other and has as its common theological basis the rejection of the Christological teaching of the Council of ↗Chalcedon (451 A.D.).

Under the auspices of *aṣe* ↗Ḫaylä Śəllase I, for the first time in history the heads of these churches came together in the year 1965 in Addis Abäba. This initiated a process of collaboration on all ecumenical levels.

In the context of the WCC, the Faith and Order Commission paved the way for ecumenical encounter between theologians of the Byzantine and Oriental Churches. A series of four unofficial conversations took place at Aarhus (1964), Bristol (1967), Geneva (1970) and Addis Abäba (1971). Agreed statements on ↗Christology were produced in the first three of these meetings, while the last one dealt mainly with the condemnation of false doctrines. In 1985 an official Joint Committee for Theological Dialogue between the two Church families was constituted. Its work subsequently resulted in official Christological Agreements in 1989 and 1990. Since 1993 they have focused on practical implications on the way towards unity.

In 1971 the Pro Oriente Foundation (↗Austria, relations with) gathered Catholic and Oriental Orthodox theologians for the first non-official consultation and this led to a common Christological formula. Further consultations on various ecclesiological issues have been held in Vienna in 1971, 1973, 1976, 1978 and 1988. Alongside these consultations, official visits took place: Patriarch *abunä* ↗Täklä Haymanot met Pope John Paul II at the Vatican in 1981, as did Patriarch *abunä* Ṗawlos in 1993. So far no official theological agreement has been achieved between the Ethiopian and the Roman Catholic Church.

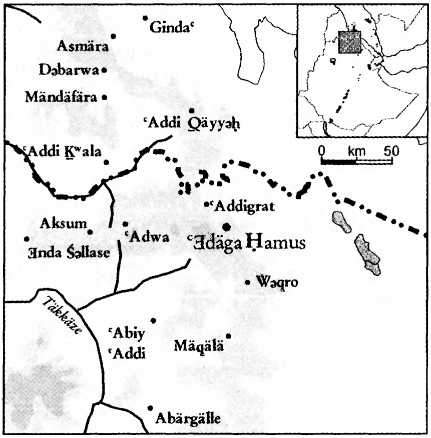
ʿƎdäga Ḥamus

The town of ʿƎ.Ḥ. (**ዕዳጋ፡ ሓሙስ**, 14°10' 60" N, 39°34' 0" E) is located in the ʿAgamä region of northern Təgray approximately 20 km south-east of ʿAddigrat at an elevation of about 2,660 m A.S.L. ↗Aksumite and possible pre-Aksumite cultural-period sites and ancient rock-cut tombs have been documented in the immediate vicinity of ʿƎ.Ḥ. An Aksumite building with cut stone architectural features underlies the church of Maryam Ṭəhot at ʿƎ.Ḥ. In the area surrounding ʿƎ.Ḥ. there is a number of important historic ↗rock-hewn churches, including, among others, Ǝnda Maryam Ṣəyon, Saʿət Maryam, Tähaqot Maryam Ṣəyon, Lähəlen Maryam Ṣəyon and



the famous church of ↗Maryam Dängälat southwest of ᶜƎ.Ḥ.

The role of the town of ᶜƎ.Ḥ. in the Italian army's invasion of Təgray in 1895–96 is described by Oreste ↗Baratieri (1898). During the 1935 invasion, *däǧǧazmač* ↗Ḫaylä Śəllase Gugsa submitted to Emilio de ↗Bono at ᶜƎ.Ḥ.

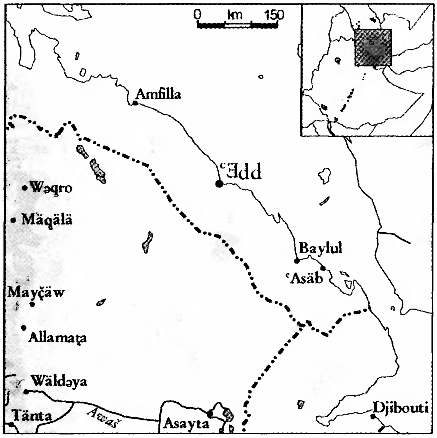
ᶜƎdd

ᶜƎ. (**ዕዲ**, or ᶜIddī, ᶜAfar spelling: Ciddi) is a Red-Sea port, lying in the southern region of the Red Sea coast (sub-zone of central Dankali) between Tiᶜo in the north and ↗Baylūl and ↗ᶜAsäb in the south.

The ancient and medieval history of the Red-Sea port of ᶜƎ. is unclear. It is very difficult to tell when it was first settled and who its first settlers were. However, according to the oral tradition, among the oldest ᶜAfar subgroups on the ᶜƎ. coast and the hinterland were the ᶜAdola and Bur Eali. They survived on fishing and trade with the Yemen (Aden, Mokha, Hodeida) and were supposed to have constructed boats for these purposes (Ǧamāladdīn – Hāšim 1997: 442). It is known that ᶜƎ. was a port at least 500 to 600 years before the arrival of the Portuguese in the area in the 16th cent., as the first mentions of the trading community there date back to the 8th cent. Later, the port lost its importance and soon disappeared from history, to be replaced by other ᶜAfar commercial centres such as the Dahlak Islands, Massawa, Zula in the north and Raḥayta, Baylūl, ᶜAsäb and Tağūra in the south.



According to popular ᶜAfar belief, the name ᶜƎ. is said to be a corruption of the ᶜAfar name *ᶜidde* for 'sand', given to the port by the Portuguese when they arrived at ᶜƎ. in the 16th cent. – either by mistake or because the port of ᶜƎ. was surrounded by lots of sands.

The importance of the port of ᶜƎ. was due to its proximity to northern Ethiopia (Təgray province) and its location on the route to the ᶜAfar hinterland. ᶜƎ. was also connected to the ↗ᶜAgamä region of Təgray by a caravan route and continuously supplyed Ethiopia with different goods, especially salt from the surrounding areas, which was vital to Ethiopia's economy (AbPrince 4).

The political situation of the Red-Sea coast from the late 18th cent., especially after the Egyptian expansion, the growth of European interest, and the revival of trade in the area, renewed ᶜƎ.'s importance. In the 1840s French agents claimed that they had bought the port; however, the claim was not supported. In 1862 the Turks took control of ᶜƎ. (RubInd 219) and the Egyptians took it over in 1866. Finally, Italians included ᶜƎ. into their possessions in 1885. However, no development took place beyond the appointment of traditional chiefs as salaried colonial officials (s. KilHDic 170). During the "Dankalia" offensive in May 1991, ᶜƎ. was conquered by the forces of the ↗Eritrean People's Liberation Front (Fontrier 1999).

The population of the city is small and consists mostly of older people, as younger people migrated to ᶜAsäb, Djibouti and the Yemen. ᶜƎ. enjoys a certain popularity among tourists.

Ǝddər

Ǝ. (Gurage, Amh. etc. **እድር**) is a term referring to associations of mutual help. Originally Ǝ. were established to organize the ↗burial ceremonies of its members and support of the bereaved. In the context of urban migration Ǝ. developed into a voluntary multifunctional institution of self-help and solidarity.

The ↗Gurage and neighbouring groups, who already knew institutions similar to Ǝ. as elements of their ↗*seera*, were the first to introduce Ǝ. into ↗Addis Abäba society. The burial-Ǝ. probably acquired new functions after the Italian occupation. Ǝ., in combination and sometimes amalgamation with other systems of mutual help, such as ↗*ʿəqqub* and ↗*maḫbär*, became an instrument for integrating migrants into the multi-ethnic urban society, for the establishment of neighbourhood networks, and for the continuation of ethnicity-based solidarity.

In the process of ↗urbanization the model of Ǝ. was adapted almost all over Ethiopia. The term "Ǝ." became a very large category for a variety of urban forms of mutual help organizations with different cultural origins. Associations of occupational groups are sometimes labelled as Ǝ. as well. The number of members can vary from under 100 to more than 1,000 people. An Ǝ. is sometimes ethnically or religiously heterogenous, the degree of which, however, differs as well as the number of its functions. Many Ǝ. are based more on vicinity than kinship, but in other cases the term is used for an urban "clan-like" organization, continuing functions of the traditional rural society and its council of elders including jurisdiction and mediation, preservation of oral traditions and religious duties. In such a case, ties to the original homeland are strong and often include development activities in the rural area. For self-development some Ǝ. even promote road-construction and the establishment of new schools and clinics. Kinship-based, religiously linked, territorial and neighbourhood-based, as well as occupational Ǝ. may all function as an urban pressure-group.

Every member has to pay a certain amount of money monthly to the Ǝ. In cases of death, sickness, house-fires, accidents and other kinds of misfortune, the Ǝ. distributes money for the support of the victims, e.g., the closest relatives of the deceased. In defined cases, such as death of a member, an extra fee is collected from all members for the arrangement of the funeral. In addition to these payments, all members have to attend the burial. Under certain circumstances the Ǝ. also helps with man-power and material, such as kitchenware and tents for family meetings. Anyone who disrespects the regulations of the Ǝ. is charged with a fine and in instances of repeated infringement faces other social sanctions or even exclusion.

Modern Ǝ. are registered at the municipality with their written regulations. The highest body of the Ǝ. is the general assembly of all members, whose decisions are conducted by the executive committee. Originally full membership was limited to men, wives being only indirect members. In kin-based Ǝ., one reason for this was that the wives, due to exogamy, were considered external to the group. Today, some change can be observed in the position of women: in many Ǝ. they form their own sub-committees for addressing their own issues, but also those on behalf of the whole Ǝ., e.g. organizing food for Ǝ. events.

Increasingly throughout the late 1950s and 1960s, Ǝ. became associated with certain industries or bureaucracies, such as those in private manufacturing and government ministries to provide insurance, workers' compensation and even strike-funds. "The solidarity created by these [institutional] Ǝ.", Killion (1985:147) contends, "formed the basis for workers' organizations and action against their employers", from which the nucleus of the leadership and membership of legal labour unions developed after the 1960 ↗coup d'état.

Besides manufacturing, institutional Ǝ. were fairly common in government ministries and private firms, yet collectively they accounted for only a fraction of the self-help associations present in Ethiopia. The others were the ethnically defined ("tribal") Ǝ. and community Ǝ. The latter became ubiquitous in every neighborhood.

During the 17 years of the *Därg* dictatorship, 1974–91, institutional and ethnically defined Ǝ. were not tolerated. Among the first victims of Mängəśtu Ḫaylä Maryam's purges were the labour unions, anything that hinted of organized labour was routed out. Ironically, institutional Ǝ. survived and even flourished in government offices and in the military, which suggests how much confidence those most loyal to the regime had in it. Ethnically defined Ǝ., or more accurately **መረዳጃ፡ ማህበር** (*märrädağa maḫbär*, 'self-help association'), were considered too threatening to Mängəśtu. Organizations or associations

Ǝddər meeting in Gore (Šeka); photo by Wener Jürgen Lange, courtesy of the Frobenius Institut, Frankfurt am Main (37–La 001–33)

that developed ethnic-political consciousness were considered subversive.

The history of Ǝ. reflects two distinct changes after 1984: first, its spread into the countryside, second, its imitated of formal sector services such as insurance in the urban environment. During the famine of 1984, peasants were forced to leave their homes and migrate to food-distribution centres and towns; in doing so they lost the network of family and community institutions that assisted them in difficult times. So ravaging was the famine that traditional voluntary institutions proved inadequate because the population was either dead or displaced. In other instances knowledge of the same safety-nets were lost to the social memory of the population. Admittedly, some region-specific voluntary associations remained, but to a large extent younger generations were forced to invent or adapt different strategies. In this light, the adoption of Ǝ. took place in Təgray, Wällo and parts of northern Šäwa, where younger peasants simply adapted Ǝ., with which they had become familiar while in food-distribution camps, to fit rural conditions.

To elaborate, Ǝ. made their way into the countryside from the overcrowded camps encircling food-distribution centres. What had been small towns became ever-expanding camps of tens of thousands of displaced people. Although chaotic in appearance to the outsider, these camps developed their own structure and organization. The camps were essentially administered by Ethiopian educated urbanites, who imposed norms with which they were familiar. One component of this was Ǝ. to help with burials, bereavement and the list of other functions mentioned above (Baker 1994:152-71).

When donor fatigue set in ca. 1986–87, healthier peasants returned to their communities, bringing with them useful, social-mobilization techniques that they had learned in the camps. In a very real sense, mutual self-help associations, which had originally developed in the countryside as religious *maḫbärs* and were adapted and formalized as Ǝ. in the urban environment, returned to the countryside only after the traditional safety-nets, perhaps including some of the progenitors of Ǝ., were forgotten or found inadequate to deal with changing conditions. While this example discusses the situation in northern Ethiopia, crisis conditions brought about by weather, war, pandemics and population dislocation racked Ethiopia through the 1980s and 1990s, causing much the same process to repeat itself in different parts of the country, as the growing literature on peasant responses clearly demonstrates (for geographical distribution s. papers presented at "The Ethiopian Society of Sociologists, Social Workers, and Anthropologists").

In the urban setting, Ǝ. expanded their services, thereby attracting additional members. In the 1990s, the concept of assisting members encountering hardship was expanded and Ǝ. became what was tantamount to insurance companies covering such items as: medical expenses, loss of property and short-term disabilities. The "Ethiopian Teachers Association Iddir [Ǝ.]" and one run by employees of the Telecommunications Authority have accrued significant capital reserves and have bridged the gap between the formal and informal sectors in two ways: first, by offering insurance-company-type services, and second by depositing their capital in the National Bank (in the case of the "Telecommunications Authority Iddir [Ǝ.]" that amounted to 12 million *bərr*), thus tying the two sectors together (Tirfe Mammo 1999:193-94). The Teachers' and Telecommunications' Ǝ., which may be the largest, illustrates a growing trend in 21st-cent. Ethiopia.

Eden, Robert Anthony

Sir Anthony E. (b. 12 June 1897, County Durham, d. 14 January 1977, Wiltshire) was a British politician and Member of Parliament.

E. attended Sandroyd School in Eton and Christchurch in Oxford. In 1923, he was elected to Parliament and, in June 1935, he became minister without portfolio for League of Nation's Affairs. After Italy invaded Ethiopia, E. maintained that the League should apply sanctions against Rome. During the war, he repeatedly said that he would welcome the reappearance of an independent Ethiopia and would recognize *aṣe* Ḫaylä Śəllase's claim to the throne. However, on 4 February 1941, E., who had become Foreign Secretary, told Ḫaylä Śəllase that Ethiopia's independence would be restored, but that Britain would offer "temporary measures of guidance and control". Thus, on 6 April 1941, London approved the establishment of the British Military Administration in Ethiopia. On 31 January 1942, Britain and Ethiopia concluded an Agreement and Military Convention that recognized the latter's independence, but placed many restrictions on its sovereignty.

Thomas P. Ofcansky

Edessa

E. was the Greek name of a town in northern Mesopotamia, in native Syriac called Orhāy, in Arabic ar-Ruhā (or ar-Ruhāʾ), nowadays known as Urfa in the Turkish province of Diyarbakır.

Founded (or re-founded) by the early Seleucids, who gave Orhāy the name of the old Macedonian capital, E. later became the capital of the small state of Osrhoene. In the early 3rd cent. A.D. Christianity became the official religion of Osrhoene. A widespread legend, known also in Ethiopia, claims that King ↗Abgar V Ukkāmā had already exchanged letters with Jesus Christ and acknowledged him as the Son of God, and that the Mandylion, a portrait of Jesus, that was preserved in E., had been painted in the course of these events. From the 4th cent. on, E. was the centre of Syriac-speaking Christianity.

In 639 E. fell to the Muslim armies. The Mandylion was handed over to the Byzantines in 942 with the approval of Caliph Muttaqī-billāh in return for 200 Muslim prisoners. From 1098 to 1144 E. was ruled by the Crusaders as the "County of Edessa". In 1146 the town was destroyed by Nūraddīn Zanǧī (Mālik al-ʿĀdil) after the Crusaders tried to regain it. Only in the Ottoman period was the town rebuilt.

The view expressed by certain scholars, e.g., Cerulli (CerLett 209), Sergew Hable Sellassie (SerHist 273), Witakowski (1989–90:195) and, with some reservations, by Ferenc (1985:261), that E. was so dear to the Ethiopians that they named an Ethiopian town after it, i.e. Roḥa (later renamed ↗Lalibäla), is problematic. The model of Roḥa/Lalibäla was Jerusalem (van Donzel 1996, 1998), and it seems that the Abgar legend became known in Ethiopia only at a later date (but see GuiSLett 76f.). The similarity of Arabic *ar-Ruhā* and Ethiopian *Roḥa* is probably mere coincidence.

Stefan Weninger

Education

Traditional Christian education

Traditional E. in Christian Ethiopia was the domain of the ↗Ethiopian Orthodox Täwaḥədo Church. As Gəʿəz was a dead language that was used for liturgical and literary purposes, it was necessary to study it and to maintain an elaborate educational system. It consisted of church schools of various levels: 1. the so-called ↗*nəbab bet* ('House of reading'); 2. the ↗*qəddase bet* ('Liturgy House'); 3. the ↗*zema bet* ('School of chanting'); 4. the ↗*qəne bet* ('School of poetry'); and 5. the ↗*mäṣḥaf bet* ('School of exegesis').

House of reading

The *Nəbab bet* was an entry-level school that existed in practically every parish near the church. Its pupils were boys, numbering from 10 to 30, who entered this school between the ages of five and seven and attended lessons twice a day (except Saturdays, Sundays and holidays). In the morning (from 8 to 12 a.m.) they studied reading and writing, beginning with the alphabet (↗*Abugida* and *Hahu*), and in the afternoon (from 2 to 5 p.m.) recited the most-popular prayers and hymns, such as ↗*Mälkəʾa Maryam* and ↗*Mälkəʾa Iyyäsus*. The goal was the command of reading, and the curriculum ended with the Psalter, which the pupils finally learned by heart. This is probably why they were called ደቀ፡ መዝሙር (*däqqä mäzmur*, 'children of the Psalter'). They practised writing on sheep's shoulder-blades, because parchment was too expensive. These studies were completed in some two or three years and crowned with a family celebration, in which the teacher was rewarded with a cow or sheep and the pupil with new clothes (Ǝnbaqom Qalä Wäld 1964/65:9).

Liturgy house

Those who sought an ecclesiastic career entered the next school, the *qəddase bet*. Such schools functioned at local churches, where a teacher (usually a graduate of a *zema bet*, a certified specialist in liturgy) taught the duties of deacon and priest. The books which a student had to learn by heart were: *Mäṣḥafä* ↗*qəddase* with 14 ↗Anaphoras used in the Ethiopian Church, *Mäṣḥafä* ↗*säʿatat*, *Mäṣḥafä* ↗*krəstənna*, *Mäṣḥafä* ↗*qändil*, *Mäṣḥafä* ↗*gənzät* and some other liturgical works. This knowledge was supported by everyday practice during church services. As a rule, the entire E. in the *qəddase bet* was completed within one year and graduates were then ready to be ordained as deacons or priests.

The Church also needed specialists in other fields: ↗*däbtära* for choral chanting ↗*zema*, experts in ecclesiastical poetry ↗*qəne*, in the ↗Calendar, in the ecclesiastical ↗Canon, in patristic studies and ↗exegesis. These were taught at higher levels, *zema bet*, *qəne bet* and *mäṣḥaf bet*. Usually these schools were few and scattered all over the country, so an aspirant had to leave home for a long time, sometimes for ever, and to become a wandering student (የቆሎ፡ ተማሪ, *yäqollo tämari*, lit. '*qollo* student'). Such students, dressed in sheep- or goat-skin, living by begging, with *qollo* (fried cereals) their main food, left their native district in groups of three or five and assumed new names to hide from their parents and to protect themselves from evil spirits (Ǝnbaqom Qalä Wäld 1964/65:21).

School of chanting

The chanting schools were the next stage in E. The *zema bet* schools of ↗Bägemdər were considered the best. They were headed by one teacher – ↗*märigeta* – who divided students into separate groups. The first studied the ↗*Ṣomä dəggwa* and the ↗*Məʿəraf*, their E. usually taking three years; the second specialized in ↗*Dəggʷa*, also for three years; the third group learnt ↗*Zəmmare* and ↗*Mäwaśəʾt*, which usually took two years (Habtä Maryam Wärqənäh 1969/70:74). All students learnt the system of notation ↗*mäläkkät*. Those who had mastered ↗*qum zema* hymns usually chose to continue their studies and master the art of choral singing (↗*Aqʷaqʷam*) in one of the schools in ↗Gondär. After graduating from a school of chanting, a student would not be referred to as a *tämari* any more, but as a ድጓ፡ አድራሽ (*dəggʷa addəraš*, 'accomplished in *dəggʷa*').

School of poetry

The best *qəne bet* schools were those in the province of ↗Goǧǧam; the most-famous ones sometimes attracted up to 200 students simultaneously (Ǝnbaqom Qalä Wäld 1964/65:50). Only a *dəggʷa addəraš* could study there. It was here that the students obtained their knowledge of Gəʿəz grammar and vocabulary and began to understand the texts they had had to memorize at previous levels. At first the teacher explained to his students the meaning of the next holy day which should be the theme for their verses and prescribed the necessary form and melody. After a day or two they presented their compositions and received the teacher's criticism. To stimulate poetic inspiration, some students took አብሾ (*abšo*), a powder of *Datura stramonium* seeds mixed with honey, which had a hallucinogenic effect (Haile Gabriel Dagne 1971:9). It usually took some four or five years to learn all forms of religious poetry.

School of exegesis

Probably one-tenth of the graduates of a *qəne bet* thereafter entered a *mäṣḥaf bet*, which had four faculties: 1. commenting the ↗Old Testament (ብሉይ፡ ኪዳን, *Bəluy kidan*); 2. commenting the ↗New Testament (ሐዲስ፡ ኪዳን, *Ḥaddis kidan*); 3. commenting the patristic literature (ሊቃውንት, *liqawənt*) and 4. study of monastic canons and writings (መነኰሳት, *mänäkʷäsat*). At the patristic-literature faculty the following books were studied: ↗*Qerəllos*; Commentary of ↗John Chrysostom on Paul's Epistle to the Hebrews; ↗*Haymanotä abäw* and ↗*Fətḥa nägäśt*. The students of the same faculty spent half a year on studying the ↗calendar and ↗computus, using ↗*Baḥrä ḥassab* and ↗*Märḥa ʿəwwur*. The third book on computus, ↗*Abušakər*, was seldom studied. At the monastic-canons faculty three books invariably were studied and commented upon: ↗*Arägawi Mänfäsawi* by John Saba, *Mar Yəsḥaq* by ↗Isaac of Nineveh and the ↗*Filkəsyos*. A graduate from the school of exegesis enjoyed considerable authority as a traditional scholar (↗*Liq*) and could obtain a high post, both in the ecclesiastical and the court hierarchy. Such an opportunity was one of the motives for many to live half of their life (up to 30 years) as a wandering student.

Mädḫane ʿAläm church school, Gondär: the head teacher *liqä liqawənt* Mänkər Makʷännən (d. 1996) with students; photo 1993, courtesy of Michael Gervers

There are many positions specific to traditional church schools. A ሊቀ፡ ጉባኤ (*liqä gubaʾe*) is in charge of teachers' salaries and pupils' regular rations, as well as other financial matters. His deputy is known as መጋቤ፡ ሥርዓት (*mäggabe śərʿat*). A ሊቀ፡ አርድእት (*liqä ardəʾət*) is in charge of pupils, their discipline and the quality of their learning. The teachers of the alphabet and the Psalter are called, respectively, መጋቤ፡ ሕፃናት (*mäggabe ḥəṣ́anat*) and መጋቤ፡ ላእካን (*mäggabe laʾəkan*). The teachers of the liturgy are called መጋቤ፡ ኅሩያን (*mäggabe ḫəruyan*); while those of *zema* are called መጋቤ፡ ስብሐት (*mäggabe səbḥat*). The teachers of liturgical *aqʷaqʷam* dance are መጋቤ፡ ሐዋዝ፡ ስብሐት (*mäggabe ḥawaz səbḥat*); *qəne* teachers are called መጋቤ፡ ምስጢር (*mäggabe məsṭir*); the professors of patristic and ascetic books are መጋቤ፡ ምክር (*mäggabe məkr*); the teachers of *Haymanotä abäw*, *Qerəllos* and *Fətḥa nägäśt* are called ሊቀ፡ ማእምራን (*liqä maʿəmran*) or መጋቤ፡ ማእምራን (*mäggabe maʿəmran*); the teachers of O.T. and N.T. books are respectively መጋቤ፡ ብሉይ (*mäggabe bəluy*) and መጋቤ፡ ሐዲስ (*mäggabe ḥaddis*). Professors who have mastered all the fields of traditional learning are called አራት፡ ዓይን (*arat ʿayn*).

Sevir Chernetsov

Islamic traditional education

General remarks

The basic purpose of Islamic E. is the transgenerational transmission of its religious, moral and behavioural precepts, as well as the strengthening of the knowledge and of the practice of Islamic tenets within the community. In connection with the social dimensions of Islamic dogma, Islamic educational activities aim at keeping alive the Islamic scale of values, the Islamic conception of licit (*ḥalāl*) and illicit (*ḥarām*), and the Islamic legal framework (↗*šarīʿa*) within which the everyday relationships among the faithful are developed. The training of the teachers and scholars who work practically in the different sections of the educational system is another object of traditional Islamic E. (cp. Hussein Ahmed in PICES 9, 97).

Traditional Islamic E. is generally structured in several different levels of learning. The elementary level is based on the Qurʾān, which is taught to children who have to learn as many verses from the sacred text as possible: they are usually taught the Arabic alphabet and then they start to read and write on their small boards (↗*lawḥ*) sections of the Qurʾān in Arabic, which they recite all together at the same time, following the schoolmaster's voice and trying to memorize it (*ḥifẓ al-qurʾān*; Haile Gabriel Dagne, in BendLang 349–53; Hussein Ahmed 1988:99; Leslau 1965:172–81; Abdurahman Garad — Wagner 1998:71–78). Courses in Arabic writing and reading for children are held in local languages (Haile Gabriel Dagne 1976:351; s. Qurʾānic extracts in Mittwoch 1906).

Elementary courses in Qurʾān usually finish with joyous ceremonies which underline the importance of the knowledge of the sacred text and its language for every Muslim (e.g., Harär: *qalam mäsbär* [Leslau 1965:181f.]; Wällo: *ḥitma* [Hussein Ahmed, in PICES 9, 99f.]). These elementary schools are named differently according to the region: *dugsi* in Somali (Dizionario Somalo-Italiano 1985:197; Mohamed Mohamed-Abdi 2003), *qurʾān gey* in Harär (Abdulnasir Edris 1992; Abdurahman Garad — Wagner 1998:69; *gē qurān gē* in Leslau 1965:172), *tehaǧǧi* in Wällo (but s. Hussein Ahmed, in PICES 9, 100), *meǧilis Qurʾān* in Harär, Ǧimma and Arsi, *šayḫi* in some urban areas (Haile Gabriel Dagne, in BendLang 350) and *ḥalawi* in Asmära (Yassin M. Aberra 1983–84:219). All these local names correspond to the general Arabic term *kuttāb*, which also has its local variations. A great part of the average faithful does not go any further this first step of learning.

Those who wish or are able to continue, attend higher-level courses which take them into the *mare magnum* of Islamic traditional heritage: after *ḥifẓ al-qurʾān*, usually Law (*fiqh*) is taught. The *uṣūl al-fiqh* ('sources of the Law'), *tawḥīd* (theology), *manṭiq* (logic), *naḥw* (Arabic grammar), *tafsīr* (Qurʾānic exegesis) and *ḥadīṯ* (Prophetic sayings) are other fields of study for more advanced learning, which necessarily imply a sound knowledge of classical Arabic, at least to be able to read texts and handbooks in *ʿarabīya fuṣḥā*. Seldom, perhaps under influence of modern E., some notions of mathematics, geometry and geography are added to these subjects (Abdurahman Garad — Wagner 1998:79).

Among those who manage to deepen their knowledge in one or more of these subjects, future teachers will come up. "Higher Islamic schools" to teach them can be called *ilm* (Arab. *ʿilm*). In Harär the institution is called *Kabīrgār*. For students coming from outside the city, there is a higher-level school, the *masgid gale* (Haile Gabriel Dagne, in BendLang 353; Hussein Ahmed, in PICES 9, 100f.; Abdulnasir Edris 1992:26–29, 31f.; Abdurahman Garad — Wagner 1998:79–83).

In Ethiopia and Eritrea, the lack of a lasting support by a stable state and the apparent slightness of financial support by the indegenous population, which was so important in founding educational centres elsewhere in the Islamic world, especially through the ↗*waqf* system, reduced the possibility of a diffused flourishing of Islamic educational institutions and limited the capability of the existing teaching-centres. In connection with this situation, one should consider the fact that Muslim teachers in Ethiopia were not regularly paid for their work, for which they usually received only symbolic rewards, and they had to earn their living mostly from other activities, such as trade and agriculture (Hussein Ahmed, in PICES 9, 97; Leslau 1965:188f.). This was a handicap for the implementation of a fully developed educational system. Centres of learning thus became characterized by the experience and knowledge of the main teacher who was working there and who, as a matter of fact, could offer advanced courses only in one branch of knowledge.

As a consequence of these structural limits in the educational organization, advanced students and learned men had to travel to find the best teacher in the field they wished to research. During their travels, students had to live on alms or to look for the support of a wealthy family (Hussein Ahmed, in PICES 9, 102). Some even studied abroad: the *madrasa* in Zabīd and Taᶜizz in the Yemen were probably the easiest to attend, but students and scholars from the whole of the Horn made their way also to the Ḥaramayn (Mekka and Medina), to al-Azhar University in Cairo and to the Omayyad Mosque in Damascus (TriIslam 62, 138). This situation has only partially changed in modern times.

Historical data

Due to the scanty historical evidence currently at our disposal, it is difficult to ascertain when and where Islamic educational institutions were first established in Ethiopia and Eritrea.

We may surmise that on the ↗Dahlak islands and in coastal towns, as well as in other Islamic communities in the interior, Muslims organized schools for their children since the very beginning of their presence.

We may imagine that, since the earlier times of the Islamic presence, sessions to teach the Qurʾān to little children were most probably held under the guidance of a school instructor who, using the local language, exerted his efforts making pupils read the Arabic text of Qurʾān aloud and memorize it, as often as possible in a way that was probably not so different from that of contemporary Qurʾānic schools of the area.

A difference between schools operating in towns (*megala*) and those of the countryside (*bādiya*) is supposed by Haile Gabriel Dagne (in BendLang 349f.), who underlines the decisive role of the teaching of the Arabic of the Qurʾān in traditional Islamic syllabi. As for pastoral groups, the form of the itinerant school (*xer* in Somali) can be considered as one of the early venues for the penetration of Islamic culture and values among nomadic tribes (Abdisalam Yassin Mohamed 1979–80:127:9f.).

Orally transmitted traditions keep some more detailed information about the origin of Islamic schools, linking it with the activities of saints and mystical brotherhoods.

For rural Wällo, Hussein Ahmed (2001: 91f.) suggests that Islamic E. found its original establishment in a multifunctional institution called *zāwiya*, which is the word that in other Islamic countries refers to a holy man's shrine. The *zāwiya* in Wällo was a "prayer house, a study and meditation centre", a venue where the faithful held religious meetings and ceremonies and a resting-place for travellers. These kinds of Islamic centres of religious practice and E. were very often attached to ṣūfī centres. Chronologically they preceded the foundation of mosques, which were, moreover, typical of urban Islamic life.

Among the Somalis of the Ogaden it is related that the famous saint ᶜUmar Barhadle created a peculiar way to teach the Qurʾān in Arabic script to Somali children (Lewis 1966; Abdisalam Yassin Mohamed 1979/80; Mohamed Mohamed-Abdi 2003), using a Somali notation for the Arabic short vowels.

In Harär, the birth of the first Qurʾānic school is linked with the saint *āw* Sūf Yahya, who came with *šayḫ* Abādir ᶜUmar ar-Riḍā and his 405 companions from Arabia in 1216 and founded the first *qurʾān gēy* in a place called Āw Qurʾān gēy or Āw Sūf Yahya, 10 km south-east of the town (Abdulnasir Edris 1992:6).

As for higher E., we may suppose that the basic elements of *fiqh* (Law) were also taught for older and more motivated students since a very early time in the Islamic communities and that some *fuqahāʾ* were able to train their disciples in more advanced learning.

We do have some hints that point to the fact that E. was apparently quite developed in the medieval Islamic states that ruled the southern part of Ethiopia. For the ↗Maḫzūmī sultanate of Šäwa in the 13th cent., Cerulli (1941:20f.) underlined the fact that the presence of a *faqīh* Ibrāhīm ibn al-Ḥasan (d. 1255) bearing the title *of qāḍī al-quḍāt* of Šäwa proves the existence of some individuals versed in the theory of Islamic Law and its juridical casuistic and also working in a

Islamic-founded judicial organization (*qaḍāʾ*). Nothing is known about the personality of Ibrāhīm ibn al-Ḥasan and about his studies and the disciples he might have trained in Šäwa.

It is apparent, in any case, that the Islamic learning-system in medieval Ethiopia was not able to offer all the curriculum up to the highest level. According to al-ᶜUmarī (writing between 1332 and 1338), Muslims living in the seven Islamic sultanates of Ethiopia did not have *madrasas* (TriIslam 73). The tight relationships not only with the learning centres in the Yemen, but also with al-Azhar and Damascus, seems to have filled this lack of higher educational institutions. Additionally, some foreign learned men came to Ethiopia, especially from the Yemen, to teach Muslim communities (Cerulli 1943:288ff.). At the same time many Ethiopian Muslims who wished to deepen their Islamic E. went abroad. The necessity to look for higher E. seems to have pushed Muslims coming from Ethiopia and the whole of the Horn towards the most-renowned Islamic learning centres: al-Azhar in Cairo, where a *riwāq* ('portico') was reserved for them (*riwāq al-ǧabartīyyīn*; ↗Ǧäbärti), and the Omayyad Mosque in Damascus, where in the 14th cent. Muslims from the Horn (*Zayālīᶜa*) owned "a big separate section in the eastern part of the mosque where a water reservoir was" (TriIslam 62; Ibn Baṭṭūṭa 1969:204).

In Yemen the presence of Ethiopian students and of Ethiopian *fuqahāʾ* looking for more specialized training is a well-documented fact. Some of these *fuqahāʾ* came back to their country after they had completed their higher E. and started to teach and to practise as judicial experts.

This was the case with the Ethiopian *faqīh* Mūsā al-Muqriʾ, who went to the Yemen to study Law according to the *Šāfiᶜī* school with *šayḫ* Aḥmad b. Mūsā b. ᶜUǧayl (d. 1291) and *šayḫ* Ismāᶜīl al-Ḥaḍramī (d. 1298), who granted him the *iǧāza* ('permission') permitting him to teach the *Kitāb al-Tanbīh* and the *Kitāb al-Muhaḏḏab* of al-Šīrāzī, two very common handbooks of *Šāfiᶜī fiqh* (Gori 1996:60ff.). On their return to Ethiopia they were strongly supported by *šayḫ* ↗Ḥusayn of Bale, who protected them against the envy of their fellow *fuqahāʾ* of the *Ḥanafī* school and thus facilitated the spread of the *Šāfiᶜī maḏhab.*

The role played by *šayḫ* Ḥusayn of Bale in helping the action of the *faqīh*, is a further witness to the tight relationship between the mystical milieux and E.

As noted, it was and still is a very common pattern that Islamic educational centres come into existence thanks to the efforts made by learned men who frequently were also active members of brotherhoods. Pupils started gathering around the master when he was alive and then, when the saint-founder passed away, they continued to attend courses held at his shrine by his successors as the head of the school. This led to the creation of many centres of Islamic learning and E. throughout Ethiopian Muslim regions, side by side with the shrines of their founders. A great part of these educational establishments are still operating nowadays.

Here we may mention in Wällo (Hussein Ahmed, in PICES 9, 101f.) the centres of Gaddo in Dawway, founded by *muftī* Dāwūd b. Abī Bakr (d. 1818/19), who is said to have studied in Zabīd and to have contributed to the spreading of the *Šāfiᶜī* school of Law; Šonke, where *al-ḥāǧǧ* Ǧawhar b. Ḥaydar (d. 1935) taught; Ǧama Nəgus, Albukko, is linked to the famous scholar *šayḫ* Muḥammad Šātī (d. 1806–07); at Gata in Qallu, *al-ḥāǧǧ* Bušrā ay Muḥammad (d. 1863) was a very renowned teacher; Anna in Rayya was the educational centre of the *qādirī* scholar Ǧamāladdīn Muḥammad (d. 1882), while Dana in Yaǧǧu was another *qādirī* establishment, where Aḥmad b. Ādam (d. 1903) taught. In Gurageland, Qatbare, about 10 km from Wälqiṭe, is an Islamic centre of learning, teaching and religious promotion founded by *šayḫ* ᶜĪsā Ḥamza al-Qatbare (d. 1949), where *tawḥīd* (Islamic theology), *ḥadīṯ* and *fiqh* and also ↗*ḏikr* and *awrād* (mystical practices) were studied.

As for the situation in Harär (↗Education: Islamic Education in Harar) at the end of the 19th cent., Muhammed Mokhtar noticed that primary E. was very well-developed among children, and that Law was also studied by adults under the guidance of advanced teachers in evening special sessions. Other European travellers of the same century were struck by the vast knowledge of Arabic and Qurʾān that Ethiopian Muslims had acquired in their local schools (Bowen 1976:309f.).

Modern situation

For the Muslim communities, the evolution towards a modern organized form of E. is mainly traceable in cities and towns and in higher-level schooling, while rural centres of traditional learning remained more or less unchanged.

Protagonists of this modernist trend were several Muslim learned men who were trained in a traditional way but felt the necessity of a renovation of the educational system. Contact with the contemporary evolution of E. in the Arab world was sometimes decisive in pushing these personages forward on the road of change.

A common characteristic of the modern Islamic E. is the widening of syllabi to include subjects which were unusual in traditional E., but which became useful tools in finding one's way in a quickly developing country. The challenge of Government schools also forced Muslim educators to look for a more competitive range of subjects which had to achieve a balance between the necessity to safeguard the traditional Islamic heritage and that of training proficient and skilful students able to match the requests of the job market and the emergence of new professions. Amharic and English, besides Arabic, started to be taught. Mathematics, geometry and science were also added.

In Addis Abäba the Islamic Council Convention (*Yäʾəslam səməmmənnät maḫbär*) founded a modern school where, in 1926 A.M., the great Muslim scholar *šayḫ sayyid* Mäḥammäd Ṣadəq (d. 1969 A.M.) started teaching Amharic.

In Harär a modern school called *Gey madrasa* was established (apparently as a private school) in 1927 by *kabīr* Kāmil, who had been trained in Egypt. In 1942 the school fell under government control and the teachers were removed (Abdulnasir Edris 1992:33). In 1961 *šayḫ* Abū Bakr ʿUmar opened his school, but it never gained official recognition by the state. Subsequently, *ḥāǧǧī* Ture managed to found the Abādir school, active in Harär, but also in Addis Abäba and among the Harari communities of Dərre Dawa. The Abādir school was recognized by the Ministry of Education. Their curriculum is that of the corresponding classes in Government schools, in addition Qurʾān, *fiqh* and Arabic (Abdulnasir Edris 1992: 35; Abdurahman Garad — Wagner 1998:85–89).

In Asmära, in 1943, the Islamic Institute Šayḫ l-Mahad was founded, its curriculum including science, arithmetic and agriculture. In the city the *awqāf* Council took charge of the supervision and the improvement of the educational system with long term programmes (Yassin M. Aberra 1983/84).

In Däse, in 1938 A.M., the above-mentioned *šayḫ sayyid* Mäḥammäd Ṣadəq obtained from the state 10 ↗*gašša märet* to help Muslim pupils in their studies, especially young girls. He managed to open a modern and organized school next to Šäwa Bärr Mosque, where 1,500 students were given the opportunity to study up to the sixth grade. This Islamic school was the second to be built in Ethiopian Islamic history after Addis Abäba's Islamic Council's school. Besides the traditional religious topics, Amharic, English, mathematics and geography were also taught there. Pupils who had achieved best results at the end of their sixth year of their schooling could be admitted directly into *wäyzäro* Səhən School in Däse.

Alessandro Gori

Islamic education in Harär

In addition to standard modern government schools, there are modern Muslim schools in Harär today which tend to combine religious

Islamic teachings with a modern curriculum, and until very recently traditional ↗Qurʾān schools were also still functioning.

Boys and girls were expected to study the Qurʾān, although for girls the demands were less stringent than for boys. A full study took up to ten years. Poorer families were often not able to send their children to school for the full length of time, since the children had to help at home. However, most of the students had studied at least part of the Qurʾān. Classes took place in the house of the *kabīr*, the Qurʾān teacher, who was also the person who prepared the traditional manuscripts and book bindings. The *kabīr* could delegate the teaching to teachers working under him.

There were two examinations: the *kahfāya* examination after having completed the study of half of the Qurʾān, and the *abaqāra* examination after the study of the full Qurʾān. *Kahfāya* refers to *sūrat al-Kahf* (ch. 38 of the Qurʾān), whose study concludes the first grade of the curriculum; *abaqāra* comes from (*sūrat*) *al-Baqara* (ch. 2 of the Qurʾān) which ends the course.

In addition, a bride had to undergo a Qurʾān examination on her wedding-day. After the *abaqāra* examination and the examination of the bride, the writing pens were ceremonially broken. The ceremony itself is called *qalam masbar* (s. Leslau 1965:181–88). All examinations were connected with festivities and smaller or larger presents to the *kabīr*.

Elisabeth-Dorothea Hecht

Modern education

Formal E. in Ethiopia was carried on for centuries by a system of religious instruction presented by the Ethiopian Orthodox Church and by Islamic traditional E.. Modern E. in Ethiopia started only in the late 19th cent. when *aṣe* Mənilək II permitted foreign Catholic and Protestant missionaries to establish a number of schools. The ↗missions, viewing E. as an effective means of proselytizing, frequently taught in local languages and sent promising students abroad (a practice begun earlier by Mənilək). Later, during the reign of *aṣe* Ḫaylä Śəllase I, the mission schools were required to advance Addis Abäba's view of national unity. In Eritrea, Catholic missions and the ↗Swedish Evangelical Mission (SEM) established a number of schools. The SEM began an English language school in Addis Abäba in 1905 and by 1924 it had established eight schools in Ethiopia. In 1921 the Brothers of Saint Gabriel founded the École Française in Addis Abäba. Other missionary groups that operated schools of note in Ethiopia included the *Bibeltrogna Vanner* (Friends of the Bible), the Seventh-Day Adventist Mission and the United Presbyterian Church of North America. The general public's fear and suspicion of foreigners and the antagonism of Orthodox Church clergy hindered the work of mission schools. Nevertheless, by the time of the Italian invasion in 1935, about 2,000 students were enrolled in denominational schools.

Following the Battle of ʿAdwa in 1896, the failure of the traditional E. system to meet the needs of a modern nation in preparing people for work in statecraft, diplomacy, commerce and industry was apparent. To address this concern, Mənilək II set up the first modern state-sponsored school in 1908 when he established the ↗Mənilək II School in Addis Abäba. The faculty, mainly Egyptian Coptic teachers and a few Ethiopians, used French as the medium of instruction in a curriculum that included French, English, Arabic, Italian, Amharic, Gəʿəz, mathematics, science, physical training and sports. In 1925 Täfäri Mäkʷännən, at that time the Regent, opened the Lycée Tafari Makonnen in Addis Abäba. The principal and teachers were French from the Lebanon and most students were boarders. To finance this educational initiative, *ras* Täfäri established a special E. tax of 6 % on all imports and exports, the first government E. budget. The Regent also sent the most promising boys abroad, most of them at his own expense.

After his coronation as Ḫaylä Śəllase I in 1930, the progress of public E. quickened. The Emperor sought to improve E. because he thought it directly related to the creation of a skilled civil service and to modern and efficient government. A central Ministry of Education and Fine Arts was set up to co-ordinate E. and, in addition to the E. tax, the Ministry received 2 % of the national treasury revenue. In Addis Abäba, Empress ↗Mänän started public E. for girls by founding the Ǝtege Mänän School in 1930, the same year that the ↗Ḫaylä Śəllase I School was established to provide technical and linguistic training. In addition, several elementary schools in Addis Abäba and the provinces were founded between 1908 and 1935. In all, there were 21 government schools with an enrolment of 4,200 students at the time of the Italian invasion.

In Eritrea, the Italian colonists established a variety of racially segregated schools: government and missionary schools for Italian children, traditional Christian and Muslim schools, run by the local people, and Catholic or Protestant schools for the colonial subjects. Elementary level "native schools" were segregated on the basis of ethnicity and religion and were of lower quality. After the 1935 invasion of Ethiopia, the Fascists boasted 33 government schools for Eritreans, although most of them had been hastily organized to impress the outside world with Italy's "civilizing mission".

During the Italian occupation of Ethiopia from 1936 to 1941, the schools of Ethiopia were closed and all meaningful E. for the Ethiopian people was terminated. In addition, the Fascists systematically hunted down and executed educated Ethiopian men and women. According to Sylvia Pankhurst, 75 % of the young graduates and intellectuals were murdered.

After the restoration of Ethiopian independence in 1941, schools reopened, but the ministry faced a shortage of teachers, textbooks and facilities. The government recruited foreign primary and secondary teachers to offset the shortage. The British were a dominant force in the empire's E. in the decade following the end of the Italian occupation. Heads of the schools in Addis Abäba and the important advisers in the Ministry of Education were British. In 1944 the government declared that English would be the medium of instruction for all subjects taught in schools. Two secondary schools were established in Addis Abäba in the 1940s: the Ḫaylä Śəllase I Secondary School in 1943 and the General Wingate Secondary School, a joint venture of the Ethiopian and British governments, in 1946. The Princess Zännäbä Wärq School, the English School, later known as the Sandford School, and the Alliance Française were private schools that opened in Addis Abäba in the early 1940s. In 1944 the first Teacher Training School was founded to prepare Ethiopians for the expanding profession. The ↗Sudan Interior Mission built the first secondary school outside Addis Abäba, the Mädḫanä ʿAläm Academy, in 1948. Lycée Guebre Mariam, managed by the Mission Laïque Française in Addis Abäba, was opened the same year and became one of the most important lycée in Africa. In addition, the Ministry of Education, other governmental departments or private societies operated technical, vocational, and special schools. Most notable of these were the Technical School, founded in 1943; the Commercial School, in 1943; and the Ambo Agricultural School, in 1946. E. received about 20 % of the national budget during the 1940s, the second largest allocation of funds. During this era, the Ministry of Education appointed provincial E. officers to promote the expansion of E. outside the capital. The Education Land Tax Act was promulgated in 1947, earmarking 30 % of the ordinary land tax for E. in the provinces. A short time later, a government secondary school was opened in Harär. By 1952 there were 60,000 students enrolled in 400 primary schools and eleven secondary schools.

Missionary education in the 1920s in a "scuola per indigeni"; Missione Cattolica, Asmära; photo courtesy of Enrico Castelli

After the liberation of Eritrea, the British reorganized or started schools to replace the Italian system of segregated E. By 1950, two years prior to Eritrea's federation with Ethiopia, 59 primary schools and one middle-level school had been set up. English was the medium of instruction in upper grades, while the choice of language in primary schools was left to local committees that favoured Təgrəñña in Christian areas and Arabic in Muslim ones. Between 1955 and 1961, during the time of the federation with Ethiopia, there were 154 Eritrean schools in operation. The federal government set up the Ḫaylä Śəllase I Secondary School and the Eritrean government added a ninth grade to the Prince Makʷännən School in Asmära, the first two secondary-level schools operating in Eritrea.

During the 1950s, the empire made a concerted effort to expand its system of E. The post-war period of reconstruction and improvisation was followed by a time of consolidation and planned expansion. From 1953 till 1955 American advisers under the Point Four Program worked with the Ministry of Education and encouraged Ethiopians to adapt the E. system to the conditions and needs of the Empire. The report of the Long Term Planning Committee under the Vice-Minister of Education became the blueprint for a revitalized system of E. Amharic was made the language of instruction for the first six school years, with English used in the later grades. A new curriculum was drawn up for the secondary schools and textbooks began to be written specifically for Ethiopia. Under Ethiopia's first Five-Year Development Plan (1957–61), which stressed the need for manpower planning, several academic and technical-vocational professional schools were built. Although E. plans were never fully funded, by 1960–61 there were 26 secondary schools, 14 of them in the provinces (with at least one in each of the provincial capitals), including two in Eritrea, which by then had become a province, and 12 in the capital. In the 1960s, 310 mission and privately operated schools with an enrolment of 52,000 supplemented the nation's public school system.

The gains made by Ethiopian E. were put in perspective, however, by the findings of the 1961 UNESCO Conference of African States on the Development of Education, which was held in Addis Abäba. Among other things, the conference pointed out Ethiopia's educational deficits: primary and secondary E. were ranked at the bottom among African nations; there were shortages of schools and teachers, a high drop-out rate and low overall attendance rates. Challenged by these findings, the Ministry of Education developed a new E. policy which remained in effect until 1974 (in the form of a second and third Five-Year Development Plan). The grade structure of schools was reconfigured into six years of elementary school (taught in Amharic), two years of junior-secondary and four years of senior-secondary schooling (taught in English). The curriculum was revised to provide a mix of academic and non-academic subjects and precedence was given to establishing technical-training schools. By the mid-1960s the Ethiopian School-Leaving Certificate had become the only valid secondary-school diploma.

Between 1961 and 1971, the government expanded the public school system more than fourfold and declared universal primary E. a long-range objective. Most of the expansion in buildings and equipment was financed by a series of World Bank loans. In 1971 there were 1,300 primary and secondary schools and 13,000 teachers and enrolment had reached 600,000. During this time the U.S. ↗Peace Corps provided teachers with college degrees for the general, secondary, special and middle schools and increased the ranks of instructors in those schools by 50 %. By 1965, when the Peace Corps' numbers were highest, there were 440 Peace Corps Volunteers teaching in 58 cities and towns, a significant factor in the quality of instruction and in the opening of new schools in the provinces. Some 2,700 students in Ethiopian University Service, a compulsory year of national service between the third and fourth years of college, also taught in the schools from 1964–74. After de Gaulle's visit to Ethiopia (1966), alternative national service volunteers (Volontaires du service national actif or VSNA) were sent to teach French in Ethiopian secondary schools, ca. 700 volunteers in the years 1967–74/75. Expenditures on E. increased from 10 % of total government expenditures in 1968 to 20 % in the early 1970s, but funding remained inadequate. Educational expenditures in Ethiopia as a percentage of the gross national product (1.8 %) were about half that of other African countries.

By 1974, despite efforts by the government to improve the situation, more than 90 % of the population remained illiterate. Primary E. was available to only 12 % of primary school-age children (in 3,196 schools with enrolments of 957,300). Only 1,000,000 students were enrolled in all the nation's schools. The E. system was criticized for being elitist, inflexible and unresponsive to local needs. Educational opportunity was limited to urban areas at the expense of rural areas (55 % of senior secondary schools were in

Eritrea and Šäwa, including Addis Abäba) and the E. system remained inadequately financed. In the early 1970s the Ministry of Education's Education Sector Review addressed many of these concerns and proposed far-reaching educational reform and expansion. Its report was not published until February 1974, however, and was never implemented.

Theodore M. Vestal

Ǝdug ras

Ǝ.r. (**እዱግ፡ ራስ**, also *ḫədug ras*) is the name given to a representative, a substitute or, according to current definitions, a vicar (GuiIohan 347). Thus, the title could properly be translated as the representative of the ↗*ras*. The degree of authority of this charge is, however, not clear: was the Ǝ.r. only a simple representative of the *ras*, like the ↗*bitwäddäd*, or rather a dignitary within the emperor's entourage? The ↗*Śərᶜatä mängəśt* is of little help here since it only refers to a list of the gifts (*mämalğa*) that the different Ǝ.r. had to give to the ruler to purchase a position (Varenbergh 1915–16, §25, 25, 41; Guidi 1922:85). The *Śərᶜatä gəbr* clearly refers to the Ǝ.r. as the organizer of the royal banquet. The **ግራ** (*gəra*) and **ቀኝ** (*qäññ*) Ǝ.r. ('Ǝ.r. of the left' or 'of the right') seem to have been under the charge of the two *bitwäddäds* (Kropp 1988:66). The position was thus twofold, a fact confirmed by the Jesuit Pedro Paez, who wrote that each of them replaced the *bitwäddäds* during their absence (BecRASO II, 52). It is, however, difficult to say if the position evolved like that of the *bitwäddäd*, which became unique in the second half of 16th cent. (Varenbergh 1915–16, §17, 21f., 37f.; Guidi 1922:81f.). In this sense, a ↗*gʷəlt* from 20 April 1626 made by *aṣe* ↗Susənyos to his brother *ras* ↗Səᶜəlä Krəstos specifically refers to two Ǝ., of the right and of the left (BeckHuntAlvar 61, PerChron ch. 76, 222). But it is not possible to identify whom they served. In addition, one of the two, **ዘበርስባሔል** (*zäbärsəbaḥel*), was also **ቃላ፡ ሀጼ** (*qala haṣe*, lit. 'voice of the emperor'), which indicates that he was a dignitary at the service of the ruler (PerChron ch. 91, 245).

In the years 1620–30, the Jesuits Almeida and Mendes confirmed the existence of one (or two?) Ǝ. The first wrote that this charge corresponded to the "president of the *azzaž*" and was a "principal man" (BecRASO VII, 113). Mendes, in turn, commented that the title was like "our president of the palace" (BecRASO XII, 489). The "adugraz" or "adrugaz" of Francisco Alvares (year 1520) did not appear to be specifically attached either to a *bitwäddäd* or to the emperor. As a spokesman of the ruler, this figure also seems to have been in a position to replace the *bitwäddäd* of the right in leading an army (BeckHuntAlvar 266, 385–88, 430, 434). Perhaps this "adrugaz" incorporated two different charges, to serve the *bitwäddäd* and the ruler. Therefore, it can be concluded that Ǝ.r. was at the same time a substitute of the *bitwäddäd* and a representative of the emperor and, as such, one of the most important dignitaries in the court, higher than the ↗*azzaž* in the hierarchy.

Dimitri Toubkis

Eebba

E. is an ↗Oromo custom that may come in the form of a blessing bestowed by a human intermediary, or directly received from god (Venturino – Tablino n.d.). E. may be reciprocal and is closer in meaning to the Hebrew concept of *bᵊrāḵā* than it is to "blessing". E. are uttered at almost every occasion when the peace of men and/or of God might be disturbed, for example, when a group of people meet to eat, to offer an animal or coffee beans for sacrifice (↗*buuna qallaa*), to discuss a serious issue or to perform a ceremony. Spontaneous E. and formally structured E. are both frequent and require verbal reciprocation between the giver or transmitter and the receiver(s). E. are part of that "inner consistency within the local varieties of expression" which, despite the influences from religions of the Book, forms a remarkably homogenous Oromo religious culture (BartOrom; Baxter 1990). The frequency and intensity of E. are such that Oromo societies sometimes appear "to float on a river of prayers and blessings" (Baxter 1978:155). The most wide-spread E. formulas are *guddaḍu* 'grow big', *gabbaḍu* 'be prosperous' and *balaḍu* 'be spacious'. It is the elder's knowledge and control of God's E. which continues to be a bulwark of their power in the face of economic, cultural and religious changes (Aguilar 1998).

Aberra Nefa

Ǝggäla

Ǝ. (**እገላ**) is the name of several interrelated kinship groups of Təgrəñña speakers in the Eritrean and Təgrayan highlands after whom districts in both regions are named. The Ǝ. tend to be endogamic. The Ǝ. of Eritrea are said, in oral tradition, to descend from migrant groups from Təgray. The two main Ǝ. groups of Eritrea, in Akkälä Guzay, are the Ǝ. Ḥaṣən and the Ǝ. Ḥämäs. The Ǝ. Ḥaṣən are located in northern Akkälä Guzay at the border of Ḥamasen near Däbrä Bizän. Further south-east are the Ǝ. Ḥämäs, who give their name to the district Ǝ., with the town of ↗Däqqämḥare, near Guraʿ, Dəgsa and Sägänäyti (to differentiate they are also called Ǝ. Guraʿ in 19th-cent. tax records, s. Pankhurst 1978:61). A part of this group is also to be found living close to the border with Təgray and Säraye near Ṣorona on the Hazämo plains (Eastern Ǝ.).

The Ǝ. had an ancient code of law, the Statute of May ʿAdgi. Traditionally, the Ǝ.'s kinship-group delegates, the **ሹም፡ እገላ** (*šum əggäla*), hold their assemblies at May ʿAdgi. Established at an unknown date, the Statute underwent subsequent amendments in 1861 and in 1902. During this latter meeting the earlier customary law was set forth by the *baḥər nägaš* Gäbrit of Korbarya. Gäbrit had previously participated in the consolidation process of the region's customary laws, including those reformed in the times of *däggiyat* Wəbe (r. 1831–55; s. Capomazza 1909: 93ff.). The Ǝ. were traditionally represented by seven elected elders, called *šum əggäla*, who were responsible for the preservation and amending of the law (Ostini 1956:5). They were thus upholders of the duties of the 'law-villages' (*ʿaddi ḥəggi*, the local legislative).

Ǝ. genealogies often reach back ca. 24 generations (as the Irob's), which permits the conclusion that they migrated to the north around the late 13th cent., a time seemingly marked by major population movements (Merid Wolde Aregay 1974:274). As early as the 15th cent. one source mentions Ǝ., Filəp̣p̣os having founded a community there (LusStud 107). A (copied?) 15th-cent. land-charter of *aṣe* Zärʾa Yaʿəqob shows that the Emperor had given the district of Ǝ. to ↗Däbrä Bizän (HuntLand 36). In a late-15th-cent. legend about *qəddus* Libanos, the "*hagär* Ǝ." ('land of Ǝ.') is mentioned as being led by the *śəyyume əggäla* Awʿalo, he and his army becoming blind as a result of a miracle (Bausi 2003:181). In the time of *aṣe* Gälawdewos, in the mid-16th cent., Ǝ. again appears in land-charters as one of the northern regions, given to Däbrä Bizän (HuntLand 54; HuntGeogr 120). Documents of that period say that the ancient Aksumite king ↗Gäbrä Mäsqäl had given in ancient times the land of Ǝ. "with its valley and high plateau from the (river) Marab to Guerguer" to the monastery of ↗Däbrä Damo (HuntLand 30). In 17th-cent. geography Ǝ. was noted as a sub-province. It was, together with Ḥamasen, Säraye, Märätta (in Akkälä Guzay) and Bäqla (today's Saḥəl) among others, one of the seven districts within the realm of the *baḥər nägaš* (s. HuntGeogr 98), at that date still being much more extensive than later. The modern smaller districts seem to be remnants of the original Ǝ.

The Ǝ. are known for their musical traditions. The *waṭa* (Tgn. *masinqo* players and singers) coming to Ṣorona are traditionally Ǝ. from the surrounding regions, e.g., ʿAddi Ahfärom.

The Ǝ. of Təgray live in the districts of Bizet, Ǝntiččo (up to Ṣorona, called there the Ǝ. ləʾälay and Ǝ. tahatay) and ʿAddi Arbaʿətä (ʿAdwa *awrağğa*) on the left side of the Bäläsa river. They are also known as the Ǝ. Daq Azmay

(HuntGeogr 98), who seem to have been a fairly ancient subgroup of the Ǝ. When, in 1597, *aṣe* Śärṣä Dəngəl led his army against *baḥər nägaś* Yəsḥaq and the Turks, passing by Yəḥa, Yəsḥaq camped at Ǝ. Daq Azmay and then lost his life in the battle near Ǝntiččo (HuntGeogr 145).

Tsegay Berhe – Wolbert Smidt

Ǝgubba

Ǝ. (**እጉባ**, also **እጕባ**, Ǝgʷəba), a locality in Tägulät in northern Šäwa, was at times used by *aṣe* ↗Zärᵓa Yaᶜəqob as a royal residence. According to his chronicle, in the seventh year of his reign he celebrated the ceremony of baptism there during the feast of *Ṭəmqat*. The Emperor apparently liked the local landscape so much that he and his court spent a long time there.

During his stay he was informed by a letter from Patriarch John XI (1428–53) that in Egypt the baptismal monastery al-Maġṭas had been burnt down by the Muslims. Subsequently, Zärᵓa Yaᶜəqob ordered a church to be built in honour of the Virgin Mary, to which he gave the name of ↗Däbrä Məṭmaq.

It was also while Zärᵓa Yaᶜəqob was in Ǝ. that he heard about the campaign of ↗Aḥmad Badlāy. With a small army and assuming the name Ḥasab Bä-Wäsän (which neither belonged to any specific troop-commander nor to a separate unit, as has often been assumed, cp. DillmZarY 21f.; PerrZarY 58, 62; PankBord 116), the Emperor set out for ↗Däwaro. There, in the battle fought at Gomīt, he defeated Aḥmad Badlāy and his brother Ḫayraddīn, on Ethiopian Christmas Saturday, 29 *Taḫśaś* 1437 A.M. [26 December 1445 A.D.]. In commemoration of both the Nativity and the victory over Aḥmad Badlāy, Zarᵓa Yaᶜəqob issued a decree proclaiming the 29th of each month a holiday.

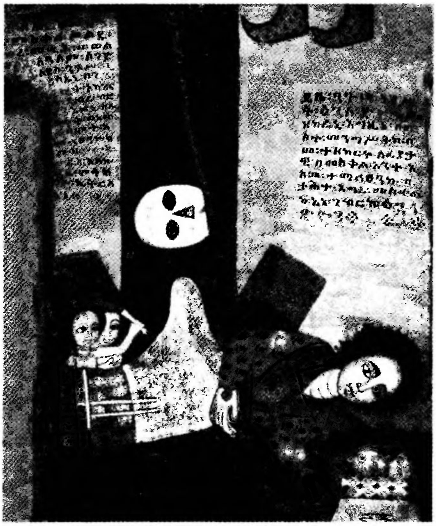
Franz-Christoph Muth

Ǝgʷalä Ṣəyon

Ǝ.Ṣ. (**እጓለ፡ ጽዮን**, r. 1801–18), commonly known as Gʷalu, was one of the shadow rulers of the ↗*Zämänä mäsafənt*. He was a son of *aṣe* ↗Həzqəyas and brother of *aṣe* ↗Iyoᵓas II, who ruled after him. Ǝ.Ṣ. was on the throne under the aegis of *ras* ↗Gugsa Märsa, although, like other rulers of the period, he did suffer a brief dethronement.



Ǝgʷalä Ṣəyon bowing at the foot of the Cross; cloth mural ca. 1820; Gondär, Däbrä Bərhan Śəllase Church, eastern wall; photo 1993, courtesy of Michael Gervers

Ǝ.Ṣ. was prototypical of the Solomonic dynasty during this period. His chronicler described him as "doing nothing", because power lay with *ras* Gugsa Märsa, and mentioned that an upstart accosted him in the streets of Gondär. Nevertheless, the margins of several manuscripts in the British Library (BritLib Orient. 604, 777) record that he made over twenty grants of land to individuals, many of the lands being tributary to the church of ↗Däbrä Bərhan Śəllase in Gondär.

Ǝ.Ṣ. was buried at the church of Adäbabay Täklä Haymanot in Gondär, as had been his father before him. He has received little attention from modern historians.

Egypt, relations with

Cultural and political relations in early times

Pre-Aksumite polities had most probably longstanding contacts with Pharaonic E. Modern authors have been speculating as to whether Təgray or the Ethiopian–Sudanese borderlands may have been the mythical "God's Land" located by the ancient Egyptians somewhere along the Red Sea – the celebrated land of ↗Punt, producer of incense and other exotic treasures to which the pharaos had sent their ships since Old Kingdom times, in the 3rd millennium B.C. The best-known memories of such foreign trading expeditions are linked with the name of Queen Hatshepsut in the 15th cent. B.C., and the detailed reliefs of them she had carved on the walls of her funerary temple at Dayr al-Baḥrī, next to her capital, Thebes. Trade was carried out between the two sides for a long time, and developed along the Nile Valley too. Occasional finds of Egyptian goods – pottery, glass, scarabs, metals – in northern Ethiopia confirm that this area of the ↗Red Sea was included in Egypt's southward trade. Nor was the commerce exclusively Egyptian-carried, for the local people were already seafaring – eager both to trade the product of their land and to convey goods by water for themselves.

From as early as the 7th cent. B.C., Egyptians and Greeks from Egypt played a major role in Red Sea navigation, centring on the port of ↗Adulis as their base of operation. By the time of the Ptolemies, a complete system of ports was created along the western coast of the Red Sea, thus fostering trade all the way to ↗India for the subsequent centuries. Within this Hellenistic framework, also characteristic of Roman and Byzantine E., ↗Aksum was soon to assert its own civilization, with a strong impact of Greek cultural features – including the language – ostensibly reflected in the Ptolemaic overtones of such documents as the ↗Monumentum Adulitanum. As witnessed by the anonymous ↗*Periplus of the Erythraean See* and ↗Pliny, and then by ↗Procopius and ↗Cosmas Indicopleustes, E.'s relevance to Ethiopia's history became central since the beginnings of the Aksumite state, and even more so since the spread of ↗Christianity into the latter in the first half of the 4th cent. *Abunä* ↗Sälama Käśate Bərhan (Frumentius) was sent there as bishop ca. 334 A.D.; his appointment by ↗Athanasius of Alexandria established the tradition of Ethiopia's dependency upon the See of St. Mark as a source of patriarchal legitimacy for the local metropolitanate. The ↗Ethiopian Orthodox (Täwaḥədo) Church remained a bishopric of the ↗Coptic Church until 1959; its head, the metropolitan (↗*Abun*; ↗*P̣ap̣pas*) was an Egyptian monk from the 4th cent. until 1950.

In Ethiopic, E. was referred to as **ግብጽ** (*Gəbṣ*, from Gr. Αἴγυπτος/Αἰγύπτιος, cp. Arab. *Qibṭ*, 'Copt') and later **ምስር** (*Məsr*, from Arab. *Miṣr* 'Egypt, Cairo'); the older term, also in the adjective form *Gəbṣawi(yan)*, applied to 'Egyptian(s)' as well, but acquired soon the wider meanings of 'Arabic-speaking Christian' and, then, 'man of white race' (Amh. *Qəbṭ* etc., s. Ricci 1955-58:96 n. 112, 98 n. 138; cp. ↗*Färänǧ*).

Most of Ethiopia's medieval Christian culture developed out of fairly continuous intercourses with E., which are responsible for its essential components: translations of literature (from Greek and Arabic, almost no traces being known for Coptic), i.e. canonical and apocryphal scriptures, as well as liturgical and hagiographical texts (↗Gəʿəz literature; ↗Hagiography); the spread of ↗monasticism; the establishment of an ecclesiastical hierarchy and a standard of Orthodoxy; the introduction of the ↗calendar (s. the names of the months); a certain religious imagery and iconography, showing both in painting and in carved decoration (especially from the period of the ↗Zagʷe dynasty); a few elements of civil administration and military technology. Contacts with E. were chiefly granted through the metropolitans and the learned members of their retinues (as is attested by such an outstanding Egyptian document as the *History of the Patriarchs of Alexandria*), who acted more often as intermediaries to and from E. – via ↗Nubia or the Red Sea – and thither to Palestine and Europe. On the route to ↗Jerusalem, where an Ethiopian community has been residing since the Aksumite age (later, alongside the Copts), a series of "Abyssinian" monastic settlements formed in E. that are also important for the transmission of the Mediterranean cultural heritage to the Ethiopian highlands (s. below: Monks in Egypt).

Modern Egyptian-Ethiopian relations

Nearly all Ethiopian rulers continued to cultivate the Egyptian–Coptic link, appreciating its help in facing the cultural siege imposed by Islam. However, this dependency was balanced by E.'s relying upon Ethiopia for the waters of the ↗Nile. The fact that Ethiopia's ↗Abbay and other Nile tributaries provide 86 % of the waters reaching E. was only established in the 1920s, but the notion that Ethiopia was the source of E.'s life is ancient (↗Carthography; ↗Gihon). This mutual dependency was further complicated by the fact that Ethiopian monarchs often considered themselves protectors of E.'s Christians, while their Egyptian counterparts acted as the patrons of Islam in the Horn of Africa and Ethiopia. The complexity of such mutuality, extending into the very heart of both countries' lives and identities, operated amidst a background of meaningful, continuous relations.

While Ethiopia's interest in E., which centred on the *abun* institution, remained constant, the reciprocal Egyptian interest fluctuated. In periods when E. was ruled by local dynasties – and later by Egyptian nationalists – the Nile dependency raised Ethiopia's importance. When ruled by non-local governments, such as the Ottomans (1517–1805) and the British (1882–1956), Egyptian involvement in the upper Nile and Ethiopia became more indirect.

Egyptian relevance culminated during the ↗Mamluk dynasties (1250–1517), which coincided with the efflorescence of Ethiopia under the ↗Solomonic dynasty (1270–1529). The Mamluk Sultans supported the Muslims of Ifāt and ᶜAdal, traded with Zaylaᶜ, and established a wing – the *Riwāq al-Ǧabartīya* – in the al-Azhar mosque which hosted young Muslim students from the Horn of Africa (↗*Gäbärti*). They were also in continual communication with Ethiopia's emperors, occasionally threatening to retain a new *abun*. Egyptian scholars from that period, notably Aḥmad al-↗Maqrīzī and Ǧalāladdīn as-↗Suyūṭī, wrote about Ethiopia, wavering between its positive and negative Islamic images. Ethiopian emperors for their part continued importing knowledge from E. For example, *abunä* ↗Sälama "the Translator" (1348–88) was much in favour of rendering many texts into Gəᶜəz. The Ethiopians also expressed an active interest in the whereabouts of the Copts, and occasionally threatened to block the Nile.

In modern times, Egyptian interest in the Nile Valley and Ethiopia was renewed when ↗Muḥammad ᶜAlī *bāšā* (r. 1805–49) established an independent dynasty in Cairo. He annexed the

Sudan to E. (1821), but soon diverted his attention from the Nile to the core areas of the Middle East. Nevertheless, there was Egyptian presence in Ethiopia from the west that culminated in two memorable clashes – the battle of Wad Kaltabu in 1837, in which the Ethiopian lord *däǧǧazmač* ↗Kənfu scored the victory, and the battle of Dabarki in 1848, in which Kaśa Ḫaylu (future ↗Tewodros II) was defeated (RubInd 69, 208).

Muḥammad ^cAlī's grandson *ḫidīw* ↗Ismā^cīl focused entirely on the Nile. He strove to establish an Egyptian "African Empire" connecting the Red Sea to the Sudan. His ambition led him into a conflict with Ethiopia, then under *aṣe* ↗Yoḥannəs IV. In March 1876 the Egyptian army was – for the second time, after ↗Gundät – defeated by the Ethiopians at ↗Gura^c. After this the whole African imperial enterprise of Ismā^cīl began to collapse. In Egyptian history the Gura^c defeat heralded the demise of Ismā^cīl, the ensuing fall of E. into British hands (1882), and the beginning of modern nationalism – the first nationalist slogans and action were initiated by veterans of Gura^c (notably by the army officer Aḥmad ^cUrabī).

While the British took control of all-Nile affairs, Egyptian nationalists developed new modern concepts of Ethiopia. Coptic schoolmasters were sent (in 1906) to help establish modern education in Addis Abäba. From the 1920s onwards, young Ethiopians, mainly graduates of the Egyptian-run Mənilək II Elementary School, were sent to E. for their secondary education, *en route* to higher learning in Europe. In 1935–36 most Egyptian public opinion-makers denounced Mussolini's invasion of Ethiopia, and a popular movement of support sent three medical units to her aid. Other Egyptian nationalists, however, those from the more militant wing, refused to forgive Ethiopia for Gura^c and for its part in denying the modern dream to unite the Nile Valley under Cairo. On the whole, relations between *aṣe* ↗Ḫaylä Śəllase I and the royal-parliamentarian system of E. remained good. By 1948 the Egyptian government helped to renew the *abun* agreement between the Coptic and Ethiopian

Church. It was agreed that the next *abun* would be an Ethiopian chosen by the Ethiopians and anointed by the Coptic Patriarch.

The Egyptian revolution of 1952 changed this pattern. Under Ǧamāl ʿAbdannāṣir, E. began to redefine herself as Arab. Abandoning the Egyptian concept of unity with the Sudan, it began building the Aswan High Dam, ignoring Ethiopia's rights to any share in the Nile waters. The new regime in Cairo started considering the Muslims of the Horn and Ethiopia – especially the young generation of Eritreans – as both Arabs and revolutionaries. In 1959 as E. (now renamed the United Arab Republic, 1958–71) signed a water agreement with Sudan that totally ignored Ethiopia, and as the ↗Eritrean Liberation Front was born in al-Azhar, Ḫaylä Śəllase drew closer to ↗Israel and also acted to disconnect the Ethiopian Church's ancient Christian link to E., thus, declaring it autocephalous. There only remained good relations with E. in the "all-African" context, and in 1963, when the ↗Organization of African Unity was inaugurated in Addis Abäba, ʿAbdannāṣir and *aṣe* Ḫaylä Śəllase demonstrated their friendship. By 1973 Anwar as-Sādāt (who succeeded ʿAbdannāṣir in 1970 and restored the name of E. a year later) had made such an influence on the Emperor that he managed to persuade him to break relations with Israel during the October War.

Relations deteriorated quickly following the Ethiopian ↗Revolution in 1974 and the emergence of Mängəśtu Ḫaylä Maryam. The more the latter leaned towards the former Soviet Union the more he alienated the now pro-American as-Sādāt. The two leaders exchanged threats and the Ethiopian began airing the old myth of blocking the Nile. Tension mounted following the ↗Ogaden War and as-Sādāt's peace agreement with Israel, when he promised to irrigate Sinai with more Nile waters. However, the Egyptian premise that the Aswan High Dam enabled them to ignore Ethiopia was shattered in 1988. After four years of drought in Ethiopia, E., in spite of the Dam, was facing a catastrophe. It became apparent to both President Muḥammad Ḥusnī Mubārak of E. and the new Ethiopian regime (as of 1991) that they should turn to the positive messages of their common history in order to reconstruct a vital dialogue concerning water and culture.

Ethiopian monks in Egypt

In keeping with the Alexandrian origins of their Christendom, to the Ethiopians Egyptian monasticism and asceticism was ever since an outstanding example and a prestigious source of inspiration. Most Ethiopian monastic genealogies (↗Genealogy) claim more or less remote Egyptian origins – not always legendary, especially for the Aksumite period.

E. was soon crossed by Ethiopian pilgrims passing along the Nile Valley on their way to Jerusalem and the Holy Land. This traditional *relais* and the institutional contacts with the Coptic Church account for the religious and cultural exchanges fostering Ethiopian culture throughout the centuries – as well as, conversely, for the presence of a few Ethiopian relics, chiefly icons and crosses, in Egyptian ecclesiastic institutions and collections from Alexandria to Cairo and the Red Sea.

The earliest positive attestation to that is a lost Gəʿəz inscription from Dayr al-Abyaḍ (the "White Monastery" near Sūhāǧ), recording the passing by of pilgrims from Goǧǧam, namely "Nəwayä Maryam, monk of Ṣəlalo, and Ṣärṣä Yoḥannəs, of ↗Däbrä Wärq", heading to the Holy Places on 8 *Säne* 222 A.M., i.e. on 2 June 1038 or 1114. At the end of the 12th cent. an Ethiopian community was possibly established at Scetis (Wādī n-Naṭrūn, near Wādī Ḥabīb) in the cell of Bähat (Copt.: Pehōout; Ar.: Bahūt) attached to the lavra of St. John "the Short" (Colobus). This community became the nucleus of the Abyssinian monastery of St. Elija (Dayr Ilyās), two miles south of the Coptic settlement of St. Bishoi (Dayr Anbā Bišūy). According to the *History of the Patriarchs*, in 1088, during the visit of the Armenian ex-Catholicus Gregory II to the Coptic Patriarch Cyril II in Miṣr (Cairo), "news was spread abroad of the agreement of the Copts, Armenians, Syrians, Abyssinians and Nubians touching the orthodox faith", i.e. their Christological confession (Evelyn White 1932:365). Yet, such a pious statement, so often called upon, is not enough to suggest that Ethiopian monks were already living in E., at Scetis, together with the representative of the other Monophysite nations. It rather features a more general wish – if not a serious allegation – of dogmatic consensus among those nations.

Several Ethiopian Saints – e.g., the famous *abunä* ↗Täklä Haymanot of Däbrä Libanos and, on more positive grounds, *abunä* ↗Ewosṭatewos of ↗Däbrä Ṣärabi and his disciple ↗Marqorewos of ↗Däbrä Dǝmah – are believed to have visited Scetis and the Ethiopian monks there. A series of famous books, like the 14th-cent. pentaglott Psalter of the Biblioteca Apostolica Vaticana, ms. Barberin. or. 2, from of the monastery of St. Macarius (Dayr Anbā Maqār), includes the Gǝᶜǝz alongside with the Syriac, Coptic, Arabic and Armenian texts (GrebTissVat I, 859ff.). In the "cosmopolitan" milieu of Scetis, Ethiopian monks were then joining liturgical service with other monastic communities; and during the visit of the Coptic Patriarch Benjamin II, in 1330, Egyptian and Ethiopian monks welcomed him to the Eastern Desert.

At the beginning of the 15th cent., when an Ethiopian community is known at Ḥara Zuwayla (a suburb of Cairo), with a church of St. George, the Abyssinian kept dwelling on their Bähat premises (CerPal 384f., 388f., nos. 10, 20). A few years later, they withdrew to the monastery of the Virgin (Dayr Sayyida) of St. John "the Short", since theirs had fallen into ruin; and then to the nearby monastery of St. Minas (Dayr Abū Mīnā). They still continued to be present at Scetis, for in 1517 "the monk and ascetic, the venerable priest Takla al-Ḥabašī", i.e. 'Takl(a) the Abyssinian', decorated the walls of the Chapel of the Wanderers in the keep of the monastery of St. Macarius with figures of desert fathers somehow copied from paintings and relieves of ↗Lalibäla (Fiaccadori 1989:149 [and n. 16], 160). In the Coptic monasteries of Wādī n-Naṭrūn, Western bibliophiles of the 17th to the 19th cent. – from Johann Michael ↗Wansleben to Lord Curzon – discovered numerous entire or fragmentary Ethiopic manuscripts (Meinardus 1965:33f.).

In the middle of the 19th cent., a significant community of Ethiopian monks resided in the south-eastern corner of the celebrated "monastery of the Syrians" (↗Dayr as-Suryān) where they had an extensive library. In 1920, seven Ethiopian monks still lived at Dayr al-Baramūs. From 1935 to 1975 an Ethiopian hermit known as *abūn* ᶜAbd al-Masīḥ (Gäbrä Krǝstos?) al-Ḥabašī occupied a cave in the vicinity of this monastery. His strict asceticism inspired such prominent Coptic ecclesiastics as Patriarchs Cyril VI (1959–71), Shenuda III (1971–) and Mattā al-Miskīn of Dayr Anbā Maqār (b. 1913).

The monastery of the Holy Virgin at ↗Dayr al-Muḥarraq, 60 km north of Asyūṭ, was inhabited by Ethiopian monks from the 14th to the 20th cent. In the 14th cent. they possessed their own monastery of the Holy Apostles near Dayr al-Muḥarraq. Because of the traditions linking the Holy Family with this monastery, the Ethiopians shared a special affinity to this Upper-Egyptian holy place and referred to it as Däbrä Qʷǝsqʷam (Ar.: Dayr Qūṣqām). In the 18th cent. *ǝtege* Mǝntǝwwab (↗Bǝrhan Mogäsa) built ↗Däbrä Ṣähay Qʷǝsqʷam (Gondär) using sand from Dayr al-Muḥarraq.

In the beginning of the 20th cent., a quarter of the monks at Dayr al-Muḥarraq were Ethiopians, but in 1970 only two Ethiopian monks lived there. During the middle of the 20th cent., Ethiopian monks also inhabited periodically the monastery of St. Samuel (Dayr Anbā Samūʾīl) in the Qalamūn desert. Following the restoration of the monastery of St. Anthony (Dayr Anbā Anṭūniyūs) in the Eastern Desert (16th cent.), Ethiopian monks visited this historical site where the founder of monasticism had lived. Here at least two "late-Byzantine" icons of Ethiopian relevance, both gifts to the monastery, are kept: the one (33 x 46 cm) shows a Virgin Eleousa ("Compassionate") of the so-called Vladimir type, with an Ethiopic inscription; the other (6 x 53 cm), the Virgin, John the Evangelist, several equestrian saints, and two additional figures labelled in Gǝᶜǝz as *aṣe* ↗Lǝbnä Dǝngel and his consort *ǝtege* ↗Säblä Wängel. At St. Anthony's, an Ethiopian monk "son of Täklä Haymanot" wrote a book on penance in 1561 (CerPal vol. 2, 419). According to Wansleben, still in 1672 Ethiopian monks kept their own monastery within Dayr Anbā Anṭūniyūs, which had been destroyed, however, since the end of the 15th cent.

Otto Meinardus – Red.

Egyptian-Ethiopian war

The war between ↗Egypt and Ethiopia, which lasted from 1875 to 1884, was arguably the most important chapter in the history of these countries' modern relations. It had far-reaching consequences for both.

The Egyptians were the initiating party. After the inauguration of the Suez canal in 1869, *ḫidīw* ↗Ismāʿīl began a campaign aimed at occupying the whole Red Sea coast. By subsequent annexations, the Egyptians connected the Red Sea by land to the Sudan. The Red Sea coast, down to Cape ↗Gardafui, was captured and encroachment inland ensued. ↗Harär was captured in 1875. But though this ancient capital of Islam became a major centre of the envisioned Egyptian "African Empire", the main strategic effort had to be made elsewhere. The flatland of the Massawa–Khartoum line was the natural Egypt-Red Sea-Sudan connection. In 1871 the French Vice-Consul ↗Munzinger was sent to ensure control over this strip. He captured ↗Kärän in 1872, and cultivated relations with neighbouring tribes, some already under the influence of the *Mīrġanīya* – an Egyptian-supported popular ↗Islamic brotherhood based in ↗Kassala. In 1873 the Egyptians from Khartoum captured ↗Mätämma.

The Egyptian vision of a Nile–African empire did not include direct occupation of Christian Ethiopia. It rather followed the concept of the "Nile Valley" (*wādī an-Nīl*), not the Nile highlands (*hadbat an-Nīl*). However, the Red Sea–Sudan connection necessitated the occupation of the future Eritrea. (It was in fact this Egyptian design which first conceived Eritrea as an integral entity.) But, since the centre of gravity of Ethiopia shifted now, under the Təgrayan Emperor ↗Yoḥannəs IV starting from 1872, to Təgray and the north, the collision was inevitable. Yoḥannəs's power-base stretched over areas immediately adjacent to this very territorial strip and included Ḥamasen in the ↗Märäb Məllaš, which the Egyptians desired. Encouraged by Munzinger and the governor of Massawa, ↗Arakel *bey*, Ismāʿīl planned an invasion deep into Ethiopia for July 1875. It aimed at ensuring Egyptian control of the Märäb Məllaš, toppling Yoḥannəs and causing Ethiopia to close its frontiers in the south.

The first stage of the war took the form of head-on collisions which ended in Egyptian defeats. An Egyptian invasion force of some 3,000 riflemen under the Dane Arendrup, was nearly wiped out in ↗Gundät, 14–16 November 1875. A 15,000-man Egyptian force under the command of Ratib *bāšā*, along with a team of mercenaries headed by the American general ↗Loring, met a similar fate in ↗Guraʿ, 7–9 March 1876 (a modern Egyptian researcher estimated the number of Egyptians killed in both battles at around 8,500; Bayumi n.d.:147). The simultaneous Egyptiandiplomatic effort to isolate Yoḥannəs in Ethiopia was only partially successful. In November 1875 Munzinger was sent to mobilize ↗Mənilək of Šäwa, but was killed in the ʿAfar area (Awsa sultanate) en route to Šäwa. Though Mənilək and *ras* Adal avoided helping Yoḥannəs till 1877, the Emperor's units proved strong enough to stem the Egyptian invasion.

The second stage of the conflict lasted till 1884 and took the form of a war of attrition. The Egyptians fortified themselves along the Massawa–Kassala-lowlands line, relying mainly on their fortress Kärän (Sänḥit) in Bogos (↗Bilin). In December 1881 they proclaimed this strip as "the Ethiopian Border Province". They also subsidized and backed Ethiopian *šiftas* who undermined Ethiopian control over the Märäb Məllaš highlands. These included *balambaras* Kəflä Iyyäsus in the Kärän area, *fitawrari* ↗Däbbäb Arʾaya in the Massawa–Asawərta area and *däggazmač* ↗Bahta Ḥagos in Akkälä Guzay. The most important figure who collaborated temporarily with the Egyptians was the hereditary ruler of Ḥamasen, ↗Wäldä Mikaʾel Sälomon. Though he helped Yoḥannəs in the battle of Gundät, he was not trusted and had to give his captured Egyptian rifles to Yoḥannəs's devotee, *šaläqa* ↗Alula Ǝngəda. Embittered, Wäldä Mikaʾel crossed the line to the Egyptians and before the battle of Guraᶜ was given by them a rank equivalent to *ras*. After Guraᶜ Yoḥannəs promoted Alula to *ras* and appointed him over Ḥamasen. In December 1879 *ras* Alula manipulated *ras* Wäldä Mikaʾel to surrender and to be imprisoned by Yoḥannəs. This episode, a by-product of the war, would mar inner-Təgrayan relations on both sides of the ↗Märäb for decades.

The Ethiopians, for their part, led by Alula in his Ḥamasen headquarters, retaliated all throughout 1877–84 with seasonal raids beyond the Egyptians lines and with punitive missions against tribes collaborating with the Egyptians. Diplomatic efforts to ease the tension and reach some understanding – conducted mainly by the British Colonel ↗Gordon *bāšā*, the Egyptian governor of the Sudan (in 1877 and again in 1879) – proved fruitless. In November 1881 the Egyptian government enabled the appointment by the Coptic Church of four bishops for Ethiopia (*abunä* Atnatewos had been suspected by Yoḥannəs of collaborating with the Egyptians during the Guraᶜ campaign and was eliminated soon afterwards). Though this was an Egyptian gesture of unprecedented flexibility, the situation along the border did not improve. In late October 1883 the conflict escalated when Alula annihilated an Egyptian company entrenched in Saḥaṭi. By that time, however, Egypt was in no position to respond. In 1881 there had erupted in the Sudan the revolt of the ↗Mahdists and in September 1882 Egypt itself was occupied by the British. In late 1883 the British undertook to dismember the falling "African Empire" of Egypt. In April–June 1884 their "Anglo-Egyptian" diplomatic mission headed by Rear-Admiral Hewett negotiated with Yoḥannəs the end of the war. By the ᶜAdwa Treaty of 3 June 1884, it was agreed that in return for Ethiopia helping to rescue the Egyptians besieged by the Mahdists, the country of Bogos would come under Yoḥannəs. While the Ethiopians fulfilled their part of the deal, they found themselves in 1885 confronting two stronger enemies – the Italians and the Mahdists.

The war was not determined militarily. Though the Ethiopians defeated the invading forces, they could not uproot the Egyptians entrenched in the Massawa lowland and Bogos. It was mainly the economic collapse of the over-ambitious enterprise of Ismāᶜīl – a collapse quickened significantly by the Guraᶜ defeat and its strategic consequences – which led to the Egyptian demise. Three years after Guraᶜ, in 1879, the bankrupted Ismāᶜīl was deposed by the Europeans and in September 1882 Egypt itself was occupied by the British. Symbolically, a few weeks later, in October 1882, Yoḥannəs managed to seal the unity of Ethiopia under his sovereignty.

The Ethiopian victory had its prize. Yoḥannəs, previously keen on a fruitful dialogue with Europe and similarly flexible towards Ethiopia's Muslims, changed his attitudes. His coercive Christianization of Muslims at home and his rigid diplomacy towards Britain, France and Italy would be among the causes leading to his downfall. The Egyptian defeat also had its blessings. Out of the Guraᶜ calamity there emerged a group of officers who would herald the emergence of modern nationalism in British-occupied Egypt.

Egyptus Novelo

The name of E.N. designates an important map of the ↗Nile basin that was possibly drawn in Florence around 1454, or rather some time before 1469 (Hirsch 1986–87:98) It comprises ↗Egypt and ↗Ethiopia, the latter including (Upper) ↗Nubia and being shown as somehow concealing the source of the former's life.

The map is chiefly known from three copies appended as *Tabulae modernae*, with different titles, to as many 15th-cent. testimonia of the Latin translation of ↗Ptolemy's *Geography*: Paris, BN, ms. Lat. 4802, fols. 130v–31r, "Egyptus Novelo", in which the arms of the later king of Naples ↗Alfonso V of Aragon, then duke of Calabria (1458–94), have been eventually identified (s. Hirsch 1986–87:96); VatLib, mss. Vat. Lat. 5699 (dated to 1469 A.D.), fol. 125r, "Egyptus cum Ethiopia moderna", and Urb. Lat. 277 (1472 A.D.), fols. 128v–129r, "Descriptio Egypti nova". Besides these exemplars, produced in Florence by the French scribe and illuminator Hughes Comminau de Mézières and the local painter Piero del Massaio, a fourth one is reported to be in the Escurial Library (Mannoni 1932:10f.). The first and eponymous copy was published by Mannoni (1932) and partially redrawn and re-plotted on a modern basis by Crawford (CrawItin 14f., figs. 1–2).

E.N. is a rectangular "modern" map with east to the top; its northern portion is based to a greater extent on Ptolemy, whereas its southern portion, describing Ethiopia from the Maria plateau down the Šäwan region (↗Šäwa), embodies an extraordinary amount of first-hand information in terms of toponyms and additional indications: e.g., *Damot aurj* ('Auriferous/Gold ↗Damot', cp. Fiaccadori 1989:155 n. 21). Such a wealth of information, both new and reliable, was supplied to the compiler(s) by someone – well acquainted with that country – who should be ultimately sought among the members of the Ethiopian delegation at the Council of ↗Florence. This accounts for the differences in content between E.N. and the more or less contemporay map of ↗Fra Mauro, the two works reflecting geographical knowledge current in Florence and in Venice respectively (Hirsch 1986–87:98). Already evident in the 16th cent., the exact influence of E.N. on subsequent ↗cartography is still to be assessed.

Gianfranco Fiaccadori

Ǝgziʾ Kəbra

Ǝ.K. (**እግዚእ፡ ክብራ**) was a 14th-15th-cent. queen. She was a spouse of *aṣe* ↗Dawit II (Conti Rossini 1900:118) – who also had at least two other wives, Dəngəl Mogäsa and ↗Ṣəyon Mogäsa – and the mother of *aṣe* ↗Zärʾa Yaʿəqob.

According to the ↗*Täʾammərä Maryam*, Ǝ.K. lost her first son and, having been sick during her second pregnancy, prayed fervently the Virgin Mary to keep her new child alive. Her prayers were answered and she gave birth to Zärʾa Yaʿəqob, who was to be especially devoted to the Virgin Mary, and to have this miracle recorded in the *Täʾammərä Maryam* (Cerulli 1933: 82f.). Later, he also kept a site for Ǝ.K. in his dynastic mausoleum, ↗Däbrä Nägʷädgʷad, where, according to his chronicle, he was then buried aside his mother and father, Ǝ.K. and Dawit II (PerrZarY 86f.).

Marie-Laure Derat

Ǝgziʾabəḥer

Ǝ. (**እግዚአብሔር**, also **እግዚእ፡ ብሔር**) is the standard Gəʿəz term for "the Lord". It could have been adopted soon after the introduction of ↗Christianity into Aksum during the reign of ↗ʿEzana (ca. 340 A.D.), since it appears in his royal inscriptions. The term is composed of the two Gəʿəz words: *əgziʾ*, 'lord' (cp. *əgziʾo*!, 'oh my lord!' or *əgziʾənä*, 'our Lord [Jesus Christ]') and *bəḥer*, 'land, earth', conjoined by means of the *status constructus*. While in ʿEzana's pre-Christian inscriptions the names of the deities are applied, in the celebrated inscription DAE no. 11 (RIE no. 189) there is an obvious attempt to invent a new terminology for rendering the basic ideas of the Christian religion. So God the Creator is described in it by three terms: *əgziʾa sämay*, 'Lord of Heaven' (used seven times), *əgziʾa kʷəllu*, 'Lord of All' (used twice) and *əgziʾa bəḥer*, 'Lord of the Land/Earth' (once). In the "pseudo-Sabaean" version of the inscription, only the word Ǝ. can be read (with ʾ in the middle omitted; s. RIE no. 190.8, 9). The Greek version of the same inscription has more developed

Christian terminology: both ὁ Κύριος, 'Lord' and θεός, 'God' and also the Trinitarian formula are used and the name of Christ is mentioned (RIE no. 271; Anfray – Caquot – Nautin 1970).

The term soon prevailed and was subsequently used in the Bible for Gr. ὁ Κύριος. It is not certain from what time the word for "God" (later rendered as *amlak*) came into use (cp., however, verses from Ps. 19 quoted in Kaleb's inscription, RIE no. 195, II, 26-29). In later sources (some epigraphic monuments; early translation of the ↗Bible) a number of derived terms can be found: e.g., *wäldä əgziʾabəḥer* ('the Son of the Lord'), *rədʾetä əgziʾabəḥer* ('the help of the Lord') etc. In later Gəʿəz texts Ǝ. can still sometimes be written in two separate words, as in the inscriptions. In the ↗Ethio-Semitic languages spoken by the Christian population of Ethiopia, the term (attested in different phonetic variants) is an important element of the lexicon and provides a substantial part of the inventory of personal ↗names; cp. also ↗Təgre, a language now spoken mostly by Muslims, which has three words for 'God': *ilahi*, *rabbi* and *əgzaher*.

Merid Wolde Aregay

Ǝgziʾabəḥer nägśä

Ǝ.n. (**እግዚአብሔር፡ ነግሠ**, also called **ነግሥ**, *nägś*) or salutation hymns (*sälam/sälamat*) is the title of a large collection of hymns in honour of the ↗Saints, Virgin ↗Mary, ↗Trinity etc. The full title is **እግዚአብሔር፡ ነግሠ፡ ስብሐቲሁ፡ ለብሰ** (*Ǝgziʾabəḥer nägśä səbḥatihu läbsä*, 'The Lord reigns, He is robed in His glory'), i.e. the opening lines of Ps 92 (93). The hymns are supposed to be read on the respective commemoration days of the saints as established by the Ethiopian church calendar (↗*Sənkəssar*).

As Getatchew Haile (1983) demonstrated, there are at least three major collections bearing this title. They have only some features in common; one should not attempt to distinguish them solely by the way they begin or end.

1) The first type of the Ǝ.n. collection (NG, following Getatchew Haile 1983) is the one attributed to *abba* Giyorgis of Gasəčča (d. 1426). It contains, among others, at least eight hymns in honour of Giyorgis himself. Besides, for every month there is more than one hymn in honour of the Apostles Peter and Paul. Getatchew Haile (1983:56ff.) argues that in some hymns the See of St. Peter in Rome is referred to;
2) the second type of the collection (NZ) is considered to have been the work of *aṣe* Zärʾa Yaʿəqob (r. 1434–68) or composed under his direction. The authorship of the Emperor appears probable since the hymns are extensive investment issues of the devotion of the Virgin Mary and praise both the Sabbath and Sunday (↗Sabbath); a lot is said on the issues of Trinitarian theology. Some of the hymns in honour of saints appear to have been taken over into the *Sənkəssar* from this collection, but many of the saints mentioned in it do not appear in the *Sənkəssar* at all. The oldest representative of this work seems to be ms. EMML 3128 (late 15th cent.);
3) the third type of the Ǝ.n. collection (MF) is often designated as **መዝሙረ፡ ፍሡሓን፡ ወጸሎተ፡ ትኩዛን** (*Mäzmurä fəśśuḥan wäṣälotä təkkuzan*, 'Psalter of the Jubilant and Prayer of the Distressed'). This is most probably the rearrangement and enlargement of a previous setting called *Ǝgziʾabəḥer nägśä zäʿarke* (NA), after the name of its author (s. EMML 1601 and 2081; s. also ↗ʿArkä Śəllus; ↗ʿArke). The name **ውዳሴ፡ ሰማያውያን፡ ወምድራውያን** (s. ↗*Wəddase sämayawəyan wämədrawəyan*), which sometimes appears in manuscripts, is not a title of its own, but merely an explanation to MF (s. EMML 2706). The MF hymns seem to have been included into the *Sənkəssar*, regardless of whether the story of the saint, as told in a MF hymn, agrees with what the corresponding *Sənkəssar* entry reports or not. In fact, all Ǝ.n. collections are important sources of hagiographic information on saints who are not mentioned in the *Sənkəssar* or elsewhere and they are worthy of further profound research.

The *nägś*-hymns represent a particular genre of the Ethiopian liturgical hagiographic literature. NG hymns usually consist of five (or four) short lines, not necessarily all rhyming, one line being made up of a pair of rhyming phrases. There are also hymns with more than four lines, some of them do not rhyme. Many, but not all the hymns from Ǝ.n. collections are *sälamat*, e.g., begin with the words *sälam lä* ... ('Salutation to ...'), or *sälam əbl lä* ... ('I say salute to ...').

NZ and MF collections can easily be confused because the hymns in both sometimes begin in the same way. NZ hymns are of so varied types that it is practically impossible to find a single hypothetical archetype. MF and NA hymns are composed of five rhyming metrical lines; some of the lines may consist of a pair of rhyming phrases. They have different introductions but similar contents. NZ and MF must have been competing works; they are well represented in the manuscript collections outside Ethiopia, whereas the NG collection is by far less well known.

The Ǝ.n. hymns are sung during the celebration of **ሥርዓተ፡ ማኅሌት** (*Śərʿatä maḫlet*, 'The Order of the Chanting'), the morning praise of the entire liturgical year (↗*Qəddase*), and also during the liturgy before the hymns of the ↗*Dəggʷa*.

Habtemichael Kidane – Maija Priess

Ǝgziʾabəḥer zäbərhanat

Ǝ.z. (**እግዚአብሔር፡ ዘብርሃናት** 'God of lights') was originally a prayer used whilst sprinkling water over the catechumen (*nəʾusä krəstiyan*). Through this practice the catechumens are meant to be accepted by God and not rejected with their sins. The introduction runs as follows: **በእንተ፡ ዘመፍትው፡ በኵሉ፡ መከራ፡ ይትወከፍዎሙ፡ ለንኡሰ፡ ክርስቲያን፡** ... **ከመ፡ ይትዐወቁ፡ እለ፡ ቦሙ፡ መንፈሰ፡ ነኪር** ... 'Regarding the necessity that they should receive the catechumens with all (due) testing and how it should happen ... The sprinkling of catechumens (is conducted) in order that those in whom is a strange spirit may be identified' (EMML 2358, fol. 33ab).

Ǝ.z. received its name from the *incipit* of the actual prayer, which is taken from the *Testament of Our Lord Jesus Christ* (↗*Kidan zäʾəgziʾənä wämädḫaninä Iyyäsus Krəstos*). Although Ǝ.z. is not an Eucharistic prayer, an abbreviated text, with alteration to fit the purpose, has been incorporated in the Anaphora of Epiphanius (↗Anaphoras), indicating that this anaphora was a local composition. The prayer is usually copied with other prayers. However, copying it with prayers that would constitute the so-called **ሰባቱ፡ ኪዳናት** (*Säbattu kidanat*, 'The Seven Covenants'), in the form published in Addis Abäba in 1959 A.M. [1966/67 A.D.], must be a recent development or the publisher's own innovation because they are hardly ever found copied together in other manuscripts in this manner.

Euringer translated this abbreviated and widely copied version into German in his edition of the Anaphora of Epiphanius (1926/28), while Marcos Daoud and Mersie Hazen translated it into English (1954).

Getatchew Haile

Ǝḫətä Krəstos

Ǝ.K. (**እኅተ፡ ክርስቶስ**, lit. 'Sister of Christ'; fl. 17th cent.) was an Ethiopian saintly nun. Ǝ.K.'s vita is known from a ↗*Sənkəssar* reading found in ms. VatLib, Vat. aeth. 112, fol. 27rc-28ra (s. Nollet 1930) and ms. Oxford, Aeth. 22 (but not found in any of the printed synaxaries). According to this source, she was born to a noble family; she married and bore a son, Tərasya. Some years later, she became a hermit at the church of Fura, where her sister was already staying. In the vita of Wälättä Peṭros, Fura appears as Fure, Fare, and this may be identified with Furi Maryam, today a small church south of the Zage peninsula (s. Bosc-Tiessé 2000:211, 247f.; yet in the *Sənkəssar*, Fura is identified with ↗Däbrä Sina on the northern coast of the lake).

At the insistence of *abba* Ṣəge Haymanot, Ǝ.K. joined ↗Wälättä Peṭros and became her faithful companion and disciple. Both opposed *aṣe* ↗Susənyos, who had converted to Catholicism, and were repeatedly exiled. After the Emperor's abdication and the country's return to Orthodoxy, Wälättä Peṭros founded a monastery at Lake Ṭana and took up residence there (Rema, with an extension at Afär Färäs). Ǝ.K. acted as her assistant and, after, Wälättä Peṭros's death in 1644, she succeeded her as abbess, a post she held for 26 years until her own death ca. 1670, on 26 *Mäggabit* (2 April).

The ↗*mälkəʾ* in honour of Ǝ.K. was published by Conti Rossini (1912) and translated by Ricci (1970). A *Gädlä Ǝḫətä Krəstos* is reportedl to be preserved in one manuscript in Kämkäm (Libo, Bägemdər).

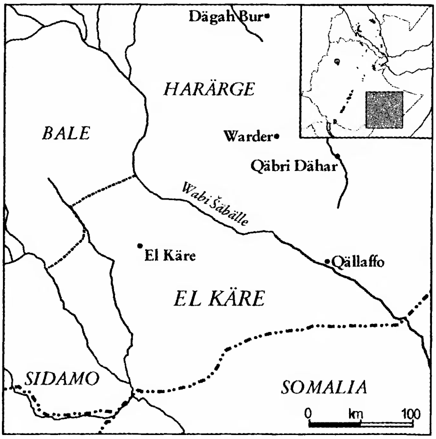
Ugo Zanetti

El Käre

E.K. is the capital of the *awrağğa* of the same name in south-eastern Ethiopia. It is a small town located at 1,000 m A.S.L., at the far end of the sedimentary plates of Bale mountains, inhabited by sedentary ↗Oromo, between the Wabi Šäbälle and the Weyb valleys. Its present population is estimated at 1,394 inhabitants (CSA 2004). E.K. emerged around a water-point (*ᶜeel* [Somali: *ceel*] means "well") used by the Somali stockbreeders who feed their cattle in the surrounding clear scrub.



This small halt along the Imi-Dolo road owes its growth to its promotion in 1984 to capital of the E.K. *awrağğa*. In addition to a market, it boasts local administrative services and a small garrison, which has profited from such a strategic location.

Since the establishment of the federalist policy in 1991, E. became the chief town of the *wäräda* of the same name (38,752 inhabitants; CSA 2004), a subdivision of the Afder zone, which is itself part of *kəlləl* Somali. The territory of Afder (423,683 inhabitants) corresponds approximately to that of the old *awrağğa* of E.K., which had 138,000 inhabitants in 1970 (density 2.4 inhabitants/km^2) and 197,800 in 1984 (density 3.5 inhabitants/km^2). E.K. has thus enjoyed an important increase in its population, larger than the national average; the twofold increase was mainly due to the arrival of refugees fleeing unrest and drought in neighbouring Somalia.

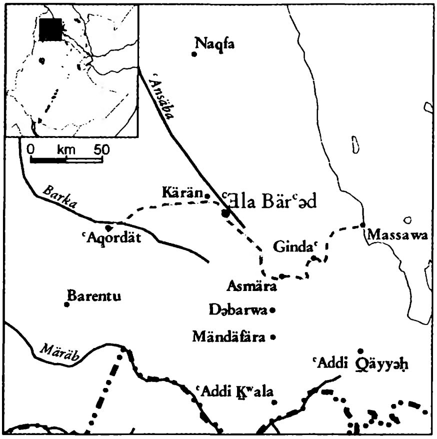
Alain Gascon

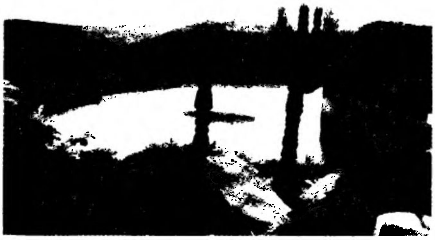
ᶜƎla Bärᶜəd

ᶜƎ.B. (**ዕላ፡ በርዕድ**, Tgr. 'cold-water well'; also ᶜƎla Bärᶜidi in Tgn. pronunciation) is an area and settlement on the road joining Asmära with Kärän, ca. 78 km north-west of Asmära. It is situated in the former province of Sänḥit, now in *zoba* ᶜAnsäba, Eritrea, and belongs to territories historically inhabited by ↗Bilin speakers. It is primarily known for its large fruit plantations, founded in the colonial period, which are irrigated by the ↗ʿAnsäba.

The historical Bilin settlement of Č̣əndəq was located here, close to ↗Däbrä Sina. Oral historiography claims that this was the first area reached by the migrating Agäw forefathers of the Bet Tarqe, the oldest Bilin group. Here they met the legendary "Rom", allegedly the original Beǧa inhabitants. Legend reports that, when the Tarqe brothers decided to leave Č̣əndəq due to their rising number, the brothers Bigäday and Lamačalli stayed between Č̣əndəq and Mägarəḥ (Käran). Later, the two lineages tracing descent to these forefathers were invaded by the Hada lineage from Barka, who subsequently became their masters (Ghaber 1993:7). The legend reflects movements and conflicts of different Bilin lineages over the fertile soil in ʿƎ.B. After the rise of the Adkämä Məlgaʾ and the Däqqi Täššəm further south, Č̣əndəq became the southernmost limit of the Bilin territories. During the expansion of *däǧǧazmač* Wəbe Ḫaylä Maryam, the Bilin, led by *sim* Hakin Mädən, were defeated at the battle of Č̣əndəq in 1844 or 1849, which opened the way to raids in the territories further north (KolTrad 2, 120; Ghaber 1993:14, 27). Because of later Təgre (Bet Ǧuk) domination of the area, it received a Təgre name.

In colonial times, the Italian "concessione agroindustriale di Elaberet" was founded there in 1904 by the Istituto Agronomico, at first, due to scarcity of water, only with plantations of sisal. In 1906 it was taken over by a private consortium, from 1908 led by Pietro Casciani (1869–1942), followed by his sons (s. ErDizBio 73f.). The "azienda", with ca. 1,000 ha in 1908, rapidly became one of the most important Eritrean enterprises. The last concessionary was the fruit-merchant Guido De Nadai. Originally a member of this consortium, he developed ʿƎ.B. considerably from 1958 to 1975. It then became the most important agroindustrial concession of post-war Eritrea (with ca. 1,500 ha). The rapid rise in production, especially of citrus fruits, but also of vegetables, was due to mechanization (e.g., a tomato-canning plant) and, more importantly, new methods of irrigation. Milk was also produced extensively. The *Därg* nationalized the territory in 1975.





Dam in ʿƎla Bärʿəd; photo 2002, courtesy of Martin Zimmermann

In 1977 ʿƎ.B., together with Käran, Afʿabet and Qarora, was taken over by the ↗Eritrean People's Liberation Front ("battle of ʿƎ.B."). During the Ethiopian central government's offensive of 1978, ʿƎ.B. was retaken by Ethiopian troops and subsequently lost again in 1988. In 1993 the "Elabered Estate" was an agro-industrial complex of 1,200 ha, with 520 ha equipped, but only irrigated over 135 ha. Administratively ʿƎ.B. forms a sub-zone (*nəʾus zoba*) of *zoba* ʿAnsäba.

Ǝlʾatqärfa: Mäṣḥafä əlʾatqärfa ↗Täʾammərä Iyäsus

Eldad Ha-Dani

E. was a mysterious Jewish traveller of the late 9th cent. Although his true origins remain uncertain, he claimed to descend from the lost Israelite tribe of ↗Dan (whence his name). E. held that the Danites and three other tribes lived in an independent kingdom. He also spoke of the impassable Sambatyn river which stopped its flow on the Sabbath and of other wonders. Several modern authorities believe E.'s narrative is composed of legends which elaborate upon a small kernel of truth concerning Jewish groups in distant lands. While some scholars (i.e. Baron 1983, Conti Rossini 1925) think that E.'s work contains the earliest known references to the ↗Betä Ǝsraʾel, others (Ullendorff – Beckingham 1982; Morag 1997) are more sceptical, arguing that it reveals little first-hand knowledge of Ethiopia and its languages. Many of the motifs found in his work recur in the stories concerning ↗Prester John.

Elemo Qiliṭuu

E.Q. (Elemo Qilixuu, birth name Ḥasan Ibrāhīm; b. 1936, Ǧarsa, Harärge region, d. August 1974, Čärčär, Harärge) was a prominent member of the Oromo nationalist movement. After pursuing a traditional Islamic education for some years, he settled in the city of Dərre Dawa. There he worked for a wealthy Arab merchant, who took him to Aden in 1956, where, some time in the 1960s, Ḥasan adopted his new name of E.Q. After some years E.Q. started his own business in Aden and married Ammune Omar from Dədər, daughter of an Oromo mother and a Yemenī father (Taha Ali Abdi, personal communication 2003). By 1966, E.Q. was a successful businessman, who attracted the attention of the Ethiopian Consulate officials in Aden. In the same year, a Harari merchant who was on a visit to Aden from Addis Abäba borrowed large quantities of goods from E.Q. with the promise to pay him back if he came to Addis Abäba. Soon after E.Q.'s arrival in Addis Abäba in early 1967, he was, however, arrested under the pretext of involvement in anti-Ethiopian government activities. By the time of his release, E.Q. was a convinced Oromo nationalist.

In early 1968 E.Q. secretly went to Mogadishu. There he met with other Oromo nationalists, who entrusted him with the task of promoting the Oromo cause in the Arab world. Back in Aden, E.Q. formed an Oromo association and served as its chairman. He managed to convince the government of Aden to allow him to open a political office. He organized Oromo nationalists in the Middle East and sought support for the Oromo cause from the governments of Aden, Syria and Iraq, the Palestinian Liberation Organization and the Eritrean Liberation Front (E.L.F.). With support from the Iraqi Government, he was able to provide a seven-month military training programme and fully equipped the first Oromo guerrilla groups, which E.Q. in 1969 dispatched to Harärge under the command of ʿAbdalkarīm Ḥāǧǧī Ibrāhīm, popularly known as Ǧarra Abbaa Gadaa. While in transit through northern Somalia, this first trained guerrilla Oromo army – with which E.Q. aspired to launch an armed struggle in Harärge – was, however, forced to give in by Somali government forces (Taha Ali Abdi, ibid.). All 38 surviving members of the

Elemo Qiliṭuu; photo courtesy of the author unit were imprisoned. E.Q. started smuggling weapons through the ᶜAfar desert to Wällo with the help of the E.L.F.

Early in 1973, a meeting in Addis Abäba brought together militant underground members of the Mäč̣č̣a and Tulama Association and Oromo nationalists from the Middle East, including E.Q. After that, instead of returning home to Aden, E.Q. left for the Č̣ärč̣är Mountains in Harärge, where he started an organized armed struggle. In the process he became an organizational expression of Oromo nationalism. He created a military unit, which some people called an ↗Oromo Liberation Front (O.L.F.) guerrilla unit (Ibsaa Guutama 2003:130).

E.Q. and his comrades were killed by Ethiopian government soldiers in August 1974 (s. Mohammed Hassen 1998:214). Today he figures in several poems by *šayḫ* ↗Bakrii Sapaloo and Oromo nationalist songs. E.Q.'s name has become symbolic for many Oromo and has propelled millions into organized motion.

Mohammed Hassen

Ǝleni

Ǝ. (እሌኒ, b. ca. 1431, d. ca. 1522, royal name Admas Mogäsa) was probably the most famous female Ethiopian ruler of the early medieval period. She was a daughter of a hereditary ruler of ↗Hadiyya, Mähmad (or, according to Hadiyya oral tradition, of his brother Boyamo).

About 1443 she was given in marriage to *aṣe* ↗Zärᵓa Yaᶜəqob to confirm the vassalage of both, the Hadiyya country and its ruler. Her marriage and inevitable conversion to Christianity severed all the ties between Ǝ. and her Muslim kinsmen in Hadiyya, and since then all her interests were concerned with the life of the Ethiopian royal court and state. She was childless and could not therefore hope for a prominent position at court after the death of her husband. The praises to her in the Chronicle of *aṣe* ↗Bäᵓədä Maryam I, the son and successor of Zärᵓa Yaᶜəqob, are certainly a later interpolation made in the reign of *aṣe* ↗Ləbnä Dəngəl at the time of Ǝ.'s regency, when chronicles of Zärᵓa Yaᶜəqob, Bäᵓədä Maryam I, Ǝskəndər, Naᶜod and Ləbnä Dəngəl were collected in one large historiographic piece.

It was precisely her being barren, which deprived her of any political future, that gave her a chance to survive during the stormy events of four subsequent reigns, when, as an Ethiopian hagiographer puts it, "the notables of Ethiopia consumed one another like the fish of the sea, and they became like wild beasts that have not shelter" (Tadesse Tamrat in PICES 4, vol. 1, 530). Finally, her isolation made her quite an acceptable figure at the court to be selected in 1508 as a regent to the young Ləbnä Dəngəl. At the same time, her detachment from petty court intrigue permitted this Muslim-born lady, old and wise, to have a wider vision of the current situation and to appreciate the growing danger of local *ǧihād* when, in the words of another Ethiopian historian, "the dignitaries did not know of the devastation of their country and their submission to Moslems, but they were amusing themselves chatting in Arabic and Amharic" (Sergew Hable-Selassie in PICES 4, 552).

Therefore she was able to look for possible allies and initiated diplomatic relations with Christian Europe. Ǝ. dispatched an Armenian, ↗Mateus, with a mission to Portugal, where he arrived in 1519. She died and saw neither the realization of the Muslim integration, nor the results of Mateus's mission, but in Ethiopian history she remained the person who, for good or bad, established continuous relations between Ethiopia and Europe.

According to a piece of information tracing back to ↗Damiao de Góis, who reports the words of ↗Ṣägga Zäᵓab, Ǝ. wrote two hymnological collections in Gəᶜəz, the ↗*Ḫoḫətä Bərhan* and the ↗*Ǝnzirä Säbhat*, an outstanding achievement for a woman in medieval Ethiopia. The tradition has it that she was the founder of the monastery of ↗Märṭulä Maryam.

Sevir Chernetsov

Ǝleni

Ǝ. (እሌኒ, d. January 1708) was a daughter of *aṣe* ↗Yoḥannəs I and a sister of *aṣe* ↗Iyasu I. She was a remarkable figure in Ethiopian political life during the last quarter of the 17th cent. Ǝ. was brought to prominence by Iyasu, who immediately after his coronation in 1682 granted her the title of governor of ↗Səmen, the traditional title of the heir apparent, probably to give no chances to any male (and therefore dangerous) candidate for this prestigious office. Such an appointment is a clear evidence for the growing importance of female royalties at the court. On the other hand, this post was not granted to her forever, and in 1685 it was given to the more prominent figure of *ras* ↗Anästasyos. Ǝ. remained an important person and in the Ethiopian "short chronicles" both her husband and her son are always mentioned with the name of their important relation: "a husband[/son] of *wäyzäro* Ǝ.".

After 1685 she held no official post at the court and led the usual life of Ethiopian women of royal blood, with one important exception: Ǝ. actively interfered in religious disputes which rendered the Ethiopian Church an ardent adherent of the ↗*Qəbat* doctrine. This adherance went smoothly during the reign of her brother Iyasu, who himself seemed sympathetic to the doctrine, but when his son *aṣe* ↗Täklä Haymanot refused to proclaim the *Qəbat* faith as state doctrine, Ǝ. with her nephew-in-law *däǧǧazmač* Tulluu started a conspiracy in 1706. The result was fatal for them: *däggazmač* Tulluu was blinded and exiled to Təgray and Ǝ. was exiled to Tänkäl (BégCron 85), where she died (DombrChr 246).

Sevir Chernetsov

Elephants

General overview

Surviving E. are classified in the order *Proboscidea*, family *Elephantidae*. Three surviving species are recognized today: two in Africa (forest African E., *Loxodonta cyclotis* and bush African E., *Loxodonta africana*) and one in Asia (*Elephas maximus*). Fossil evidence from the *Proboscidea* dates to the early Eocene epoch (about 55 million years ago) in north-western Africa. Since then, remains of extinct proboscideans have been found in all continents, except Australia, Antarctica and some ocean islands. Their geographical distribution ranged from austral to boreal latitudes and from sea level to elevated mountains. Proboscideans have been highly diversified and extremely adaptable to varied environmental conditions, including swamps, rivers, shallow lake edges, savannahs, forests, tundras and extreme desert habitats. Today, only about one half (182) of the 352 species and subspecies of proboscideans that were once recognized are considered valid. The earliest member of this order (*Phosphatherium escuilliei*) was a dog-size, later taxa reached a gigantic size of over 4 m at the shoulder and weighed over 7 tons, e.g. *Mammuthus trogontherii*. The African E. is the largest living terrestrial mammal, reaching 4m at the shoulder and 7 tons in weight; it is considered a keystone species (Osborn 1936, 1942; Shoshani 1998, 2000; Shoshani – Tassy 1996). Extinct proboscideans have been found in Djibouti (Chavaillon – Berthelet 2001), Eritrea (Ferretti et al. 2003) and Ethiopia (Kalb 2001). In historical times the African E. ranged all over Africa, except perhaps in the hottest inhospitable areas like the Sahara. The extant E. population in the ↗Horn of Africa is found in Ethiopia, Eritrea and Somalia.

The varied topography of the Horn of Africa and its wildlife habitats is directly associated with its diverse geography and climatic conditions and includes fauna and flora globally unique. Elevation in the Ethiopian highland reaches over 4,300 m A.S.L. (in the Səmen Mountains) and dips to about 160 m B.S.L. in the ↗ʿAfar Depression. From west to east, some of the vegetation types of the Horn include moist western forests, sub-Afro-Alpine, Afro-Alpine, juniper forest, deciduous woodland, acacia woodland, semidesert, desert, coastal and mangroves. This diverse topography is the basis for the three phytogeographic zones in the Horn of Africa: the Somalia-Masai (the eastern lowland), the

African elephants in the dry riverbed of the Gaš River, *zoba* Gaš-Barka; photo 2003, courtesy of Jeheskel Shoshani

Afro-montane (the highland) and the Sudanian (the western lowland). Two major climatic patterns occur in the Horn: the long summer rains from about June to September and the short winter rainy season from around March to April. Watersheds in the Horn are composed mostly of seasonal rivers (*wādīs*) that collect water during the rainy season. Exceptions include the permanent Blue Nile River in Ethiopia and the ↗Täkkäze (Setit) River, the natural border between Ethiopia and Eritrea and a part of the E. habitat in *zoba* ↗Gaš-Barka. In Ethiopia E. habitat consists of mixed vegetation. In Eritrea, aside from the permanent Setit River, much of the E. habitat is xeric (dry); vast portions are dry for most of the year. The floodplains of the Gaš and Setit rivers are composed of riverine forest and include the impressive doum palms.

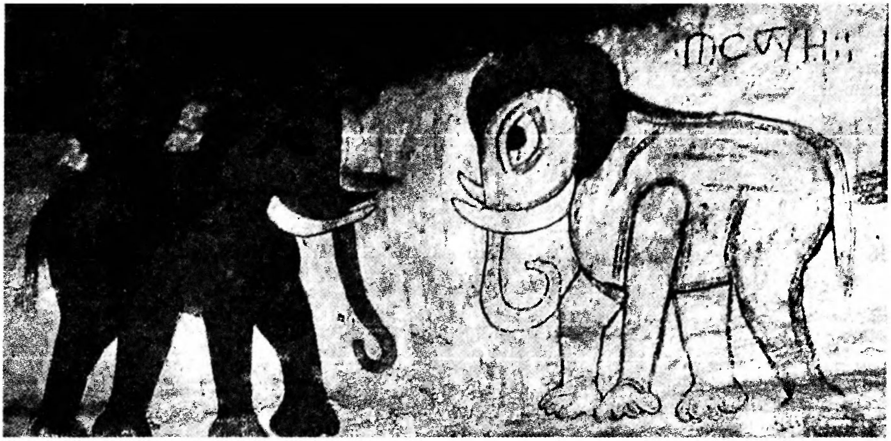
Cultural history

↗Punt was the most important E.-hunting ground for ancient Egypt (cp. Phillips 1997: 445f.). During the 3rd cent. B.C. the Ptolemies deliberately sought their own source of war-E. to counter the Seleucids, who got theirs from their Indian allies. A catching-base was established by Ptolemy II (280–46 B.C.) at Ptolemais of the Hunts, on the ↗Barka River. His successors, Ptolemy III (245–21 B.C.) and Ptolemy IV (221–04 B.C.) continued these activities. It was originally assumed that African E. were not domesticable, until the Ptolemies managed to use the smaller subspecies present in northern and northeastern Africa (*Loxodonta cyclotis*) as war-E. Possibly the Greeks introduced E. domestication first in ↗Meroë (Krebs 1968; Desanges 1978:272–77).

E. were caught all along the Red Sea coast down to Cape Gardafuy in Somalia, but the port of shipment to Egypt was ↗Adulis. The military training of the E. was more often done by Indian specialists.

Throughout antiquity, ancient authors (such as ↗Herodotos) used the presence of E. both in ↗"Aithiopía" and India far in the south as a crucial argument for the supposed geographical link between the two countries (the Ethiopian region being regularly called one of the countries of ↗"India" until the 16th cent.; cp. Fiaccadori 1992: 12ff., n. 33; 46f., n. 12; Schneider 2004). Independent of this misinterpretation, the assumption of an early presence of Indian E. and/or E.-related knowledge from India in Ethiopia is supported by the etymology, tracing the Gəʿəz word **ነጌ** (*näge*, 'elephant', pl. *nägeyat*) to Sanskrit *naga* (DillmLex 685; s. Fiaccadori 1992:54f., n. 26).

According to a hypothesis of Dillmann and later Altheim – Stiehl (1971:423f.), the 4th-cent. Aksumite ruler ↗ʿEzana had a special military



Wall-painting; Gännätä Maryam church near Lalibäla, south aisle; end of the 13th cent.; photo 1993, courtesy of Michael Gervers

unit mounted on E. which was called *sarwe dakʷen* or *sarwe daken* (lit. 'E. [mounted] troops'?), a term possibly connected with Sāho *dakano* ('elephant').

The potential supply of E. was huge. In the 6th cent. Nonnosus, the envoy of the Byzantine Emperor Justinian, reports that he saw at Aue, midway between Aksum and Adulis, up to 5,000 E. feeding in a large plain, probably the Ḥazamo plain (Photius, *Bibliotheca*, cod. III, ed. Henry 1959, 6; s. Fiaccadori 2004:128f.). ↗Cosmas Indicopleustes reports an extensive trade in Ethiopian E.-tusk to India, Persia, South Arabia and the Roman Empire (*Topographia Christiana*, XI, 23, ed. Wolska-Conus 1973:355). According to the ↗Monumentum Adulitanum, Ptolemaios III employed in the third Syrian war E. of Ethiopian and "Trog(l)odite" origin – the latter coming from the hinterland of the Red Sea coast and from Meroë (cp. Desanges 1978:276f.).

The importance of E. for the Aksumite kingdom was sometimes unduly emphasized by drawing on Hellenistic sources (PankIntro 12, 37, 41). Yet, E. were then regularly coming to places with wells and small torrents in the lowlands near the coast. According to local tradition, the village of Däḥono – a name also related to Sāho *dakano* – is one of such places (Fiaccadori 2004:129), the surrounding area in those times being also known for E.-hunting (↗Ḥərgigo).

Archeological evidence of E.-trade can be found at the archeological site of ↗Qoḥayto, which is said to have been an ↗ivory-trade post. It includes at least one petroglyph of an African E. from ᶜAddi ᶜAläwti, deemed to have been engraved in ca. 200 B.C. (Hagos et al. 2003:16, with details), but dated by the relevant graffito (DAE no. 68 = RIE no. 255) to the Christian Aksumite period (Fiaccadori 2004:155).

Hillmann and Hillmann (1998) propose that when the Aksumite ruler ↗Abraha started his campaign against Mecca in 547 A.D., war-E. were shipped from Ethiopia via Adulis to South Arabia. In *sūra* 105 of the Qurʾān, *al-Fīl* (Arab. '[Of] the E.'), Abraha's failure to conquer the Sacred City is partly attributed to his E.'s kneeling down in awe at the Meccan boundary. According to Altheim and Stiehl (1971:475f.), the event, which took place in what has since been called the "Year of the Elephant", is introduced in a mural painting in the Church of ↗Däbrä Salam at Aṣbi (Gerster 1972, ill. 156), but this representation can be rather interpreted with reference to St. Thomas (Fiaccadori 1992:55 n. 26).

Beside their role in warfare and as providers of ivory and skin, E. had an outstanding symbolic meaning in different Ethiopian cultures. The E., like the ↗lion, was related to kingship. E.-hunting was, in theory, a privilege of the Ethiopian emperor and E.-tusks were seen as his possession. Also rulers of southern states and regions expected tribute in E. tusks and organized hunting campaigns (e.g., in the Gibe states and Qabeena, s. CecZeila). The form of address for the emperor, *ǧanhoy* or ↗*žanhoy* ('majesty'), seems to be connected with the Amharic word

ዝሆን *zəhon*, 'elephant' (cp. Yäm/Ǧänǧäro *zakno*, Sidaama *daniččo* etc.). Haberland (HabKön 130f.) rather derives the word *ǧan* from the Cushitic *dan*, *don* or *donzo* for 'judge, elder, chief' (but cp. Gəᶜəz *danäya*; ↗ *dañña*).

In the southern parts of Ethiopia, the hunting of E. was culturally important in connection with the killing-complex (↗ Meritorious complex). The E. was one of the animals most prestigious to kill. An Oromo who killed an E. was anointed with butter and entitled to wear the ostrich feather and the bracelet of a killer (*irboore*), which was in some cases made of ivory. Among the ↗ Dorze the killing of an E. was worth the killing of 40 men (VSAe II, 53, 209, 283, 395f., 402, 468f.; VSAe III, 202). Among the Ethiopian nobility, too, the killing of E. was a source of prestige and the hunter was entitled to wear earrings. The killing of an E. could be celebrated by songs of praise and gifts to the successful hunter (PankSoc 168, 262). In the north, E.-hunting was likewise bound to the killing-complex. A successful killer of an E. received the title of *ḥanta*. One E. equalled ten slain enemies, as documented, e.g., still in late-19th-cent. eastern Təgray, heroic deeds being conditional for becoming an accepted member of society (cp. ↗ *gaz*). Such a hero had a privileged access to resources; songs would be composed to honour him. The same connotation was also applied in name-giving: the Tgn. term for E., **ሐርማዝ** (*ḥarmaz*), may even function as a personal name, almost synonymous with "hero" (as earlier, perhaps, in the graffito of the aforementioned petroglyph from ᶜAddi ᶜAläwti).

Other symbolic characteristics of E. were also known. The Amado Oromo considered themselves relatives of the E., said to be descended from a group of Amado children who were transformed into them. A very similar story was told by the Ǧideničč in ↗ Meʾen (VSAe I, 380f., 414; for legends related to E. s. also VSAe II 632). In the myth of the Šeko of ↗ Gimira, the first human couple gave birth to a boy and an E. After a dispute over food, the E. had to flee into the forest. There he gave birth to stars, wind, rain and fire. For the Šeko, the E. was also connected with the introduction of jams (VSAe III, 62). In Baka (↗ Aari) culture, a man of the Garšima clan with the ritual office of *dongur goodimi* was considered the master of the E. He was said to have the ability to order the E. to leave the fields (VSAe I, 47).

Till the intensification of the ↗ ivory trade from the 18th cent. onwards the distribution of E. stayed on a high level. Proof for this is given by both historical documents on royal hunts and observations of travellers. E., like other wild ↗ animals, were plentiful wherever they found suitable ecological circumstances, especially in the ↗ *qʷälla* (cp. PankEcon 248–52; PankSoc 288–92). An index of the formerly wide distribution of E. can also be seen in the high number of place names linked with E. all over Eritrea and Ethiopia.

While the African E. was mainly for hunting, Indian E. occasionally served in war and as beasts of burden. One of the most noteable imports of Indian E. into Ethiopia resulted from the ↗ Napier expedition. In 1867 the British General Sir Robert Napier brought "44" E. from Bombay (Myatt 1970:90f.), along with many horses, mules, donkeys, camels and bullocks, to fight *aṣe* ↗ Tewodros II at Mäqdäla. Oral tradition says that an unspecified number of the Asian E. used by him (*Elephas maximus*) were released or escaped from his camp and mated with the native African E., thus giving origin to hybrid E. in the Horn. According to British sources 39 Asian E. survived and were taken back to India (Kodolitsch 1869: ch. 3, 45, ch. 8, 202, ch. 5, 322). Yet, morphologically, all the E. observed in Gaš-Barka were typically African E. (*Loxodanta africana*), not hybrids.

E. were hunted mainly for their tusks (ivory) and hides (e.g., for shields and for export), to diminish their numbers in order to save the field crops and to gain heroic prestige. Tails were regularly cut off and displayed as proof of the heroic deed. The consumption of E. flesh was ritually restricted in many societies and often only allowed for ↗ marginalized groups.

A traditional method of E.-hunting among the ↗ Arsi was to follow the fleeing E. on horses and then to cut the tendon of their hind legs. The Kunama used the same method. The ↗ Hamran hunted E. with swords in a similar way. The Mekan (Gimirra), famous E.-hunters, built platforms on treetops and threw spears into the mouth of the E. who tried to eat the leaves of the trees (VSAe III, 18). Another method is reported from the Ǧideničč hunters in Meʾen: they rubbed themselves with E. dung to imitate their smell and crept near to the animals overnight. They killed them with a kind of harpoon with a powerful iron blade (VSAe I, 416). From Geeraa a method is documented in which a single hunter approached an E. up to a certain distance in order to wound the heart of the animal with the ca. 60-cm-long blade of his lance. The hunter had to leave the place immediately and stay away until the E. bled to death (CecZeila vol. 3, 300f.).

For those few who could obtain firearms, E.-hunting was less complicated. Since the period of the ↗Gondärine kingdom, E. were hunted by the Christian rulers with their courtiers. *Aṣe* Iyasu I (r. 1682–1706) did the first documented royal hunt with rifles. During an expedition into the country of the "Šanqəlla", some 200 E. were killed. In the following years royal hunts are reported with the Emperor himself killing many E. on his own. Most of his successors were also E.-hunters, or at least took part in royal hunts.

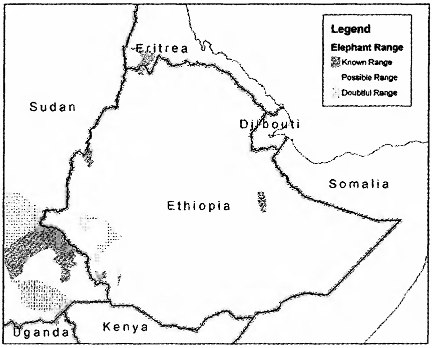
In the 18th and 19th cent., the increasing spread of firearms resulted in the expansion of E.-hunting. It was chiefly practiced to accumulate large quantities of ivory for export (PankSoc 291f.). Ivory became one of the most important means for regional rulers to finance their military and political ambitions. E.g., between 1889 and 1913, *aṣe* Mənilək of Šäwa (later *aṣe* ↗Mənilək II) exchanged ivory for firearms and used firearms to acquire more ivory.

E.-hunting gradually became a profession. E.-hunting expeditions were encouraged by the merchants, who sometimes also financed them in advance. Such activities started in the first half of the 19th cent. in the north, especially in Wälqayt, Šire, Wäğğärat, Säraye, Ṭəlṭäl, Raʾs al-Fīl and then south of the Abbay river, later extending further south. The local rulers who had to permit such hunts received tribute in ivory. Under Mənilək II taxes on E.-hunting had to be paid. The first tusk to touch the ground when an E. was killed had to be for the Emperor (PankEcon 509). The new hunting methods and the greed for ivory and firearms became the main reason for the decline of E. population of the whole Horn of Africa and of their total extinction in large areas of it. In the 20th cent. the decrease of E. in Ethiopia entailed a regression of ivory exports (PankEcon 248f., 420, 509; PankSoc 291ff.).

Current distribution of elephants

Based on data presented by Barnes et al. (1999), in Somalia E. (about 130) are restricted along the coast to the south-east, there being a possibility that they migrate into and out of Kenya. The number of E. in Ethiopia ranges between 321 (definite) and 985 (speculative); they are found in six places: Mago and Omo National Park (↗National Parks), Tama Wildlife Reserve, Gambella National Park, Mizan Täfäri Controlled Hunting Area (all in the south-west), Baabbillee Elephant Sanctuary (central east), Dabus Valley Controlled Hunting Area (central east, near the Blue Nile) and Gaš-Setit (in the north-west, migrating from Eritrea). In Eritrea, E. are confined to Gaš-Barka in the south-west; their number is close to 100 (Shoshani et al. 2004; Nicholson-Lord 2003). These E. migrate back and forth between Eritrea and Ethiopia, entering the Täkkäze valley and the nearby Ethiopian Šire Protected Area. However, they do not intermingle with E. in Ethiopia, since the closest E. population is in the Dabus Valley Controlled Hunting Area, about 500 km to the south (Barnes et al. 1999).

Current E. distribution in the Horn of Africa is restricted to a small fraction of their historical sites. They are confined to island populations. Explanations for the reasons behind the shrinking E. habitat in the Horn vary from human settlements to hunting and lack of water resources. Conservation measures to protect this keystone species are urgently needed in the Horn of Africa. Especially vulnerable are the E. in Eritrea, for they might become geographically and genetically isolated from other populations in East Africa, even though they migrate in and out of Ethiopia.



Elephant distribution in Ethiopia in the year 2002; from Blanc et al. 2003

Ǝlfəñ ↗Gəbbi

Ǝlfəñ askälkay

Ǝ.a. (**እልፍኝ፡ አስከልካይ**, lit. 'protector of the inner chamber [*əlfəñ*]' or 'chamberlain') was an Amharic title of a special official at the royal court (↗*Gəbbi*) in Šäwa. His duty was "the protection of the imperial inner-chamber against undesirable and uninvited visitors as well as the strict observation of etiquette and protocol in seating, presentation to royal audience, neatness of the chambers and the maintenance of general order" (Bairu Tafla in: PICES 4, 602). These duties are similar to those of the *täqaqän ↗blatten geta* at the court of ↗Gondär.

In the ↗Goǧǧam regional court during the *Zämänä mäsafənt*, Ǝ.a. was the lieutenant of the *mulu-bet ↗aggafari*. His job was to stand at the door of the *əlfəñ* during meals or when councils were being held, or when the lord gave audience to his subjects. Nobody could enter without Ǝ.a.'s permission. He also acted for the *mulu-bet aggafari* in the latter's absence and had a contingent of 80 to 100 soldiers under his command. He was selected for this charge from the best horsemen of the region (AbbSéjour vol. 1, 344).

At the time of ↗Mənilək II, not only the monarch, but also *ətege* ↗Ṭaytu – who also had her own court – had an Ǝ.a. of her own. In the later years of Mənilək's reign, Ǝ.a. was, like the other institutions of the imperial court, regularized. An elaborate definition of the tasks of an Ǝ.a. was issued (MahZekr 64ff.). It was further modernized in the reign of ↗Ḫaylä Śəllase I. A military officer with the rank of general was appointed for the post of Ǝ.a. This office continued up to the Revolution of 1974 when the *Därg* abolished it together with other institutions of the monarchy. The last Ǝ.a. was executed together with other high-ranking dignitaries of the empire in November of the same year.

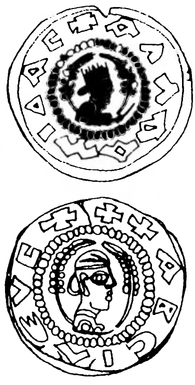
Ǝllä ᶜAmida

By the name Ǝ.ᶜA. (**እለ፡ ዓሚዳ**, 'Lord of the Steles/Columns'; 'Guardian of the Columns' for Lusini in StAeth 61 and n. 23), two different kings of ↗Aksum (I and II), belonging to the early 4th and 5th/6th cent. respectively, are known in Ethiopian documents.

The first one – groundlessly identified with ↗Sembrouthes (Altheim – Stiehl 1968:334 and 1969:170f., 245; Hahn 1983:123ff. and in PICES 8, vol. 2, 11f.), in his turn equated to



Gold coin of Ǝllä ʿAmida, diameter ca. 18 mm; drawing courtesy of Wolfgang Hahn

the Ḥimyarite king ŠMR YHRʿŠ (Drewes 1962: 106f.) – is positively the father of King ↗ʿEzana, called *walda Ǝllä ʿAmida* ('son of Ǝ.ʿA.') in two of his Gəʿəz monumental inscriptions from Aksum (RIE nos. 188.1, 189.2; cp. RIE no. 271.9f., in Gr: υἱὸς τοῦ Ἐλλεαμιδα, i.e. *hyiòs toû Elleamida*, 'son of Ǝ.ʿA.'). The same patronymic, *[w]ld*^{m} *ʾel*^{m} *ʿmd*^{m}, applies to the anonymous king – therefore, ʿEzana's (elder) brother – responsible for a similar Aksumite inscription in South Arabic characters (RIE no. 186.1). The clan-name he bears here can be read *bʾs[y*^{m} *g]šn*^{m}, as suggested by BICI ΓICENE, i.e. *bisi Gisene* ('man of Gəšän', cp. ↗Amba Gəšän?), found in Greek legends on coins – indeed predating those of ʿEzana – issued by King ↗Ousanas (*WZN?), thereby identical with ʿEzana's brother (Schneider 1987:614f.; s. Fiaccadori 2004:109f.). Ǝ.ʿA. (I) is clearly one and the same as Ǝllä Aläda who in the Homily in honour of Frumentius (↗Sälama Käśate Bərhan), preserved in the 14th-cent. mss. EMML 1763 and 8508 (s. Fiaccadori 1989:150 [and n. 3], 161f., ill), possibly drawing on Greek sources, is the father of ↗Ǝllä Azgʷagʷa (i.e. ʿEzana) and the sovereign under whom Frumentius himself came to Aksum (Getatchew Haile 1979:314; hence the *Sənkəssar* commemoration on 26 *Ḥamle*, in GuiSyn II, 428.; var.: Ǝllä Aʾəda).

The name of the second Ǝ.ʿA. occurs in Greek, ΑΛΛΑΜΙΔΑC, i.e. *Alla (A)mida* (vars.: ΑΛΛΑΛΑΙΔΑC, *Alla (A)laidas*; ΑΛΛΑΜΙΡΥΙC, *Alla (A)miryis* = ΑΛΛΑΜΙΔΙC, *Alla (A)midis*?), on the obv. of scarce gold coins in which the legend runs all round between the inner circle and the outer border; on the rev.: ΒΑCΙΛΕΥC, i.e. *basileus* ('king', with vars.). Both sides of coins display the image of a king half-length bust rightwards, draped, and crowned with a triple-element tiara or a head cloth respectively, and framed by two wheat stalks; on the obv., his arm shows two bracelets, his hand possibly holding a short stick (Type 115–16 in Munro-Hay – Juel-Jensen 1995:212f.). Since ↗Kaleb's and Ǝ.ʿA.'s coins are die-linked (MHAksum 156), the latter has been chronologically related to the former, as either his predecessor or his successor. According to Ethiopic hagiographic traditions, Ǝ.ʿA. (II) is in fact the monarch during whose tenure – late 5th/early 6th cent. – some of the ↗Nine Saints and the whole group of the "Righteous Ones" (↗*Ṣadqan*) arrived into the kingdom of Aksum (but cp. the hagiography of ↗Gärima). As Alʿamida/Al(ʿa)meda, he appears, e.g., in the Vitas of *abba* ↗Ṗänṭälewon and ↗Zämikaʾel Arägawi, where he is "son of Säʾaldoba/Sälʿadoba" and predecessor of ↗Tazena "father of Kaleb" (Conti Rossini 1904:44 and, respectively, Guidi 1894:61f.); as ʿAlmed, in the Vita of the ↗*Ṣadqan*, with the omission of Tazena (Conti Rossini 1903:9, 13; cp. the *Sənkəssar* entry for Ṗänṭälewon, 6 *Ṭəqəmt*, in ColSyn VII, 22ff.). Yet, it is not to be excluded that, due to confusion of traditions, great religious events of the 6th cent. – witnessing Kaleb's successful struggle for Christianity in South ↗Arabia – become muddled with older accounts of Ethiopia's conversion under ʿEzana, as in the connected case of ↗Abrəha and Aṣbəha (CRStoria 153f., 258f.; MHAksum 205f.). In this respect, it may be worth noting that the form Ǝllä Aläda, limited to the Homily in honour of Frumentius (and to the relevant passage of the *Sənkəssar*), may be ultimately explained by such Greek spellings as ΑΛΛΑΛΑΙΔΑC in coin legends. A Ǝllä Ameda (vars.: Zaʾəlla Ameda, etc.), i.e. Ǝ.ʿA. (II), with 16 years of reign, is actually placed between the two famous "brothers" in one of the traditional "king lists" (CRList 293: list C, no. 67) – long after another Alʿameda (vars.: Zaʾalləʿamida, etc.), i.e. Ǝ.ʿA. (I), with 30 years and 8 months (ibid. 292, no. 57).

The full sequence of kings, preventing the identification of Ǝ.ʿA. (II) with Tazena himself (tentatively proposed by Pedroni 1997:67, 75, 80), is actually repeated in the most authoritative of those lists: here too, Alʿamida/Alʾameda (with usual vars.), followed by Täzena/Tazena and Kaleb, is sometimes ranking after Sälʾadoba/Säʿaldoba (CRList 272: list A, no. 22; 281: B, no. 43; 298: D, no. 45; cp. 292f.: C, no. 83).

Gianfranco Fiaccadori

Ǝllä Aṣbəḥa ↗Abrəḥa and Aṣbəḥa; ↗Kaleb

Ǝllä Azgʷagʷa

Ǝ.A. (**እለ፡ አዝጓጓ**) is the name of the ruler(s) of Aksum who succeeded King Ǝllä Alada, i.e. ↗Ǝllä ʿAmida, during whose reign Frumentius (↗Sälama Käśate Bərhan) arrived in Ethiopia. In his turn, Ǝ.A. would have been followed by the famous brother-kings ↗Abrəha and Aṣbəḥa.

The tradition about Ǝ.A. proves to be of considerable age, for it appears in the anonymous homily in honour of Frumentius, transmitted in a manuscript from ↗Dabrä Ḥayq Ǝsṭifanos dated to 1336–40 A.D. (EMML 1763), as well as in its almost contemporary pendant from ↗Tana Qirqos (EMML 8509, s. Fiaccadori 1989:150 [and n. 3], 161f., ill.). Here Ǝ.A. is the name of a single person: *wänägśä Ǝllä Azgʷagʷa* ('and Ǝ.A. became king', Getatchew Haile 1979:314). Yet, in the 16th-cent. *Sənkəssar* commemoration of Frumentius (*Ḥamle* 26, in GuiSyn II, 428), it seems to refer to more than one person: *wänägśu Ǝllä Azgʷagʷa* ('and Ǝ.A. became kings'), such reading being possibly entailed by the understanding of *əllä* as the (majestatic) plural of the Gəʿəz relative pronoun *zä*, as well as by the annexed name's similarity to the pattern of Gəʿəz "broken plural". In the "king lists" (C: Zäʾälläsgʷagʷa, Zäʾälläsgʷagʷ, Azgʷag), Ǝ.A. is ruling for 77 years as the 43rd king, while Alʿameda (= Ǝllä ʿAmida) stands at 57th place, before Ǝllä Ahyäwa (↗Eon).

The long reign and the resemblance of the names led to Dillmann's interpretation (1880:19) of Ǝ.A. as reminiscent of the ↗Zagʷe dynasty. Conti Rossini (1922:17f.) suggested instead a derivation of Ǝ.A. from subsequent corruptions of the Gr. *ΕΛΛΑ ΑΙΖΑΝΑ, i.e. *Ella Aizana* [Ezana], a form of ↗ʿEzana's name otherwise unattested but not unlikely in terms of what is known about Aksumite royal onomastics – be it a personal or a throne name (s. Fiaccadori 2004:110).

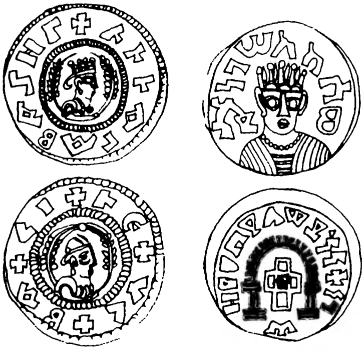
Ǝllä Gäbäz

The name Ǝ.G. (እለ፡ ገበዝ), connected by Conti Rossini (1922:374f.) with South Arabian *gbḏ/gbz* 'devastate, plunder, sack' (but cp. Ar. *ǧabaza* 'cut, set aside': here in the sense of '[tax-]collecting', Ǝ.G. being '[tax-]collector'?), is likely to designate two different Aksumite kings of the 6th and the 6th/7th cent. respectively. The one, also called Zägäbäzä Aksum (a later variant possibly referring to ↗Aksum Ṣəyon cathedral, s. ↗Gäbäz), is introduced as an immediate predecessor of ↗Gäbrä Mäsqäl in the 14th/15th-cent. Life and Miracles of *abba* ↗Libanos or Mäṭ(ṭ)a (ed. Bausi 2003, §§33, 36, 413). The other is known from scarce late 6th- or early 7th-cent. gold coins where he appears on both sides, half-length bust rightwards, wearing a tiara or a head cloth respectively; his figure is framed by two wheat stalks, one of which the king is holding in his hand, and enclosed in an inner beaded circle with crosses and Gr. legends (Type 124 in Munro-Hay – Juel-Jensen 1995:222f.). The obv. is inscribed: ΑΛΛΑ/ΕΛΛΑ ΓΑΒΑΖΗϹ or, less probably, ΓΑΒΑΖ ΝΓ, i.e. *Alla/Ella Gabazēs* or *Gabaz n(e)g(us)* = *nəguś* ('king', s. Fiaccadori 2004:110, against Lusini in StudAeth 71 n. 21); on the rev.: ΒΑΣΙΛΕΥ(C), i.e. *basileu(s)* ('king').

According to his negative characterization in the hagiography of *abba* Libanos, the first Ǝ.G. should be rather identified with King ↗Ǝsraʾel, in terms of royal vs. Christian names. As to the second Ǝ.G., he has long been deemed to lie behind the patronymic of ↗Ǝlla Ṣaḥam, king of ↗Aksum at the time of the Prophet Muḥammad, that occurs twice in the Annals of aṭ-↗Ṭabarī (ed. de Goeje 1881–82:1569f.): *ʾbn ʾbǧr*, restored to *ibn Al(l)a/-ā Ǧabaz* ('son of Ǝ.G.') by Hartmann (1895:299f., amended by BassHist vol. 2: 419f., n. 2). Yet, the same segment can better be interpreted as *ibn *Al(l)a Ḫataz(a)* or *ibn *al-Ḫataz(a)*, i.e. son of (Ǝllä) Ḥetaza (s. ↗Ḥataz).



Gold and silver coins of Ǝllä Gäbäz, diameter ca. 18 and 16 mm; drawing; courtesy of Wolfgang Hahn

The two historical personalities – the successor of ↗Kaleb, sometimes arbitrarily identified with ↗Wazebas (e.g., by Pedroni 1997:67, 75, 80), and his later namesake – seem to have been conflated into Ǝ.G./Zagäbäz of the traditional "king lists" (CRList 294: *C*, no. 80, with 21 or 24 years of reign).

Gianfranco Fiaccadori

Ǝllä Ṣäḥam

The name of Ǝ.Ṣ. (እለ፡ ጸሐም, also Ǝllä Śäḥam) occurs with variants (Zäʾəllä Ṣaḥəm, Zäṣäḥam, Ṣäḥam etc.) in at least one of the traditional Ethiopian "king lists", where he is first assigned a reign of nine years, then of 28 years, and finally of 15 years (CRList 292, 294: "List C", nos. 54, 75, 79).

As a matter of fact, Ǝ.Ṣ. is the Christian king of ↗Aksum whose death was lamented over by the Prophet ↗Muḥammad in 630 A.D., for he must be identified with the *naǧāšī* (al-)Aṣḥam(a) known from the Arabic chronicles as the one who received the Muslim emigrants in 615/6 A.D. (↗Aṣḥama b. Abǧar, with other indications; for vars. of the name, al-Makkī, II, 1, in Weisweiler 1924:49). In one of the most important of these sources, the *Annals* of aṭ-Ṭabārī (de Goeje 1881-82:1568ff.), he appears thrice, as *(an-naǧāšī) al-Aṣḥam* or *Al(la) Aṣḥam* ('[the *nəguś*] Ǝllä Ṣaḥam'). The first time he is also called *malik al-Ḥabaša* ('king of Ethiopia'); the second time is given the patronymic "ibn Abǧar"; the third time is mentioned in connection with his son ↗Armaḥ: *Arhā* [< **Armā* < **Armà* < **Armaḥ*] *ibn al-Aṣḥam ibn Abǧar*. The latter patronymic has been restored to *ibn Al(l)a/-ā Ǧabaz* ('son of Ǝllä Gäbäz') by Hartmann (1895:299f., cp. BassHist 419f., n. 2), but it can be better interpreted as *ibn Al(l)a Ḥataz* or *ibn *al-Ḥataza* ('son of [Ǝllä] Ḥataz': s. for details ↗Ǝllä Gäbäz, ↗Ḥataz). In fact, the whole sequence retrieved, **Armaḥ ibn Alla Ṣaḥam ibn Alla Ḥataz*, makes it clear that Ǝ.Ṣ. was the father of *nəguś* Armaḥ and the son of *nəguś* Ḥataz – thus contributing to the reconstruction of a lesser known part of the king series and of the relevant chronology (in keeping with the Islamic source lying behind the Chinese text hinted at in MHAksum 92f.).

According to a tradition already known in the 16th-cent. ↗*Futūḥ al-Ḥabaša* (BassHist 318 [text]), the tomb (*qabr*) of *Aṣḥamat an-naǧāšī* was revered at ↗Wəqro (Ǝndärta, s. Guida 300; TTChurch 34f. and Lusini 1993–97:252).

Gianfranco Fiaccadori

Ǝllä Śahəl

Ǝ.Ś. (**እለ፡ ሣህል**, vars. Zä Ǝllä Śahäl and others) is a ruler name appearing in some of the Ethiopian "king lists". In the type C lists (s. CRList 283ff., 293f.) this name is mentioned in the 62nd place (separated from ↗Abrəha and Aṣbəha by only one name) with a reign of 14 years, and again in the 69th place with a reign of 2–6 months, and in the 77th place with a reign of two years.

According to the Vita of *abba* ↗P̣änṭälewon, this saint died during the reign of King ↗Kaleb's successor Śaḥəl, in the year 246 of the Era of Diocletian (530 A.D.). Yet, this passage is missing in an earlier copy of the Vita (ms. EMML 1479, fol. 72va).

The words *əllä śähəl* (i.e., *śahəl*) also appear in a late-Aksumite or fully medieval inscription: the epitaph of a certain Giḥo, "daughter of Mängäśa" (RIE no. 232). In some of the proposed interpretations, they were understood as a genuine royal name (e.g., Conti Rossini 1939, CerLett 18f.), though in an uncertain context. Among the recent re-evaluations of the inscription there are suggestions to consider the words *əllä śähəl* either as a genitive of abstraction ('those of mercy/compassion', s. Fiaccadori 1990: 10th/11th or 11th/12th cent.) or as a part of another – otherwise unknown – designation for the Era of Diocletian (s. Kropp 1999, where a precise, though unconvincing, date of Giḥo's death is also offered: 27 *Taḫśaś* 590 Era of the Martyrs [23 December 873 A.D.]).

Both the interpretation of the segment under scrutiny as a ruler's name, Ǝ.Ś., and the latter's occasional inclusion into the "king lists" (s. ↗Chronology) can be plausibly explained by the fact that Giḥo's gravestone had long been laying embedded in the wall of the old church of ↗Däbrä Libanos of Šəmäzana (in ↗Ham). Being so visible, the well-preserved inscription might have attracted the attention of local traditional scholars.

Stuart Munro-Hay

Ǝllä ᶜUzena

The name Ǝ.ᶜU. is one of the possible readings of a word appearing in a difficult passage at the beginning of the Mārib dam inscription set up by the South-Arabian king ↗Abraha in 543 A.D. *ʾn ʾbrh ᶜzl/y mlkn ʾgᶜzyn rmḥś zbymn* (CIH 541, 4f., s. illustration for Abraha). Leaving aside the discussions on *ᶜzly*, *rmḥś* and *zbymn*, one of several suggestions regarding *ʾgᶜzyn* (e.g., 'of Gəᶜəz kin', s. CRStor 188; s. ↗Agᶜazi) was to read it as *ʾlᶜzyn* and translate the whole passage as "I, Abraha, viceroy (?) of king ʾLᶜZYN", i.e. Ǝ.ᶜU. *Ǝllä-* is frequently a part of king ↗names; the tentative vocalization *Ǝllä ᶜUzena* was suggested by Ryckmans (1953:6, n. 26) with reference to King ↗Ousanas as distinguished from ↗Wazena (WZN), both known from Aksumite ↗coinage. In the case of Wazena, ᶜZYN would in fact represent quite an odd rendering – the initial ᶜ standing for *w* – of the name of this possible successor of ↗Kaleb Ǝllä ᶜAṣbəḥa (s., though, ↗Ǝllä ᶜAmida, ↗Ǝsraʾel, ↗Gäbrä Mäsqäl). However, even the learned identification of *Ǝllä ᶜUzena with Ousanas seems to be far-fetched.

Ǝllen

Ǝmbet Ǝ. (**እሌን**, also Ǝlän, Ǝleni; b. ca. 1801, Zagər/Karnäšəm, d. 1851, ᶜAd Täkälezan) was a lady of high birth who played a distinguished political role during the ↗*Zämänä mäsafənt* and won the respect of her contemporaries. Her fame is underlined in 19th-cent. sources by the unusual reference to *raʾəssi* Wäldä Mikaʾel as the "son of Ǝ." without any connotation of disparagement.

Hardly anything has been preserved about her upbringing and formal education, if any. Even the name of her father is not given with certainty. Killion calls him "*aite* Hagos, Kantibai of Zagher" (KilHDic 258f.) and the informants of Kolmodin refer to him as "Ayte Fəssəha, the son of Ayte Selṭan" (KolTrad I), while Yəsḥaq Yosef (1999) uses both names alternately. All sources agree that she was extraordinarily intelligent, a persuasive speaker, an astute politician and a valorous leader. She is said to have commanded the men in combat personally and fought herself like one of them.

Ǝ. entered politics, not by choice, but rather by the exigencies of the time. She was given in marriage to *ayte* Sälomon (the eldest son of *käntiba* ↗Zärʾay of Hazzäga, who ruled the greater part of Ḥamasen for over 40 years), by whom she had a daughter, Tämärṣa, and two sons: Wäldä Mikaʾel and Märᶜəd. Apparently, her husband was neither popular within and outside the family nor powerful enough to dominate the political arena. It also appears that his health was scarcely robust. *Käntiba* Zärʾay was said to have wished to nominate Gäbray Habtäṣəyon, a grandson, to be his heir in his stead, had tradition not hampered him. He did, however, bequeath much of his wealth to Gäbray, while Sälomon received the hereditary office. From this circumstance developed a bitter rivalry within the ruling family, accompanied by incessant intrigues, with which Ǝ. had to cope for many years, both during her husband's lifetime and after his death around 1837, primarily to preserve her children's right to the governance.

Sometime after his accession to the office in the mid-1820s, Sälomon attacked the neighbouring district and rival centre of Ṣäʾazzäga for some obscure reason; but his men were quickly routed by the defenders and he fled to Guraᶜ, Akkälä Guzay, his mother's home region. This uninstigated attack revived the old conflict between the two centres of Ṣäʾazzäga and Hazzäga, which continued unabated until the Italians arrived in the region in 1889.

Ǝ. mobilized the remaining men of Hazzäga and her relations in Karnäšəm and attempted twice to avenge the defeat of her husband, but in vain. Fighting two fronts – Ṣäʾazzäga, on the one hand, and Gäbray (who split her base), on the other – was too much for her. She then looked beyond the Märäb for help. She allied with *šum ᶜagame* Säbagadis, who, having subdued ↗Märäb Məllaš, appointed Ǝ. over the whole of Ḥamasen. After the death of Säbagadis in 1831, the old rivalries of Märäb Məllaš broke out anew and Ǝ. had to look to other quarters for support. Again she succeeded in winning ↗Wəbe Ḫaylä Maryam to her side and she was confirmed in her office.

Her administration was said to have been by and large fair, though at times she tended to treat her enemies harshly. Consequently, *ayte* Gäbray refused to submit to her rule and lived as a rebel in the heavily forested ʿAnsäba region for many years, a situation which made her all the more uneasy and vigilant. She was generally regarded as excessively revengeful, an attribute which not only terrorized opponents, but also brought about her untimely death.

In the late 1840s, she felt it was time for her to give up her regency in favour of her elder son, Wäldä Mikaʾel, who was then in his mid-20s. Probably she was also tired of the ceaseless conflicts she had to deal with. She did in any case retire to the St. Mary church of Hazzäga as a nun. It was here, incidentally, that *käntiba* Wäldä Gabər of ʿAd Täkälezan visited her on his way back home. She received him cordially, in spite of the fact that they were enemies for a dozen years.

Ayte Sälomon had allegedly entrusted to him 40 rifles on behalf of his young children. When Wäldä Mikaʾel and Märʿəd requested him to hand them over some years later, Wäldä Gabər denied having received any rifles from their deceased father. Besides, he mistreated and dismissed his wife, the daughter of Ǝ. Hence, Ǝ. fought and defeated him some years earlier. Now Wäldä Gabər was murdered after his departure from Ǝ.'s friendly reception, a tragedy which the people of ʿAd Täkälezan attributed to the sinister scheme of Ǝ. As a consequence, Wäldä Gabər's relations attacked Hazzäga and took captive Ǝ. and two of her small grandchildren, whom they eventually tortured to death. This event became one of the underlying causes for Wäldä Mikaʾel's contemptuous and rancorous attitude towards Ḥamasen for the next 30 years.

Bairu Tafla

Ellena, Giuseppe

E. (b. 29 March 1839, Saluzzo [Cuneo], d. 1918, Florence) entered the Italian Army after obtaining a degree in Engineering and in 1859 became Artillery officer. He fought in the Austro-Italian war of 1866 and held a teaching position in the Artillery and Engineering School of Turin. In 1887 was in charge of the 7th Artillery Regiment. He was Major General in 1893.

On 29 January 1896 E. moved to Eritrea where he was one of four Italian infantry brigade commanders who fought at the Battle of ↗ʿAdwa. His 3rd Africa Infantry Brigade, which included 4,150 rifles and 12 cannons, was organized into the 4th Infantry Regiment, 5th Infantry Regiment, 3rd Native Battalion, Artillery Brigade and 1st Engineers Company.

Confusion and disorganization characterized the Italian campaign at ʿAdwa. Initially, General Oreste ↗Baratieri, Governor of Eritrea and commander-in-chief, held E.'s brigade at Räbbi Ariänni. However, within hours after the Italians started moving against the Ethiopians, Baratieri divided E.'s brigade, thus ensuring its near destruction.

The 4th Infantry Regiment remained at Räbbi Ariänni and tried to cover the Italian retreat but suffered heavy losses. The 3rd Native Battalion, the Artillery Brigade, and two companies of the 5th Infantry Regiment's Alpine Battalion reinforced Brigadier General Giuseppe Edoardo ↗Arimondi, commander of the 1st Africa Infantry Brigade, who led the Central Column of the advance and lost his life during the retreat. The 5th Infantry Regiment's 15th Africa Infantry Battalion deployed to Mount Bälah to reinforce Arimondi's 1st Bersaglieri Battalion (1st Infantry Regiment) but arrived too late and was cut off and overwhelmed by the Ethiopians. The 5th Infantry Regiment's 16th Battalion and two companies of the 5th Infantry Regiment's Alpine Battalion also suffered heavy losses in a desperate attempt to halt the Ethiopian onslaught in the Mount Bälah. E. then made the mistake of moving his 1st and 2nd Quick Fire Batteries into the Məmṣaḥ pass, thereby helping to block the road and hinder the Italian retreat. E. survived the Battle of ʿAdwa and was repatriated on 14 March 1896.

Thomas P. Ofcansky

Ellero, Giovanni Battista

E. (b. 17 July 1910, Tricesimo, Udine, d. 28 November 1942) was an Italian civil servant in Ethiopia who made important contributions to the ethnography and history of Tǝgray.

Between 1931 and 1935 E. completed degrees in Law, Philosophy (Bologna) and Political and Labour Sciences (Ferrara); in view of a career in the colonial administration, he studied Tǝgrǝñña and Amharic. On 15 May 1936 he joined the Ministero dell'Africa Italiana (↗Africa Orientale Italiana), serving in several posts in Tǝgray (political office in ^{c}Addigrat, Commissioner office of Akkälä Guzay, Ǝnda Śǝllase, ^{c}Addi Da^{c}aro, Mäq̣älä, ^{c}Om Hağär and ^{c}Addi Remoz). When in 1941 the Italian colonial empire collapsed, E. was left in charge under the British Military Administration in ^{c}Addi Qayyǝḥ and collaborated with the anthropologist Siegfried ↗Nadel (s. Dore 2004). In June 1942, he was made prisoner by the British troops and sent to South Africa. He died as the ship that transported him was sunk by the German navy.

During his six years in Tǝgray, whenever he was off duty, E. carried out field work in different areas and on various topics, but with a focus, apparent in his writings, on main colonial problems: customary law, traditional land rights and land resources, genealogies, and pastoral taxonomy (for his ethnographical role s. Dore 1993:37–40). He was in assiduous correspondence with Carlo ↗Conti Rossini. From his research he published six articles between 1939–48 (republished in EllLusAnt), where he skilfully combined – and this is probably the most interesting aspect of his research – different methodologies: use of oral traditions and written sources, participant observation and cartography (Dore 1993:40–43). E. offered there insights into the history and the secular and monastic life – with some of the first serious censuses of its monasteries – of Šire and Ǝndärta, into ↗Tuqrīr groups and Wälqayt, the later being the subject of a larger unpublished monograph.

Giovanni Battista Ellero; photo courtesy of Giovanni Dore

E. additionally collected several colonial documents, mostly letters from Tǝgrayans and Italian officers, spanning from the 1880s to the 1930s. These, along with other studies on Akkälä Guzay, Waldǝbba, Ǝndärta, and the Sāho and Asaorta (^{c}Asawǝrta) groups, are kept at the Department of Discipline Storiche of the University of Bologna and have been (partially) published (e.g., Uoldelul Chelati Dirar – Gori – Taddia 1997; Uoldelul Chelati Dirar – Dore 2000).

Andreu Martínez

Elsa^c

E. (**ኤልሳዕ**, Elisha) was the second head of the monastery of Däbrä ^{c}Asbo (later known as

↗Däbrä Libanos of Šäwa) after *abba* ↗Täklä Haymanot, the celebrated saint. According to the early 16th cent. Acts of Täklä Haymanot, the saint appointed E. shortly before his death (Budge 1906, ch. 110). Another more ancient (so-called Waldəbban) recension of Täklä Haymanot's Acts has it that it was E. whom Täklä Haymanot ordered to take his leg, severed after many years of standing; E. hid the leg under the community's ↗*tabot* and was appointed head of the monastery soon thereafter (s. Conti Rossini 1895:119ff.); the monks, however, might have preferred another candidate (e.g., *abba* ↗Anorewos the "Elder").

E. held office for three months only before he died. His death was predicted by a certain deacon, who miraculously returned from the dead only in order to bring the message of Täklä Haymanot to his disciples: E. was doomed to die and be substituted by ↗Filəppos. The prophecy was fulfilled three days later (s. Budge 1905, chs. 111–12; for a somewhat different chronology s. Conti Rossini 1895:122).

In the tradition of Däbrä Libanos E. is commemorated on 11 *Ḫədar*. He is praised for his piety but otherwise almost nothing is known about him. However, the persistent repetition of "the arisen monk's" story in a number of sources suggests that the transferring of the office from E. to Filəppos was an important and possibly turbulent event, the original purpose of the story being seemingly to legitimate Filəppos's abbotship.

E. may be identical to a certain *abba* E. appearing in the list of Täklä Haymanot's principal followers (cp. ms. EMML 1834, fol. 102a; Budge 1906, ch. 103). Notwithstanding his short tenure, E. is well remembered in the monastic tradition, chiefly in Šäwa, and is usually included amongst the heads of Däbrä Libanos (for a rare exception s. ms. EMML 3255, fol. 2b; cp. ↗*Ǝč̣č̣äge*). At least two images of E. are known (s. ms. EMML 2999, fol. 88b; 4026, fol. 142a).

Denis Nosnitsin

Elyas

Abba E. (ኤልያስ; 15th cent.) was a nephew of *aṣe* ↗Zärᵓa Yaᶜəqob, the son of the Emperor's sister ↗Ǝleni and an important church singer, Bakimos. He lived during the reigns of Zärᵓa Yaᶜəqob, *aṣe* Bäᵓədä Maryam, *aṣe* Ǝskəndər and *aṣe* Naᶜod. Despite his connections to the royal family, E. did not exploit his position for personal gain and refused offers of prestigious monastic seats, such as ↗Däbrä Libanos, Däbrä Wägäg and Däbrä Halleluya. He is said to have clashed with the ↗Stephanite clergy and to have been persecuted by their supporters.

Elyas

E. (ኤልያስ, d. 1 January 1733?) was an official at *aṣe* ↗Bäkaffa's court. The end of *aṣe* Bäkaffa's reign was marked by a series of sudden promotions at the court. Thus, on 14 July 1729 a certain E. was promoted from the rank of ↗*bašša* (14th place in the court hierarchy) to that of ↗*ras* (2nd place). However, Bäkaffa died on 19 September 1730 and E., anxious to safeguard his position, took sides with *aṣe* ↗Iyasu II, the seven years-old son of Bäkaffa and Məntəwwab (↗Bərhan Mogäsa). It was as *ras* that he was among those who proclaimed *aṣe* Iyasu II emperor and was immediately rewarded with the hand of Bäkaffa's daughter Wälättä Täklä Haymanot, who was given to him in marriage on 28 September 1730.

It was the only reward E. received, for he was soon returned to his previous position of *bašša*, the commander of the royal guards armed with match-locks. It was not the previous courtiers, but Məntəwwab's relatives, natives of ↗Qʷara, who were then promoted at the court: in July 1731 Niqolawos, the elder of the Qʷara clan, was appointed *ras* in place of E.; and on 19 July 1732 the same Niqolawos was additionally granted the title of ↗*bitwäddäd*. Subsequently, a party of malcontents, unhappy with the rise of Qʷara upstarts, arose at the court. Among them were such prominent figures as the President of the

Supreme Council Tənsaʾe Mammo and ex-*bitwäddäd* Lafto. When old Niqolawos died on 18 December 1732, they entered ↗Gondär under the pretext of mourning and proclaimed a new ruler, *aṣe* ↗Həzqəyas, whom they had released from Wähni Amba, a place of detention for male royalties. E. immediately joined them with his musketeers and they besieged and stormed the palace compound for several days, so that the Qʷara clique was rescued only by provincial rulers who hurried with their troops to rescue them. On 1 January 1733, the decisive battle took place at Fänṭar, where the rebels were defeated and Həzqəyas captured. E. probably lost his life on the same day.

The triumph of Iyasu II and his mother Məntəwwab revealed the growing might of the provincial rulers – a tendency which later proved fatal for the Gondärine dynasty.

Sevir Chernetsov

Elyas Ḫaylu

Aläqa E.Ḫ. (ኤልያስ፡ ኃይሉ; b. 1861, Moṭa, Goǧǧam, d. early 20th cent.) was one of Ethiopia's most prominent artists in *aṣe* Mənilək II's time. From Moṭa he moved to Šäwa, where he entered *aṣe* Mənilək II's service, and, according to family tradition, was one of the first Ethiopians to go abroad to study painting, in France.

E.Ḫ.'s paintings include illustrations for a copy of ↗*Täʾammərä Maryam* (now in Addis Abäba's ↗Qəddəst Śəllase church; mf. EMML 1180). E.Ḫ. also decorated many churches, including one in Moṭa, as well as in Mädḫane ʿAläm in Ankobär, and Uraʾel, Yäkka Mikaʾel, and one at *aṣe* Mənilək II's palace, in Addis Abäba.

Battle of ʿAdwa; painting by Elyas Ḫaylu (detail); from Rosen 1907

Since his work was unsigned, and there has been much over-painting in Addis Abäba churches, where historical memory of painters is often blurred, it is impossible to identify these paintings. His icons of ↗Gäbrä Mänfäs Qəddus and ↗Täklä Haymanot are, however, reproduced in Rosen (1907).

E.Ḫ. was one of the first Ethiopian artists to depict *aṣe* Mənilək II's victory at the battle of ↗ʿAdwa and, claims family tradition, painted one which the monarch inspected on his triumphal return to his capital. One such work is reproduced by Felix Rosen, who notes that it was unusual in indicating the different pigmentation of the Ethiopian and Italian armies. Two ʿAdwa battle paintings by *abba* [sic] E.Ḫ., probably the said *aläqa*, are in the Alfred ↗Ilg collection in Zürich.

Aläqa E.Ḫ., like many other artists, was also a poet. One of his poems was reproduced by his son, ↗Gäbrä Ǝgziʾabəḥer Elyas, in the chronicle of *ləǧ* Iyasu and *nəgəśtä nägäśtat* Zäwditu (s. GebMolIyas).

Richard Pankhurst

Ǝmäʾalaf Ḫəruy

Ǝ.Ḫ. (እማኣላፍ፡ ኅሩይ; b. 1908, Dima, d. 1972) was a traditional Ethiopian artist active during the Ḫaylä Śəllase period. One of three sons of the church artist *aläqa* ↗Ḫəruy Wäldä Giyorgis of Dima in Goǧǧam, decorator, inter alia, of the churches of ↗Ǝnṭoṭṭo Maryam and ↗Gännätä Giyorgis in Addis Ababa, Ǝ.Ḫ. was brought up and trained by his father. Making his way to Addis Ababa during the ↗Zäwditu period, he obtained employment as a book illustrator in the then newly established ↗Bərhanənna Sälam

Printing Press and also produced several paintings of royal personages for the Parliament building. After the Italian invasion he and his elder brother Nəqaʾe Ḫəywät Ḫəruy decided to join the Resistance. On receiving blessing and supplies from their father, the two brothers joined the Patriot leader ↗Ḫaylä Maryam Mammo and, after his death in battle, continued to fight beside their fellow Patriots. Nəqaʾe Ḫəywät was killed in action two years later. Ǝ.Ḫ. joined *ras* ↗Abbäbä Arägay's Patriots. During this time he produced one or more seals for his comrades and also helped them by making bullets.

After the Liberation, Ǝ.Ḫ. was appointed by Mäkʷännən Habtäwäld to head the Handicraft School, then located in the Kolfe area of Addis Abäba, and was subsequently attached to the National Library of Ethiopia. He was one of a select group of artists employed at the Palace to design the new Ethiopian bank-notes, and he later produced a series of paintings of *käntibas*, or Lord Mayors, for the Addis Abäba Municipality, as well as a portrait of the Ḫaylä Śəllase's daughter Princess Ṣähay for the Śəllase church in Addis Abäba. His most important work was, however, the decoration of the ↗Gännätä Ṣəge Giyorgis Cathedral, together with Afäwärq Täkle. Its original paintings, which included a representation of the Battle of ʿAdwa, had been destroyed at the time of the Graziani Massacre in 1937 and were replaced only after the Liberation.

Ǝmäkina

Ǝ. (እምኪና) is a mountain fortress overlooking the Täkkäze valley in eastern ↗Bugna in Lasta.

There are two ancient churches on the mountain top, Ǝmäkina Lədäta and Ǝmäkina Mädḫane ʿAläm. They are believed to have been built during the reign of *aṣe* ↗Gäbrä Mäsqäl in the 6th cent. On the eastern foothills of Ǝ. there is a rock-hewn church of ↗Gännätä Maryam decorated with paintings under *aṣe* Yəkunno Amlak.

Ǝ. is a highly inaccessible mountain stronghold from where ↗Mälkəʾa Krəstos, a descendant of *aṣe* Dawit II, waged an anti-Catholic struggle and then a dynastic power contest against *aṣe* ↗Susənyos; the royal chronicler refers to him as "pretender Mälkəʾa Krəstos of Ǝ." Ǝ. remained difficult and impregnable to the royal forces throughout the period of the Catholic episode.

Another mention of Ǝ. occurs in the period of *aṣe* Bäkaffa. There the pretender ↗Gubala had established his centre until he made peace with the Emperor in 1726. The mountain also served as a royal prison when *ras* ↗Aligaz, the Yäǧǧu Oromo king-maker, deposed and imprisoned *aṣe* ↗Täklä Giyorgis I in 1789; he remained there until his release by his Lastan supporters in 1791/92.

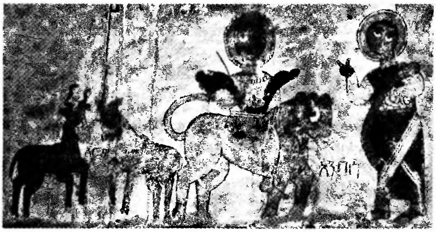
Wudu Tafete

Ǝmäkina churches

Two churches of Ǝ., both constructed in a cave, belong to the type represented by ↗Däbrä Damo, ↗Yəmrəḥannä Krəstos, ↗Zaräma Giyorgis and ↗Žämmädu Maryam. The bigger one, situated on the east slope of the mountain, is dedicated to the "Redeemer of the World" (Mädḫane ʿAläm). It is sheltered by an irregular stonewall that closes the opening of the cave. An oriented basilica (8.7 m x 6.5 m x 5.2 m), it is constructed of small stone pieces and red tufa rubble layered in alternate shifts. The interior is divided into three naves by two squared pillars. A transversal wall screens the sanctuary. Two wooden architraves along the whole church support the clerestory wall decorated with friezes of wooden panels and pierced by six wooden framed windows. A flat wooden ceiling covers the aisles, while the central nave has an open-rafted saddle-back roof.



St. Mamas riding a lion; wall-painting; Ǝmäkina Mädḫane ʿAläm, western wall; end of the 13th cent.; photo 2002, courtesy of Michael Gervers

The central part of the sanctuary, with a wooden dome, opens into the nave through a wooden arch. The western, northern and southern doors are of a massive wood.

The church is extensively decorated with relatively well-preserved paintings. Geometric and vegetal patterns cover almost all wooden architectonic details. Zoomorphic motifs, as well as crosses and angelic faces – with a clear apotropaic purpose – appear in several places. Figural representations – scenes from the O.T. and N.T., saints, monks, archangels and two donors – are to be found by the door, along the walls of the aisles, on all sides of the pillars, on the upper wall of the nave and in the sanctuary. The dome of the church is decorated with a large ↗ *Maiestas Domini*. The iconographical programme and the style of murals show a close relationship with the paintings in the nearby church of ↗ Gännätä Maryam, which should be ascribed to the same workshop and dated to the same period, i.e. to the second half of the 13th cent.

The second church, on the west slope of the mountain, is devoted to the Nativity of St. Mary (Lədätä Maryam). It lies behind a high and large wall pierced by a door opening with carved wooden frames and by windows with finely insculped traceries. The oriented church is cubical and very small (7.5 m x 7.4 m x 2.9 m). The exterior is entirely covered by white plaster. The windows are irregularly disposed. A saddle-roof supported by two monolith pillars rises above the central nave, while flat wooden ceilings cover the aisles and the sanctuary, at the entry of which two wooden columns are found, probably the remains of an old chancel. However, according to the local priests, who ascribe to them a symbolic significance, they were brought from Jerusalem.

The church is decorated by paintings difficult to date. The roof and the ceilings are covered with geometric patterns. On the walls the figures of saints, angels and different animals appear. These highly stylized representations resemble the drawings in the Coptic magic scrolls.

Əmba Dərho

Ə.D. (**እምባ፡ ድርሆ**) is a long-standing small town located 12 km north of ↗ Asmära (for exact location s. map under Əmbärämi), in the heart of the Eritrean plateau. In one of the early 16th-cent. "itineraries" collected by Alessandro ↗ Zorzi it is referred to as "Embandero, a royal city": namely, the city "of the king of Masen" or ↗ Ḥamasen (CrawItin 124f.:I, 4). A land charter of *aṣe* ↗ Ləbnä Dəngəl grants Ə.D. to Dafla, the well-known ↗ *kantiba* of Ḥamasen, "for his pilgrimage to Jerusalem, and for his children and his children's children" (CRAxum 35 [text] = 38 [tr.], no. 38; HuntLand 47, no. 37). The priests of the local church of Ənda Iyäsus report a tradi-

Lədätä Maryam Church, west façade; 13th cent. (?); photo 2002, courtesy of Michael Gervers

Grid excavations of Ǝmba Dərho near Asmära showing a megalithic circle; photo courtesy of Krishna Rao

tion about the latter's founding in 367 of the "Ethiopian Calendar" (Heldman 1974): i.e., in 374/75 or 1250/51 A.D. according to whether the era "of the Incarnation" or that "of Martyrs" is meant hereby. Although that tradition cannot be verified, it is possibly safe to assume that Ǝnda Iyäsus had been established by the end of the 14th cent. The low circular stone wall that encloses the church compound is decorated with interesting cross-finals of stone (Heldman 1974).

On a hillock 500 m north-west of the main settlement, there is an archaeological site, with two megalithic stone circles side by side on the hillock. Adjacent to the site a microlith-bearing site stands where redware pottery-worked stones are seen spread on the surface. One of the stone circles on the west was excavated in 2000 by the Department of Archaeology of the University of Asmära.

The stone circle consists of a cairn of stones surrounded by a circle of 22 large boulders which sealed undisturbed burial deposits. The underground chamber might have been prepared by scooping out the soft basaltic rock. There is an entrance on the west to this cavern-like chamber, formed of four upright stone slabs. Five small stone boulders on the inside support these vertically arranged slabs. The height and width of the entrance are 78 cm and 65 cm respectively. This gate-like entrance protects the burial goods.

Excavation was carried to the depth of 160 cm in different levels. Varieties of cultural materials were recovered. They included 24 pottery vessels, a small glass bowl, beads of stone, glass and copper, 10 cowry shells of white colour, a copper hair pin, two pairs of bracelets and a pair of gold earrings. Five human molar teeth were also collected. These ornamental objects and the teeth appear to be related to an adolescent girl with an age probably below 15. She may have belonged to a nomadic pastoral community of Aksumite times.

Ǝmbabo

Ǝ. (**እምባቦ**, also Imbaaboo) is a place in Horo Guduru, the former Wälläga province. It entered the history books subsequent to the battle fought between *nəguś* Mənilək of Šäwa (later ↗Mənilək II) and *nəguś* ↗Täklä Haymanot of Goǧǧam on 6 June 1882. This was preceded by armed confrontation between their two generals, *ras* Däräso Ṭabo of Goǧǧam and *ras* Gobäna Dači of Šäwa, in their bid to establish control over the resource-rich Oromo principalities of south-western Ethiopia, when Gobäna reportedly forced Däräso to flee, leaving behind the ivory and other goods that he had collected from the Oromo lands. An exchange of derogatory correspondence between their two lords set the tone of the impending clash of arms. The daylong battle, which was marked by exceptional ferocity, ended with the defeat and capture of Täklä Haymanot. One-fifth of the Goǧǧam forces are said to have died on the battlefield.

An enraged *aṣe* Yoḥannəs chastened his vassals for going to war without his consent by taking away Agäw Mədər from Täklä Haymanot and Wällo from Mənilək II, as well as forcing the latter to surrender the arms he had captured at the battlefield. But the ultimate historical significance of the battle remains that Šäwan hegemony over the Oromo principalities was assured and Mənilək's succession to the imperial throne thereafter became only a matter of time. The ferocity of the battle notwithstanding, Mənilək and Täklä Haymanot maintained an amicable relationship until the latter's death in 1901.

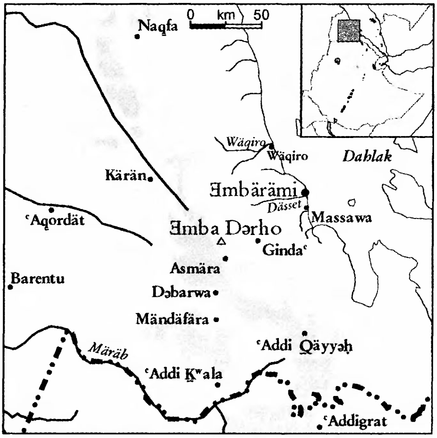
Ǝmbärämi

Ǝ. (እምበረሚ) is a village in Eritrea located ca. 19 km north of ↗Massawa on the northern bank of the Dässet river, ca. 1 km from the sea.

According to local traditions the settlement was founded by elements of the Təgre-speaking group Mäsḥalit. It is believed that while grazing in the area, a widow of the ᶜAd Baᶜadinge clan gave birth to a girl, who was named Baryam. The mother, Um Baryam ('mother of Baryam'), settled there and the village that developed around the spot gradually came to be known as Ǝ. (Salvadei 1913:1833; Odorizzi 1911:171f.).

However, Ǝ. derives its importance from being the centre of the influential ↗ᶜAd Šek holy family and the site of a region-wide *ziyāra* (pilgrimage) to the sacred shrines of the family's venerated saints, performed annually on 13 *Ṣafar*. ᶜAd Šek traditions date the arrival of *šayḫ* Muḥammad b. ᶜAlī b. al-Amīn (ca. 1808–77) in Ǝ. to ca. 1840. *Šayḫ* Muḥammad had gained such widespread success in attracting followers and establishing his reputation as a holy man that in the early 1860s Guillaume Lejean (1865:142) described Ǝ. as "une Mecque au petit pied". Ǝ. became an important centre of Islamic propagation in the region.

With time other Təgre- and ↗Sāho-speaking groups of ↗Sämhar settled in Ǝ. under the auspices of the ᶜAd Šek family. Due to its position on the coast, Ǝ. was also associated with contraband and illegal slave-trading in the last third of the 19th cent. (Douin 1936:255). Around the turn of the 20th cent. there were ca. 1,000 people living in the village, mostly by grazing herds and agriculture. Under Italian colonial rule irrigated plantations were developed along the Dässet river and on the coastal plain towards Wäqiro in the north and Massawa, south of the village.



The last decades of the 20th cent. were hard for many inhabitants of Ǝ. Following the nationalization of their lands and oppression by the forces of the *Därg*, many fled in the mid-1970s to Saudi Arabia and Port Sudan. Today Ǝ. has a small population. The village still hosts the yearly *ziyāra* by numerous followers from the Eritrean lowlands and is visited by the highest Muslim authorities in the country.

Ǝmbayyä Habte

Däǧǧazmač Ǝ.H. (እምባየ፡ ሃብቴ, b. 1910, Kärän, d. 22 April 1988, Asmära) was an official who served for more than 30 years as a provincial governor and political counsellor in Eritrea. His father, *ayte* Habte Mällak (who governed the lower ᶜAnsäba-Bogos region in 1931–34) and his mother, *wäyzäro* Gämmär Bäyyan, were from the ᶜAddi Dəkkəl group of the Bilin. Ǝ.H. received his education in the Italian schools for natives in Kärän and Asmära and attended the Salvago Raggi vocational school in Kärän in 1926.

Ǝ.H. began his career as a clerk in the desalination enterprise in Massawa in 1927. Two years later, he moved to Somalia, where he worked with an Italian concessionary plantation company until 1935, when he returned to his home region. An Ethiopian source (*Taṭäq* for 27 *Miyazya* 1980) alleges that he was kept in confinement in Kärän, as he was suspected of associating himself with a pro-Ethiopian group of young persons. Other sources indicate, however, that he worked with a transport enterprise in Kärän until 1938, when he again changed his post to the office of the Governor of Eritrea, to which he was attached as a clerk and interpreter until 1941. After the defeat of the Italians, he was employed by the rich businessman El-Giak Ihemir, with whom he stayed until 1945, when he devoted more time to politics.

Ǝ.H. is said to have been one of the founders of the ↗*Maḥbär Fəqri Hagär Erətra* in 1941 and he became secretary for its branch in the western region from September 1941 to September 1942. Again he reorganized and led the restructured pro-Ethiopian movement in the western lowlands in 1946–47. In the late 1940s, he became a judge in the Kärän court of justice, while at the same time acting as a member of the town council and the educational commission.

In January 1950, he went to Addis Abäba as a member of a delegation and was awarded a gold medal by the Sovereign, an indication of his close connections with the Ethiopian government. In 1952 he was elected to the ↗Eritrean Assembly.

During the periods of the British Administration, the Federation and the provincial status of Eritrea, he held the position of governor of the districts of Kärän, Ḥamasen and Aq̱ordät, respectively, with the title of ↗*fitawrari*. In the late 1960s he was appointed vice-director of the provincial administration of Eritrea, and eventually provincial counsellor of Eritrea with the title of ↗*däǧǧazmač* and the rank of vice-minister, a position which he held until his retirement in 1975.

In recognition of his services, he was awarded the order of the Ethiopian Star. In the 1980s, he acted as President of the Eritrean Patriotic Association and representative of the people of Kärän in the National Šängo. He was buried at Ṣäṣärat, Asmära.

Bairu Tafla

Ǝmbilta

Morphology

Ǝ. is an end-blown flute not played solo but as part of an ensemble consisting of three, four, or five flutes of differing lengths, ranging from 75 cm to 1.5 m, with an average inside diameter of about 3 cm. Materials of construction vary and include hollow reeds or bamboo of an appropriate diameter or, where bamboo is scarce, a thin-walled metal tubing having from 2.5 to 3 cm of inside diameter. Three sizes of Ǝ. commonly constitute one set (Kimberlin 1980:239; Tesfaye Lemma 1975:17). **ይማ** (*yəma*) is the longest flute with no finger holes, being identified by a small slot on the underside close to the distal end. **ድፍን** (*dəfən*), the middle size, has no finger hole or slot. **አውራ** (*awra*), the designated leader of the ensemble, is the shortest length flute with the smallest opening from the shortest diameter; the flute has one underside hole and a U-shaped slot on the underside close to the distal end.

According to Ashenafi Kebede (1971) and Tesfaye Lemma (1975) the *awra* produces three pitches; the other two share the same two pitches, sounding an octave apart. However, field recordings made in 1972 and 1996 illustrate melodies made up of four, five and even six pitches. Yared Marässa, an Ǝ. and ↗*wašənt* maker and player, was commissioned to make a set of three Ǝ. from metal tubing purchased from the Märkato (↗Addis Kätäma) in Addis Abäba.

Cultural Context

According to tradition, Ǝ. players, like other wind instrument players, were slaves who lived and worked for the nobility, some having been captured along the Sudanese border. The main reason for this tradition, a belief and attitude which persists even today, is that the act of blowing hard on wind instruments like the Ǝ. and ↗*mäläkkät* causes incurable and painful haemorrhoids, **ጥሩምባ፡ መንፋት፡ ሬብ፡ ይገለብጣል** (*Ṭərumba mänfat reb yəgäläbtal*). Thus, any activity requiring physical exertion or threatening one's health was left for slaves to perform (Ashefani Kebede 1971:163ff.).

Today, Ǝ. can be found among the Amharic- and Təgrəñña-speaking people of central and northern Ethiopia, for ceremonial use in Lalibäla and Gondär, in the Wällo region, and among the Berta people of the Beni Šangul region in the south-east. There is historical evidence of use of Ǝ. in Aksum in the church ceremonial functions held outdoors.

Function

Although the Ǝ. is used for social functions and celebrations, it has been essentially a ceremonial instrument played during royal processions or to accompany troops marching for battle. A collection of Ǝ. from Tesfaye Lemma (1975) was used in Šäwa and may have also been used during the battle of ↗ᶜAdwa. Historically the Ǝ., along with the *mäläkkät* and the ↗*nägarit*, represented ceremonial instruments or 'insignia of royalty'; they were used to herald the approach of the king or other officers of authority during ceremonial state functions. These three instruments are most of the times used as a trio; even for proclamations the instruments feature as an ensemble. When a new Emperor ascended to the throne and when proclamations of national concern were made, the *nägarit* sounded and the *mäläkkät* and the Ǝ. heralded the news. Today, Ǝ. are used, for instance, to greet state and foreign dignitaries at Bole Airport.

Pitch

Harmonic overtones can be heard, and these also contribute to the unique tonal quality and texture, from a soft, deep, mellow sound having a "breathy" quality to the lighter or louder, more strident sound. It is the overtones and the act of over-blowing that enables the Ǝ. to produce the overtones or harmonics more loudly than the fundamental pitches. Usually these "extra sounds" are ornaments and embellishments, giving the melody a particular character arising from the skill of the player. Two Ǝ. play two pitches an octave apart from each other. The third can play three pitches of which two pitches are an octave apart. Collectively, intervals heard are approximately a perfect or diminished fourth and/or fifth interval. Sometimes when four or five musicians perform together on the three instruments, one or two instruments may be duplicated in performance.

Music

The player holds the Ǝ. at a downward angle away from the body, towards the player's right. The players may also dance, accompanying each other on the Ǝ. When an Ǝ. ensemble performs, it typically plays in hocket, where a single melody is produced by a set of three to five Ǝ. players playing pitches or short motifs in alternation with some overlapping of parts. In the 1996 field recordings, there are ensembles three or four Ǝ. players where the *owra* is duplicated. In addition, Ǝ. performers are also dancers and acrobats. A stylistic trait is that of the players doing various dance step patterns in a circle formation, so that the Ǝ. sounds fluctuate, alternating between "coming closer" and "going further away". To play one melody, the three performers must coordinate their melodic components with regard to timing, giving continuity to a seemingly disjunctive manner of executing sounds.

A traditional composition performed with the Ǝ. is known as **ሻንቀት** (*šanqät*), an invocation to God at the beginning of the performance. Overtones are prominent. At the end of the piece, in the "coda" section the ensemble does not end playing simultaneously; rather, each Ǝ. player in turn ceases playing.

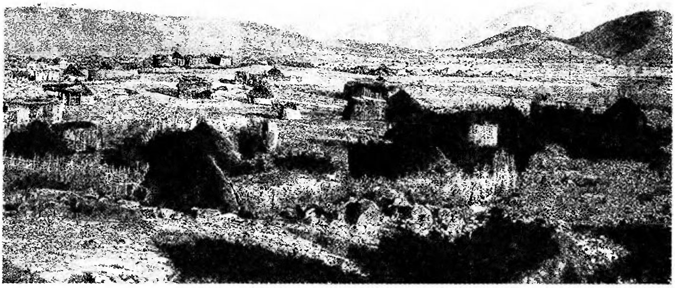
Emirates ↗Amīr

Ǝmkullu

Ǝ. (**እምኩሉ**, also Mənkullu, in European sources "Moncullo", "M'Kullo") is a Təgre settlement on the road from Massawa further inland, immediately after Ḥəṭumlu, on the dry river-bed of the Wissa. In 19th-cent. sources it shows a certain prominence, as most Europeans settling in the Ottoman Massawa Province had a residence and garden in Ǝ. and the ↗Swedish Evangelical Mission established their centre here, between Ǝ. and Ḥəṭumlu. The French and British vice-consuls to the Ottoman (later Egyptian) ↗Habeš province had their private residences in Ǝ. The Imperial Austrian vice-consul Gerhard received the expedition of Duke Ernst II of Saxe-Coburg-Gotha here in his house in 1862 and many other ↗expeditions started there.

After the Swedish mission had to give up their missionary centre for Ḥamasen at Ṣəᶜazzäga following the turmoils of the year 1876, they were virtually confined to the coastal areas. In 1877 they received their grounds at Ǝ. as a gift from the Governor-General of the Egyptian Sudan during a tour through his territories (Smidt 2003:52f.). Starting from the 1870s, local children, including a few freed Oromo, were taught (in Amharic) at the Swedish school at Ǝ. In the hot seasons they migrated to the higher, and thus fresher, settlement and missionary station of Gäläb (ArEvang 227). A clinic and a guesthouse for pilgrims and travellers were established in the mid-1880s. Ǝ.



Ǝmkullu around 1906 (note the Italian fort on the hill); photo print from the collection of the author

appears also as the place of publication of quite a few "incunabula" in Təgrəñña and other languages, such as Oromo (the first one printed in 1885; s. Wright 1967:70ff.; ArEvang 302), until the printing-press moved to Asmära in the early 20th cent. In 1891 the Ǝ. mission headquarters – popularly known as Mädḫane ᶜAläm – were moved from Ǝ. to Ṣəᶜazzäga (ArEvang 315, 322).

Shortly after the Italians had established their *protettorato* over the Egyptian Massawa Province in 1885, they built a fort at Ǝ. with a telegraph, in front of the settlement at the other side of the river Wissa. Two other forts were erected in the vicinity – a smaller one at Ḥəṭumlu and the Forte Principe Vittorio Emanuele on the hill above Ǝ.

Later, a railway line, joining the *Penisola Abd-el-Kader* with the station Saḥaṭi in the mountains, was constructed, following the Wissa, with a station at Ǝ. In addition, a Decauville-tramway led from Ǝ. to the port of the *Penisola Gherar* (s. map of 1888). Today Ǝ. is part of the greater city of Massawa.

Wolbert Smidt

Ǝmmä Məḥrät

Ǝ.M. (**እመ፡ ምሕረት**, lit. 'Mother of Grace') is a mountain range in the centre of north-east Šäwa next to the town of ↗Ankobär, rising to ca. 3,100 m A.S.L. According to a local oral tradition, it used to be higher in the past. E.M. is a part of a long chain of mountains stretching from the Bulga province in north-east Šäwa through Ankobär and Mänz to Wällo. A fortified 19th-cent. village of ↗Fəqre Gəmb was also situated on this mountain range.

A pretender, who attempted to gain rule over Šäwa in the early 17th cent. under the name of Tewodros Ṣäḥay, once fled to E.M. from the troops of *aṣe* ↗Susənyos's warrior brother *ras* ↗Śəᶜəlä Krəstos. From there, Tewodros Ṣäḥay fled to Mənğar, where he was finally killed by the local Oromo.

The peak of Ǝ.M. is always hidden in clouds, even when at the feet of the mountains the sun is shining. The range is covered with dense juniper forests. Ǝ.M.'s elevation and relative inaccessibility made it suitable to be used as a prison and a treasury for the Šäwan dynasty rulers, at least since the late 18th cent. Moreover, ↗Ḫaylä

Mäläkot, the 8th in the line of the Šäwan dynasty (1847–55), stayed there while heir apparent to his father, *nəguś* Śahlä Śəllase. It is reported that Ḫaylä Mäläkot completed his church education in a monastery at Loza, a locality within the Ǝ.M. range. While the peak of Ǝ.M. is partly used as a monastery and another part of it as a prison and royal depot, the forested slopes at and below Däns used to serve as hunting grounds for the rulers of Šäwa. In 1841, the British traveller Harris noted rural communities in parts of Ǝ.M. who were engaged in metalwork, pottery manufacture and woodwork. Descendants of these people still inhabited the area throughout the greater part of the 20th cent.

Ǝmmä mənet ↗ Monasteries

Ǝmmäbet

Ǝ. (**እመቤት**, also *əmmet, əmmät, əmyat*, 'mother of the house') was the titular epithet of a mother of a ruler's children, usually applied to the uncrowned spouses of a ruler and his concubines.

Thus, the crowned spouse of *aṣe* Śärṣä Dəngəl, ↗Maryam Səna in Ethiopian chronicles, is called as ↗*ətege*, while his concubine Harago, who bore him his son *aṣe* ↗Yaᶜəqob, is referred to as Ǝ. As this name was not a title, but merely an epithet, it was used rather freely, and ↗Aṣmä Giyorgis Gäbrä Masih in his chronicle *History of the Galla and the Kingdom of Šäwa* (BTafA) referred to the first, uncrowned spouse of *aṣe* Mənilək II *wäyzäro* ↗Bafäna as *əmyat*, though her numerous children were not progeny of the Emperor. Sometimes this epithet was applied to the crowned queens as well.

Lit.: BTafA 908; DombrChron 301; KaneDic vol. 2, 1130.

Sevir Chernetsov

Ǝmməru Ḫaylä Śəllase

Ras Ǝ. (**እምሩ፡ ኃይለ፡ ሥላሴ**; b. 1892, Gursum, Harärge, d. 1980) was one of the four principal Ethiopian commanders of the northern front at the time of the Italian invasion of 1935, as well as a prominent statesman revered in progressive Ethiopian circles. A great-great-grandson of *nəguś* ↗Śahlä Śəllase of Šäwa, Ǝ. was the son of *däǧǧazmač* Ḫaylä Śəllase, a church-educated nobleman attached to Mənilək II's court, and later to that of *ras* ↗Mäkʷännən Wäldä Mikaʾel. Ǝ. and Mäkʷännən's son Täfari (the future Emperor ↗Ḫaylä Śəllase I) were brought up "like twins" (HSLife I, 15). They began their education, in Amharic and French, at Mäkʷännən's court. After the latter's death in 1906, they were summoned to Addis Abäba, where they witnessed proceedings at the imperial court before being enrolled in the newly established ↗Mənilək II Secondary School. On Täfäri's appointment as Governor of Harär in 1910, Ǝ. became governor of Ǧaarso district. After the overthrow of *ləǧ* Iyasu in 1916, Ǝ. was imprisoned by the latter's supporters, but escaped (HSLife I, 50; Perham 1969:83). In 1916 he married *wäyzäro* Ṣəge Maryam, grand-daughter of *ras* Gobäna Dači: throughout his life she was his only wife. Appointed *däǧǧazmač* in 1918, he became *əndärase* of Harärge (Forbes 1925:364, index). In the eleven years which followed he attempted to centralise and rationalise the administration, establish a juster system of taxation, and encourage modern education. He also welcomed the development of Čärčär as a model province (MolLit 103f.). Later, in 1929, he was made governor of Wällo, where he again sought to reform the administration, taxation and justice, and assisted the founding of modern schools. He also built roads, and curtailed rebellion by the Rayya Oromo (MolLit 106). On leaving his governorate he adopted the novel practice of leaving behind his administration, thus laying the foundation of a permanent civil service (Greenfield 1965:173).

After Ḫaylä Śəllase's accession as Emperor, Ǝ. served on the commission drafting the 1931 ↗Constitution, and, as the Emperor recognised, was the only noble who supported curtailing the hereditary rights of the regional dynasties (HSLife I, 179f.). Falling ill in 1932 he was one of the first Ethiopians to travel abroad for medical treatment (MolLit 107). Returning that year he was appointed governor of Goǧǧam, with the title of *ras*. He attempted to modernise the province's administration, abolish tolls, and improve the peasantry's position. He encountered opposition, however, from traditionalists accustomed to rule by local governors, and his rule, interrupted by the Italian Fascist invasion, was too short to achieve major reforms. He nevertheless introduced electricity and a radio transmitter at the Goǧǧam capital, ↗Däbrä Marqos (Perham 1969:297; MolLit 107f.).

As governor of Goǧǧam, Ǝ. played a major role in resisting the Italian fascist invasion. Mobilising his forces in mid-September 1935 he marched north with 40,000 troops (Badoglio 1937:19). Early in December he threatened the Italian position in Šire, captured "more than a hundred machine-guns" (HSLife 267), and later in the month defeated the invaders at Säläqläqa, before advancing towards the Eritrean frontier. The Italian commander Pietro ↗Badoglio responded by attacking with poison-gas from the air (Mockler 1984:81, 86). Ǝ. recalled: "A hundred or so of my men who had been splashed by the mysterious fluid began to scream in agony as blisters broke out on their bare feet, their hands, their faces. Some who rushed to the river and took great gulps of water fell contorted on the banks and writhed in agony which lasted for hours before they died" (Del Boca 1965:79). Unable to resist the enemy's aerial onslaught (Badoglio 1937:44), Ǝ. had to retreat. He nevertheless reorganised his forces, and early in February 1936 again advanced, but was defeated, after fierce hand to hand fighting, at the battle of Sire, where his men suffered heavy losses - and, as he admitted to the Emperor, many of his men began to desert (Badoglio 1937:139; also 142f.). Badoglio suppresses any reference to gas in his memoirs, but its use is well documented in Del Boca (1996). The last of the great Ethiopian chiefs to be defeated, Ǝ. then withdrew to Däbrä Marqos, "with those of his men who had survived the bombs, gas and mustard poison" (HSLife 270). Däbrä Marqos finally fell to the Italians on 20 May, 15 days after Addis Abäba.

Ras Ǝ. and his seasoned army meanwhile marched south to Gore, whither the Emperor, before leaving the country, had transferred the seat of government, placing it under the elderly *bitwäddäd* ↗Wäldä Ṣadәq, president of the Senate and step-father of *ras* ↗Kaśa Ḫaylu. From Gore, Ǝ. made contact with the Emperor in London, who despatched his principal aide-de-camp, Bälhu Dägäfu, to the town with orders confirming Wäldä Ṣadәq as head of the government, and Ǝ. as head of the armed forces. (HSLife II, 7–10, 12f., 19f.; Mockler 1984:136). At the end of the rains Ǝ. was joined by graduates of the Holota military academy, foreign educated intellectuals, and Eritrean defectors from the Italian army who between them constituted the ↗*Ṭәqur Anbäsa* group. Ǝ. and the *Ṭәqur Anbäsa*, seeking to join with other resistance forces, marched eastwards across Wälläga (Tadässä Meča 1951; Greenfield 1965:231ff.; Bahru Zewde 2002:86, 204). The enemy had however by then gained control of Wälläga. Its governor, *däǧǧazmač* ↗Habtä Maryam Gäbrä Ǝgziʾabәḥer, was a virtual prisoner, and the Italians had fortified the crossings of the Didessa river to prevent Ǝ. and his army from crossing it. They nevertheless seized the offensive, and inflicted heavy casualties on the Italians and their collaborators in fierce hand-to-hand fighting. *Ras* Ǝ. and his political advisers decided, however, that the capture of the river crossings would involve unnecessarily heavy bloodshed, and leaving the highlands would entail serious risk of malaria. It was therefore decided instead to march southwards via Bädäle, Agaro and Limmu, and thence though the Botor pass into Šäwa. On reaching Agaro, however, Ǝ. learnt that the Italians had occupied Ǧәmma, on 15 November, that the local ruler, ↗Abbaa Ǧoobir, had become a collaborator, and that a flood of refugees from Ǧәmma were pouring into Agaro. This posed a serious moral problem for Ǝ. The refugees, who were pleading for his help, tied down his army, and reduced its mobility, but could not be left to perish. He and his advisers accordingly decided to make their way to Bonga, capital of Käfa, to

Ǝmmәru Ḫaylä Śәllase during a meeting with India's Prime Minister Jawaharlal Nehru in the 1950's in New Delhi; photo courtesy of the IES (no. 43 E4)

place the refugees in the custody of *däǧǧazmač* Tayyä Gulälat. The refugees were duly sent on ahead, with Ǝ.'s troops protecting their rear. A fierce battle was fought with a pursuing enemy force at Geeraa, after which Ǝ.'s men proceeded to the Goǧäb river, the frontier of Käfa. There they learnt to their dismay that *däǧǧazmač* Tayyä and *bitwäddäd* ↗Wäldä Ṣadəq had both given up the struggle without firing a single shot. The result was that Ǝ. and his men, surrounded by what Del Boca terms "a ring of iron", were obliged to surrender at the end of December 1936 (Del Boca 1965:216f.; MolLit 114f.). He was then taken to Italy, and imprisoned first on the island of Ponza, where he met Italian and other Anti-Fascist detainees, then to Lipari, and finally to Lungo Buco, on the Italian mainland. An appeal to the League of Nations for his release proved fruitless (*New Times and Ethiopia News*, 3 April 1937). He was later offered the return of his lands if he would only recognise the Italian conquest, but he replied that estates meant nothing to him so long as he was deprived of his country (Haddis ʿAlämayyähu 1992/93:215-29). He was subsequently liberated by the British late in 1943 after their occupation of southern Italy (Mosley 1964:283). He then rejoined his family in Addis Abäba, who had spent their exile in Jerusalem (MolLit 115f.).

After his return to Ethiopia, *ras* Ǝ. was appointed Governor of Bägemdər. An advocate of social justice he urged the Emperor and the Council of Ministers to embark on land, judicial and administrative reforms. His proposals, however, were not accepted. In 1947 he was appointed Ambassador to the United States, where he attended the United Nations Assembly (Spencer 1984:218). His liberal opinions won the support of the Ethiopian student movement in America (Greenfield 1965:338f.). On returning home he insisted that his share of the lands awarded to him in Arsi be allocated to the veterans who had fought under his command (MolLit 118). He was elevated to the title of *ləʿul ras*. In 1954 he was made ambassador to India, a post he occupied until 1959. These two appointments kept him out of Ethiopia for much of the post-war period. A third ambassadorial appointment, to the Soviet Union, was announced in 1960, but failed to materialise on account of that year's abortive ↗Coup d'état. His liberal reputation was apparent at that time, when, the plotters, without consulting him, announced his appointment as Prime Minister. He attempted to prevent bloodshed between the armed factions, and was later called as a defence witness (Greenfield 1965:401, 408, 443; MolLit 120). Thereafter he held no official post in Ethiopian government, but continued to give advice. He was present at the Jubilee Palace when Emperor Ḫaylä Śəllase was deposed in 1974 (Del Boca 1995:332f.). His only son, Mikaʾel Ǝmməru, later served as Prime Minister in 1974. He died in August 1980 and was given a state funeral by the *Därg*.

Ras Ǝ. was a notable author. His principal writings include **ፊታውራሪ፡ በላይ** (*Fitawrari Bälay*, 1948 A.M. [1955/56 A.D.; English tr. in *EthObs* 5, 1962, 342–60]); **ሰውና፡ እውቀት** (*Säwənna əwqät*, 'Man and Knowledge', 1952 A.M. [1959/60 A.D.]); and **ዓለማዊ፡ ትግል** (*ʿAlämawi təgəl*, 'Worldly Struggle', 1967 A.M. [1974/75 A.D.]). An autobiographical account of his early years, 1892–1936, is deposited in the IES Library.

Ǝmnätu

Abba Ǝ. (**እምነቱ**, full name Ǝmnätä Maryam Gəbrätu, b. ca. 1815 [?] Ǝnda Abba Gärima, ↗Təgray, d. early 1870s Massawa) was a Catholic priest close to the courts of Təgrayan rulers, from "Agäw" ↗Nəguśe to *aṣe* ↗Yoḥannəs IV, and frequently acted as a diplomatic envoy. In 1847 he was converted to ↗Catholicism and ordained priest by Giustino de ↗Jacobis. Ǝ., becoming a key-person in Təgrayan foreign politics, related himself to Europeans in many ways.

A relative, Mərṣit, was married to the Catholic convert Wilhelm ↗Schimper.

In the 1850s Ǝ. was deeply involved in the enterprise to establish a Təgrayan-French alliance. At that time Ǝ. visited Paris and Rome, and was especially impressed by both the Paris opera and the Catholic church services (de Rivoyre 1885: 182). In October 1858 "Agäw" Nəguśe sent him on a mission (led by his cousin Ṭäqäye) to the Emperor Napoléon III. Ǝ. was de-facto taking lead of the delegation and was given audience by the Emperor. Additionally a letter was sent to the Pope with the aim of gaining his support for Nəguśe (RubActa 2:60; Rubenson 1998:64). The mission to ↗France led to the conclusion of a treaty on 29 December 1859, which still played some role on the international scene in the 1880s, even if never put into force. At Ǝ.'s meeting with the French representative Count Stanislas Russel on board of the frigate Yemen near ↗Zula, it was agreed in Nəguśe's name to cede the port of Zula and islands to France, and to erect a French protectorate over the remaining coastal lands. This was followed by another treaty of 9 January 1860 concerning French artisans, concluded at ↗Ḥalay (treaties s. RubActa II, 94–97). Nəguśe, who did not control the coast, in exchange expected French recognition for his claim to the throne, but lost his life before any of the stipulations of the treaties (kept strictly secret) could be realized.

After de Jacobis died in 1860, Ǝ. became one of the leaders of the opposition against Bishop Biancheri as his successor, as his letters to the d'↗Abbadies and others show. In the period of political unrest before ↗Tewodros II's fall, *abba* Ǝ. was again employed as an envoy in 1867. *Däǧǧazmač* ↗Ḫaylu Täwäldä Mädḫən, the governor of Ḥamasen, was under pressure to join Kaśa Mərč̣a, the new rebellious leader of Təgray; instead, he tried to look for new alliances and therefore sent Ǝ. to the Egyptian Vice-King, bearing presents and a letter asking for some sort of military assistance. However, the mission did not lead to any results, as Ḫaylu submitted to Kaśa before the end of 1867.

A very learned man, Ǝ. was in excellent terms with local leaders, but also foreigners, favoring projects of French-Ethiopian friendship. Around the same time he received a mission from France (de Rivoyre 1885:182), which had been sent to protect the Catholic missionary station at ↗Kärän. He was then acting as the local tenant of the mission and in this function received funds to be distributed in Bogos (↗Bilin).

During that period Ǝ. became involved in a local power struggle. He sided with Giovanni ↗Stella, wishing to become governor of Bogos, in his conflict with the French Vice-Consul at Massawa, ↗Munzinger. On 28 September 1869 one of Ǝ.'s followers, Yoḥannəs Täkläḥannəs, committed an assassination attempt on Munzinger,'s life while the latter was travelling in an area close to Kärän. When it became clear, that Ǝ. was behind it, he was arrested. Several members of Kaśa Mərč̣a's court used this occasion to ask for a more severe policy against European influence, and Ǝ. was liberated. However, following protests of the surviving Vice-Consul and warnings from the pro-European party led by Kaśa's counsellor *aläqa* ↗Bərru Wäldä Giyorgis, Ǝ. was arrested again together with the assassin in early 1870 and was condemned to death for the "crime against the good relations with foreign kingdoms". Several local princes asked for pardon, and on 8 March the two prisoners were transferred to the Vice-Consulate at Massawa. According to de Rivoyre, Ǝ. was "murdered in the streets of Massawa" by an unknown person.

Ǝnär

Ǝ. (**እናር**, also Enär) is a small group of *ənsät* cultivators and mixed agriculturists linked to the *Säbat Bet* ↗Gurage ('Seven Houses of Gurage') confederation. Their language is classified by linguists as a dialect of (Peripheral) Western Gurage. It is very similar to, or even a slight variant of, ↗Ǝndägañ (s. Hetzron 1972:61; 1977:4). The settlement area of the Ǝ. is bordered in the north by the ↗Ǝnnämor, in the east by the Ǝndägañ and in the south and west by the territory of the ↗Hadiyya subgroup of Leemo (s. map under Gurage). In their history the Ǝ. had changing alliances with all these neighbouring groups.

Their main centre is the small market town of Qose, which was part of the former Kontäb *wäräda* of the Hadiyya *zone*. Today Ǝ. country is under the administration of the Ǝnär and Ǝnnämor [or Gunčure] *wäräda* of the Gurage zone.

The Ǝ. are mainly Orthodox Christians. Like the ↗Mäsmäs and Ǝndägañ, to whom they are culturally closely related. They claim to own a *tabot*, brought during the migration of the Gurage in the first half of the 17th cent. and said to be preserved at the church of Ǝnär Amanuʾel near Qose. Before the conquest by Wäldä Aššagari in 1889, the Ǝ. followed a syncretistic folk-religion with Christian elements and cults like that of the spirit *Saʾamar* (s. article on Ǝndägañ). An important spirit medium was the *Qosi dam*.

Dirk Bustorf

ᶜƎnbaqom

Ǝč̣č̣äge ᶜƎ. (**ዕንባቆም**, b. ca. 1470, d. ca. 1560) was the eleventh abbot of ↗Däbrä Libanos, author and translator, commemorated in the *Sənkəssar* on 21 *Miyazya* (BudSaint 817f.).

According to his hagiography (*Gädlä ᶜƎnbaqom*, Ricci 1954ff.), he was born in Yemen from a Jewish mother, belonged to a princely family and is said to have been named Abū l-Fatḥ before being converted to Christianity. As a youth, he discussed the Qurʾān with a Muslim *qāḍī al-quḍāt* ('the judge of judges'), in particular *sūra* 3: 48, in which "those who have disbelieved" were for him the Muslims. This type of exegesis, i.e. turning around words or phrases of the Qurʾān in order to refute it, he was to use profusely in the ↗*Anqäṣä amin*.

Around 1489, between 16 and 25 years of age, he left his native country and went to Ethiopia accompanied by a servant, a former Ethiopian army officer who had been taken prisoner by the Muslims of ↗ᶜAdal during the reign of *aṣe* Ǝskəndər (r. 1478–94) and had been sold as slave to a Yemenite. ᶜƎ. stayed for three years with the *baḥər nägaš* Zäkaryas and in 1492 went to the court of Ǝskəndər, by whom he was well received. After the death of the Emperor in 1494 he fled the disturbances at the court around the succession to the throne and went with his former servant to Märḥabete, the latter's native region.

The crisis of faith he was going through brought him to Däbrä Libanos, where he was received by *əč̣č̣äge* ↗P̣eṭros and by the pious and prophetic ↗Habtä Maryam. After instruction in the Christian faith, he was baptized by *abunä* P̣eṭros or, according to ↗Alvares, by the Metropolitan *abunä* ↗Marqos, who had arrived in Ethiopia in 1481 (s. BeckHuntAlvar vol. 1, 13–16). At his baptism Abū l-Fatḥ received the Christian name ᶜƎ. (Habakkuk). He entered the noviciate, took the monk's habit and, probably around 1500, was ordained deacon and priest. He became the Metropolitan's most important assistant. When *əč̣č̣äge* P̣eṭros called him back to Däbrä Libanos, a serious conflict arose between the Abbot and the Metropolitan. At a court council, convened at the order of *aṣe* ↗Ləbnä Dəngəl, it was decided that ᶜƎ. should return to Däbrä Libanos, which he did in or after 1508. His activities brought him to various places, but he remained under the jurisdiction of Abbot P̣eṭros. After the latter's death, probably in October 1523, ᶜƎ. was elected Abbot of Däbrä Libanos in November of the same year (Ricci 1967–68:116, 122). He has been the only non-Ethiopian to be elevated to the dignity of ↗*əč̣č̣äge*.

Some three or four years later, ca. 1527–28, ᶜƎ. was accused of lèse-majesté and sentenced to death by the above-mentioned group of dignitaries, possibly at the instigation of the ↗*ᶜaqqabe säᶜat*. At the intercession of the sisters of the Emperor, the sentence was commuted to exile to Gunč̣ (or Gunč̣i). This area, inhabited by Muslims (Ricci 1967–68:133, 137), was one of the common places of exile (s. PerChron 129) and possibly to be located on the southern shore of Lake Ṭana. This must have taken place before 1532, for when Aḥmad b. Ibrāhīm al-Ġāzī (Grañ) destroyed Däbrä Libanos on 14 July of that year, ᶜƎ.'s successor Yaᶜəqob was abbot of the monastery.

About one year after ᶜƎ. went into exile, Ləbnä Dəngəl, at the urgent request of monks and hermits, called him back, but he refused categorically to return to his former post. He retired to the solitude of Wäräb in the Ǝndägäbṭan district, located in the basin of the Gudär river (TadTChurch 177, note 8; cp. Ricci 1966:86). When Grañ invaded that region some years later (ca. 1535–36), ᶜƎ. withdrew among the ↗Gafat, in those days described as pagans (TadTChurch 237, n. 4). From there he withdrew even further to ↗Bizamo, where his life was threatened by the local population. In 1540 he addressed from here to Grañ the *Anqäṣä amin* as we know it, or perhaps a summary of it. In the same year Ləbnä Dəngəl died and was succeeded by his son *aṣe* ↗Gälawdewos. The new Emperor asked ᶜƎ.'s forgiveness for the way his father had treated him and kept him at the court, in particular as counsellor for the war against Grañ. During this time he translated sacred books from Arabic into Gəᶜəz. In the end, perhaps around 1559, at the advanced age of almost 90, he felt tired and withdrew with his followers to the property Gälawdewos had given him. In 1559 the Emperor was killed in battle against the Muslims and was succeeded by *aṣe* ↗Minas, who nourished a great friendship for ᶜƎ. By royal appointment ᶜƎ. became for the second time Abbot of Däbrä Libanos; he died on 21 *Miyazya* [16 April 1560 or 1561 A.D.], some 90 years old (Ricci 1969–70: 135). According to his *Gädl* he died at the age of 137 (on the colophon in ms. BritLib 812, from which it was concluded that ᶜƎ. was still alive in 1563, s. Ricci 1967–68:161–76, n. 261).

ᶜƎ.'s contribution to Ethiopic literature was remarkable. The *Anqäṣä amin*, written in 1540, is considered to be his most brilliant composition. Some of ᶜƎ.'s works carry a date, others are undated. In 1523, at about the time he was elected Abbot of Däbrä Libanos and was in contact with Alvares, with whom he became befriended, he translated into Gəᶜəz the Arabic version of ↗John Chrysostom's commentary on St. Paul's Epistle to the Hebrews (BritLib: Add. 16, 197, Orient. 737, 739; BN Éth. 120; Abbadie 67). He was assisted by "Michael the Egyptian" (s. Conti Rossini 1946:7–17). The Arabic text is perhaps one of the 34 homilies of John Chrysostom on that Epistle (translated from Greek into Arabic by the Melkite Abū l-Fatḥ ᶜAbdallāh b. al-Faḍl, s. GrafLit, vol. 2, 53).

In 1553, at the order of Gälawdewos, ᶜƎ. translated into Gəᶜəz the Arabic version of the famous ↗*Bärälam wäyəwasəf*. In the colophon of the mss. BritLib Orient. 699 and 753, ᶜƎ. asks the reader to pray for the translator who does not know the language, i.e. Gəᶜəz (s. Budge 1923, cp. CerSLett 192f.; GrafLit, vol. 1, 547).

The ms. BritLib 812 (cp. Add. 16, 252; Berlin, Staatsbibliothek Ms. or. oct. 83 [3]; BritLib Orient. 812; BN Abbadie 130) contains the Ethiopic translation of the Arabic chronology of Abū Šākir b. Abī l-Karam Buṭrus (↗*Abušakər*; s. GrafLit, vol. 2, 428–34, esp. 433). The text was translated by Salik with the assistance of ᶜƎ. (Ricci 1967–68:166).

At an unknown date ᶜƎ. also translated the ↗Revelation of St. John and a collection of sacred texts. According to the colophon of two mss. (BN Abbadie 9, 164), the Revelation was translated from Arabic into Coptic; and from Coptic into Gəᶜəz by ᶜƎ., **ምስኪን** (*məskin*, 'poor') and **መምህር** (*mämhər*, i.e. superior) of Däbrä Libanos. The colophon was probably written by ᶜƎ. himself, because, as Ricci remarks (1955–58:100), *məskin* at a certain point was part of the titles the *əččäges* gave themselves at the beginning of letters and because the *Gädl* too gives ᶜƎ. the title *mämhər*. The Revelation may have been translated into Coptic for the benefit of the Metropolitan because, as the *Gädl* remarks, the Copts are not permitted to celebrate their liturgy in another language. If this translation can be brought in relation with *abunä* Marqos, it must be dated between 1523, when ᶜƎ. was elected Abbot of Däbrä Libanos, and 1530, the year in which Marqos died. According to Alvares, ᶜƎ. copied the Gospel of St. John (BeckHuntAlvar vol. 1, 262). If the Portuguese priest wrote "Gospel" instead of "Apocalypse", it would not be his first inaccuracy; the translation was made between 1523 and 1526, the year in which Alvares left Ethiopia.

The 17th-cent. ms. BritLib Orient. 743 contains a collection of sacred texts. A note says that the collection was translated from Arabic into Gəᶜəz by "our father" (*abunä*) ᶜƎ., who gave it to his (spiritual) son Habtä Iyäsus. According to Wright, this note does not belong to the manuscript. Ricci argues (1955–58:101) that the note originates not from ᶜƎ. himself, but from Habtä Iyäsus; he used the term *abun* in the sense of "our father" to indicate a respected priest. In this way Habtä Iyäsus referred to ᶜƎ. in a similar note, which adds "Däbrä Libanos" to the word "superior" (*mämhər*), in ms. BN Abbadie 9, containing more or less the same texts as those of Orient. 743.

ᶜƎ. probably also translated, at the order of Ləbnä Dəngəl, the ↗*Arägawi mänfäsawi* from Arabic into Gəᶜəz (DillmBerl 43f.; GuiSLett 68; GrafLit, vol. 1, 434ff.), in collaboration with Metropolitan Marqos and Michael the Egyptian.

ᶜƎ.'s knowledge of languages is quite remarkable. In addition to a thorough knowledge of Arabic, and of Gəᶜəz, which he mastered during his long-standing contact with other learned men in Ethiopia, he studied Coptic with the Metropolitan and Portuguese with Alvares (BeckHuntAlvar vol. 1, 13). ᶜƎ. may also have practised his Portuguese with Pero da ↗Covilhão. Alvares also relates that "Yaᶜəqob" (confusing ᶜƎ. with his successor as abbot) wrote in "his own writing" (that is, in Ethiopic characters) the Gloria of Holy Mass, the Credo, the Pater, the Ave Maria, the Creed of the Apostles and the Salve Regina, and that he knew them in Latin (BeckHuntAlvar vol. 1, 262f.). According to the *Gädl* (Ricci 1955–58:100, n. 143), ᶜƎ. also knew some Armenian. The ms. BritLib Orient. 743 says that ᶜƎ. knew "a Romance dialect", which is almost certainly an Italian, perhaps Venetian, dialect (ibid. 106f.): Giovanni Battista da ↗Imola met in 1482 at the court of the king at ↗Bärara the Venetians Hieronimo ↗Bicini and Nicolò ↗Brancaleone (s. Suriano 1900:80, 86; CrawItin 44). From mss. BritLib Orient. 737 and BN Abbadie 211 one can suggest that ᶜƎ. probably knew some Hebrew (but cp. Ricci 1955–58:106). Finally, the *Gädl* (ibid. 82, 106) says that the Metropolitan taught ᶜƎ. the Syriac letters. This knowledge he may have widened with the help of Syrian merchants, who found themselves at the court in Bärara (BassÉt 149, 235).

Ǝnbaqom Qalä Wäld

Aläqa ᶜƎ.Q. (**እንባቆም፡ ቃለ፡ ወልድ**, b. 1917, Šäwa, d. 1970s, Addis Abäba), an ecclesiastic and traditional scholar, received his church ↗education in ↗Goǧǧam. In the course of ca. 24 years, from 1927 to 1951, he passed through all the grades of traditional learning: *nəbab bet*, *zema bet*, *qəne bet*, as well as the school of traditional exegesis *mäṣḥaf bet*, and specialised in ↗*qəne*-poetry.

In 1952-63, he taught *qəne* at the ↗Holy Trinity Theological College in Addis Abäba. Later he joined the ↗Institute of Ethiopian Studies, where he, together with other traditional scholars, participated in recording *qəne* for the series *Qené Collections*, contributing, in particular, for issues 3, 21, 22, 27, 29 and 31.

ᶜƎ.Q. also wrote a treatise in Amharic on traditional church learning, describing mainly his own experience. This valuable piece of evidence offered by a person who had grown up within the tradition was mimeographed by the IES in 1965 and translated into English by ↗Mängəśtu Lämma in 1970, thus bringing ᶜƎ.Q. wider recognition and attracting new attention to the Ethiopian traditional church education.

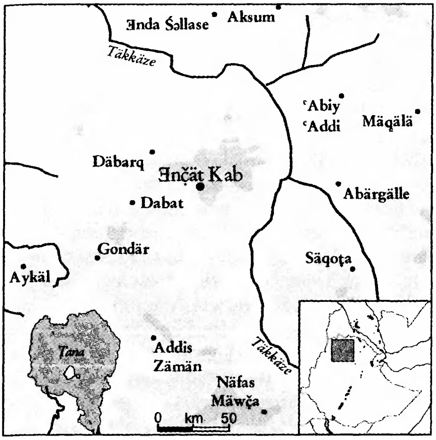
Ǝnčät Kab

Ǝ.K. (**እንጫት፡ ካብ**) is a strategically situated settlement in ↗Səmen (13°06' N, 38°09' E). In the early 19th cent. it was the capital of the local ruler, *ras* ↗Gäbre Täsfa. His palace, according to Nathaniel ↗Pearce (1831), comprised "the most extensive buildings" of any governor in Ethiopia. The buildings were, however, subsequently destroyed by *ras* ↗Wäldä Śəllase of Təgray, whose soldiers set fire to the town.

Ǝ.K. later became the headquarters of two successive rulers of Səmen, *däǧǧazmač* ↗Ḫaylä Maryam and his son *däǧǧazmač* ↗Wəbe. A major



battle was fought in this area in June 1830 between *däǧǧazmač* Wəbe and *ras* ↗Marəye Gugsa (the latter was victorious; s. Shiferaw Bekele 1990:36).

The permanent population during the 1830s reached, according to Eduard Rüppell (1838), only about 800 inhabitants.

Richard Pankhurst

Ǝnda

Ǝ. (እንዳ, variant እዳ *ədda*) is a Təgrəñña term with a territorial and/or genealogical reference. Today, it is much used in the general sense of 'place of ...'. More precisely, it means house, dwelling, habitation or, in genealogical context, lineage, clan, kinship group (s. Kane 2000:1491).

The territory of a village (*ʿaddi*, 'land') in Təgrəñña tradition is conceived of as originally belonging to a founder-ancestor of the village population. Consequently, the distribution of land (↗land tenure) is based on descent from one of the different lineages (Ǝ.) related to this apical ancestor – one lineage calling itself, e.g., Ǝ. Ḥayät ('House of Ḥayät') after an ancestor Ḥayät, who lived in a historically relatively recent past, around five to seven generations earlier. The members of such an Ǝ., even if living abroad, have the right to a defined part of the inherited village land (*rəsti*). This right applies to male descendants only. In a few cases, also a woman, if living alone, may obtain from the ↗*bayto ʿaddi* ('local assembly') the right to her own share of the land of the Ǝ.; she would then also be mentioned in the genealogical tree of the Ǝ. (↗Genealogy). The term for 'paternal kinship group' is *əndabbo* (from Ǝ. *abbo*, 'the group [clan] of the father'; cp. Ǝ. *adda* for the paternal kinship group of the mother). The term *ənda gʷal* ('the girl's house') appears in the context of marriage; after the first ceremony in the house of the groom's parents, the revels continue in the house (village) of the bride. The idea that not only the territory, but also the legal traditions and customs come from the forefathers is expressed in the term *əndabba* ('customs', from Ǝ. *abbaw*), as in *ḥəggi əndabba* ('customary law', ↗*Ḥəggi*).

Also the use of the word Ǝ. as a term for religious places in Təgrəñña seems to be old. "Ǝ." followed by the name of a saint (the saint of the *tabot*) or a venerated religious founder means a religious establishment – a monastery or a church – together with the territories given to it (e.g., the monastery Ǝnda Abba Gärima; the old Asmära church Ǝnda Maryam; Ǝnda Śəllase and Ǝnda Abranyos (Ǝnda Abbona) as alternative designations for Däbrä Bərhan Śəllase of ʿAdwa and, respectively, Däbrä Abunä Abranyos or Däbrä Ṭəllul south of Dəbarwa; or Ǝnda Mikaʾel for St. Michael's church of Däbrä Sälam). Such a name of a church or monastery may later be adopted as the name of the local settlement (e.g., the Təgrayan town Ǝnda Śəllase).

By extension the term is often used today for city quarters, areas with new settlements, localities of a specific historical importance etc. E.g., the area including the legendary "tombs" of the ancient King ↗Kaleb Ǝllä Aṣbəḥa near Aksum is called Ǝnda Kaleb; a house where *suwwa* ('beer') can be purchased, is known as Ǝ. *suwwa*; an autobus station appears as Ǝ. *awtobus*; the modern housing area on the outskirts of ↗Asmära, Sämbäl, is often referred to locally as Ǝnda Korəya, as it was built by Koreans; the deserted copper-mining area close to Dəbarwa is named Ǝnda Ǧapan, for it was in the hands of a Japanese firm until the 1960s.

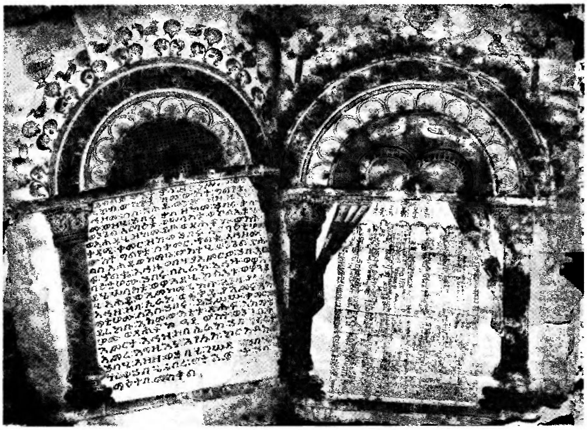
Wolbert Smidt

Ǝnda Abba Gärima

The monastery of Ǝ.A.G. (እንዳ፡ አባ፡ ገሪማ), or Betä Abba Gärima (ቤተ፡ አባ፡ ገሪማ), also known as Däbrä Mädära (ደብረ፡ መደራ), is located on the eastern slopes of Amba Abba Gärima, ca. 6 km east of ᶜAdwa, in the heartlands of Təgray. It is to its immediate north that the Battle of ↗ᶜAdwa took place. It is one of the oldest sites of Christianization, if not also one of the earliest settlements, in the region. Its foundation probably dates back to the 5/6th cent. and is attributed to ↗Gärima (known also as Yəsḥaq, one of the ↗Nine Saints), to whom the church of the monastery is dedicated. Another important church dedicated to the saint (Abunä Gärima, አቡነ፡ ገሪማ) is located in ᶜAddi Käwəḥ, in the nearby Wəq̱ro, Təgray (cf. Godet 1977:35), where two altars with South Arabian inscriptions are preserved (cf. RIÉ nos. 8-9). Ǝ.A.G. is also the name of a small cave-chapel at ᶜAddi Mäᶜarda, near to Mändäfära, Säraye, Eritrea; an annual pilgrimage site, it is especially noteworthy for its rock-paintings (cf. Franchini in: PICES 1, 285f.).

The hagiography of Gärima as told in the *Homily* attributed to Yoḥannes, Bishop of Aksum (possibly written in the 15th cent.), presents Ǝ.A.G. of Mädära as the main place of his activity (CRStor 160, 167f.). According to the *Homily*, *aṣe* ↗Gäbrä Mäsqäl, after visiting Gärima in Mädära at Betä Mäsqäl, founded a new church there and gave lands (Ṭafa, ᶜAdwa, Məsaḥ, Səbᶜeto or Bəᶜito, and Mayä Ləḥəkʷət) for the service of commemoration (↗*Täzkar*) of the saint, adding later other lands (Atäret, Gibat and seven villages) for the saint's and his own commemoration. The substitution of ↗Zämikaʾel Arägawi for Libanos (or Mäṭaᶜ) in the list of the Nine Saints offered in the *Homily* has been considered a reflection of an anti-Däbrä Damo attitude in the 14-15th cent., which may have involved Ǝ.A.G., too (cf. CRStor 160; Conti Rossini 1940:54f.).

Ǝ.A.G. was one of the most important religious centres in the Aksumite time. It still preserves three manuscripts of the *Gospels* (Abbā Garimā I, II and III) which are considered to be the oldest Ethiopian manuscripts ever found (cf. UhPal 831). Of exceptional importance for Ethiopian palaeography and New Testament text criticism, they were first made partially known by Leroy's (1960; 1968) studies on the iconography of Evangelists and, particularly, ↗Canon tables. Later fully microfilmed by Donald Davies and described by Macomber (1979:1–11), they have been used by Zuurmond (1989; 2001) in his critical editions of the ↗Gospels of Mark and Matthew. Their dating is still uncertain and a matter of discussion; Heldman's (AfrZion 129f., nos. 52, 53) stylistic analysis and Mercier's (2000:

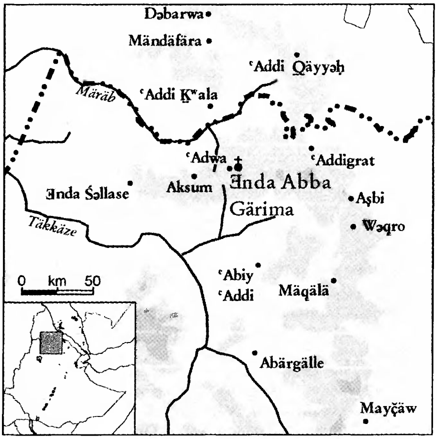


Illuminated Canon tables; Gospel Book of Abba Gärima Monastery; photo courtesy of Michael Gervers

36–45) contribution, taking into account also radiocarbon chronology, tend to date the illuminations back into the 7th or even 6th cent. This leaves essentially open the question of the dating of the texts, probably a genuine product of the Ǝ.A.G. *scriptorium*, as opposed to the illuminations, that could be of foreign origin.

A number of still-unpublished documents bound inside these manuscripts (cf. Macomber 1979:2f.) testify to the importance of the monastery throughout the centuries, from the alleged foundation of the church by Gäbrä Mäsqäl (6th cent.) and from the probably historical endowment by *aṣe* ↗Säyfä Arʿad (14th cent.), up to the 18th cent. at least. In ms. Abba Gärima II (now misplaced in Abba Gärima I) there is a donation of lands by Gäbrä Mäsqäl in a 17th-cent. hand (fol. 2^{r}); a donation of religious objects by [Säyfä] Arʿad (fol. 2^{v}); an obscure document concerning the building of three churches and the establishing of privileges to the benefit of the monastery by King Armäḥo, possibly ↗Armaḥ (fol. 3^{r}; on this document cf. Schneider 1990:152; Kropp 1992:264f. [but two words are misspelled, cf. Davies 1987:303, fig. 6]); a donation of land by *däğğazmač* Kəflä Iyäsus in 1707/08 (fol. 3^{r}); and a further one by a certain Zäʾamanuʾel in a 15th-cent. hand. In ms. Abba Gärima III (now misplaced in Abba Gärima I) there is a record of the construction of the monastery by *aṣe* Gäbrä Mäsqäl, along with donations, copied in a 14/15th-cent. hand followed by the record of the visit and benefactions by *aṣe* ↗Bäʾədä Maryam (fol. 1^{v}); and a benefaction by *aṣe* Śärṣä Dəngəl (fol. 4^{v}). Much less important, but still remarkable as a product of the *scriptorium* of Ǝ.A.G., is ms. Paris, BN Éth. 131, which is a *Gädlä sämaʿətat* dating to the 13/14th cent. (cf. Bausi 2002:4, n. 8), written by order of *nəburä əd* Səmʿon and later sold to the Ethiopian community in Ḥārah Zuwaylah, Egypt, as we are informed by a note on fol. 180^{v} (cf. ZotBNat 198; CerPal vol. 2, 409, document no. 38, of the 16th cent.).

The *Mäṣḥafä* ↗*Aksum* also records documents concerning Ǝ.A.G. In one feudal act some of the lands are mentioned which are referred to in the *Homily* by Yoḥannəs as those of the *gʷəlt* given by *aṣe* Gäbrä Mäsqäl (CRAxum 19 [text] = 21 [tr.], no. 3); a second act (ibid. 32f. [text] = 37f. [tr.], no. 31), dating to 1526/27, confirms the donations by *aṣe* Ləbnä Dəngəl at the time of *nəburä əd* Abba Efrem and *daññā* ʿƎnqʷä Maryam of Mädära; a third one by Śärṣä Dəngəl (ibid. 45f. [text] = 55 [tr.], no. 57) renews the *gʷəlt* in favour of Mädära and settles disputes concerning the right of appointing scribes (*ṣäḥaft*) by confirming abbot (*mämhər*) Täsäbkä Mädḫən in his charge (the King agrees that he can only appoint as abbot one of the monks of the monastery chosen by the monks themselves); finally (ibid. 74 [text] = 88 [tr.], no. 6), abbot Tänśəʾä Krəstos of Betä Abba Gärima is mentioned as having taken part, with others, in the excommunication of the Ǝdda Degäna during the reign of *aṣe* Śärṣä Dəngəl in 1578.



In the third decade of the 16th cent., Ǝ.A.G. was visited by Francisco Alvares, who remembers it as a relatively small monastery, but a pilgrimage site renowned for a cave, once the dwelling-place of *abba* Gärima, the earth of which was credited with curative properties (BeckHuntAlvar 165ff.). A century later, in the dramatic circumstances of the forced conversion to ↗Catholicism of the monks, the monastery was visited and described in detail by Manoel ↗Barradas (cf. BecRASO IV, 1906:236–43; Barradas 1996:126–31).

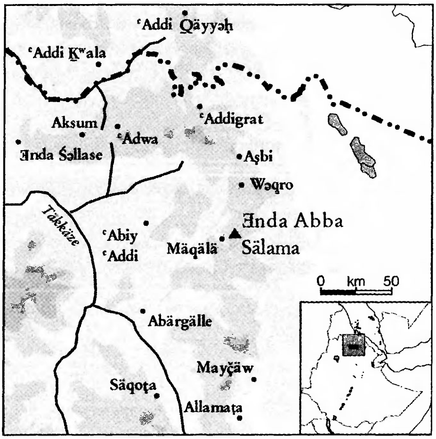
Alessandro Bausi

Ǝnda Abba Sälama

Ǝ.A.S. (**እንዳ፡ አባ፡ ሰላማ**, also Ǝnda Abunä Sälama, Ǝnda Sälama) is located in the Täḵli *wäräda*, ↗Tämben (Təgray province), to the east of ᶜAbbiy ᶜAddi, near the bank of the Ruba Wayni, which is a tributary of the Wärˀi river. Ǝ.A.S. lies on a flat-topped mountain (↗*Amba*), which is inaccessible except for its southern side. The top can only be reached through a 30 m-high rock shaft ("chimney") by pulling a rope. The monastery is said to be a foundation of *abba* ↗Sälama Käśate Bərhan, the first bishop of Ethiopia, consecrated by ↗Athanasius of Alexandria in the first half of the 4th cent. According to *abba* Sälama's hagiography, which is preserved at Ǝ.A.S., the mount was previously also called Däbrä Məsṭir or Däbrä Mädḫanit (Schneider 1987:155, 157f.).



An old church, hewn into the slope right below the rim of the cliff, is a simple construction of the basilica pattern, with two rows of columns separating two aisles from the nave. The simplicity and lack of any ornamentation (as compared, e.g., to the rock-churches of ↗Gärᶜalta), might point to the great age, but may be conditioned also by the quality of the friable reddish sandstone (Plant 1973:49). The newly erected church (the old one has been abandoned), monastic settlement and three large water reservoirs are located on the flat top of the mountain. Ǝ.A.S. claims to preserve the relics of *abba* Sälama Käśate Bərhan, as well as his two ceremonial crosses.

Because of its inaccessibility, the *amba*, as the most secure place throughout the ages, has been used as prison for rebels and other dangerous persons. It was also used as a treasury for the most cherished relics and items of cultural heritage. During the reign of *aṣe* ᶜAmdä Ṣəyon I, bishop *abunä* ↗Yaᶜəqob is said to have been detained at Ǝ.A.S. More recently it was the place of detention of *aṣe* ↗Täklä Giyorgis II, after he was defeated by *däǧǧazmač* Kaśa Mərča (later *aṣe* Yoḥannəs IV) at a battle near ᶜAdwa in July 1871.

The thickly wooded valley, which surrounds the *amba* and provides natural protection from an air raid, was found suitable to hold the fourth general meeting of the Ethiopian Peoples Revolutionary Democratic Front in 1990, before launching their final attack on the *Därg*.

Ǝnda Gäbrəʾel

Ǝ.G. (እንዳ፡ ገብርኤል), one of the main churches of ↗ᶜAdwa, was constructed on the order of *däǧǧazmač* Wäldä Gäbrəʾel, son of *ras* ↗Mikaʾel Səḥul, who rose to the ruler of the entire Təgray after his father in 1767 overtook an active political role in Gondär (marking thus the beginning of the ↗*Zämänä mäsafənt* epoch). A land charter issued by *aṣe* ↗Täklä Giyorgis probably in 1795 (that is, years after Wäldä Gäbrəʾel was killed by *ras* ↗Aligaz in ca. 1787) gave to Ǝ.G. "six lands" as ↗*gʷəlt*-possessions. As follows from another charter, Ǝ.G. was once endowed by *däǧǧazmač* ↗Säbagadis Wäldu, during his heyday as the ruler of Təgray some time in the 1820s (he also granted land to the church of Mädḫane ᶜAläm of ᶜAdwa).

Ǝnda Kaleb

Ancient sarcophagi inside the southern tomb at Ǝnda Kaleb, attributed to Gäbrä Mäsqäl; photo 2005, courtesy of Wolbert Smidt

Ǝ.K. (እንዳ፡ ካሌብ) is an archaeological site of the Aksumite culture period located on the west side of the Abba Liqanos plateau, approximately 2 km north of the centre of the city of ↗Aksum. Numerous written and oral traditions from Aksum attribute the origins of the site to the 6th-cent. Aksumite king ↗Kaleb and his son and successor ↗Gäbrä Mäsqäl. The site of Ǝ.K. consists of two covered monumental tombs made of individually worked and dressed granite blocks with ashlar masonry and an overlying structure with features suggestive of an ecclesiastical form and function. The northern tomb, traditionally attributed to Kaleb, consists of a stepped adit, a central longitudinal chamber and three rooms. The southern tomb, attributed to Gäbrä Mäsqäl, also has a stepped adit, a central longitudinal chamber and five rooms, in one of which three sarcophagi are preserved. The upper structure of Ǝ.K. comprises a central raised courtyard reached by six large steps and situated between two identical room wings or large halls, each containing three aisles with two rows of four free-standing pillars and rectangular apse-like features with side rooms (s. DAE II, 127–34; Munro Hay et al. 1989:42–47). The appearance of the upper structure, and the complex's underground passages in particular, might have fostered legends about the connection with ↗Mäṭära or the miraculous "splitting of the earth" in the hagiographies of Kaleb, ↗Panṭalewon and ↗Zämikaʾel Arägawi (s., e.g., Esteves Pereira 1899).

The tombs ("houses") of Kaleb and Gäbrä Mäsqäl are mentioned in the *Liber Axumae* (*Mäṣḥafä* ↗*Aksum*), where they are said to be full of treasures (CRAxum 6). The site was described by various foreign travellers to Aksum, among others, Francisco Alvares in the 1520s, Henry Salt, accompanied by Nataniel Pearce, in the early 19th cent. and Gerhard Rohlfs in 1881. Ǝ.K. is in fact one of the candidates for the original location of a lost Greek inscription copied by Pearce himself "in a very dark place" (possibly a tomb) before September 1815. In this text (RIE 274), almost completely weathered and not easily retrievable, the initial part of the title preceding Ps 87 (or 47) in the Septuagint has been recently recognized (Fiaccadori 2003, with dating towards the end of the 4th cent.). From the same site of "Dachel ebn Negus" (i.e. *Ǝnda Kaleb nəguś*), another lost inscription certainly comes that was reproduced as undecipherable in a Latin-character facsimile by Rohlfs (RIE 273). It was then read as an Ethiopic text (Fiaccadori 1981); refering to "the Egyptian" (*gəbṣawi*), it could indicate (similar to another inscription, RIE 202) the presence of an Egyptian ecclesiastic in the train of one of the metropolitans (s. MHAlex 69f.).

Some additional findings at Ǝ.K. followed in later times, since archaeological investigations by the ↗Deutsche Aksum-Expedition in 1906 focused on the architectural elements of the site, providing a comprehensive plan of the tombs and the surrounding upper structures. Further excavations were conducted by the British Institute in Eastern Africa in 1972–74 under the direction of Neville Chittick, offering additional insight into the local stone architecture and limited information on the site's chronology. Now it is assumed that the Ǝ.K. complex – an outstanding example of the Aksumite elite's sepulchre culture (↗Graves) – was constructed in several phases some time in the late 4th or early 5th cent., but was abandoned already in the mid or late 6th cent.

After the Deutsche Aksum-Expedition's work, the preservation of Ǝ.K.'s archaeological area has been negatively affected by both stone removal for re-use and transport of architectural elements to the so-called ᶜEzana Garden.

Ǝnda Mäkʷännən

Ǝ.M. (እንዳ፡ መኰንን; also Ǝdda Mäkʷännən, Ǝnda Mäkʷänni, Mäḵonni, Mähoni or Mohoni) is a district in ↗Təgray immediately to the south of ↗Ǝndärta (Ellero 1941:161). Historical sources record it mainly as a battlefield and a centre of rebellions and upheavals against the royal authority, but do not allow any explicit connection between the place-name (meaning in Təgrəñña 'house' or 'family' or 'seat' etc. 'of the *mäkʷännən*' – 'governor, prince or aristocrat') and the ↗*təgre mäkʷännən*, i.e. the dignitary *par excellence* endowed with that title. The royal chronicles relate that in 1562 the troops of *aṣe* ↗Minas were defeated at Ǝ.M. by the coalition of *baḥər nägaš* ↗Yəsḥaq, ↗Özdemir *paša* and some Portuguese led by Francisco Jacome (Conti Rossini 1921–22:690; Kropp 1988:60f.), and that in 1588 it was again occupied by Turkish troops before *aṣe* ↗Śärṣä Dəngəl defeated them on a punitive expedition (CRHist 129; HuntGeogr 148). In 1678 Ǝ.M. took part in a general upheaval in the districts of, and around, Ǝndärta against *aṣe* ↗Yoḥannəs I (GuiIohan 25; DombrChr 210, n. 417; HuntGeogr 234). In the *Liber Axumae* (*Mäṣḥafä* ↗*Aksum*) Ǝ.M. appears among the districts traditionally due to paying tribute to the cathedral ↗Aksum Ṣəyon: here, as in the case of Naᶜder, for the building of the *qəṣr gädamawi*, 'the outer enclosure' of the cathedral itself (CRAxum 11).

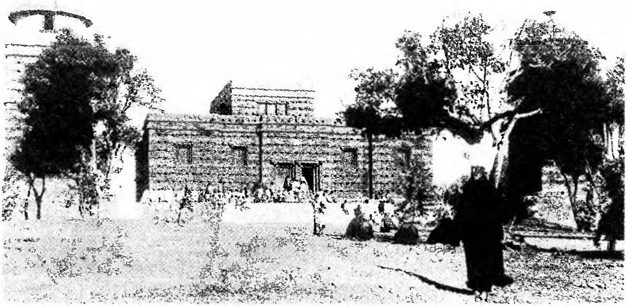
Alessandro Bausi

Ǝnda Maryam

Ǝ.M. (**እንዳ፡ ማርያም**), a site in the north-eastern part of ↗Asmära, is so named after the local Orthodox cathedral devoted to the Virgin Mary. The present building, with two bell-towers and a colourful mosaic by Nenne Poggi Sanguineti in the façade, was erected in 1938 by engineer Odoardo Cavagnari in place of an earlier one, designed by architect Ernesto Gallo as a "picturesque Italian interpretation of the Abyssinian liturgy and style" (*Guida* 203). Completed in 1920, this basilican church with raised nave was flanked by two squared towers with the function of a sacristy or storage space (↗*ʿƎqa bet*). It was in turn raised in the place of a late Aksumite basilica to which a porched *dägg(i) sälam* (lit. 'threshold/gate of peace', an atrium chapel) had been added to the south-west as a separate structure, in 1917. Later the seat of the St. Mary's Elementary School, the *dägg(i) sälam* is still extant to the south of the main entrance of Ǝ.M.

The original church, built between the 6th/7th and the 8th/9th cent. and since dedicated to the Holy Virgin, was extensively altered and damaged throughout the subsequent ages. According to tradition, it was burned twice: by Queen ↗Ǝsato in the 10th cent., then by ↗Aḥmad b. Ibrāḥīm al-Ġāzī (Grāñ) in the 16th cent. Major restorations were undertaken under *aṣe* ↗Gäbrä Mäsqäl, possibly identical with ↗Lalibäla (r. ca. 1185–25) or rather ↗ʿAmdä Ṣəyon I (r. 1314–44), and again after Grāñ's defeat in 1543. The building is described as follows by the Jesuit Manoel ↗Barradas in 1626: "It is square and not very large, but has three naves with twelve columns that are very thick through the middle, six on either side, which are plastered with lime. They say that there are twelve in honour of the Twelve Apostles of Christ" (*Tractatus*, II, 42, s. BecRASO IV, 268; Barradas 1996:149). The oldest church of Ǝ.M. was eventually demolished or allowed to be demolished by the Italians and replaced by the new one in 1919, just a few years after the detailed survey of the ↗Deutsche Aksum-Expedition (1906) had appeared in print (1914), where the similarities between this precious relic of Aksumite building and the more famous Ǝnda Abunä Arägawi of ↗Däbrä Damo are first noticed.

The earliest architecture of Ǝ.M. (following in some respects the "archaic scheme" of Buxton 1947:38ff.) must have been oriented on a rectangular plan (ca. 20 m × 8 m), with projecting corners and recessing or indented walls. It displayed both the characteristic podium and the usual Aksumite construction technique, which alternates horizontal timbers and courses of squared stone or stone set in earth mortar, and is strengthened by short round logs known as *rəʾəsä ḥəbay* (lit. 'monkey-head[s]'). The interior had a narthex or vestibule-like space, a nave and two lower aisles separated by twelve squat round piers in wood and masonry, and a sanctuary zone between two squared chambers. It included a series of finely carved wooden parts: a triumphal arch and door lintels with geometrical patterns; brackets and capitals with leaves and crosses (drawn from the palaeochristian and early-Byzantine repertoires); a number of panels with animals or geometrical designs from a trabeation frieze round the nave and, most probably, the sanctuary itself.



Ǝnda Maryam church (Asmära), rebuilt in the Aksumite style (1920); later superseded by the new Cathedral (1936); postcard from the collection of Wolbert Smidt

About 40 such panels survive, either as entire pieces or as fragments. Apart from a few re-employed in the *dägg(i) sälam*, most of them have been removed to the National Archaeological Museum in Asmära. They find exact comparisons in the wooden ornament of Ǝnda Abunä Arägawi, as well as of the no longer extant Aksumite churches of ↗Yəḥa (Təgray) and Aramo (Eritrea). According to a recent hypothesis (Fiaccadori 2005), the carved reliefs with animals of both Ǝ.M. and Ǝnda Abunä Arägawi are – as well as the similar representations in later Ethiopian murals – but a visual rendering of moral characters featured by real or fantastic animals in the *Physiologus*, a Christian book composed in Greek at Alexandria between the 2nd and the 3rd cent. A.D. and translated into Gəʿəz in the Aksumite age (↗*Fisalgos*). If so, those reliefs could be a reflection of the Ethiopian fortunes of the Greek text, as well as an indirect witness to the early local circulation of at least one copy of the relevant cycle of Byzantine illuminations (↗Byzantine Empire).

Gianfranco Fiaccadori

Ǝnda Maryam Mägdälawit

The archaeological site of Ǝ.M.M. (**እንዳ፡ ማርያም፡ መግደላዊት**) is located on the northern edge of the Ḥaṣabo plain north-east of ↗Aksum.

The only excavation of the site was conducted by the Missione Archeologica Italiana directed by Salvatore Puglisi, in 1939. At that time, substantial architectural ruins and pottery were revealed, suggesting that the site dates to the (late) ↗Aksumite culture period. The name Ǝ.M.M. hints at the possible existence, in the past, of a church foundation dedicated to ↗Mary Magdalene, the traces of which, however, were not recorded. The site, obviously an ancient residential centre, needs futher investigation.

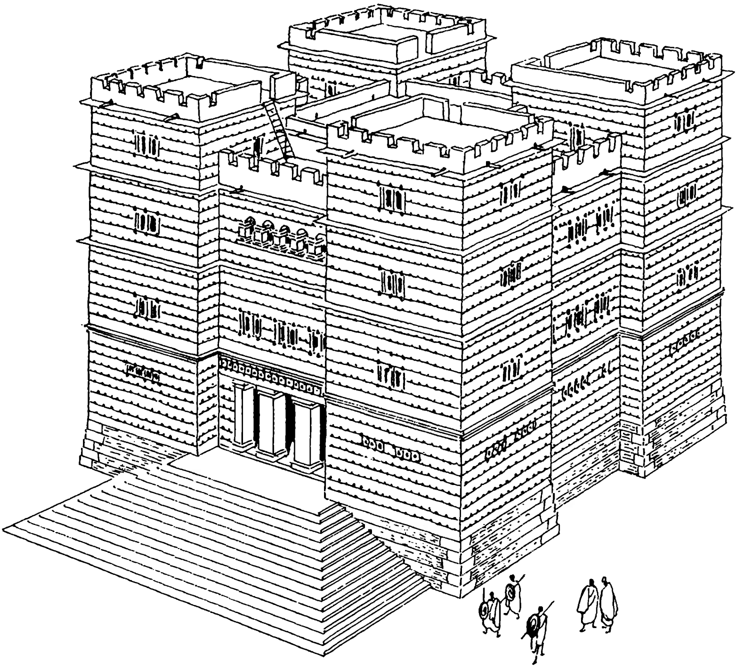
Matthew C. Curtis

Ǝnda Mikaʾel

Ǝ.M. (**እንዳ፡ ሚካኤል**) is an archaeological site of the Aksumite period located in ʿAddi Kələttä, in the western part of the city of ↗Aksum. In 1906 the ↗Deutsche Aksum Expedition (DAE) conducted excavations at Ǝ.M., revealing a 27 m x 27 m dry-stone masonry square-planned structure built upon a large stepped podium and possessing massive dressed-stone corner blocks.

This structure, believed to be the central pavilion of an elite Aksumite residence or "palace", contained four corner towers and ten rooms with emplacements for multiple columns. Although information concerning the functions and roles played by the central pavilion at Ǝ.M. during the Aksumite period are limited, the structure is generally similar in plan to elite Aksumite buildings documented at ↗Ǝnda Səmʿon (ca. 250m north-east from Ǝ.M.), Täʾak̠a Maryam and ↗Dungur in the Aksum area.

The ruins of Ǝ.M. may have inspired legends about an old Mikaʾel church, told to the DAE. Yet the name can also derive from a church structure that may have stood on or near the site some time prior to the 20th cent.: the *Mäṣḥafä ↗Aksum* mentions Mikaʾel ʿOfay church in the district of Mälake Aksum, which may be identical to Ǝ.M. In any case, the remains of the building seen by the DAE indicated that the "palace" had been destroyed long time before. During the 20th cent., the preservation of the site of Ǝ.M. suffered



Reconstruction of the palace of Ǝnda Mikaʾel; from DAE II, 107

greatly through building and road-construction activity. Today, little physical evidence remains of the Ǝ.M. archaeological site's existence.

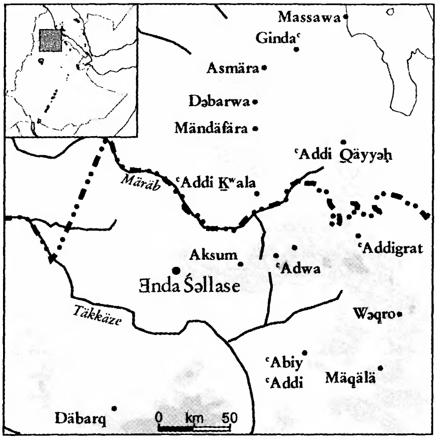
Ǝnda Śəllase

Ǝ.Ś. (እንዳ፡ ሥላሴ), the capital of Taḥtay Qorare *wäräda* and of ↗Šire *awrağğa* (Təgray), is a town located in the old district of Qʷäraro, ca. 50 km to the west of Aksum, at an altitude of 1,900 m A.S.L. Its population exceeded 25,000 in 1994 (CSA 1995) and amounted to 33,515 inhabitants in 2000 (CSA 2000).

The site of ʿAddi Wänfəto, situated 1 km to the south of the contemporary Ǝ.Ś., seems to be its precursor. According to the oral traditions, the Italians, who occupied the area in the 1930s, found the place inconvenient. Its population was moved away and ʿAddi Wänfəto declined, but a new settlement, Ǝ.Ś., with the seat of *residenza* and a flourishing market (due to the favourable position of Ǝ.Ś. on the Gondär–Asmära road), was developed nearby.

The area of Šire, centred upon the town of Ǝ.Ś., is rich in archaeological potential, showing an almost unbroken line of human habitation over perhaps half a million years; it is of great importance for understanding the nature of links between the Ethiopian highlands and the Sudanic



steppes to the west. Until 2000, little archaeological attention had been given to this area and only a few sites were known from earlier work. ʿAddi Adḫano is a site 5 km to the north of Ǝ.Ś., where a possible standing Aksumite stela was noted (Puglisi 1941:100–03; Godet 1977:35). Säläkleḵa, a probable proto-Aksumite cemetery complex, is located 15 km to the east of Ǝ.Ś., where ceramic and bronze objects were recovered (Cossar 1945). The church of Wəblä Maryam at Səmema, a village 17 km north-east of Ǝ.Ś., is held to have Aksumite-era foundations; rock-cut steps, stelae and miscellaneous artefacts have been reported to exist there. Hirətay, 1 km south of Wəblä Maryam church, has been described as a possible early/middle Aksumite-period cemetery and settlement site; it was partially excavated by the late Gäbrä Kidan Wäldä Ḥawaryat in 1994 (the results remain unpublished).

Since 1989 the area of Ǝ.Ś. was the issue of disputes between the Təgray People Liberation Front and the Ethiopian army (Fontrier 1999: 141ff., 159–64). In 2000 a war-damage survey was conducted by the Ethiopian archaeologists Asäməräw Däse and Täklä Ḥagos (the results of this survey are unpublished).

In 2001 an international archaeological survey team under the direction of the author expanded upon the previous results. Prehistoric stone-age remains are widely noted within the region, indicating the great antiquity of human settlement in the area; the sites comprise dense, open and rock-shelter locations yielding material showing affinities to Early Stone Age, Middle Stone Age and Late Stone Age industries found elsewhere in the highlands.

Of special note is the extensive site of May Adraša located some ten km to the east of Ǝ.Ś.; its size would suggest that it is a fairly large urban settlement of Aksumite date, which may date to at least proto-Aksumite times (last millennium B.C.) on the basis of material noted in 2003. The recent survey work has identified a number of other pre-Aksumite and Aksumite sites in the vicinity, which merit detailed archaeological investigation (s. Finneran et al. 2003).

Little is known about the archaeology of the Ǝ.Ś. area after the collapse of the Aksumite polity, but extensive monastic building in the early 15th cent. attests to the re-Christianization of the area under *ạṣe* ↗Dawit II (s. Ellero 1939). Of special interest is the large monastic community of Ǝnda Giyorgis, located two km to the north-east of Ǝ.Ś. on Laqamba. The records in the monastery's "Golden Gospels" list gifts, including extensive ↗*gʷəlt* landholdings, from the time of Däwit II. Other smaller Dawit-era monastic communities remain, although much altered and rebuilt. The town of Ǝ.Ś. might have been named after the small monastery at ʿAddi Wänfəto founded, presumably, by *ạṣe* ↗Iyasu I in 1692 (s. Ellero 1939, 1941; this monastery should not be confused with another one by the same name [known also as Däbrä Erar or Däbrä Ṣəge] in ↗Ṣäʿada Ǝmba, Ḥamasen, Eritrea).

Ǝnda Śəllase ↗ Däbrä Bərhan Śəllase

Ǝnda Səmᶜon

Ǝ.S. (እንዳ፡ ስምዖን) is a site of the Aksumite culture period located in the Kuduku quarter of the city of ↗Aksum. Local traditions suggest that the Ǝ.S. area once contained a royal palace. During 1906 the ↗Deutsche Aksum-Expedition (DAE) conducted excavations at Ǝ.S. in the attempt to delineate the plan of an Aksumite elite building. However, due to the presence of overlying standing buildings and house rubble, only the south-eastern portion of the elite building at Ǝ.S. was revealed and mapped by the DAE. Based on the plan of the excavated area and above-ground surface evidence documented in 1906, the elite building at Ǝ.S. seems to have occupied an area of 34 m^2 and consisted of a square-planned structure built upon a large stepped podium. The building contained a central row of three rooms, two large wings or halls, each with 28 column emplacements, and corner rooms. Like the building at ↗Ǝnda Mikaʾel, the structure documented at Ǝ.S. may represent the central pavilion of an elite residence.

Five exploratory trenches were excavated near the Ǝ.S. site during the 1972–74 British Institute in Eastern Africa's archaeological project at Aksum. The excavations revealed the walls of at least one elite residence similar to Ǝ.S., suggesting that Ǝ.S. and the surrounding area were part of an elite residential district within the ancient settlement of Aksum. Gəᶜəz inscriptions found in the Ǝ.S. area (s. Schneider in PICES 4) and coins uncovered during the British Institute in Eastern Africa's excavations suggest that elite residences in this area of Aksum were probably occupied during the 4th to 6th cent. A.D.

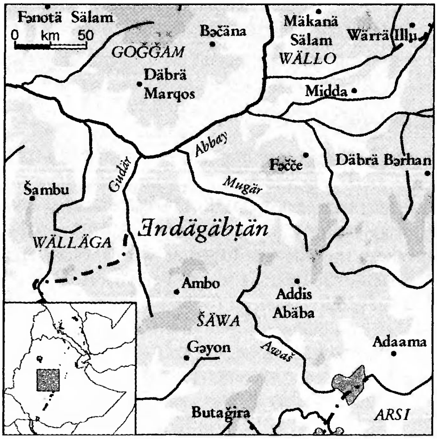
Matthew C. Curtis

Ǝndägäbṭän

Ǝ. (እንደገብጠን, also Ǝndä Gäbṭän, Anda Gabṭän, Ǝndägäbṭon), an old historical region, was situated to the north-west of Fäṭägar and Wäräb, north-east of Damot, between the rivers Gudär, Abbay and Mugär (covering the area around the source of the ↗Awaš, cp. Ricci 1966:85). Being on the southern fringe of the kingdom, it might already have been under the sway of the Christian monarchs in the 14th cent.; ↗Ṣabraddīn b. Dalḥūy b. Manṣūr of Ifāt wanted to contest *aṣe* ↗ᶜAmdä Ṣəyon's authority over Ǝ. and to install his officer there.

From the 14th cent., however, Ǝ. gradually became one of the central provinces of the Ethiopian empire. A number of sources report attempts to Christianize the region (co-ordinated most probably from ↗Däbrä Libanos of Šäwa) and eliminate magical practices and non-Christian traditional beliefs (e.g., ↗*däsk*-cult), which were deeply rooted in Ǝ., at that time the domain of the Semitic-speaking ↗Gafat people (cp. Taddesse Tamrat 1988:145). The Vita of ↗Samuʾel of Däbrä Wägäg reports that he was appointed "*bäträ yarek* [the major spiritual supervisor?] in the land of Ǝ." by *aṣe* ↗Däwit II. Other saintly monks preached in Ǝ., namely ↗Bäṣälotä Mikaʾel and, in particular, ↗Anorewos "the Elder", who founded the monastery of Däbrä Ṣəgağğa in the neighbouring region of Wäräb. A certain *mämhər* Abuqir "of Ǝ." was obviously a close associate or a favourite of *aṣe* ↗Bäʾədä Maryam (PerrZarY 107, 133). *Abba* Täklä Maryam (also known as ↗Mäbəʾa Ṣəyon) a contemporary of *aṣe* Zärʾa Yaᶜəqob, was appointed ↗*nəburä əd* of Ǝ. (e.g., ms. EMML 1779, no. 3; 2860, no. 2).

At least from the beginning of the 16th cent. Ǝ. was a part of Šäwa. *Ǝččäge* ↗ᶜƎnbaqom was granted a land-estate in Ǝ., in the locality of Ṭiqo, the "hereditary possession" of the Ethiopian metropolitan himself (Ricci 1966:75). During



the *ǧihād*, *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī (Grañ) dispatched a troop of cavalry under the command of ʿAbdannāṣir to invade Ǝ. and "to burn down the church of the ancient kings" (BassHist 243f.). In the second half of the 16th cent. *aṣe* ↗Śärṣä Dəngəl still used Alata, a locality in Ǝ., as his rainy-season camp, having completely subdued the local Gafat people. At the same time, Ǝ. was the scene of the political ambitions and rebellions of *ras* ↗Ḥamälmal and *abetohun* Fasilo. However, with the advance of the Oromo (Afre confederation, Sädäča, Tuulama), the Gafat were driven out into Goǧǧam, beyond the Abbay (so was the population of Damot). Consequently the effective political control of the Ethiopian monarchs over Ǝ. came to an end, even though later emperors and rulers of Goǧǧam made incursions into the region. which was incorporated only in the late 19th and early 20th cent. The territory of the historical Ǝ. was stored to the Ethiopian empire in modern times; it is divided between three former *awraǧǧas* of Šäwa province (Č̣äbo–Gurage, Männagäša, Ǧibat–Mäč̣č̣a).

Denis Nosnitsin

Ǝndägañ

Ǝndägañ language

Ǝ. (እንደጋኝ) is one of the ↗Gurage languages in the most western part of the Gurage speaking area (s. map under Gurage), called Ǝndägañä by the speakers themselves. Together with ↗Geto and ↗Ǝnnämor it belongs to the Peripheral Western Gurage group (Hetzron 1972:6). Ǝ. is more closely related to Ǝnnämor than to Geto. A dialect of Ǝ. is ↗Ǝnär. Another dialect, the only outlying Gurage group, is called ↗Mäsmäs (Hetzron 1977:4).

In the Peripheral Western Gurage group a glottal stop (going back either to ʾ and ʿ or to a glottalized *q*, *ṭ*, *č̣*) is found which is lost in most other Gurage idioms, intervocalically or forming a cluster with nasals, liquids and semivowels, e.g. *annäʾä*, impf. *aarəʾ*, juss. *äärä*ʾ 'be ended' (cf. Čaha *anäqä*, Amh. *alläqä* – Gəʿəz *ḫalqä*). **mʾ* and **nʾ* but not *rʾ* underwent metathesis: *säʾma* 'hear' (cf. Ǝnnämor *sämʾa*, Amh. *sämma* – Gəʿəz *sämʿa*), *säʾna* 'arrive' (cf. Ǝnnämor *säʾna*, Čaha *säna*, Muher, Soddo *sälla*), but *burʾä* 'voracious' (cf. Čaha *bura* – Gəʿəz *blʿ* 'eat').

Among the western Gurage idioms only Ǝ. maintains an initial *h* going back to Semitic pharyngeals and glottals, e.g. *himbä* 'tear' (cf. Čaha *əmba* – Gəʿəz *ʾanbəʿ*), *(h)iʾinä* 'ache' (from the verb *eʾä-*, Čaha *aqʸä-*, Səlṭi *anč̣e* 'be sick', cp. Gəʿəz *ḥqy* 'gnash the teeth'). In verbal roots the first radical ʾ is attested instead, e.g. *anäqä*, impf. *aʾanq*, juss. *äʾänq* 'strangle' (cp. Gəʿəz *ḫanäqä*).

With some triradical verbs a glottal stop (going back to ʾ or ʿ) appears as second radical, e.g. *waʾarä*, impf. *əwäʾär*, juss. *äwaʾar* (cp. Gəʿəz *wäʿalä*), as well as third radical, e.g. *gʷäddaʾa*, impf. *əgʷädä*, juss. *ägʷdä* 'harm' (cp. Gəʿəz *gʷädəʾa*).

A special development has taken place with verbs with a nasal as second and ʾ as third radical where second and third radical change places, e.g. *häʾna*, impf. *əhärʾä*, juss. *ähərʾä* 'forbid, hinder', cf. Ǝnnämor *ḫänʾa* (with the original sequence of nasal and glottal stop), Amh. *källa* – Gəʿəz *käləʾa*.

Within Gurage a similar behaviour of ʾ in root forms can only be observed in Ǝnnämor.

The elementary ten word list: *att* 'one', *hurʾet* 'two', *soʾost* 'three', *əsaad* 'fire', *əhä*, *əḫä* 'water', *ũwããyä*, *ayääd* 'sun', *bäññä* 'moon', *šən* 'tooth', *däm* 'blood', *anääd* 'tongue'.

Leslau has published some Ǝ. texts (1982) as well as a dictionary (1979, I, 139–256, 1240), an English–Ǝ. index (1979, II) and an etymological dictionary (1979, III). As to Gurage dialects/languages, s. in general Leslau (1992).

Rainer Voigt

Ǝndägañ ethnography

The Ǝ. (also Šadgär) are a member-group of the *Säbat Bet* ↗Gurage confederation. Their settle-

Ǝndägañ landscape, view of the historical market on the hill of Šorko with the three intertwined holy trees (centre right) where the *nugs* is enthroned, the Gibe valley and the Ǧangäro mountains in the background; photo 2000, courtesy of the author

ment area is situated in the southern part of today's "Ǝnnämor and Ǝnär [or Gunčure] *wäräda*" of Gurage zone. It is bordered by the ↗Ǝnär in the west, the ↗Ǝnnämor and ↗Geto in the north and the Azärnät-Bärbäre (↗Səlṭi; ↗Ǝnnäqor) in the east. In the south the neighbours of the Ǝ. are the Leemo ↗Hadiyya. Until the 1990s most of the Ǝ. territory was part of the "Kontäb [today Miišaa] *wäräda*" of Hadiyya zone and even before the Ǝ. were affiliated with Leemo in one *awrağğa*. Small groups of Ǝ. are to be found in Hadiyya, ↗Səlṭi and ↗Kambaata territories.

The Ǝ. conduct a mixed farming system with a significant importance accorded to ↗*ənsät*. For generations many Ǝ. have left their lands for seasonal or constant labour migration, and nearly every family has relatives outside Ǝ. country.

The oral traditions of the Ǝ. say that they migrated from Gura^c^ (in Akkälä Guzay) to the south with *azmač* Səbḥat in the early 14th cent. (cp. BeckHuntAlm lxvi, lxix). The ancestors Ǝndägañ (also Bädägañ) and his "grandson" Šadgär are said to have led their people into the area. The Ǝ. claim to have brought the *tabot* of Maryam from the north. Its sanctuary was at the early Ǝ. settlement of Bušurro on the slopes of the Mugo massive. The *tabot* itself is said to have been hidden in a cave while the church was destroyed during the war of Aḥmad b. Ibrāhīm al-Ġāzi (Grañ) in the 16th cent.

As a relatively small group, the Ǝ. for the most part of their history were dominated by other groups. Since the beginning of the 17th cent., the Sooro subgroup of Hadiyya was the dominant power in the area, which according to historical memory "suppressed" the Ǝ. by raids and collection of irregular tributes. After the Leemo reached Ǝnnäqor at the end of the 18th cent., an alliance of Leemo and Ǝ. was established. The alliance was based on strong ties of intermarriage and mutual military aid. The Sooro were pushed to the south of today's ↗Hossäyna until the second half of the 19th cent. and the Leemo became protecting partners of the Ǝ. Leemo and Ǝ. continued their alliance in the many conflicts they had with different Gurage neighbours, the Azärnät-Bärbäre, and in the fight against Mənilək II's troops.

The tradition counts twelve houses of Ǝ., but the real number of subdivisions (*ṭəw*) is much higher. The social system resembles that of the other *Säbat Bet* Gurage (cp. ShGurage ch. 4, 5).

The highest traditional office is that of the *nugs* ('king'), which was changed into that of ↗*azmač* after Mənilək's conquest. The *nugs* is enthroned and anointed with butter and honey in a ceremony lasting several days under three intertwined holy trees at the (former) market of Šorko.

The Ǝ. claim to have been Orthodox Christians at least since the mission to the Gurage of *abunä* ↗Zena Marqos and *abba* Täklä Haymanot (late 13th/early 14th cent.). The last is reported to have built a church "with wood from the devil's tree" in "Yätäybar", in an area called "Ǝndegən" (ms. BN Éth. 342/Griaule 38), probably linked with the Ǝ. ancestors. In the syncretistic folk-religion, a local branch of the traditional Gurage religious system, which the Ǝ. developed after Grañ, some Christian elements were preserved, e.g., a modified fasting system and the veneration of Bušurro Maryam, which became a cult predominantly carried out by females.

The high-priest of the Ǝ. folk-religion is the *Saʾamär dam*, a spirit-medium representing *Saʾamär* (also *Awaqa*), the ↗*Waq* of Ǝ., who was syncretized with Archangel Gabrəʾel. The *Saʾamär dam* has some significance for the cult of the ↗*Božžä* spirit in other areas of the *Säbat Bet* Gurage country as well. He also had some authority among the Leemo, ↗Mäsmäs and Ǝnär.

The Ǝ. folk-religion lost its influence after Mənilək's conquest. Today a great majority of the Ǝ. are Orthodox Christians and the memory of the old cults has faded. The recent *Saʾamär dam* Märammo defines himself as an Orthodox Christian who blesses his people and prays for the well-being of the country.

Ǝndalkaččäw Mäkʷännən

Ləǧ Ǝ.M. (እንዳልካቸው፡ መኰንን, b. 1926, d. 1974) was a Šäwan nobleman, son of former Prime Minister ↗Mäkʷännən Ǝndalkaččäw and grandson (through his mother) of *ras* ↗Mängäša Atikam of Goǧǧam. He belonged to an aristocratic family related to the ruling house of ↗Šäwa. M.Ǝ. received a quality education, first at Ḫaylä Śəllase I Secondary School in Addis Abäba and then at Oxford University in the United Kingdom.

After returning home, Ǝ.M. started his career as a diplomat in the Ministry of Foreign Affairs (1955–57). He then worked in high governmental and ambassadorial positions. Among the major internal posts he held are: Vice Minister of Education (1958–59), Minister of Commerce and Industry (1961–66), Minister of Posts and Communication (1968–74) and Prime Minister (February–July 1974). He also held the following positions abroad: Ethiopian Ambassador in London (1959–61) and Permanent Representative at the United Nations (1966–68).

Until the 1970s Ǝ.M. was better known as a diplomat than as a minister. He was Ethiopia's delegate at the Bandung Conference (1955) and the Suez Conference (1956). At the UN he was not only Ethiopia's representative on the Security Council, but also served as its president. He chaired a series of international crises in the Middle East, Cyprus, Rhodesia, Namibia and Czechoslovakia. Moreover, he was one of the advocates for disarmament and the non-proliferation of nuclear weapons. These and other activities in the UN caused them to honour Ǝ.M. as a "remarkable diplomat". He was also once suggested as a possible candidate for the post of UN Secretary General.

Ǝ.M.'s career ended tragically. With the resignation of ↗Aklilu Habtäwäld's cabinet in Febru-

Ǝndalkaččäw Mäkʷännən; from *Sestante* 7, 1971:35

ary 1974, Ǝ.M. was appointed Prime Minister. He envisaged a constitutional monarchy and a cabinet accountable to a democratically elected parliament as stated in his white paper presented to the parliament. However, as mass movements increased and the military exploited the people's discontent, Ǝ.M. lost popular support. He was put in custody and then became a victim of the *Därg's* summary execution of officials in November 1974.

Seltene Seyoum

Ǝndärase

Ǝ. (**እንደራሴ**, lit., in the Šäwan dialect of Amh., 'as myself') means a deputy, or, more precise, representative plenipotentiary. Ethiopian traditional emperors, who had always both their court and army with them at their camp, needed no deputies whatsoever and there existed none. However, with the establishment of a permanent capital city at ↗Gondär (1636), Gondärine emperors soon felt a need for a special dignitary with a high level of authority to whom the capital city could be entrusted during the annual campaigns, traditionally headed by the emperor himself. In the Gondärine kingdom, such an official was called *ras* ↗*bitwäddäd*.

In Šäwa this need emerged only during *aṣe* ↗Mənilək II's time, after the foundation of ↗Addis Abäba, and the corresponding official was called Ǝ., which was not a title, but a temporary office, or, probably, function. The sovereign appointed an Ǝ. to represent him during his absence from the capital. The Ǝ. was a well-trusted noble, usually an army commander of high rank. His main duty was to maintain the security in the capital and, in order to achieve this aim, the Ǝ. had full power to execute the law on behalf of the sovereign. Another duty of the Ǝ. was to be a guardian of an heir to the throne.

When in 1909 *aṣe* Mənilək II's health deteriorated seriously, there appeared the need for a permanent deputy for him, a kind of regent. *Ras* ↗Täsämma Nadäw was nominated to be a guardian to *ləǧ* ↗Iyasu, with the title of *ras bitwäddäd*. But this ancient title did not correspond precisely to regent and so *ras* Täsämma was also called **ባለ፡ ሙሉ፡ ሥልጣን፡ እንደራሴ** (*balä mulu śəlṭan əndärase*, 'representative plenipotentiary'), which was created specifically to describe his position at the court. It was a novelty much needed in the circumstances and the same title was used for the Heir to the Throne *ras* Täfäri Mäkʷännən (later *aṣe* ↗Ḫaylä Śəllase I) during the reign of *nəgəśtä nəgəśtat* ↗Zäwditu. According to Ḫaylä Śəllase's autobiography (HSLife) and some other Ethiopian sources, Täfäri Mäkʷännən received the title of Ǝ. together with that of Heir to the Throne in 1916 (e.g., TSTarik); but according to other Ethiopian sources and historians, he received the title later. Gäbrä Ǝgziʾabḥer Elyas describes the ceremony which took place on the 19 December 1922 when Zäwditu nominated Täfäri Ǝ.

Thus, under these rather exceptional circumstances, Ǝ. indeed became a title for a while.

Täfäri Mäkʷännən retained the governorship of Harär after he moved to Addis in 1916. He appointed a series of governors with the title of Ǝ. to govern the province on his behalf.

With the enthronement of Ḫaylä Śəllase I in 1930, it lost its exceptional significance, and after 1941 all provincial governments became Ǝ. until tite title was abolished by the *Därg*. The word remained as an Amh. word meaning 'deputy'.

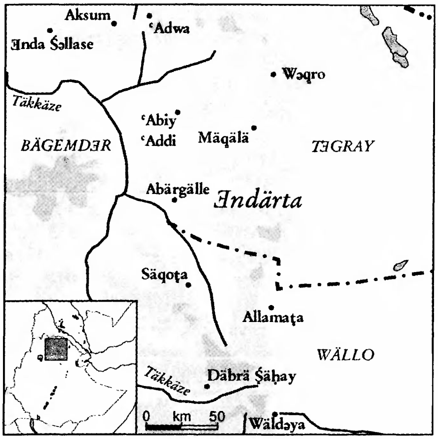
Ǝndärta

Ǝ. (**እንደርታ**, also Ǝntärta, Andärta) is a region in south-eastern ↗Təgray that lies to the east of ↗Gärʿalta, to the north-east of ↗Säläwa and to the north-west of ↗Wäǧǧärat. In the provincial administration Ǝ. constituted an *awrağğa* (with the capital ↗Anṭalo).

From the Aksumite era onwards, Ǝ. was an important staging-post on the trade route from ↗Aksum to the hinterlands. In the 13th cent., its governor had two titles of Aksumite origin, ↗*ḥasgʷa* and *ʿaqqabe ṣänṣän* (**ዓቃቤ፡ ጸንጸን**, s. TadTChurch 73, later abbreviated into ↗*ʿaqaṣen*). During the reign of *aṣe* ↗Yəkunno Amlak, the governor of Ǝ. (*śəyyumä Ǝndärta*) was Ǝngəda Ǝgziʾ (CRDLib no. 10); in the 14th, ↗Yaʿəbikä Ǝgziʾ, another governor, was powerful enough to rebel against *aṣe* ↗ʿAmdä Ṣəyon I. In his land charter (ibid. 17), Yaʿəbikä Ǝgziʾ



does not mention the King; the colophon of the ↗*Kəbrä nägäśt* reveals that, in fact, he was the ruler who committed the creation of this work, which later became "the national saga" of Ethiopia. However, ᶜAmdä Ṣəyon successfully suppressed the revolt (CRAxum no. 29). There is no further information concerning the line of Yaᶜəbikä Ǝgziᵓ, whereas the local tradition places ᶜAmdä Ṣəyon's residence in Nazrä Maryam (near ↗Kʷiḥa) and his grave in Abba Nob church in Addi Qäläbäs, near Anṭalo. In the 16th cent., the province was ravaged by the army of ↗Aḥmad b. Ibrāhīm al-Ġāzī, who wanted, among others, to visit the grave of *näǧāśi* Aṣḥama (BassHist 419 [tr.]; ↗Aṣḥam b. Abǧar; ↗Ǝllä Ṣäḥam). Muslim communities were recorded in Ǝ. in the late 17th cent., but later disappeared (their traces are still found in Ǝ.: gravestones at Kʷiḥa and Wägər Ḥaribo, a mosque at Addi Abunä Nazrä[t]). In 1628, Ǝ. saw the rebellion of *baḥər nägaš* ↗Täklä Giyorgis, governor of Təgray, against *aṣe* ↗Susənyos. In the time of ↗Yoḥannəs I, the people of Ǝ. joined the big rebellion lead by *ras* ↗Fares, the follower of ↗*Täwaḥədo*-doctrine, but were beaten by ↗Dəlbä Iyäsus.

The local tradition of Ǝ. refers to Endor, who came from ᶜAgamä in the time of ↗Abrəha and Aṣbəha; he was the apical ancestor of the "seven (lineages) of E.". Also it tells about brothers Bayleṣen and Bəggədiṣen; the son of the latter, Asbärom (a contemporary of *aṣe* ↗Fasilädäs), was the ancestor of *ras* ↗Wäldä Śəllase (whose power basis was in Ǝ., in particular in ↗Čäläqot and Anṭalo) and *aṣe* ↗Yoḥannəs IV, who resided in ↗Mäqälä.

E. always maintained its importance as a place where salt-caravans were accepted and organized to travel to the salt-mining places in the Dankali desert; the governors of Ǝ., who were granted the title of ↗*balgäda*, were responsible for the ↗salt trade and taxation (↗*Amole*). There was a tradition of the movement of ↗Ewosṭateans in the region, though the churches and monasteries of Ǝ. became numerous mostly due to Yoḥannəs IV. The most known are, e.g., Ǝnda Mäsqäl, linked to *abunä* ↗Absadi, and Ǝnda Kidanä Məḥrät, reportedly founded by *abunä* Abrəham in the 14th cent. Among the rock-hewn churches, Iyäsus Arhənᵓo near Gibǧet deserves attention, once a flourishing monastic establishment, recorded already by ↗Tellez.

Ǝndih näw

Ǝ.N. (**እንዲሁ ፡ ነው**, 'It is so') was an annual yearly literary journal of the University College of ↗Addis Abäba University, but only two issues appeared, one in *Ṭərr* 1957 A.M. [January 1965 A.D.] and the second in 1958 A.M. [1966 A.D.]. Ǝ.N. was not the first literary journal – the *Literary Journal of University College, Ḫaylä Śəllase I University* and the literary magazine *Something* had appeared earlier, respectively four and two years previously – but the Ǝ.N. was the first of its kind in Amharic.

Ǝ.N. was conceived as a forum for literary discussion or talented students enable them to exchange views in their native language and using their native Ethiopic script. According to the editorial, the aims of the publication were to ensure that the university students and professors could present and exchange their literary pieces, while the general public could provide them with feedback, support and financial assistance.

The chief editor of the first issue was ↗Bərhanä Mäsqäl Rädda, a student activist and leader who later became one of the founders of the ↗Ethiopian Peoples Revolutionary Party. The vice-editor was Bäʾəmnät Gäbrä Amlak, at that time working in the University Library (later he became lecturer in the Department of Ethiopian Languages and Literature and was the author of the novel ልጅነት [*Ləǧənnät*, 'Childhood']). The Chairman of the Managing Board was Abbäbä Wärqe; Yonas Admasu was its Secretary. The Literary Board had Getatchew Haile as its Honorary Chairman and Bərhanä Mäsqäl Rädda as its Chairman. Among its members were Amsalu Aklilu and ↗Daññaččäw Wärqu. In all, 15 persons held various appointments in the maiden issue of Ǝ.N., which ran to 37 pages and contained an editorial, ten poems, one story, two essays, a travel report, a play let and about a dozen advertisements.

The second issue of Ǝ.N. kept the main title, but was affiliated to the Arts Faculty, and Bäʾəmnät Gäbrä Amlak became its editor-in-chief. In this 24-page issue an editorial, five poems, eight couplets reflecting on various issues, four proverbs, a travel report, three essays, a book review and six advertisements appeared.

Fekade Azeze

Ǝndod

Ǝ. (እንዶድ, Tgn. ቺብቲ, *čibti*; also known as *Phytolacca dodecandra*, *Phytolacca abyssinica*, *Pircunia abyssinica*) is a member of the *Phytolaccaceae*, also known as soapberry. This plant is found in Africa and in parts of Latin America and Asia. Ǝ. has small berries which, when dried, powdered and mixed with water, yield a foaming detergent solution.

In Ethiopia Ǝ. exists in two main varieties, *arabe* with pinkish, and *ahəyo* with greyish berries. *Arabe* (possibly meaning 'from Arabia') has more powerful detergent properties than *ahəyo* (meaning 'donkey' and implying that it is less active than the other type). The plant is a climber with hanging branches; it grows very rapidly under direct sunlight and in its natural habitat reaches a height of up to 10 m, the average being 2–3 m. Under favourable climatic conditions, the plant in Ethiopia bears fruit twice a year, in January and July. Many Ǝ. bushes were cut down during the droughts of 1973–74 and 1984–85.

Ǝndod plant (detail); photo courtesy of the Endod Development Project, Ethio-Coffee and Tea Plantation and Marketing (ECTPM), Pvt. Ltd. Co., Addis Abäba

People of all ages are familiar with the plant and its various uses. Ǝ. berries are used as soap, but very little is traded at markets due to the low social status of Ǝ.'s soap. Commonly, it is used by poor people in rural areas. In areas where the evapotranspiration is very high, partial shade by other bushes or trees is necessary to avoid sunburn. Unfortunately, wilting of leaves is the main obstacle for the cultivation of Ǝ. at lower elevations (below 1,600 m A.S.L.), where ↗bilharziasis is endemic.

Common traditional medicinal uses of the plant are the treatment of skin itching (ringworm), abortion, gonorrhoea, leeches, intestinal worms, anthrax and rabies. The molluscicidal properties of Ǝ. were discovered in northern Ethiopia (ʿAdwa) in 1964 by ↗Aklilu Lämma. He also conducted research on Ǝ.'s larvicidal, fungicidal, spermicidal and other medical properties.

Ǝndrəyas

Aṣe Ǝ. (እንድርያስ, r. 1429–30, regnal name Əskəndər), son of *aṣe* ↗Yəsḥaq, succeeded his father when he was very young. According to al-Maqrīzī (MaqIlmam 9, 39), his reign lasted for four months, whereas the "short chronicles" gave him a period of reign of six months (BassÉt 101f.; DombrChr 155). His uncle, Ḥəzbä Nañ (↗Täklä Maryam), reigned after him. This period is completely unknown because of the lack of sources.

Ǝndrəyas

Ǝ. (እንድርያስ; 15th cent.) was the eighth head (↗*Əččäge*) of the monastery of Däbrä ʿAsbo (↗Däbrä Libanos) of Šäwa, the successor of ↗Yoḥannəs Käma and a contemporary of *aṣe* ↗Zärʾa Yaʿəqob.

The first part of Ǝ.'s tenure appears to have been a success. According to the Chronicle of Zärʾa Yaʿəqob, the monks of Däbrä ʿAsbo were the first to congratulate the Emperor on his brilliant victory over ↗Aḥmad Badlāy, which took place on 26 December 1445 at Agbära. For this expression of loyalty the monastery was endowed with rich gifts. The Emperor visited the community and concluded an unprecedented "covenant" (↗*Kidan*) with the monks: the monastery was to obtain land possessions for the commemoration of "the Feast of our Lord Jesus Christ" on the 29th day of every month, which would be accompanied by the commemoration of the Emperor's victory. In addition, the name of the monastery was changed from Däbrä ʿAsbo (cp. ↗*däbr*; ʿAsbo is supposed to be a place name, but it is also a Gəʿəz word meaning 'price, reward') to Däbrä Libanos. This can be translated as 'Mount of Lebanon', but it seems to have been named after the famous monastery of ↗Däbrä Libanos of Šimäzana, the foundation of *abba* Mäṭaʿ (also known as ↗Libanos). The transference of the name may reflect an attempt to create in Šäwa a new religious centre by the model of the by far more celebrated Däbrä Libanos in the north. The next step by Zärʾa Yaʿəqob was to place new churches and monasteries under the administration of Däbrä Libanos, among these ↗Däbrä Bərhan, ↗Däbrä Məṭmaq and ↗Däbrä Nägʷadgʷad. Two representatives of Däbrä Libanos were asked to stay permanently at Zärʾa Yaʿəqob's camp, in the vicinity of the Emperor.

The source of the subsequent conflict may have lain in the expense of the centralizing politics and personal qualities of Zärʾa Yaʿəqob, on the one hand, and the concentration of authority in the hands of Ǝ. coupled with the growing independence of Däbrä Libanos, on the other. The Acts of Ǝ.'s successor ↗Yəmrähannä (Märḥa) Krestos relate that the aged Ǝ., who sought to complete his life as a martyr, was occasionally summoned by the Emperor, put into custody and afterwards died in prison. As the Chronicle of Zärʾa Yaʿəqob states, at court Ǝ. was falsely accused by a certain Zärʾa Ṣəyon. Only after almost a year did Yəmrähannä Krəstos manage to convince the Emperor to allow Ǝ.'s remains to be returned to Däbrä Libanos. In fact, the disfavour of Ǝ. might have been politically motivated and linked to the persecution of *abba* ↗Täklä Ḥawaryat (cp. Kur 1972:42). The latter seems to have been an associate of Gälawdewos, the Emperor's son, punished by his father for his participation in a plot (there are hints that Gälawdewos and *aṣe* ↗Bäʿədä Maryam may be the same person, cp. Taddesse Tamrat in PICES 4; Getatchew Haile 1994:107). Another possible cause of Ǝ.'s persecution could be disagreement with the Emperor on the issue of the ↗Sabbath. In any case, the arrest of Ǝ. may have taken place some time around 1455, and then he died (TadChurch 242, n. 3: in 1462). After this, the office of the head of Däbrä Libanos was possibly vacant for some years, as follows from the Chronicle of *aṣe* Bäʾədä Maryam (contrary to what the Acts of Yəmrähannä Krəstos report). The Däbrä Libanos tradition venerates Ǝ. as a martyr; in the ↗*Sənkəssar* he is commemorated on 17 *Ḥamle*.

Denis Nosnitsin

Ǝndrəyas of Säffəʾa

Ǝ. (**እንድርያስ**), a saintly monk, lived during the reign of *aṣe* Zärʾa Yaʿəqob (1434–68). He was a son of Zäʾamanuʾel and Amätä Mänfäs Qəddus and at Däbrä Säloda became a disciple of Gäbrä Krəstos, who vested him in the monastic habit. Ǝ. spent most of his life in ↗Bogos, where he met with the pilgrims heading for the Holy Land. One of these pilgrims, Täʾamnä Ǝgziʾ, decided to stay and live with him. Reminiscences of Ǝ.'s apostolic activities are found at Araza, as well as in other places of Eritrea.

His feast day is celebrated on 1 *Yäkkatit* (8/9 February). His hagiography, which is still unpublished, was written "at the behest of the Holy Spirit" and a certain Melchisedek passed it on to Gäbrä Śəllase, a monk, who than asked a confrere, Ṣägga Haymanot, to edit it.

Endybis

E. (Gr. ENΔYBIC) was a late-3rd-cent. Aksumite (↗Aksum) ruler, the first to issue currency – to date the only evidence for his life. Nor can any of the names transmitted in the "kings lists" be reasonably traced to E., occasionally identified with king ↗Sembrouthes of the ↗Däqqämḥare inscription.

On the obv. of his coins – gold, silver and copper issues – E. appears head-and-shoulders profile bust rightward, framed by two wheat stalks and draped in a garment with folds; he wears a headcloth, an earring and a round collar or necklace, the pre-Christian symbol of the moon god appearing over his head. A Greek legend goes round: *Endybis basileus* 'Endybis king', and continues on the obv., with the same design as the rev.: *Axōmitō*[*n*] *bisi Dachy* 'of the Aksumites, man of Dachy [Dachi]', which includes his *bisi-* or clanname (BICI ΔAXY), possibly connected to the *sarwe dakʷen* or *sarwe daken* ('elephant [mounted] troops'?) of king ↗ʿEzana (↗Elephants).

E.'s dating can only be approximately defined with the help of the metrological clue provided by his gold coins as compared with the contemporary Roman system. Silver and copper coins, much less known, show the same iconography and legends, but without wheat stalks. The frequency of E.'s gold and silver coins is due to hoarding, does not necessarily suggest a long reign. The initiative of starting the production of coins might originate within the framework of international trading on the Indian route, as also proved by the interesting synchronism with the end of South Arabian coinage (Fiaccadori 2004:143).

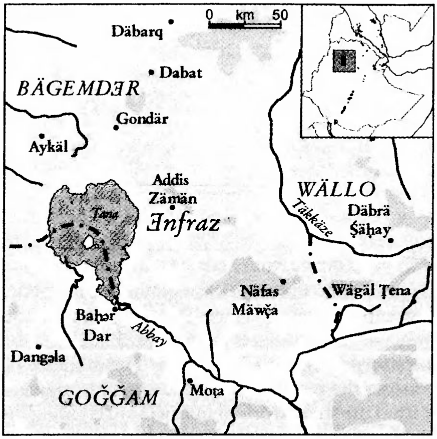
Wolfgang Hahn – Red.

Ǝnfraz

Ǝ. (**እንፍራዝ**, also Ǝmfraz) is a district in ↗Bägemdər 60 km south-southeast of ↗Gondär. It borders Lake ↗Ṭana in the west, Dämbəya in the north, and ↗Fogära in the south. The land rises from flat plains beside Ṭana through low hills to the high plateau of Bägemdər in the east. It is one segment of a north-south transportation route down the east side of Ṭana long used by traders and travellers alike.

Its original inhabitants were ↗Agäw; but by the early 14th cent., Ǝ. was populated by the Fälaša (↗Betä Israʾel), who were gradually evangelized and made subjects to the authority of the Christian emperors. Early in his reign, *aṣe* ↗ʿAmda Ṣəyon I sent his armies against Ǝ. and neighbouring lands, bringing the area under his control and introducing Christianity to the



inhabitants. In the middle of the 16th cent., Ǝ. was one of the very few areas to escape devastation during the *ǧihād* by ↗Aḥmad b. Ibrāhīm al-Ġāzī (who, however, was killed at Zantära in Ǝ., ↗Wäyna Däga). This fact had two important consequences. First, the churches and monasteries of Ǝ. remained intact and served as an educational and literary foundation for the later revival of Christian culture in the country. Second, for security reasons, *aṣe* Minas (1559–63) chose Ǝ. as a place of refuge and as a rainy season residence, where there was already a settlement, probably a way station for Muslim traders. In the mid-1570s, his son, *aṣe* Śärṣä Dəngəl (1563–97), established his camp at ↗Guba'e (Guzara), "chosen among all the monasteries of Emfraz" according to the royal chronicle (CRHist 83 [text]). There he constructed a stone castle on a hill overlooking Lake Ṭana, seemingly the first example of Gondär-style architecture in the kingdom. In all probability, the stone bridge over the Garno River below the castle also dates to his reign.

Ǝ. remained the capital of the Kingdom until 1589. Thereafter, it served as a temporary residence for a succession of emperors, who resided at Guba'e (Guzara) or at Qoga, just to the south, and it was one of the regular stages on the imperial line of march from Gondär to ↗Goǧǧam and adjacent lands. In the early 17th cent., the ↗Jesuits proselytized heavily in E. and located the seat of their patriarch at Däbsan (↗Däbrä San), close to the Guzara castle. In 1708 *aṣe* ↗Tewoflos was crowned in Ǝ.

Long before it became a political center, Ǝ. was a stage on the long-distance ↗trade route that ran from the Red Sea via Təgray and Ṭana to the southern highlands. Indeed, the desire to secure this route and to levy tolls on the caravans (as well as the growing pressure from the ↗Oromo in the south) were probably the major reasons that drew Śärṣä Dəngəl to Ǝ. After arrival of the royal court and army, the original settlement grew into a town or city of up to 15,000 inhabitants, according to the report of the Jesuit father, Pedro ↗Paez (BecRASO II, 203f.). Ǝ. retained its commercial importance even after the founding of Gondär. In 1700 the French physician, Charles ↗Poncet, reported that it was inhabited by Christians and Muslims and famed for its trade in ↗zibeth and slaves. 70 years later, James ↗Bruce found a town of some 300 houses on the slope below the castle and Muslim merchants trading in cloth, frankincense, myrrh, and salt; some were the royal tent-makers.

With the rise of ↗Šäwa during the 19th cent., Ǝ. declined in importance, along with Gondär and Bägemdər. Today, the Baḥər Dar–Gondär road, successor to the former caravan route, traverses Ǝ. and passes through the small village that bears the name. Nearby ruins testify to Ǝ.'s prominence in the past.

Sevir Chernetsov – LaVerle Berry

Ǝnǧära ↗ Bread

Ǝngəda

Ras Ǝ. (**እንግዳ**; b. ca. 1820, d. 1868, Mäqdäla) was a *balabbat* of Qʷara and Agäw Mədər and one of the influential officials of *aṣe* ↗Tewodros II. Hardly anything is known about his background, upbringing and education, apart from the fact that he came from a wealthy family. From all indications he was an acquaintance of *ləǧ* Kaśa Ḫaylu (Tewodros) in his youth and one of his earliest companions; he was said to have participated in practically every battle Tewodros fought.

When Tewodros conquered Šäwa in 1855, Ǝ. was sent at the head of an army to pursue the *mäkʷanənt* of Ḫaylä Mäläkot, who had taken young Mənilək with them and retreated to the eastern lowlands. With *bitwäddäd* Bərru and *bitwäddäd* Wəbe on his side, Ǝ. defeated them at the battle of Bäräkät (Mənǧar) on 30 *Ḫədar* (9 December) and took Mənilək captive (ZanLitTheod 4, 24ff.; MonVidTheo 11f.).

When returning from Šäwa, Tewodros pacified Goǧǧam by punishing the remaining rebels and, after Ǝ. defeated ↗Tädla Gʷalu in August of the next year (ZanLitTheod 26f.), appointed the former governor of the region. Apparently, Ǝ. did not retain the office for long, for he had to act as a counsellor and "prime minister" to his royal master.

He fell out of royal favour for some time in the mid-1860s and suffered imprisonment for a short time at ↗Amba Gəšän (where he was kept together with "Agäw" ↗Nəguśe Wäldä Mikaʾel and *baša* Gäbrä Mikaʾel, s. ZanLitTheod 29f.), but he was reinstated and later killed at the Battle of ↗Mäqdäla on the side of Tewodros, together with his brother, *azzaž* Fanta. Rassam, who knew him well, states that Ǝ. was "a man of most gentlemanly bearing, of strict integrity, and of an eminently humane disposition" (RasTheo vol. 1, 255).

Bairu Tafla

Ǝngəda

Aläqa Ǝ. (**እንግዳ**; 19th cent.) flourished during the reign of *aṣe* ↗Tewodros II. He was later also employed by *aṣe* Yoḥannəs IV and *nəguś* Täklä Haymanot and was still active in the early years of *aṣe* Mənilək II's reign. He was born on Zäge island in Lake Ṭana and many of his signed wall-paintings can still be seen in the local church of ↗Ura Kidanä Məḥrät. Other paintings by Ǝ. decorate the churches ↗Däbrä Marqos and ↗Bəčäna Giyorgis. The Staatliches Museum für Völkerkunde in Munich acquired one of his paintings, a large canvas of the Crucifixion, showing the painter's self-portrait at the foot of the cross (no. 81–301465).

Ǝ. belonged to the Ethiopian "transition period", i.e. a period in the Ethiopian painting of the 20th cent. when secular paintings became more and more common and the first European ↗colours were being imported. His paintings represent an excellent record of the fashion in clothes and jewellery at that time.

Ǝ.'s paintings in the church of Ura Kidanä Məḥrät show the arrival of *aṣe* Yoḥannəs at Lake Ṭana, *nəguś* Täklä Haymanot's reception by priests as he arrives at Lake Ṭana and an aristocratic lady with her female servants who commissioned him to paint her portrait. Apart from the secular themes, Ǝ. also painted religious scenes. Among these, his well known Flight of the Holy Family to Egypt from the *Nägärä Maryam* cycle in Ura Kidanä Məḥrät can be mentioned.

Girma Fisseha

Ǝngəda Wärq

Ǝ.W. (**እንግዳ፡ ወርቅ**; d. 1868, Mäqdäla) was the chief secretary of *aṣe* ↗Tewodros II and perhaps the only one to bear the title of ↗*ṣäḥafe təʾəzaz* during the reign of the same monarch. The sources refer to him mostly as "*aläqa* Ǝngəda", an indication of his clerical learning, but no reference is made to his native region. Täklä Ṣadəq Mäkʷəriya mentions that he was the successor of *däbtära* ↗Zännäb in the office, though there is no evidence that the latter ever reached the rank of *ṣäḥafe təʾəzaz*.

Hardly anything is known about his life and activities before and, to a great extent, during Tewodros's reign, apart from the usual task of taking care of the royal seal and correspondence. The sovereign sent him once on a mission to Aden and the neighbouring region, where he claimed to have been mistreated. He is said to have complained about it to the monarch, who, in turn, accused him of bringing Europeans into the country. He was thus suspected by the Europeans in Ethiopia of inciting anti-European sentiments in the sovereign, while, at the same time, his master mistrusted him. Towards the end of 1867 or in early 1868, he was arrested under the pretext of a lost royal rifle for which he allegedly could not pay the high price set by the sovereign, and was consequently put in chains and kept on mount Mäqdäla, where he was executed along with other prisoners in April 1868. No chronicle is so far attributed to his composition.

English language in Ethiopia

Foreign contacts in the early- and mid-19th cent. caused a handful of Ethiopians to acquire a good knowledge of English. Such English speakers included ↗Maḫdärä Qal from Təgre, who had studied partly in Malta; ↗Mərča Wärqe, a man of partial Armenian descent, who had gone to school in Bombay; Emperor Tewodros's son ↗ʿAlämayyähu, who attended the British military academy at Sandhurst; and *hakim* ↗Wärqənäh Ǝšäte also known as Dr. Martin, whose studies in India and Scotland led to his becoming his country's first foreign-trained physician (BZHist s. index). On the military side, meanwhile, a British sergeant, J.C. ↗Kirkham, who had participated in the Mäqdäla campaign, seems to have instructed some of *aṣe* Yoḥannəs IV's troops in English: the British traveller De Cosson reports that he was "not a little surprised" to hear commands, such as "Present arms", "Shoulder arms", and "Right and left turn", clearly pronounced in English (De Cosson 1877, vol. 1, 302).

Though modern education in Ethiopia, established in the few decades prior to the Italian Fascist invasion of 1935–36, was primarily in French, some education was also given in English. The ↗Mənilək II Secretary School, founded in Addis Abäba in 1908, taught English, while the Täfäri Mäkʷännən school, established in 1925, held classes in that language. English was also taught in the city's American school, set up in 1934, as well as in nine pre-war provincial schools: in Dərre Dawa, Ǧiǧiga, Asbä Täfäri, Gore, Neqemte, Däbrä Marqos, Gondär, ʿAdwa and Mäqälä (ZerEth 224, 226; Pankhurst 1955: 536f., 588ff.). *Ras* Täfäri Mäkʷännən's bodyguard was also partially trained by English-speaking non-commissioned officers of the King's African Rifles, a British African force based in British East Africa (Rey 1923:175f.).

In Ethiopia, as in other parts of the Middle East, World War II led to a major, almost accidental shift in educational language policy and practice. *Aṣe* ↗Ḫaylä Śəllase I spent his exile (1936–40) in Britain, where his family and courtiers learnt English. Ethiopia was liberated in 1941, largely by British troops, who remained in occupation of much of the country for the next three years (Spencer 1984:139–58). France, by contrast, was then under Nazi German occupation. Ethiopian primary education, re-established in 1942, and secondary education, in 1944, thus came into existence at a time of British supremacy. The resultant paramountcy of the English language in education was reinforced by the availability of English-speaking teachers from Sweden, prominent in the important ↗Ḫaylä Śəllase I Secondary School, from India, many of them employed in the provinces, and later from the United States, on the Point IV programme, as well as subsequently the Peace Corps. The language was also promoted by the British Council, which operated a fine library in English. A large proportion of Ethiopian students sent abroad for education likewise went to Britain, North America or India: all of them English-speaking areas.

English thus became, virtually by default, Ethiopia's main foreign language. The country's principal foreign advisers were at first all English-speaking. The English language was used, with Amharic, in the ↗*Nägarit Gazeṭa*, or official gazette, established in 1942, and the Penal Code, promulgated in 1952, as well as in all subsequent codes. English was also employed in several initially largely British- or American-run institutions, most notably the State Bank of Ethiopia, Ethiopian Airlines and the Imperial Highway Authority, as well as by British and, later, American experts and advisers. In 1944 the government made English the language of instruction of most primary and secondary schools, as well all institutions of higher learning. The principal Ethiopian Government foreign-language newspaper was in English: the ↗*Ethiopian Herald*. Most of the books and periodicals in the National Library were in English, while the majority of its public lectures were delivered in that language (Bahru Zewde 2002:108).

The advance of English likewise found expression in the fact that most of the country's scholarly periodicals, among them the *Ethnological Bulletin* of the University College of Addis Abäba, the ↗*Journal of Ethiopian Studies*, the *Ethiopian Medical Journal* and the *Ethiopian Geographical Journal*, were published largely or wholly in that language. An exception were the *Annales d'Éthiopie*, which appeared mainly in French. Several pieces of creative writing by Ethiopian authors of the post-Fascist occupation likewise appeared in English. These included Ṣäggaye Gäbrä Mädḫən's *Odo Oak Oracle* (London 1965), Daññaččäw Wärqu's *The Thirteenth Sun* (London 1973) and Śahlä Śəllase Bərhanä Maryam's *Warrior King* (London 1974), as well as English short stories and/or poems by such writers as Səbḥat Gäbrä Ǝgzi'abəher, Ašänafi Käbbädä, and Solomon Därässa (Lockot II, 391–95). This practice was, however. vigorously condemned by the poet and playwright Mängəśtu Lämma, who argued that Ethiopian authors "should express themselves in their own native language ... the tongue with which their mother dandled them on her knees" (Pankhurst 1988:204). Amharic in fact remained the main language of Ethiopian literature.

The penetration of English was restricted by the fact that the language entered at a relatively late stage of Ethiopia's modernization, when Amharic had already imported the more immediately necessary load-words from either French, during the Mənilək era, or from Italian, during the Fascist occupation: e.g. adopting **ላጋር** (from French *la gare*, 'the railway') or **ጎማ** (from Italian *gomma*, 'tyre'). The expansion of English was likewise limited by the relatively small size of the British community, its limited role in Ethiopian economic life and its general aloofness from the indigenous population. The British community thus had markedly less linguistic significance than that of the Italians, whose loan-words were so significant in relation to motor vehicles and virtually all their parts. Several English loan-words nevertheless came into use in Amharic, e.g, *bəruš*, for a brush, *kot*, for a coat, and *libstik*, for lipstick (Bemnet Gabre Amlak 1958:121ff.). Amharic-speaking Ethiopians with a knowledge of English would likewise often pepper their sentences with the occasional English word or phrase and would almost invariably do so in preference to those of other foreign tongues.

Richard Pankhurst

Ǝngʷərgʷərro

Ǝ. (**እንጉርጉሮ**, lit. 'muttering, grumbling, lamentation') is the expression of personal emotions, deep feelings of sorrow, grievances, depression and the like in poetry, resulting from the loss of parents, close relatives or friends due to death, loneliness, dissatisfaction with life, impoverishment, during tragic events, etc.

Among the Amharic-speaking people of Ethiopia, Ǝ. is usually composed and recited orally by younger adults and elderly people at times of deep grief or mourning (some singers and reciters may accompany their Ǝ. with the ↗*bägäna* or ↗*kərar*). Through Ǝ. both men and women would reflect their deep feelings or personal emotions at ↗funerals and afterwards with low voices in memory of the dead person. However, Ǝ. can also be recited during solitary agricultural activities such as weeding, harvesting, grinding and other rhythmic home duties. The people also use this form of poetry to communicate with God and to share their grievances with Him in the hope of obtaining assistance, solutions or strength from Him. In the rural areas, the peasants use this form of poetry to express their protest against the injustices and discriminations imposed on them by local officials and administrators.

Funeral ceremonies are particularly the focal point of lamentation and the recitation of funeral poems. In an Ǝ., the dead person may be addressed and praised and his (or her) individual qualities, behaviour, accomplishments etc. are described so as to make the public mourn, grieve and burst into tears. The dead person's clothing and material objects may be brought to the funeral ceremony by his/her close relatives; they are also displayed during his memorial services (↗*Täzkar*) and for a certain period thereafter. The mourners refer to them while lamenting and reciting Ǝ. Besides, there are professional dirge-singers known as **አልቃሽ** (*alqaš*) who compose and recite heart-touching funeral poems.

In some Amharic historical books and chronicles, it is mentioned that the Ethiopian emperors, kings and nobles used to compose and recite Ǝ. when members of their families and close relatives died, to express their grief and deep sorrow. The common formula by which the authors introduce an Ǝ. is: [XY] **ሲሞት፡** [XY]**፡ እንዲህ፡ ብሎ፡ አንጐራጐረ** … ([XY] *simot* [XY] *əndih bəlo angʷäraggʷärä* …, 'when [XY] died, [XY] lamented, having said …'); or [XY] **ሲሞት፡ አልቃሽ፡ እንዲህ፡ ብላ፡ ገጠመች** … ([XY] *simot alqaš əndih bəla gäṭṭämäčč*, 'when [XY] died, the funeral-singer [fem.] composed [an Ǝ.], saying …').

The following Ǝ. is known to have been composed and recited by *aṣe* ↗Tewodros II after the death of his beloved wife *ətege* Täwabäčč (TSTarik IV, 19):

እስቲ፡ ጠይቁልኝ፡ ርቃ፡ ሳትሄድ፡
እቴጌ፡ ተዋበች፡ ሚስት፡ ናት፡ ገረድ።

Ǝsti ṭäyyəqulləññ rəqa sattəhedə
Ǝtege Täwabäčč mist nat gärädə.

'Ask on my behalf before she goes far away:
Was [lit. 'is'] *ətege* Täwabäčč wife or maid?'

Ethiopian authors, such as Täklä Ṣadəq Mäkʷəriya (TSTarik), Ṗawlos Ñoñño (1985), *ṣäḥafe təʾəzaz* Gäbrä Śəllase (GSMen) and others attempted to document a number of Ǝ. and funeral poems referring to major historical events and prominent personalities.

Getie Gelaye

Ǝnkoyye

Ǝ. (**እንኮዬ**, Christian name Wälätta Qəddusan, d. 1 October 1757) was a daughter of *abeto* Waksos from Bula and Fäṭägar and of *wäyzäro* ↗Yolyana. She married *däǧǧazmač* Mänbär of Qʷara and gave birth to a daughter, ↗Bərhan Mogäsa (Məntəwwab), and a son, ↗Wäldä Ləʿul.

Aṣe ↗Bäkaffa, during his short sojourn in Qʷara, entered into a transient union with Məntəwwab. In 1727 their son was born and called Iyasu (later *aṣe* ↗Iyasu II) in commemoration of *aṣe* Bäkaffa's father. In June 1730 Bäkaffa, in spite of the rainy season, suddenly and urgently summoned to Gondär both Iyasu and Məntəwwab, with her mother Ǝ. There they enjoyed the protection of Ǝ.'s uncle Niqolawos, to whom *aṣe* Bäkaffa had just recently granted a title of *grazmač*.

What plans *aṣe* Bäkaffa had connected with this Qʷara clan remains obscure, because he suddenly fell ill and died in September 1730. Niqolawos did his best to enthrone his great-nephew Iyasu, from whom he immediately received the prestigious title of ↗*däǧǧazmač* of Səmen, which was usually granted to the crown-prince. Niqolawos remained the leader of this Qʷara clan until his death on 8 December 1732. Then its military defender became young Wäldä Ləʿul, and its moral leader and clan's elder – his elderly mother Ǝ. Formally, this was manifested in her indispensable presence at every ceremonial royal entrance of *aṣe* Iyasu II. This position she held until her death. Her son Wäldä Ləʿul was absent at the time of her death on a campaign, and therefore her burial in Gondär was headed by *däǧǧazmač* ↗Ḫaylä Mikaʾel Ǝšäte, next by seniority among the clansmen.

Sevir Chernetsov

Ǝnnämor

Ǝnnämor language

Ǝ. (self-definition Ǝnor, Ǝnōr, Inōr; Amh. also **ኤኔሞር**, Ennemor) is one of the ↗Gurage languages in the most western part of the Gurage speaking area (s. map under Gurage; there are also Ǝ.-speakers in Addis Abäba, which are said to be woodsellers and shoe-shiners). Together with ↗Geto, ↗Ǝndägäñ (including ↗Ǝnär) it belongs to the Peripheral Western Gurage group (Hetzron 1972:6). Ǝ. is more closely related to Ǝndägäñ than to Geto.

In contrast to most Ethiosemitic languages Ǝ. has long or “double” vowels which are in opposition to short vowels, e.g. *ãfʷ* ‘mouth’ (cp. Amh. *af*) : *ããfʷ* ‘bird’ (Amh. *wof*).

In addition to the usual set of consonants common in Ethio-Semitic languages Ǝ. has a set of nasalized consonants, labialized consonants and palatalized consonants. The suprasegmental nasalization is triggered by the primarily nasalized consonants *m-*, *r-* and *w-*. The present tense of *näpärä* ‘he was’ (cp. Amh. *näbbärä*) is **yəräßər* (cp. Amh. *yənäbr*) with its surface form y*ərämər*. Internal labialization which goes back historically to a *-u* suffix affects the last non-coronal consonant of a verbal form, e.g. **yəçäkər-u* > *yəçäkʷər* ‘one cooks’ (impersonal). Internal labialization is sometimes accompanied by internal palatalization. This process which affects in Amharic only the last alveolar root consonant is extended in Ǝ. to the velars (*gʸ*, *kʸ*, *qʸ*, *hʸ*) and to *r* (**rʸ* > *y*). Palatalization occurs e.g. in the B-type (‘geminating’) verb class. Here original gemination – apart from concomitant degemination and devoicing – led to the development of a palatal element, e.g. **zäbbärä* > **zʸäpärä* > *žäpärä* ‘he returned, gave back’; the original unpalatalized *z* reappears in the jussive (*äzäpər*).

The glottal stop can be a reflex of glottalized phonemes (*q*, *ṣ/ṡ*, *ṭ*, *č̣*), as in *sã ʾãrä*, ‘hang up’ (cf. Ǝndägäñ *säʾänä*, Čaha *säqärä* – Gəᶜəz *säqälä*), *wãʾä*, ‘swallow’ (cf. Čaha, Amh. *waṭä* - Gəᶜəz *wäḫaṭä*).

As a reflex of Gəᶜəz ʾ and ᶜ the glottal stop occurs mainly as second radical and more rarely as third radical in verbal forms: *baʾasä*, impf. *yəbäʾäs*, juss. *äbaʾas*, ‘be bad’ (cf. Čaha, Amh. *basä* - Gəᶜəz *bəʾəsä*), *bänʾa*, impf. *yəḇärʾa*, juss. *äbrʾa*, ‘eat’ (cf. Čaha *bäna*, Amh. *bälla* – Gəᶜəz *bälᶜa*).

Gemination is very rare (but s. *ənnə* [cp. Amh. *hullu*] ‘all’); original lengthened voiced consonants are devoiced, e.g. **näbbärä* (as in Amharic) > *näpärä*, ‘he was’. These morphophonological processes have led to various root consonant alternations; thus the present form *yəßärʾa*, ‘he eats’ belongs to the perfect form *bänʾa* (cp. Amh. *bälla* and Tgn. *bälᶜa*, ‘he eats’), and **yəräḥəß*, ‘he finds’ to *näkäßä* (cp. Amh. *räkkäbä*).

Several stories have been published by Hetzron (1977), Prunet – Chamora (1995) and by Leslau (1982), who published a short grammatical outline (1983) as well as a dictionary (1979, vol. 1, 257–390, 1241f.), an English-Ǝ. index (1979, vol. 2) and an etymological dictionary (1979, vol. 3; s. also the grammar of Ǝ. by Chamora – Hetzron 2000). A subdialect of Ǝ., Mägär, is not well-known, but a story is documented in Hetzron (1977:249–55).

The ten word list: *at*, ‘one’, *wərʾət*, ‘two’, *soʾost*, ‘three’, *əsaad*, ‘fire’, *əḫa*, ‘water’, *ə̃wããyä*, *ayäd*, ‘sun’, *bäñä*, ‘moon’, *šən*, ‘tooth’, *däm*, ‘blood’, *anäḇäd*, ‘tongue’.

Rainer Voigt

Ǝnnämor ethnography

The Ǝ. (self-designation Ǝnor) are one of the ↗Gurage groups belonging to the confederation of *Säbat Bet Gurage* (‘Seven Houses of Gurage’). Before its formation they were also members of the *Amməst Bet Gurage* (‘Five Houses of Gurage’) confederation. The territory of Ǝ. is bordered by the ↗Čaha in the north, the ↗Gumär and ↗Geto in the east, the ↗Ǝnär in the south and the Gibe valley, which in the west marks the border with Ǧangäro (↗Yäm). Geographically Ǝ. is divided into a highland (*ägər*) and a lowland (*angät*) part (BrHad 262 [map.]; Shack – Habte-Mariam Marcos 1974:125). Today the Ǝ. are part of the population of Ǝnnämor and Ǝnär *wäräda* (or Gunčure *wäräda*).

According to oral traditions the people of Ǝ. descend from different migrant groups from the north, some of them having arrived under their leader *azmač* Səbḥat in the first half of the 17th cent. Leslau (1983:136f.) documents the tradition that the original number of these groups was the symbolic 99. The dynamics of migration within the Gurage region can in some cases be traced from the endings of clan-names: names with the ending of *žära* sometimes refer to the earliest settlers from the north, those with *ṭəb* (Gurage 'clan, lineage') at the end are said to refer to a second wave of migrants. There are also clans who claim descent from the Muslim leaders *ḥaǧǧī* Aliyye Umär (s. ↗Səlṭi) and *imām* ↗Sidi Mohammed. Around Mafäd there are also settlers with ↗Alaaba ancestors and a clan with ancestors from Ǧangäro is documented as well.

An early mention of Ǝ. lists it in a group of tributary districts who had to pay tribute in horses to *aṣe* ↗Yəsḥaq (r. 1414–29; HuntGeogr 92ff.).

According to the Chronicle of Susənyos, the Ǝ. were enemies of *abetohun* Susənyos (later *aṣe* Susənyos, r. 1607–32). After supporting him at first, they affiliated to the coalition of Sidi Mohammed. The Ǝ. were thus a military threat to Susənyos's troops, who had suffered casualties and had to fight for two days until they could overrun the ↗*amba* of the Ǝ. (PerChron 26ff., 37f., cp. BTafA 211ff., 251ff.).

Despite strong ties of intermarriage with the co-members of the *Amməst Bet* and later *Säbat Bet*, the Ǝ. were constantly in a warlike relationship with their neighbours. The Ǝ., being nearly a military coequal, refused to pay any tribute to the Čaha, who held a dominant position in Gurage-land. The opposition against Čaha led to several wars in the 1840s. The Ǝ. fought in coalitions with other Gurage groups, e.g., with the Gumär. Even under the pressure of the expansion of *aṣe* Mənilək II, the conflicts with other Gurage continued, e.g., with the Geto and Ǝndägañ, as well as Leemo (↗Hadiyya; Shack – Habte-Mariam Marcos 1974:18, 124ff.; Gabreyesus Hailemariam 1991:5f., 14f.; Bustorf 2001:52ff., 107).

In their defence against the northern troops, the Ǝ. affiliated to the *ǧihād* of *imām* ↗Ḥasän Ǝnǧamo, not all of them without being forced. After the defeat of the *imām* in 1889, the Ǝ. territory came under Mənilək's control. In the following period native leaders were integrated into the new governance-system (Shack – Habte-Mariam Marcos 1974:124ff.; Leslau 1980:140f.).

Islam, which started to prosper during the time of Ḥasän Ǝnǧamo (Leslau 1983:143), today has, according to the 1994 Census, the largest number (106,124) of followers in Ǝ. and Ǝnär *wäräda* (population in total 196,455). With Mənilək's occupation, the Orthodox mission started. The first church was Mädḫane ʿAläm, built by the native *balabbat* Wərgasä (Leslau 1980:140f.). The number of followers today is 82,364. The Catholic mission, which was established with a Capuchin school in the 1930s (PankEcon 683) today has 2,226 members, being outnumbered by the Protestants with 4,744 members. The number of 489 people in the same Census identified themselves as followers of the Gurage folk-religion. The name of the protecting spirit of the Ǝ. is *Ǧäbär* (↗*Waq*). He is represented by the high-priest *Ǧäbär dam* (Gabreyesus Hailemariam 1991:138).

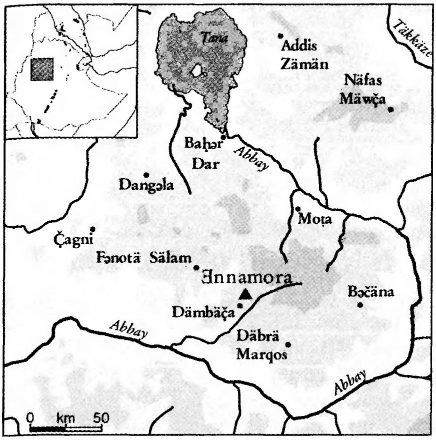
Dirk Bustorf

Ǝnnamora

The mountains of Ǝ. (እናሞራ; 2,500 m A.S.L.) stand over a marshy valley during the rainy season to the north-east of the town of Dämbäča (2,130 m A.S.L.). To the east, large volcanic buttresses rise to more than 4,000 m A.S.L. This small region is part of the Dämbäča *wäräda*,



which until 1991 belong to the Damot *awrağğa*. Today this *wäräda* is a subdivision of the West Goğğam zone in the Amhara *kəlləl*.

Lit.: CONSOCIAZIONE TURISTICA ITALIANA, *Carta dell'Africa Orientale Italiana (scala 1:1,000,000)*, Milano 1938; CSA 2000.

Alain Gascon

Ǝnnäqor

Ǝ. is an area in the highland part of today's Səlṭe (↗Səlṭi) zone. Linguists use the term Ǝ. also for a slight variant of the Azärnät-Bärbäre variant of the Səlṭi language (East ↗Gurage) spoken in that area (Hetzron 1972:119; s. also Gutt 1976–79:73; Drewes 1996:73).

To the west and south Ǝ. borders on the ↗Hadiyya *wärädas* of Kontäb (today Miišaa) and Leemo and to the north-west on the country of the ↗Ǝndägañ (s. map under Gurage). Till the formation of Səlṭe zone it was part of Hadiyya zone. While the 14 *giičo* ('clans') of Azärnät live east of Ǝ. in the lowland of Azärnät, the 17 *giičo* of Bärbäre settle in Ǝ. as well as on the slopes of the Mugo massive (Mount Midačča). Azärnät and Bärbäre also can be found in the areas of ↗Wəlbaräg and Sankura in the lowlands of Səlṭe zone.

Ǝ. is mainly characterized by intensive *ənsät* cultivation, while the formerly important role of cattle-breeding is considerably weakened. The old centre of Ǝ. is the small market town of Duna, which had been founded already in the time of *aṣe* Mənilək II by the order of *balabbat* Hemačo Seqeṭo. Situated on an old trade route, the market even today attracts thousands of visitors from all surrounding districts. The area west of Duna is known for its rich water-resources and lush grazing-grounds. There, on the road from Ǝndəbər to Hossäyna, during the rule of the *Därg* the small town of Lera was founded. Today it is the administrative centre of Azärnät-Bärbäre *wäräda*.

The first Muslim migration into Ǝ. started probably in the 16th cent. Sidi Mohammed, said to be the nephew of the Səlṭe ancestor *ḥağğī* Aliyye, led a fraction of the *ğihād* movement of ↗Nūr b. Muğāhid to Ǝ. (BrHad 123). Sidi's people dispersed to Ǝža, Gumär, Čaha and ↗Alaaba.

With its situation on the edge of the fertile highland grazing-grounds, Ǝ. was frequently a place of military contention. In the second half of the 18th cent. the Leemo used Ǝ. and Mugo as a "gate" to the highland. From here they penetrated the territory of the Ǝndägañ, who became their allies, and started to push the Sooro (Hadiyya), who controlled the area in the first half of the 18th cent., out of the later Leemo territories.

The movement of the Bärbäre from north of Mount Midačča into Ǝ. started probably at the end of the 18th cent. The migration was a result of population growth and military pressure from the Gurage neighbours, especially ↗Gumär, ↗Geto and ↗Ǝnnämor. In the middle of the century the Azärnät-Bärbäre were made tributary to *abagaz* Hamdəno from Geto. They also had to face harsh military challenges by the Leemo-Ǝndägañ alliance.

The Azärnät-Bärbäre were united under one leadership by *imām* Gumfamo. Under him, in the 1870s they joined the *ğihād* of ↗Ḥasän Ǝnğamo. After the defeat of Ḥasän Ǝnğamo (1889) the troops of *aṣe* Mənilək II, led by *ras* Wäldä Aššagari, entered into the Azärnät-Bärbäre territories and finally camped in Ǝ. *Imām* Gumfamo submitted and later became *balabbat*.

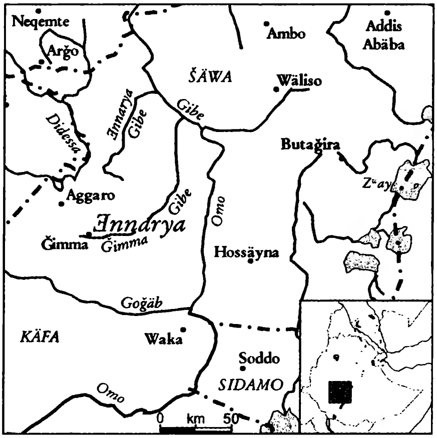
Dirk Bustorf

Ǝnnarya

Ǝ. was an important kingdom in the area of the later ↗Gibe states. It was called Hinnaryo (the correct self-name) by the Omotic-speaking ↗Gonga people, who had established it in the 13th cent. Gəʿəz sources render the name as (እ)ናርእት ([Ǝ]nnarʾət) or እናርያ (Ǝ.), in European literature it appears as Enarea, Hinnaro or Ennareya. The 16th- and 17th-cent. Portuguese travellers referred to it as Narea. In the early 18th cent. it succumbed to the Oromo expansion and was partially incorporated into the ↗Limmu Ǝnnarya territory (Ǝ. becoming a shortened form of the name of this ↗Gibe state).

Ǝ. comprised most of the regions of Geeraa, Limmu, Buno, Guummaa, Illuu and Bure and probably was the first Gonga state with its royal court at Čula Bačči. It was a hierarchical, heterogeneous state whose political elite were of "foreign" origin: the Hinnaro-Bušašo, ↗Damot and ↗Käfa. The Käfa and Šeka states were initially vassals of Ǝ. The Christianized Hinnaro also appear as an important clan within the Käfa state, claiming descent from Ǝ.

The country, at least its elite, was allegedly first Christianized by *abunä* ↗Täklä Haymanot in the early 14th cent. and then again under *aṣe* ↗Śärṣä Dəngəl (late 16th cent.), who converted King ↗Bädančo in 1588. Ǝ. was also mentioned in the famous 15th-cent. praise song dedicated to *aṣe* Yəsḥaq (r. 1414–29); it appeared as one of the areas that paid him tribute (probably gold, slaves and cattle). Ǝ. also sent soldiers to fight along with the imperial troops led by Wäsän Sägäd against ↗Aḥmad b. Ibrāhīm al-Ġāzī ("Grañ") in 1530–31. Bieber (1920:77) reported that in the 17th cent. two Portuguese military men (Sapero and Sigaro), after being chased out by *aṣe* Gälawdewos, succeeded in building a power base in Ǝ. and mingled with the Ǝ. royal family.



Ǝ. was a comparatively wealthy state and it became a rich source of slaves and ↗gold for the northern Ethiopian traders after 1270. Ǝ.'s *mooti* Lami (↗Motälämi) may have been an ally of *aṣe* ↗Yəkunno Amlak (Lange 1982:25). Contacts between the Amhara-dominated northern Ethiopian state and Ǝ. were always significant. Some assert that Ǝ. was at some time even a part of the Ethiopian highland state. Six of its kings were allegedly of northern descent and known as the "Amaroçi" (cp. ↗Amaaro). Ǝ.'s resources (s. above) were later a primary attraction for its conquest by the Oromo (regional politics also played an important role). From the late 16th to the 18th cent., the Ǝ. leaders, backed by military force and good frontier defences, tried to appease the Christian Amhara rulers and the encroaching Oromo in order to maintain Ǝ.'s independence. But the Oromo, in particular the Sadača federation, gained the military advantage, settled in the country and forcibly took control of the land (ca. 1710); the growing internal division in Ǝ. aided this process. The last of the Ǝ. kings, Šisafoçi, fled to Šeka.

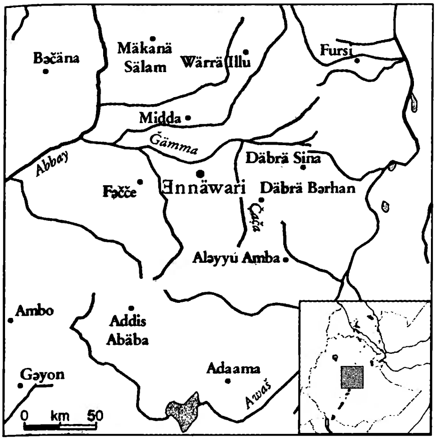
Ǝnnäwari

Ǝ. (እነዋሪ) in the district of Morät, 40 km northwest of Däbrä Bərhan, was the site of a fortress established in 1870 by Mənilək, *nəguś* of Šäwa (later *aṣe* ↗Mənilək II).

Described by the French traveller Arnoux, in 1873, as "a fortified place situated on an abrupt height" it stood on a high mountain ridge some 10 km long by 6 km wide, largely surrounded by unscalable precipices. The only natural place of access was protected by a huge stone wall with



a wide and deep adjacent ditch, impossible for cavalry to cross.

The settlement emerged as the site of one of Mənilək's principal treasuries, with "enormous stocks" of provisions, including *ṭef*, wheat, barley, and over 500,000 kg of butter, reputedly "sufficient to supply a large army for over a year". The mountain fortress also served as a state prison. Perhaps the most important figure incarcerated was *nəguś* ↗Ḫaylä Mäläkot Śahlä Śəllase's nephew *däǧǧazmač* ↗Mäšäša Säyfu. With the subsequent rebuilding of ↗Ankobär, in the late 1870s, Ǝ. lost its importance, but later became an administrative centre of the area.

Richard Pankhurst

Enoch, Book of

Origin and *Vorlage*

E. (**መጽሐፈ፡ ሄኖክ**, *Mäṣḥafä Henok*, also "Ethiopic Book of E." or 1 E.) is a Jewish apocalypse which emerged between the 4th cent. B.C. and the 1st cent. A.D. (s. Milik 1976, passim). The entire work (except for the so-called *Book of Giants*) has been preserved only in Gəʿəz. It was not known in Europe until James ↗Bruce brought the manuscripts of E. from Ethiopia to England in 1773.

The original language of the work seems to have been Aramaic. Initially there were separate books with Enoch as the principal figure, which were collected and brought together under the common title.

The Aramaic fragments were found only for a small part of the text (ca. 8 %). Among the Qumran discoveries, fragments of the following independent tracts were found: *The Book of the Watchers* (chs. 1–36 of the Gəʿəz version), *The Book of Giants, The Book of the Luminaries* (chs. 72–82), *The Book of the Dream Visions* (chs. 83–91) and *The Book of the Epistle* (chs. 92–108). *The Book of Parables* (chs. 37–71), which emerged in the late 1st cent. B.C., is missing. This has lead to the assumption that *The Book of Giants* was substituted in the early centuries A.D. by *The Book of Parables* (s. Milik 1976:91–98).

One quarter of the work is attested through four Greek fragments, which came into existence between the 4th and 11th cent. A.D. (Black 1970:5–44). The Greek version was used by the Ethiopian translator as a *Vorlage*, although some features of the translation can only be explained by the presence of a Semitic *Vorlage* (Ullendorff in PICES 1).

The Bible canon and Enoch's reception history

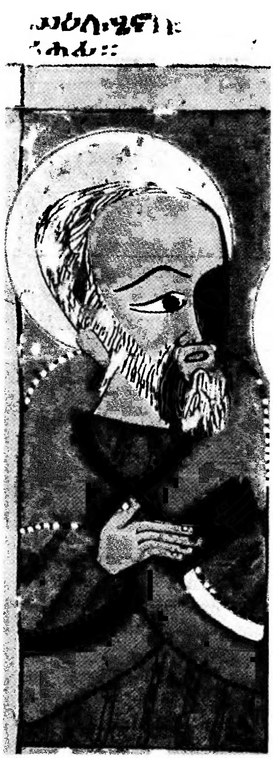
E. was widespread in the Orient and was considered to be a biblical text, as the writings of Origen and Tertullian indicate. It is quoted in the N.T. (Jude 14–15) and referred to in many works of early Christianity (s. Nickelsburg 2001:82–95). A knowledge of E. is also attested in some of the ↗Pseudepigrapha.

The book shared the fate of other apocalyptic works. As the apocalyptic positions subsided, in the 4th and 5th cent. E. was criticized for not being a genuine biblical work and for propagating heretic views. Nevertheless, outside the hegemony of the Byzantine Church, the work continued to be used, and the Ethiopian culture contributed to its preservation.

In Ethiopian manuscripts containing the O.T., E. occupies a prominent position and often follows after the four Books of Kings (Baumstark 1905:170). Conversely, it is regularly missing in the canonical lists provided by the Byzantine tradition (Brandt 2000). *Aṣe* ↗Zärʾa Yaʿəqob defended E.'s canonicity in the reformist work *Mäṣḥafä* ↗*milad* (which hints at theological controversies around E.), and gives E. the same rank as that held by the Book of Daniel (Uhlig 1984:470f.).

Manuscripts

About 80 Ethiopian manuscripts with E. are known (for 45 mss. s. Uhlig 1984:473–76). The



Enoch "the Writer"; miniature from a Gospel book (detail); Gundä Gunde Monastery; fol. 18r; early 16th cent.; photo 2002, courtesy of Michael Gervers

most important is the 15th-cent. ms. Ṭānāsee 9. Eight manuscripts date back to the period up to the 16th cent. The texts of later manuscripts (17th–18th cent.) show traces of revisions and attempts to standardize the tradition and to create a uniform text (↗Bible).

Content

1) *The Book of the Watchers* (chs. 1–36) deals with the fall of the angels, the "Sons of God" (Gen 6:14). Having mated with mortal women and revealed forbidden secrets, they brought evil to the world, which brought about God's judgement – the deluge and the destruction of mankind. Being the prophet and the proclaimer of the Last Judgement, E. undertakes cosmic journeys and describes Paradise and the underworld, as well as the fate of the righteous and the sinners.

2) *The Book of Parables* (chs. 37–71) bears its title because of the three parables (= speeches; chs. 38–44; 45–57; 58–71), which describe the Judgement on sin. It also deals with archangels and astronomic mysteries (1st Speech, chs. 38–44), the "Head of the Days" and the "Son of Man", the Resurrection and the separation in the Last Judgement and the different types of judgement (2nd Speech, chs. 45–47), as well as the Judgement of the Righteous, the Judgement upon the Fallen Angels, E.'s ascent to Paradise and his cosmic journey (3rd Speech, chs. 48–71).

3) *The Book of the Luminaries* (chs. 72–82) describes the relation between solar and lunar years, the "wind rose" and the importance of the hierarchy of the stars for the cosmic order. However, in itself it is not an astronomical or mathematical treatise: instead it documents the divine laws that bring order to the cosmos.

4) *The Book of the Dream Visions* (chs. 83–91) contains a survey of the "history of salvation" in two series of visions, the Great Flood (chs. 83–84) and the Vision of the Animals (chs. 86–90), both ending with extermination of the sinners and salvation of the righteous.

5) *The Book of the Epistle* (chs. 92–105 [106–08]) contains an exhortation to the dweller upon earth, consisting of three parts: the Ten-Weeks Apocalypse (chs. 92:1–5, 93:1–10, 91:11–17), the lamentations and the admonitions (chs. 94–105). This is followed by two separate parts, which today are usually represented as appendices: one narrative on the birth of Noah (chs. 106–07) and "another Book of Enoch" (ch. 108).

Religious conception

↗Eschatology is the central topos of the work. History will be consummated by war and total destruction, in which Satan, the fallen angels and the sinners will be destroyed. In a scenario of the Judgement (throne council, divine Judge, "Book of Deeds") the divine Sovereign announces an irreversible decision: eternal extermination of the sinners on the one side and eternal salvation of the faithful on the other. The apocalyptic explanation of history is formative. E. gives an outline for the history of salvation beginning from the Creation till the coming Aeon. It divides history into epochs, in a way similar to the Book of ↗Jubilees and to Daniel. Another feature of the work is the dualism between God and Evil, which is not solved until the Judgement.

E. as "writer of justice", expert in the secrets of history and cosmic principles, is the prototype of the wise man; he conveys the divine knowledge to the pious, giving them understanding of the world and history.

Other Enoch writings

Other E. works are to a large extent dependent on E. They were developed in different civilizations: examples are the *Slavonic E.* (or: *2 Enoch*), written in early Christian times; the *Hebrew E.* (or: *3 Enoch*), which emerged in the early Middle Ages; a Coptic *Enoch Apocryphon* seems to have been composed in the 5th cent. In the Armenian version of E., a *Vision of the Righteous Enoch* is to be found, which is supposedly to be dated to the 8th cent. (for further works s. Uhlig 1984: 466ff.; Nickelsburg 2001:82–95).

Siegbert Uhlig

Ǝnor ↗ Ǝnnämor

Ǝnqollo č̣oqqe ↗ Č̣oqqe

Ǝnqoqəlləš

Ǝ. (**እንቆቅልሽ**, Amh. lit. 'you [sg. fem.] know what I know') is a question-answer game (↗games) performed between a challenger and a respondent. Grammatically, Ǝ. is addressed in the 3rd pers. sg. feminine, the masculine being **እንቆቅልህ** (*ənqoqəlləh*). This may suggest a possible feminine character in the origin of the game. It belongs to the broad category of oral literature involving short and fixed forms that are expressed briefly and concisely (e.g., ↗Proverbs).

Ǝ. requires at least two players, the challenger and the respondent. Children take turns in asking and answering, usually in the evening or, in the rural areas, while looking after the cattle or watching the harvest from birds and wild animals. The riddling session begins with an opening formula **እንቆቅልሽ?/እንቆቅልህ?** meaning 'I challenge you' or 'I know what I know'. The respondent says, **ምን፡ አውቅልሽ?/አውቅልህ?** (*mən awqəlləš*? / *awqəlləh*? [fem./masc.]) meaning 'what shall I know for you?' The respondent is expected to provide the answer promptly, for otherwise he/she will be confronted with insulting words such as **ዋለብህ፤ አደረብህ** (*waläbbəh*, *addäräbbəh*, 'the [riddle] remained unanswered daylong and nightlong against you'). If the respondent answers correctly, it will be his/her turn to play. If the respondent cannot provide the solution at all, the challenger boasts and demands a reward, usually in the form **አገር፡ ስጠኝ** (*agär səṭäñ*, 'give me a country') and he/she can choose whichever country or city he/she wishes. He/She has the right to reject such proposals for any reason he/she might imagine. The challenger will give the answer or solution only after he/she agrees to accept the name of a country or city that he wishes. Once the proposed country/city is accepted, the challenger will boast of his/her victory and belittle, insult or even curse his/her opponent. Here are two examples of Ǝ.:

Challenger: **እንቆቅልሽ?**
Respondent: **ምን፡ አውቅልሽ?**
Challenger: **አፍ፡ የላት፡ ትናገራለች፤ እግር፡ የላት፡ ትሮጣለች።** (*Af yällat tənnaggäralläč, əgər yällat təroṭalläč*, 'Mouth it [she] has not, yet it [she] speaks; foot it [she] has not, yet it runs.')
Respondent: **ሰዓት** (*Säʿat*, 'watch')
Challenger: **እንቆቅልሽ?**

Respondent: ምን፡ አውቅልሽ?
Challenger: ሲተኛ፡ እንደ፡ ሬሳ፣ ሲነሳ፡ እንደ፡ አንበሳ። (*Sitäñña əndä resa sinnässa əndä ʾanbässa*, 'When it [he] sleeps it [he] is like a corpse, when it [he] rises it is like a lion.')
Respondent: ጠመንጃ (*Ṭämänǧa*, 'gun or rifle').

In Tgn. the game is called **ሕንቅሕንቅሊተይ**, *Ḥənqəḥənqəllitäy*.

Getie Gelaye

Ǝnqoqqo

Ǝ. (**እንቆቆ**) is the Amharic term for the common indigenous climbing shrub known as *Embelia schimperi*. The scientific epithet of this species makes reference to Wilhelm ↗Schimper, the German traveller and plant-collector who stayed in Ethiopia from 1837 onwards. The term Ǝ. is so popular that it is almost synonymous with medicine/remedy. Its potent medicinal value is revealed in sayings, poems and aphorisms that underpin its frequent use as a remedy. The Ǝ. plant is widely distributed in Ethiopia, being recorded in all the regions. This woody climber grows along the margins of forests and hilly areas and is also known from eastern, western and southern Africa.

In Ethiopia, the fruits of the Ǝ. are gathered from the bushes and sold in the market, they have familiar medicinal prescriptions in traditional therapeutics. Varied preparation methods and dosages are used in different parts and among different socio-cultural groups in Ethiopia. The use of the fruits to expel tapeworm and different round-worms is common. The dry fruits can be chewed and the juice swallowed, or they could be powdered and the concoction drunk to expel tapeworm. Traditional drugs made from Ǝ. are also known to have anti-malarial properties. Other reports by traditional healers assert that the root and fruits of Ǝ. are useful in treating tapeworm, asthma and blood-pressure disorders (s. Gelahun Abate 1989:181). Preparation from the root is also used as a purgative and a vermifuge in East Africa and Uganda. Leaves of this species are reported to be edible. As an anti-helminthic, the fruits of Ǝ. are taken mixed with ↗*kosso* pumpkin-seeds, barley grains or, with the pulp of edible fruits.

Zemede Asfaw

Ǝnqulal bet

Ǝ.b. (**እንቁላል፡ቤት**, 'egg house') was the Amharic name given to one of the buildings in *aṣe* Mənilək II's palace compound in Addis Abäba (↗*Gəbbi*).

The compound, like those of other Ethiopian royal palaces, comprised two main parts: the one centred around *əlfəñ*, or private quarters of the monarch, and another one around *addaraš*, or reception hall, where banquets were held. The main *əlfəñ*-building was constructed between November 1892 (GueCopMen 325, n. 4) and January 1894 (Vanderheym 1896:63f.). Shortly later, a fine three-storey pavilion was built nearby, linked to the *əlfəñ* by an esplanade (GueCopMen 530, n. 3).

The new building was popularly called Ǝ.b. (or *ənqulal sägännät* 'egg tower') for its egg-shape dome (a reflection of the old Gondärine tradition of ↗*ənqulal gəmb*-structures?); at its sides, a post of *əlfəñ*-guards was established. Ǝ.b. soon became one of the palace's symbolical features. Higher than the surrounding structures, it gave the Emperor a distant view; due to the same reason, it was frequently noticed and photographed by Europeans (e.g., s. Kulmer 1919: xxvii, xxviii; GueCopMen, pl. 54; Rikli 1935: 22). An attractive sketch by the artist ↗Afäwärq Täkle appeared on the cover of the 1957 *Ethiopia Observer* issue.

Richard Pankhurst

Ǝnqulal gəmb

Ǝ.g. (**እንቁላል፡ ግምብ**, lit. 'egg building') is a popular name of various structures (↗*Gəmb*) or parts of structures voulted with peculiarly "egg-shaped" domes that were erected in the late 16th–18th cent. in the then Ethiopian capital ↗Gondär and around Lake Ṭana, the core of the ↗Gondärine kingdom, or even later, by imitation, in other parts of the country. In order to put up this type of covering, beams were inserted into the upper edge of the wall (the scaffolding holes are still visible) and then the dome constructed with bricks and mortar lime.

The remains of "egg-shaped" roofs can be seen on the top of two 12-m towers belonging to the possibly late 16th-cent. royal residence at Guzära (↗Guba'e). The existence of such roofs (today partly or fully collapsed) can be further suggested for the buildings of the royal residences at ↗Yəbaba (Anfray 1980-81:12ff., pl. 13), Gəmb Giyorgis (ibid., 14f., pl. 17) and ↗Azäzo (Anfray in PICES 8, vol. 1, 13, 33, pl. VIa). Gondär's possibly oldest Ǝ.g., now a ruin north of *aṣe* Iyasu I's palace, was reportedly the first Gondärine residence of *aṣe* ↗Fasilädäs prior to the erection of his main castle or "house", in turn provided with three towers by the "egg-shaped" roof. The entire palace complex counts several Ǝ.g.-type constructions. From one of them, Məntəwwab (↗Bərhan Mogäsa) and *aṣe* Iyasu II inspected the royal troops in 1741 (Guilyas 108).

There is a number of examples of the same architectonic feature in such religious buildings as, e.g., the churches of ↗Baḥrəy Gəmb, Waybela Maryam (Anfray 1965:15, pl. XVIf.) and Lədäta Maryam (Anfray in PICES 8, vol. 1, pl. IVb). The "egg-shaped" dome of these churches, topping the ↗*mäqdäs*, was usually more spacious and bigger in size than that of the residential buildings, thereby requiring stronger and more durable construction.

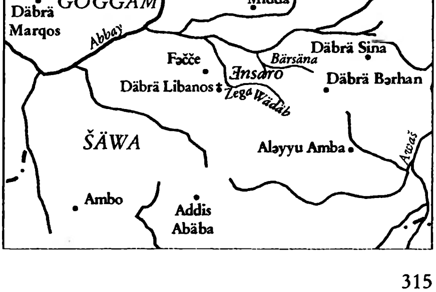
Ǝnsaro

Ǝ. (**እንሳሮ**) is a small district (*wäräda* up to 1999) within the former *awrağğa* of ↗Sälale (Šäwa), bordered by the rivers Zega Wädäb and Bärsäna. The area is situated at the altitude 2,700 m A.S.L. and characterized by numerous flat-top mountains (↗*Amba*). Its proximity to the ↗Däbrä Libanos monastery (situated on the other side of the Zega Wädäb) gave the region some importance within the local monastic tradition. Occasionally, Ǝ. appears in monastic ↗genealogies as a locality where a certain Dawit, one of the spiritual pupils of *abunä* ↗Täklä Haymanot, used to preach. The monastery of Ǧär Śəllase, founded by *abba* ↗Iyasu, is located in Ǝ., as well as at least one rock-hewn church Qeṭ Abbo (Sauter 1963, nos. 98f.). According to the ↗*Dərsanä ʿUraʾel*, the old historical district of Ṣəḥga was located in Ǝ.

In the course of the 16th-17th cent. ↗Oromo migrations, the Wabarii, or Oborra- (s. ↗Qottu) and Waǧǧuu-Oromo settled in Ǝ., but soon ↗Amhara from neighbouring Morät regained the area, thus re-establishing the connection between the Amharic-speaking enclave of central Šäwa and Däbrä Libanos. In the early 19th cent., Ǝ. was under the sway of *märəd azmač* ↗Wäsän Sägäd. Somewhat later it appears as one of the regions where *nəguś* ↗Śahlä Śəllase consolidated his power at the beginning of his reign. When around 1910 *aṣe* ↗Mənilək II tried to reform and unify the judiciary system, Ǝ. was placed under the jurisdiction of the first of the six *wämbär*-judges. In Mənilək's time the governor of Ǝ. had



the rank of *qäññazmač*, but later it was lowered to *grazmač* (↗*Azmač*).

Yätnora, the bigger sub-district of Ǝ. (*məkəttəl wäräda*; the second one is Wabari), is remarkable for its large number of churches (41 churches on only 450 km^2 in 1974), which points to the old Christian tradition of the area. The fact that there is a *wäräda* with the same name (Yätnora) in east Goǧǧam may reflect early Amhara migrations into Goǧǧam across the Abbay.

Denis Nosnitsin

Ǝnsät

Ǝ. (**እንሰት**, *Ensete ventricosum* [domesticated species], local names, e.g. in Gurage: *ässät*, in Hadiyya: *weesa*) is a staple food crop in Ethiopia's southern and south-western highlands. The Ǝ. plant resembles the banana (genus *Musa*) and belongs to the same family (*Musaceae*), but has its own genus, *Ensete*. Because it does not produce edible fruits, the term "false banana" is encountered quite often in the literature. Although other species of *Ensete* are distributed over parts of Asia and wild plants of *Ensete ventricosum* are to be found in parts of sub-Saharan Africa, it is only in Ethiopia that the Ǝ. plant has been domesticated and is used as a food crop. Ǝ.-cultivating groups differentiate more than 60 local varieties of the genus *Ensete*. It is not yet clear if it is possible to identify them botanically, too.

Ǝ. is grown at altitudes ranging from 1,200 m to 3,100 m A.S.L. with an average temperature between 10° C and 21° C and in areas which receive annual rainfall of about 1,000 mm to 2,000 mm. Ǝ., once established, can tolerate occasional years of low rainfall and short or delayed rainy seasons. Moreover, Ǝ. can cope with heavy rainfall or hailstorms and even occasional frosts. For Ǝ. is a perennial plant, it protects the soil against erosion. Since the plant is drought-resistant and can be harvested at almost any time of the year, Ǝ. plays a particularly important role as a "famine food" in years of drought when other crops fail.

Today more than fifteen million people depend to a greater or lesser extent on the cultivation of Ǝ., some 20 % of the total population of Ethiopia. The cultivation area is restricted to the southern and south-western part of the Ethiopian highlands, with inhabitants belonging to many different ethnic groups, among them the ↗Gurage, ↗Hadiyya, ↗Kambaata, ↗Wälaytta, ↗Sidaama, ↗Aari, ↗Käfa and the peoples of the Gamo Highlands. The intensity of Ǝ. cultivation varies widely among the different ethnic groups. Some grow Ǝ. merely as a security food plant, while their main subsistence is based on cereals or tuber crops (e.g., ↗Šeko). Others rely on Ǝ. and cereals and/or tuber crops in equal measure (e.g. Hadiyya, Wälaytta). Still others depend heavily on E. as their staple food and main crop (e.g. Sidama, Gurage). In other parts of Ethiopia the use of Ǝ. for food is not usual or even known. The plants found in these areas are used for their fibres and leaves or just for decorative purposes.

The geographical diffusion of Ǝ. has varied over the centuries. In the 17th and 18th cent. Ǝ. gardens could be found in the regions of Lake Ṭana, the Səmen mountains and Gondär. Nowadays, the largest extension of Ǝ. cultivation can be observed mainly in the border regions of two ethnic groups, one growing Ǝ., the other having a different system of subsistence (e.g., Sidama and ↗Arsi). The usual way to transmit the knowledge of its cultivation is by inter-marriage, as the women who are mainly concerned with the cultivation of Ǝ. are the ones moving to new places.

The place of origin of the Ǝ. plant has not yet been determined. Two competing theories are still to be either verified or disproved. One theory says that the origin of Ǝ. lies in Asia, because all other species of *Ensete* are located there. Furthermore, there are indications that the plant was known in ancient Egypt. The other theory sees the appearance of so many different varieties of Ǝ. in southern Ethiopia and the sophisticated systems of planting and processing in the same area as indications that Ǝ. must be endemic to Ethiopia.

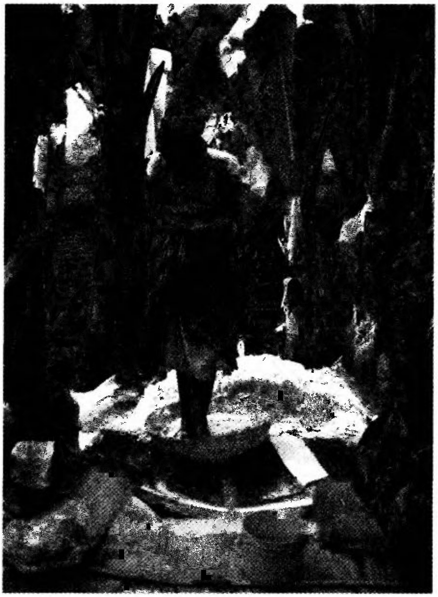
Ǝ. is usually cultivated in gardens which are situated next to the houses of individual families.

Sometimes the Ǝ. plants stand in rows according to their age and/or type, sometimes mixed. In some areas Ǝ. is inter-cropped with vegetables, coffee-bushes or the like. Usually the gardens are enclosed to protect the plants against damage from livestock and wild animals such as porcupines. Protection against bacterial wilt (caused by the bacterium *Xanthomonas musacearum*) is much more difficult. The desease spreads quickly by means of contaminated knives or through the dung of livestock that have been fed with infected plants. The only means of prevention seem to be to control and restrict the use of farming and processing tools and to uproot and bury or burn the infected plants as soon as the disease is identified.

Unlike wild Ǝ., the domesticated Ǝ. form is propagated as a vegetable by burying the corm of a ca. three-year-old plant after having removed the roots and cut out the apical bud. Some ethnic groups cut the corm into two or four pieces. Three to four months later, numerous suckers sprout. All Ǝ. plants have to be manured so that they develop an enormous pseudo-stem and store large amounts of starch. In nearly all cases, the dung of livestock is used or at least preferred. But due to increasing population size, the grazing grounds become scarce and the need for inorganic fertilizer grows. Ǝ. is transplanted one to four times during its life cycle at ever wider spacing according to the tradition of the ethnic group concerned.

The Ǝ. plant produces large quantities of starch in its underground stem rhizome (corm) and in its pseudo-stem, that can reach a height of up to eight meters. Consequently, an Ǝ. garden of about a quarter of a hectare is sufficient to feed one family. Especially in densely populated regions, Ǝ. is of great importance to secure nutrition. Ǝ. food has a high content of carbohydrates, calcium and iron, but it is low in protein and vitamins, so that it has to be supplemented by other products of animal or vegetable origin.

In most Ǝ.-cultivating regions the plants are harvested shortly before or upon maturity, i.e. when the plant flowers. In times of food shortage younger plants are harvested, too. The harvesting is done in a similar way in most areas: Leaves are cut off, leaf-sheaths are removed and corm is dug out. The inner skin of the leaf-sheaths is stripped and the pulp scraped off with a split piece of bamboo or a metal scraper. To do this, a strip of one leaf-sheath is laid on a wooden plank leaning on an Ǝ. plant or a house and is fixed at the upper end. The working woman either stands in front of the plank or sits with one leg stretched up to hold the leaf-sheath in place. The Ǝ. corm is grated onto a workplace neatly covered with Ǝ. leaves. The pulp and the grated corm are mixed and poured into a fermentation pit lined with Ǝ. leaves or into a special bin made out of bamboo. Some ethnic groups use a starter to facilitate the fermentation process. It is usually prepared of pieces of the leaf-sheaths and the corm together with local herbs. In the first two weeks of fermentation the mixture is regularly turned, kneaded and mixed. After two weeks to one month the mixture is fully fermented and can be used to prepare food. The product – ቆጮ (*qoč̣č̣o*) – can be stored for about four months. If it is to be stored for a longer period of time or even years, every four to five months the lining of the pit has to be renewed and the *qoč̣č̣o* mixed with the fresh pulp of a newly harvested plant. Otherwise it will rot.



Ǝnsät mousse being prepared in an *ənsät* growth behind a house in Hadiyya; photo 2002, courtesy Alke Dohrmann

The major food products obtained from Ǝ. are *qoč̣č̣o*, ቡላ (*bulla*) and አምቾ (*amməččo*), as they are called in Amharic. *Qoč̣č̣o* is the fermented mixture of the stripped leaf-sheaths and grated corms, as described above. To produce a kind of "Ǝ. bread" (↗Bread), a portion of *qoč̣č̣o* is taken out of the pit and squeezed. The dry substance is cut over and over again, because it still contains small pieces of fibre. The meal is mixed with water and the dough roasted on a baking-plate wrapped in Ǝ. leaves. With other methods of preparation, all fibres are removed. *Bulla* is the best-quality Ǝ. food and used to prepare pancakes, porridges, or dumplings. It is pure starch, which is obtained by washing and squeezing the pulp and grated corm before processing it as *qoç̣ç̣o*. *Amməčč̣o* is the boiled corm. In some areas young plants are harvested to use the corm, in other areas only the corms of mature plants of special varieties are taken.

Ǝ. is not only grown for nutritional reasons. It also provides fibre as a by-product when the leaf sheaths are stripped. The fibre is very strong and used to make sacks, bags, ropes, cords, mats and building material. The leaves and dried leaf-sheaths are used as packing material, plates, or as fuel. Even the dried midribs are so strong that they are suitable as binding-material, especially in the construction of roofs. In times of drought the plants are given to the livestock as fodder. These are only some examples of the manifold uses of Ǝ. products. There is no part of the plant which cannot be used in one way or the other.

The Ǝ. plant is important as a food crop and a means to prevent hunger in times of food shortage. Special varieties are used for medical cures for broken bones and birth problems. Furthermore, one should not overlook the fact that Ǝ. is an important market commodity. Women sell processed food products, fibres and leaves in order to buy other food products, clothes, school materials and the like. Especially in the time before the next harvest, when all the grain is sold, Ǝ. is of great value to obtain cash.

For those ethnic groups who grow it extensively, Ǝ. is a plant of high cultural importance. A man's or a woman's status and prestige are to a large extent defined according to the number and size of the Ǝ. plants in their garden or the size of the garden as a whole. Sometimes the cultivation of Ǝ. is connected with ritual performances or parts of Ǝ. are used for ritual reasons, especially in funeral ceremonies.

Ǝntälam

Ǝ. (**እንተላም**, also *nətäläm*) was a traditional Ethiopian unit of capacity. Found already in medieval Gəᶜəz texts (s. Pankhurst 1969:117, n. 84), it was used mainly for the measuring of grain, often in connection with ↗taxation, but occasionally also of ↗*ṭägg*.

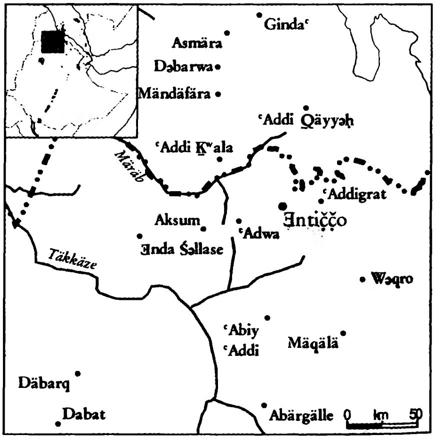
The Ǝ., like other Ethiopian measurements, varied significantly from place to place and time to time. It thus tended to be larger in times of plenty, and smaller in those of scarcity. It was often considered the equivalent of one camel load, or the capacity of some 250 "Mənilək cups", and can be taken as equal to anything between 170 and 400 litres.

Lit.: LesCDic 33; RICHARD PANKHURST, "A Preliminary History of Ethiopian Measures, Weights and Values", part II, *JES* 2, 7, 1969, 99–164 (Lit.), here 117, n. 84.

Richard Pankhurst

Ǝntiç̣ç̣o

Ǝ. (**እንቲጮ**, also Ǝntiç̣äw, Ǝntəç̣ç̣o, Gəᶜəz Ǝntä ṣew, i.e. '[settlement] near salt') is the name of a



settlement and of a historic province in Təgray. The village became the site of a confrontation between *aṣe* ↗Śärṣä Dəngəl and *baḥər nägaš* ↗Yəsḥaq. In November 1578 Śärṣä Dəngəl came to Təgray to subjugate Yəsḥaq. His strategy was not to storm Yəsḥaq's well-fortified capital of ↗Dəbarwa, with its Turkish garrison, but to make Təgray soldiers of Yəsḥaq desert him by endangering their native villages, and Ǝ. was one of them. Yəsḥaq had to defend the lands and interests of his soldiers, and at Ǝ. he and Śärṣä Dəngəl clashed. Their confrontation there lasted from 10 November to 26 December 1578. On 13 November Yəsḥaq with his Turks put the royal army to flight, but Śärṣä Dəngəl did not retreat from Ǝ. On 17 November there was another battle, which brought victory to nobody, but Śärṣä Dəngəl's stratagem worked and Yəsḥaq's vassals and allies began to go over to the Emperor. The final battle took place on 26 December. Yəsḥaq's army was routed, he himself fled, but was wounded and returned back to die in battle. The Turkish *paša* was also killed in the same battle (CRHist 67ff.).

Ǝ. was also the name of a governorate (comprising, among others, Yəḥa area), with Ǝ. as its centre. Tradition says, that the 17th-cent. governor of Təgray, ↗Kəflä Waḥid (whose wife was related to *aṣe* Ləbnä Dəngəl according to Ǝ. tradition) was also the governor of Ǝ. At least since his times, the *gʷəlti* of Ǝ. had acquired a considerable prominence, regularly being accorded to highest officials of Təgray. In the 19th cent., *däǧǧazmač* Wəbe Ḫaylä Maryam gave the governorate with the *gʷəlti* to his foreign advisor, Wilhelm ↗Schimper. Due to his presence, foreign travellers visited Ǝ., inquiring into trade possibilities of the governorate. Schimper reformed the local agriculture, e.g., by introducing the first potatoes from Germany, and also built a church and stone houses. After the rise of the future *aṣe* ↗Tewodros II in 1855, the *gʷəlti* was taken away from him, and later was owned by the family of *aṣe* Yoḥannəs IV. The Italians, however, expropriated Gäbrä Śəllase, the governor of Təgray, who had half of the *gʷəlti* (ʿAddi Ḥədur, Mänadəq), and *raʾəs* Śəyyum Mängäša, who had the other half (Tukuz, ʿAddi Hasama). Later it was restored by the British to the families, e.g. to *däǧǧazmač* Zäwde Gäbrä Śəllase (possessing it until the *Därg*'s land reform).

In the Italian period Ǝ. was changing its rural shape into a small street city and administrative centre (seat of a residenza). The ancient street leading from ʿAdwa via Yəḥa and Ǝ. to eastern Təgray, was renewed under the direction of the local governor *blatta* Ǝngəda Ḫaylu, who possessed the *gʷəlti* between Yəḥa and Ǝ. (as the husband of the half-cast Giovanna "Ǧämbär" Dumas from Näfasit, a granddaughter of the former governor Kidanu, owner of this *gʷəlti*). The place additionally emerges in the historical sources when one of the invading Italian columns marched to ʿAdwa through it. Finally, in 1987 the town was bombed by the *Därg*, which led to many casualties. The day of the bombing has been celebrated in Təgray as the day of martyrdom.

Today Ǝ. is part of the *wärädä* Aḥfärom. Ǝ. is a traditional market place, which is known for its salt (*čäw*) and *gešo* (leaves used for *səwa* or *mez*), and also flax seed and fruits, produced in the area. It is also a traditional centre of Təgrəñña-speaking Muslims (↗Ǧäbärti), as nearby Mäsäḥəl-Dəbdəbo, who even own *rəsti* there.

Sevir Chernetsov – Wolbert Smidt

Ǝnṭonəs

Ǝ. (**እንጦንስ**; fl. 14th cent.) is the monastic name of Amänku Ǝgziʾ, the son of Ṭəritä Ǝgziʾ and Məkbeyu, a native of Gəbäle in ↗Säraye. There are no hagiographic documents on him other than his Acts (↗*Gädl*). According to this text, he was ordained deacon by *abunä* ↗Yaʿəqob (1338–45) immediately after his arrival in Ethiopia. He married but, after his wife was abducted, he took the monastic habit from *abba* Iyəsänano Ǝgziʾ (s. Conti Rossini 1943:339). He was ordained priest and helped his spiritual father until the latter's death. He founded monasteries for men and convents for women, first at ʿAsəm and later at Damba Tänbuk.

Ǝ. was a miracle-worker. He refused the king's invitation to live at court, remaining in his own monastery until he became ill and refused to take food for 4 months and 22 days. He appointed his own successor, ↗Samuʾel of Däbrä Halleluya, whom he had initiated into monastic life at his own monastery. It was there that Ǝ. died, probably on 3 *Taḫśaś* (the day on which his hagiography is read), and was buried during the reign of *aṣe* ↗Säyfä Arʿad.

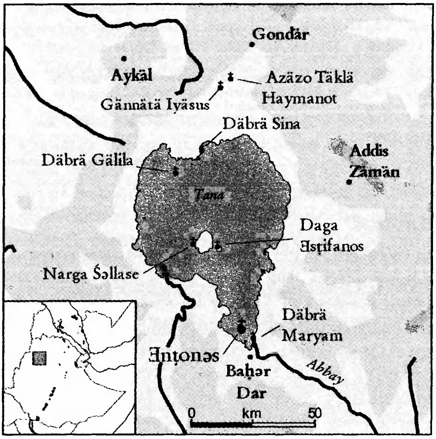
Ǝnṭonəs

The little islet of Ǝ. (**እንጦንስ**), covered by forest, is located in the southern part of Lake Ṭana, near ↗Kəbran island (s. the map in Bosc-Tiessé 2000: 211). It is the place of a monastic establishment whose history is closely linked to that of Kəbran. According to the Acts of ↗Zäyoḥännəs, the founder of the Kəbran monastery during ʿAmdä Ṣəyon's reign, the two fishermen who took the holy monk to Kəbran subsequently settled on Ǝ. The place would later be occupied by a female community (Schneider 1972:18).



In the beginning of the 17th cent., the monastery seems to have been well-known, as it is mentioned by Pedro ↗Paez (BecRASO II, 279). It was at that time a male community. During *aṣe* Iyasu I's reign (1682–1708), the church was devoted to Christ (Ǝ. Iyäsus). It was burnt down afterwards at an unknown date, but some paintings on canvas in the first Gondärine style and books kept in the Kəbran Gäbrəʾel church were said to come from this church (Hammerschmidt – Jäger 1968, pl. 21, 24). However, it is certain only for those manuscripts which contain notes concerning Ǝ. (ms. Ṭānāsee 50, s. fol. 290r; ms. Ṭānāsee 57, fol. 1r, 87rc). Iyasu I greatly appreciated the site, where he often came at the end of his life for health reasons. It seems that it was he who ordered the building of thermal baths (**ቤተ፡ ብላኔ**, *betä bəläne*) on the island (DombrChr 75, 237ff.), for there is no mention of them before his reign. This building in Gondärine masonry is located on the south-eastern part of the island and is today in a relatively good state of preservation (s. map, sections and pictures in Bosc-Tiessé 2000:245f.). Today, monks live on the island again and a new church has been built.

Claire Bosc-Tiessé

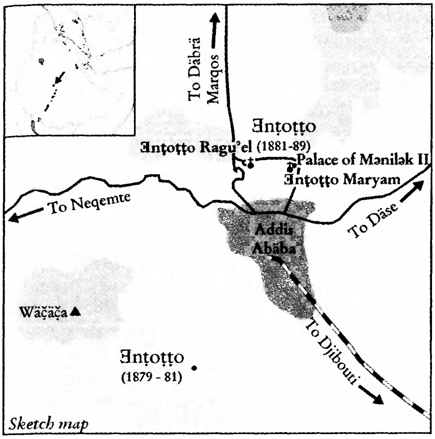
Ǝnṭoṭṭo

Ǝ. (**እንጦጦ**) is the name of a mountain range to the north of ↗Addis Abäba with the elevation ranging from 2,600 to 3,200 m A.S.L., and of a town lying in the Ǝ. mountains (09°06' N, 38°42' E). In the early years of the Amhara conquest of Ǝ., the mountains were covered with forest, but after the foundation of the city most was cut down for fuel and building purposes. Now the area is being reforested by ↗eucalyptus.

Two different locations of the town of Ǝ. were identified before the present site, the first east of Wäčäča (1879–81) and the second at Dildila. In 1881, *nəguś* Mənilək (later *aṣe* ↗Mənilək II) moved with his court and founded a new ↗*kätäma* with the name Ǝ, which replaced also Dildila as the name for the mountain.

The town, which may also have been the site of an encampment of *aṣe* ↗Ləbna Dəngəl, had a

One of the buildings of *aṣe* Mənilək's compound at Ǝnṭoṭṭo; photo 2004, courtesy of Michael Gervers



Sketch map

predominantly military function. Soon it became the capital of Šäwa. The coronation of Mənilək II and *ətege* Ṭaytu Bəṭul was held in Ǝ. (and not in Aksum) in November 1889. From 1886 to 1887, the capital moved to the plains below the Ǝ. hills, around what were then the hot springs of ↗Finfinnee. Addis Abäba replaced Ǝ. because there was more wood for fuel and construction and because of the warmer milder climate. Ǝ. was windier, colder and more prone to lightening and thunder storms. Tradition has it that Ṭaytu preferred the plains below and persuaded Mənilək to move. After her husband's death she was exiled there and stayed in Ǝ. until her own death.

There are two significant churches still in use on Ǝ., ↗Ǝnṭoṭṭo Maryam and ↗Ǝnṭoṭṭo Ragu'el and nearby are the remains of an early rock church ↗Yäkka Mika'el.

Ǝnṭoṭṭo Maryam

The church of Ǝ.M. (እንጦጦ፡ ማርያም) was founded by *ətege* ↗Ṭaytu Bəṭul and became a significant centre of religious and intellectual life, as well as the major church to which the imperial court went for the veneration of St. Mary during the reigns of the imperial monarchs resident in ↗Addis Abäba, that is *aṣe* ↗Mənilək II, *nəgəśtä nägäśtat* ↗Zäwditu and *aṣe* ↗Ḫaylä Śəllase I. After two years of construction (1885–87), the feast to bless the new foundation was held in 1887. Some of the measurements of the church were taken from those in the Bible of the temple of Solomon (cp. 1 Kgs 6; GueCopMen 212, n. 4). Carpenters came from ↗Gondär and the wood from the forest of ↗Männagäšä, just west of Addis Abäba. The foundation and consecration of Ǝ.M. make up a substantial portion of the longest chapter in Gäbrä Śəllase's chronicle of *aṣe* Mənilək II's reign. The banquette (↗*Gəbər*), which followed the consecration had over 20,000 guests, and the feasting lasted for many days. Thousands of cattle were consumed and there was no shortage because the dedication took place before the famine and rinderpest epidemic of 1889. In 1905 Ǝ.M. was rebuilt with stone with an encircling balcony. Some foreign expertise was used in the renovation.

Ǝ.M. remained the most prestigious church foundation in the name of Mary in the Addis Abäba area and special services were held there on the monthly feast of St. Mary on the 21th day of each month as well as on 20 *Mäskäräm*. The imperial courts of Mənilək II, *ləǧ* ↗Iyasu, Zäwditu and Ḫaylä Śəllase I would regularly celebrate the most important days of the year dedicated to Mary at Ǝ.M. Zäwditu also organized the *täzkär*, or memorial service, for *ətege* Ṭaytu at Ǝ.M. There is now a museum of *aṣe* Mənilək II there.

The architecture of Ǝ.M. is that of a traditional round Ethiopian church with a thatched roof and circular ornament at the peak. Later *ətege* Ṭaytu added a silvered and guilded dome. The church is encircled by a gallery, upheld by a series of rounded pillars.

Among the murals inside Ǝ.M. there is a painting of of Mənilək II and Ṭaytu represented as the Queen of Sheba and her son Mənilək I, a portrait of St. Mark and The Last Supper. Some of the murals were painted by *aläqa* Ḫəruy, his son ↗Ǝmä'alaf and ↗Afäwärq Gäbrä Iyäsus.

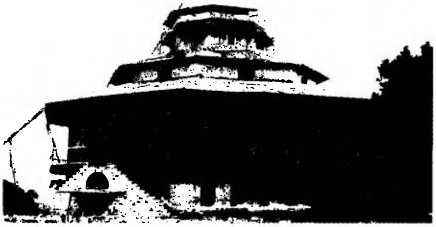
Ǝnṭoṭṭo Ragu'el

The church of Ǝ.R. (**እንጦጦ፡ ራጉኤል**) was built in the compound of *aṣe* ↗Mənilək II's palace at ↗Ǝnṭoṭṭo, north of Addis Abäba. Its construction began in February 1885 and the church was inaugurated on 5 November 1889. There are different traditions as to where the ↗*tabot* of Raguʾel was obtained. The problem is all the more complex because of the presence of two *tabots* of Raguʾel. Some informants believe that a monk by the name of *abba* Bälaynäh carved the *tabot*. There is much difference of opinion on the second *tabot*. Some say that it was brought from Jerusalem by *aṣe* ↗Yoḥannəs IV, who gave it to Mənilək at the ↗Ləčče Agreement of 1878. Others believe that Mənilək brought it from Jerusalem.

Arab and Indian artisans were employed in the construction of the church. The main artisan was *ḥaǧǧī* Kawas, an Indian from Peshawar, who also participated in the construction of the churches of St. Gabriel in Addis Abäba, St. Mary at Addis ʿAläm and Mənilək's palace in Addis Abäba. There were also several masons from Gondär and Ankobär, timber was brought from Männagäša. The church is octagonal and has two floors. The walls of the *mäqdäs* are decorated by religious and secular paintings executed by eminent artists, such as *aläqa* Zäyoḥannəs from ↗Maḫdärä Maryam, *aläqa* ↗Luqas and his son *aläqa* Śahlu, *aläqa* ↗Mäzmur Zädawit and *näggadras* ↗Afäwärq Gäbrä Iyäsus. European travellers were full of admiration for the building (e.g., Powell-Cotton 1902:169).

Ǝ.R. is a ↗*däbr* church; in 1890–91 a total of 193 *gašša* of land was granted for support of its clergy. Ǝ.R.'s heads were among the most influential clerics of the period, with ↗Gäbrä Śəllase, who was Mənilək's chronicler and ↗*ṣäḥafe təʾəzaz*. The first ↗*gäbäz* of the church was *däǧǧazmač* ↗Mäšäša Wärqe, a secretary and interpreter in the court of *aṣe* Yoḥannəs IV and later an influential official in Mənilək's court. The next *gäbäz* was *ras* Mikaʾel Ali of Wällo (r. 1891–1909) and his successors, his daughter *wäyzäro* Səhin (1910–27) and her daughter *ətege* ↗Mänän Asfaw, also held the office. The traditional school of Ǝ.R. was opened soon after its establishment and large number of students who received their schooling there later gained prominence in the Imperial court.



Ǝnṭoṭṭo Raguʾel on an early 20th cent. photograph; after renovation, during which an additional small storey was added to the top; from the collection of Wolbert Smidt

Another Raguʾel church was built by *ətege* Mänän in 1955 at ↗Addis Kätäma (s. ↗Däbrä Ḫayl Qəddus Raguʾel), since she had vowed to build another church if St. Raguel's help would bring back her consort to power after the Italian invasion of 1935–36. After the liberation of 1941, she wanted to move the Ǝnṭoṭṭo church to Addis Abäba where a large parish would be founded. She was strongly opposed by the clergy at Ǝnṭoṭṭo, but with the intercession of *abunä* ↗Basəlyos, and promises of generous rewards, some of the clergy reluctantly accepted the transfer. When the new Raguʾel church was built, the church of Ǝ.R. was renamed as Ǝnṭoṭṭo Elyas to suppress the association of Raguʾel with the old site and thus enhance the Addis Abäba Raguʾel church. The *tabot* of Elyas was available there, since the Elyas church used to be the third one at Ǝnṭoṭṭo, but its clergy died during the Great Famine of 1882–92 (↗*Kəfu qän*) and Mənilək ordered it to be moved to Ǝ.R.

Although priests were assigned to Ǝnṭoṭṭo Elyas to provide religious services on Sundays, on days of important festivals, to hold services for the dead and to officiate at baptisms, the people of Ǝnṭoṭṭo did not get regular religious services. Because of financial problems and continued controversy between the two churches, religious services at Ǝnṭoṭṭo stopped completely in September 1976. A patriarchal committee was set up to revive Ǝ.R. church. With the financial support from the monthly salary of the Patriarch *abunä* ↗Täklä Haymanot for two priests, the church was opened in May 1979. The Ministry of Culture restored the old building of Ǝ.R. in 1982–84, but the final attempt to return the *tabot* of Raguʾel, along with some historical and ecclesiastical objects, from Addis Kätäma to Ǝnṭoṭṭo ended in a tragedy and some deaths when a large angry crowd opposed the removal, believing that the military government wanted to make it a museum, attacked the people who came to carry out the order of transfer on 10 May 1985.

Environment

On the whole, two different groups of concepts of E. can be identified: (1) based on natural science, and (2) integrating social and natural sciences, in which society, with its patterns and processes, is an active part of a whole system (s. Leser 1997:922f.).

The term "degradation" of the E. originates in soil science, meaning all processes changing the soil structure (s. Leser 1997:133), including especially those which deteriorate soil fertility, such as soil erosion, change of biotic or/and abiotic structures of soils etc. Environmental degradation in most cases is used as a – not clearly defined – term for all processes deteriorating and devaluating such natural resources as soils, vegetation cover, water, biodiversity etc.

The great famines of the 1970s and 1980s resulted in an increased interest in the environmental processes of the Horn of Africa. E. degradation is seen as one of the most acute problems in Ethiopia and the surrounding countries, because of its effects on agriculture, which is the economic base of the country.

Environmental history

Most of the important developments in the history of E. in Ethiopa and Eritrea preceded the advent of man. The greatest changes in the ↗geomorphology of the area were shaped over millennia by the earth's own geological and climatic evolution. In more recent times, however, these changes have been dramatic, especially those directly caused by humans.

Soil erosion in the Ethiopian highlands; photo 1998, courtesy of Manfred Müller

Domestication of important agricultural crops, such as ↗*tef* and finger millet, is believed to have started about 7,000 years before present (B.P.). The ↗Aksumite culture selected and propagated specially adapted germ plasm and subspecies, thus becoming a primary centre for the diffusion of several cereals, pulses and oil-seed crops. The development of the ox-↗plough (ca. 1,000–500 B.C.) was a crucial stage in E. history; open space for ox-ploughing and for the various crops and pastures for the oxen was needed, one reason why long-term change of the vegetation structure has been severe (McCann 1999).

Bonnefille and Hamilton (1986), on the basis of palynological studies in Arsi and Bale, believe that there was wide-spread forest destruction around 1,850 years ago. From the presence of the pollen of plants usually associated with human habitation, the destruction in this period is believed to have been caused by man. There has been a decline in *Podocarpus* forest and a rise in places of ↗juniper forest following the opening up and burning of montane forests and a wide-spread presence of secondary forest and scrub vegetation (*Dodonaea* and *Celtis*-type vegetation).

The well-known and still often-repeated reports about heavy destruction of forests and woodlands since 1900 (e.g., Huffnagel 1961, von Breitenbach 1961) are criticized by McCann (1997; 1999) as being "narratives". Several regional studies (McCann 1999; Ritler 1997 and 2003) show that forest dynamics is a complex and nonlinear process and that the deforestation (and degradation) is much older than reported yet, especially in the central and northern highlands.

Obviously, in western and southern Ethiopia a broad deforestation recurred in the 20th cent., but studies fully covering these areas, or at least the larger of them, do not exist to date.

The "narrative" about heavy deforestation is based on figures which have never been proved (also because there do not exist any reliable figures about vegetation cover up to about 1960). Indeed, several researchers and institutions presented figures indicating an over-all deforestation since the 1950s (Wøien 1995). Being basically correct, the non-uniform use of terms like forest, woodland and bush leads to confusing figures and sometimes inaccurate conclusions.

Melaku Bekele (1998), basing on reports of travellers, states that the "Green Age" should be set before or immediately after the introduction of agriculture into Ethiopia at least 4,000 years B.P. There is evidence indicating that the Aksumite civilization was worn out by soil erosion and an associated decline in agricultural productivity. Several travellers wrote in the 16th–18th cent. of landscapes that were barely or not at all covered by trees. In the north-central part of Ethiopia, forested areas are reported to have been restricted to the vicinity of churches and monasteries. Travellers in the 19th and early 20th cent. wrote about the lack of forests in the central highlands of Šäwa (McCann 1999; Ritler 1997 and 2003).

But there is also the record of full forest recovery in areas previously known as open land, as was the case with Geeraa forest (McCann 1999). According to Massaja, in 1859 the highlands of Geeraa were open land bordered with forest. The status of the surrounding forest was described as already retreating due to agricultural expansion when Cecchi visited the area in the 1880s. When Geeraa came under the rule of *aṣe* MəniləkII in 1881, a mass exodus of the population of the region to other areas appears to have occurred. As a result, when Cerulli visited the area in 1928, the entire area was covered by a dense broad-leafed forest.

Degradation of resources

Resources are all those requirements of an organism, population or an ecosystem, which help the accumulation of energy by their increased availability. They are divided into two as: (i) biological (renewable) resources; and (ii) physical (non-renewable) resources.

Biodiversity is under pressure in many places because of deforestation, indigenous trees and crops being replaced by other imported species and of the extension of land-use in formerly low or uncultivated areas because of population growth (s. Eshetu Yirdaw 2002).

↗Wood is a basic and multi-functional resource of an agricultural society with almost no fossil resource reserves. In the central and northern highlands, wood deficit was a major problem already in the 19th cent. Since the 1890s ↗Eucalyptus as an imported species has been helping particularly to solve the energy problem in many places, but the high demand for water by this plant is provoking soil erosion, according to some scholars.

The major reasons for deforestation and degradation of forest resources are clearing of forests and woodlands for cultivating crops and cutting of trees and shrubs, e.g., for fuel-wood, charcoal, construction material, etc. Plantation forestry has been far from meeting the demand for wood, so that deforestation is inevitable. The causes of deforestation are, however, closely linked with a vicious cycle of mutually reinforcing factors, i.e., poverty, population growth, poor economic growth and the state of the environment. In 1994 it was estimated that high forests covered less than 2.7 % of the country and the process of deforestation still continues (EFAP 1994).

The degradation of soils is clearly linked to rainfall patterns (sum, intensity of rains, seasons), topography and vegetation cover or land-use, respectively. Soil erosion is a very old phenomenon: the fertility of the ↗Nile waters in Egypt since ancient times is mainly the effect of soil loss in Ethiopia. Hurni (1990:57) suggests for Ethiopia about 1.5 billion tons of soil loss per year, the highest rates per hectare coming from cropland and currently unproductive land. Tests of soil loss in several intensively used areas of the ↗*wäyna däga* show a great range, from very low (1 ton per ha) up to very high (212 tons per ha) rates per year (Herweg – Stillhardt 1999:16). A major problem for the farmers is that in several places soil depth will gain a critical level for agriculture in the next few decades, if it is not possible to slow down or even to stop this process with conservation measures.

Land degradation involves both soil erosion and loss of soil fertility. While the soils in the highlands have a high inherent fertility, the continuous removal of nutrients without replacement, as well as the steep and dessicated terrain with extensive areas of slopes, coupled with the high intensity of rainfall have led to accelerated soil erosion, reaching up to 400 tons/hectares/ annum (EPA 1997). In 1986 half of the arable land in the highlands was estimated to be moderately to seriously eroded (FAO 1986; EFAP 1994). Due to the scarcity of wood for fuel, animal dung and crop residues are used as fuel instead of their normal use as fertilizers which increases fertility loss. The impact of soil erosion on crop yields is estimated to be a reduction of between 1 % to 2 % per year. The biological degradation due to the decline in organic matter causes a further loss of 1 %.

↗Water, in terms of its availability and quality in general, its discharge patterns and the seasonal variation of rainfall, plays an integrating part in the system of environmental processes. Degradation of water resources involves both siltation and sedimentation, leading to changes in the physical, chemical and biological condition of the resources. Deforestation, poor agricultural practices and soil erosion increase surface run-off and reduce the amount of rainfall infiltrating the soil and eventually percolating into groundwater aquifers. About 74 % of the annual run-off of more than 110 billion m³ goes into the rivers that flow into Sudan, Egypt, Somalia and Kenya. Lower levels of infiltration and water storage in soils also affects the availability of water for human use. This, in turn, leads to higher peak flows in streams and rivers causing greater flood damage. Where soils are better at retaining moisture, spring- and river-flows are extended and evened out. This is important for irrigation development. Soil erosion also leads to a reduced life for storage dams due to siltation and may change the conditions for transport and hydropower production.

Reduced vegetation cover and the associated impact on land degradation threaten ecosystems. Decline or loss of vegetation cover reduces the amount of carbon that can be sequestered from the atmosphere, contributing to global warming.

The introduction of exotic species may cause several unforeseen risks, such as their becoming notorious competitive weeds (e.g., *Argemone mexicana*, *Parthenium hysterophorous*, *Prosopis juliflora*, water hyacinth, etc.), thereby reducing crop yield and replacing local flora, causing adverse effects on the E. (biotic and abiotic components) and the introduction of or susceptibility to disease.

The carrying capacity of the rangelands, 42% of the country's total area (above 1,700 m A.S.L.; average annual rainfall above 600 mm) is severely limited by inadequate watering facilities and by a consequent inefficient utilization of vegetation. The cutting of fodder instead of letting the animals range freely could be an improvement in order to reduce overgrazing and to increase biomass productivity.

Due to the expansion in irrigated crop cultivation in some of the traditional pastoral areas, some grazing lands have been lost. The pastoralists most affected are the ᶜAfar and Karrayyuu, who have lost close to 35,000 and 22,000 hectares of their best dry-season grazing areas, respectively. Grazing areas have been reduced for parks (19,767 km²; ↗National Parks), wildlife reserves (28,100 km²) and sanctuaries (9,536 km²). This situation has led to conflicts between pastoralists and animosities towards government organizations. The pastoralists have been forced to live in and utilize the marginal areas for livestock production and have, therefore, become more vulnerable to drought.

The continuing succession of droughts has affected livestock populations as well as the ability of highland farmers to produce crops. It has also led to catastrophic livestock losses, as well as deterioration in rangelands (Gedion Getahun 1999). The other climatic extreme, i.e. too much precipitation and the subsequent flooding, has also been a problem in many parts of the country (↗Climate).

Pollution

Pollution may be defined as any undesirable change in the physico-chemical and biological properties of air, water and soils, which may cause harm to humans and other organisms, or to cultural and natural elements of the human environment (Gupta – Bhardwaj 1979).

Air pollution is caused mainly by the addition of poisonous gases and particulate matter. Most of the gases are the product of combustion of fossil fuels in automobiles, industry and domestic use. These gases include a mixture of carbon and nitrogen oxides and hydrocarbons. Large quantities of highly poisonous carbon monoxide particles and lead are also produced during combustion. Urbanization and industrialization have resulted in areas of excessive pollution.

Ozone is highly oxidizing and can damage the leaves of crops. Being acidic in nature when combined with moisture, gases like sulphur dioxide and hydrogen sulphide affect metals, textiles and animals. Nitrogen oxides can kill organisms, but their greater role is in the formation of smog in cold and humid conditions. The various hydrocarbons and nitrogen oxides react together in the presence of light, producing peroxyacetyl nitrate and similar compounds. On foggy days, these chemical substances remain suspended in the atmosphere, adsorbed around particulate matter, and, e.g., cause irritation to the eyes and bronchial disorders. Another gaseous substance, fluorides, is produced from the aluminium industry. It causes serious damage to young leaves and fruit orchards, though some plants like onions, cotton, tobacco and citrus are highly resistant. The particulate matter arises from various industrial operations: mining, quarrying, grinding and polishing, saw-mills, textiles and burning of fuels. During cold or humid periods the smaller particles serve as nuclei for condensation of water vapour and produce fog. The particles, when deposited on the leaves, or even when suspended as part of fog, reduce light intensity, considerably affecting photosynthesis. If they are inhaled, they can cause numerous respiratory diseases and allergies. The particulate matter may also consist of various chemicals, pesticides and poisonous substances, such as organic compounds of tin, lead and cadmium, which may cause tuberculosis and carcinomas.

During recent years fresh-water streams in Ethiopia have turned into open sewers. The addition of domestic sewage, agricultural waste and industrial effluents reduces the oxygen content of the water body on which most of the aquatic life depends. The organic matter is not readily mineralized and the anaerobic conditions produce foul smell due to the production of ammonia and hydrogen sulphide. The additional input of materials leads to rapid growth of certain organisms, particularly the phytoplankton, which further add more organic matter. Many poisons are brought with the effluent and the pathogens make the water unfit for use.

The process in which the primary and secondary production of the water body increases rapidly is called eutrophication. The addition of detergents brings in large quantities of phosphates, which can be utilized only in certain groups of organisms, the blue-green algae, taking advantage of their nitrogen-fixing ability, and this is again the beginning of eutrophication. The agricultural run-off also brings with it several organic compounds as pesticides, which soon enter into the food chain and become gradually concentrated in the tissues of the organisms at a higher trophic level, resulting in death or impairment of life-activities of animals and man.

The process of removal of soda ash from Lake ↗Abyata provides a good example of mining associated with great risks of pollution for a water body known to have very rich fish and bird life.

Mercury compounds, another important pollutant of water, are produced as waste by paper mills, the chloralkali industry, mercury vapour lamps and plant-protection compounds. The inorganic salts of mercury are reduced under anaerobic conditions and in the presence of hydrocarbons into dimethyl mercury, which enters into the food chain.

Pollution of soils results from the excessive use of fertilizers, pesticides and herbicides, adversely affecting the physical, chemical and biological properties of the soil, which in turn affects plant growth. Mining, excavating soil for brick making and building and road construction etc. also reduce soil resources. Another source of soil pollution is dumping of solid wastes. Other sources of pollution include ionizing radiation. Many of the radioactive substances enter into the food chain and become concentrated, causing harmful effects.

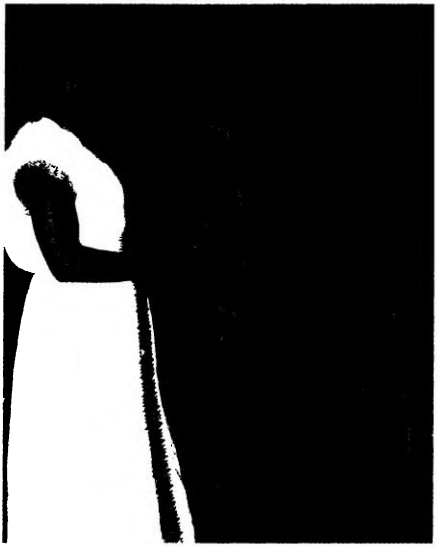
Ǝnzata

Ǝ. is an Amhara descent-group from the Gondär region, most of whom are musicians, called ↗*azmari* in Amharic. Today, non-*azmari* use the term *azmari* mainly in reference to professional ↗*masinqo* players and the female singers accompanying them. Ǝ., in contrast, is a self-designation relying on ancient genealogical links, which strictly distinguishes the in-group. Anyone who does not belong to this group is called *bugga* and is excluded from the Ǝ. group precisely because he/she does not share genealogical ties. Ǝ., also call themselves *liqä mäqʷas*, which used to be the title given by nobles to significant musicians serving for the court.

The complex network based on in-group marriage in areas with a high population density of Ǝ., such as Dämbəya, Ǝnfraz, Bäläsa and Wägära in Gondär, underlines their strong genealogical relations. The village of Bulboks near Gondär is exclusively inhabited by Ǝ., and nearby ↗Bahər Gəmb has a significant minority. Takuritu Ǝngəda, who was linked with the Gondärine court acting as *azmari*, is the common ancestor to large numbers of Ǝ. in both villages. Quite a few prominent figures, including Yərga Dubbale and Tädla Fante in the modern Ethiopian popular-music scene, are members of the Ǝ. descent group.



Ǝnzata musicians; Gondär; photo July 2004, courtesy of Wolbert Smidt

Someone descending from a *bugga* family can be accepted by the group as an Ǝ. when he is a musician in at least the second generation and living within the Ǝ. group's networks.

The settlement pattern of Ǝ. is both to concentrate in the villages of origin and in urban areas, where they engage in extended musical activities. One can also find seasonal singers who normally live in the villages as farmers, but who go travelling for musical activities after the harvest season. Ǝ. therefore can be found in all major settlements of Ethiopia.

In addition to the system of in-group marriage, communication through the secret argot/slang of Ǝ. allows the group to share a sense of community and exclusivity. Moreover, it helps as a means of exchanging information they do not want outsiders (*bugga*) to know. Because of this and due to the high degree of non-intelligibility with Amharic it is often considered by the Ǝ. as a "language" on its own, called Ǝnzatañña or Ǝnzatlanqʷa by them. Communication by the Ǝ. argot can take place most advantageously when used during performances in front of an audience of *bugga*. It is strictly taboo to share the argot with outsiders.

The argot is formed on the basis of Amharic and can vary slightly according to generation and place. Several viewpoints can be put forward in tracing the origin of the argot. Leslau (1964) indicates that the great majority of its vocabulary is a deformation of Amharic words and it also borrows vocabulary from other languages such as Agäw, Sidaama and Oromiffa. Ten basic words from the Ǝ. argot are the following: *andəkä* ('one'), *git* ('two'), *säləst* ('three'), *əffənəč* ('fire'), *wačo* ('water'), *čäbärä* ('sun'), *čäləqləq* ('moon'), *bəran* ('blood'), *məlasməč* ('tongue'), *mamʷača* ('tooth').

In relation to the argot of Ǝ., it is worth noting a fundamental difference from the *yäwäf qʷanqʷa* (Amh. 'bird's language'), different codes of words used by young children and adolescents. Different from Ǝnzatəñña, these codes are formed spontaneously while speaking, following fixed rules of deformation. Ǝnzatəñña, however, is learnt by children as a second "mother tongue" besides Amharic, by listening to parents. Most of the vocabulary, therefore, would not be constructed while speaking; some Ǝ. even deny that they construct the words at all. However, a part of the vocabulary is associated with "bird's language". Both follow similar rules of reduplication of the root with a consonant inserted between the reduplicates (cp. *čäləqləq*). Also, the argot of ↗*lalibeločč*, the dawn-singers coming from Goǧǧam, northern Šäwa and Wällo, shares many common words with the argot of Ǝ. (cp., e.g., the words for 'two' and 'water').

Itsushi Kawase

ᶜƎnzira səbḥat

The ᶜƎ.s. (**ዕንዚራ፡ ስብሐት**, usually rendered as 'The Lyre of Praise'), which is also sometimes called *Arganonä wəddase*, is a long hymnological composition in Gəᶜəz glorifying ↗Mary the Mother of God. The Gəᶜəz term *ᶜənzira* (cp. LesCDic 65) assumed different meanings over the centuries: sometimes it designated a stringed instrument ("instrumentum chordarum"), sometimes it was also used to indicate wind instruments, a kind of flute ("instrumentum flatus"). It is alphabetically structured; the author composed a verse (of different length) for each syllable of the Gəᶜəz syllabary. The ᶜƎ.s. is one of the most beautiful devotional works of the Ethiopian Mariological hymnology. Through praises and invocations, it stresses the holiness and motherhood of Mary. It witnesses the perfect veneration the Ethiopians have for Mary, always in the right measure and with no danger of Mariolatry.

The hymns of the ᶜƎ.s. are distributed according to the days of the week for a daily liturgical private recitation. The whole composition is in fact called **ዕንዚራ፡ ስብሐት፡ ዘሰብዓቱ፡ ዕለታት** (*ᶜƎnzira səbḥat zäsäbᶜattu ᶜəlätat*, 'The Lyre of Praise of Seven Days').

The ᶜƎ.s was probably intended for edification of pious Christians rather than as an apologetical work or a rejoinder to Mary's enemies. Sources for the ᶜƎ.s. are mainly the biblical books. Apocryphal books are also quoted everywhere in the work. Although the ᶜƎ.s. is traditionally attributed to ↗Ǝleni, *aṣe* Zärʾa Yaᶜəqob's wife, internal evidence suggests that the most likely candidate for its authorship must have lived between the 16th and the 17th cent.

↗Hymns

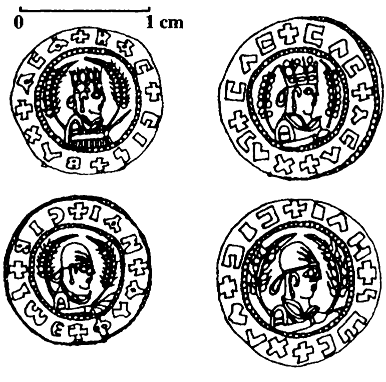
Habtemichael Kidane

Eon

E. was a Christian king of ↗Aksum in the late 4th or early 5th cent.; his more precise dating to "420–ca. 431" (Pedroni 1997:59–62, 80) is based on a few erroneous assumptions. Indeed, one of the first successors of ↗ᶜEzana and an immediate predecessor of ↗Ebana, he is actually known from his gold coins alone (↗Coinage), where he is portrayed on both sides, head and shoulders profile bust right, wearing a crown or a head cloth, with Christian crosses and Greek legends allround. His coins have also been found in South ↗Arabia, where the hoard of al-Maḍāriba (some 70 km west of Aden) has greatly increased our knowledge of this matter (Munro-Hay 1989:90ff.,



Coins of Eon; drawing courtesy of Wolfgang Hahn

pls. 23ff.). They display four varieties (Types 59–60 and 61–62, in Munro-Hay – Juel-Jensen 1995: 152–56), all written with reversed or incomplete letters. The obv. is possibly inscribed *basileus basileōn* "king of kings" (Browne 1992:295f.), but the interpretation of the legend (+ BAX + ACA + BAC + CIN and variants) remains uncertain. On the rev. legend reads *Eōn Bisi Anaaph*, but with such odd spelling vars. as to prompt the false reading *Bisi Aniōskal* (dismissed by Munro-Hay 1980–81). The clan or tribal name *Bisi Anaaph* ('Man of Anaaf'), also restored as *Bis*(*i*) *Ianaaph*, has been traced to the South Arabian personal name *Y*(*a*)*n*(*a*)*f* (Manzo 1995:74–77).

Whatever the general implications of such an intriguing connection (Fiaccadori 2004:110), E. cannot be satisfactorily identified with any of the rulers mentioned in the Ethiopian traditional "king lists", although a loose similarity of his name to that of Ǝllä Aḥyäwa (CRList 292, list C, no. 58) has been noticed (Hahn 1983:135). Nor can *Eōn* (EѠN) be turned into *Nōe* (NѠE), i.e. 'Noah' (DAE I, 55; followed by Anzani 1941: 88 and Hahn 2001:125, fig. 1), merely to achieve conformity with the (later) Aksumite kings who used a biblical name – and yet against the natural reading direction of the whole legend. The much more suitable *Eōn* (tentatively reconstructed as *ʿAwn* or *ʿEw*(*u*)*n* in CRStor 167, 216) should be rather compared, with no direct relationship whatsoever, to *Ḥyn* in the Ethiopic inscription of ↗Kaleb Ǝlla Aṣbəḥa (RIE no. 191.34f.), possibly one and the same as *Ḥywnʾ* (Drewes 1978) mentioned in the contents of the fragmentary Syriac *Book of the ↗Ḥimyarites* (heading of ch. 5) as the name of the leader of the military expedition sent to South Arabia by Kaleb himself in 518 or 523 (Moberg 1924:xc: "the name is probably disfigured"; Hahn 1983:135; MHAksum, 84f., 230). Nor can a relationship of *Eōn* to the Ethiopic root *ʾyn* (cp. LesCDic 50: *ʾayyänä*, *täʾayyänä* 'live well and comfortably') be easily excluded: e.g., in terms of a participial form **ʾƎy*(*y*)*un*, in Gr. garb, *'Εών (< *Αἰών?).

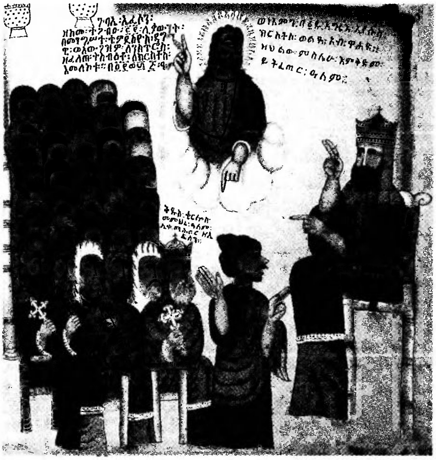
Gianfranco Fiaccadori

Ephesus, Councils of

E. (Gr. Ἔφεσος, Gəʿəz ኤፌሶን, *Efeson*), a seaport in Asia Minor near the modern Selçuk, is famous for having hosted two important ecumenical Councils in 431 and 449. Against the background of the conflict for primacy between the patriarchal sees of Alexandria and Antioch, the third ecumenical Council of 431, summoned by the Byzantine Emperor Theodosios II, was aimed at settling the Christological controversy triggered by the Patriarch of Constantinople, ↗Nestorius,



"The Council of Ephesus"; wall-painting, Mädḫane ʿAläm, Gondär; 20th cent.; photo 1993, courtesy of Michael Gervers

stating that Mary was not Θεότοκος (*Theotokos*, 'God-bearer'), but merely the mother of Christ-the-Man. The Patriarch of Alexandria, ↗Cyril, opened the Council (22 June) before the arrival of the Antiochene delegation, favourable to Nestorius, easily succeeding in having him condemned and deposed immediately. Pelagius's belief in the primacy of free will over grace and ecclesiastical institutions for the salvation of man was condemned as well. On his arrival, some days later, the Patriarch of Antioch John I summoned a separate council that in turn deposed Cyril. After a prolonged crisis and a hard confrontation, the controversy temporarily ended with a theological formula agreed upon by Cyril and John in 433 and with the substantial victory of the Alexandrian position. The Council of E. was in fact responsible for the birth of an independent Nestorian Church (↗Nestorius) in the decades immediately to come. It is the first of the great ecumenical councils of which the original acts are preserved (full list of the extant texts in CPG IV, nos. 8620–8867).

The second Council of E. (known also as *Latrocinium*, 'Robbery', so named by Pope Leo I) was summoned by Theodosios II in 449 to settle the conflict originating from the condemnation of the monastic leader ↗Eutyches by a synod of bishops held the year before in Constantinople (at the initiative of the Patriarch Flavian, without consulting Leo I), since he maintained that Christ had only one nature after the Incarnation and his flesh was not consubstantial with the human flesh. After a quarrel with Flavian of Constantinople (March 449), the Emperor summoned the Council, giving the chair to the powerful Dioscorus, Patriarch of Alexandria, a partisan of Eutyches. Leo I sent the short but important theological treatise *Tomus ad Flavianum*, but failed to settle the dispute (June 449), and his envoys were not even allowed to speak in the assembly. Dioscorus led the proceedings in a climate of growing violence and arbitrariness, with the support of the turbulent followers of the Syrian monk Barsauma, and succeeded in forcing the delegates to accept his thesis completely. A huge amount of original documents is extant on the Council of 449 (full list in CPG IV, nos. 8910–41), partially included in the Acts of the following ecumenical Council of ↗Chalcedon (451).

The first Council of E. is the last of the so-called "ecumenical councils", the deliberations of which were and still are accepted by the Ethiopian Orthodox Church, while those of the following Council of Chalcedon (451) were not. The very existence in Ethiopia of the collection known as ↗*Qerəllos*, i.e. the 'Cyril [of Alexandria]' (cf. Weischer 1979:11–24; Brak-Kirche 164ff.), the real winner of the Council of E., is probably due to a pro-Monophysite (and anti-Chalcedonian) interpretation of writings originally intended mainly as anti-Nestorian (GuiSLett 18f.). The Gəʿəz version, probably from Greek, of a fragment from the so-called "Acts on the bishops of Cyprus" (*Gesta de episcopis Cypriis*, CPG IV, no. 8744; Greek text in Schwartz 1929:122, ll. 1–22; for the Coptic translation cf. Coquin 1981:43f., n. 13) is a recently discovered original document from the Council of E. of 431 (cf. Bausi 2002:148).

Ethiopian theological thought has indissolubly linked the name of the third ecumenical Council (431) with the condemnation of Nestorius (cf., e.g., the *Mäṣḥafä ↗senodos*, Bausi 1995:5 [text] = 2 [tr.] and the long chapter on Nestorius in the *Mäṣḥafä ↗məsṭir* by Giyorgis of Sägla: YaqMist I, 72–104 [text] = 44–62 [tr.]). The theological struggle of the first Council of E. was to be resumed as a consequence of the increasing theological disputations with the Catholic missionaries (↗Jesuits). In this connection, the *Treasure of the Faith* (↗*Mäzgäbä haymanot*), or *History of the Four Monophysite Councils*, composed between 1555 and 1559 at the bequest of *aṣe* ↗Gälawdewos (Cerulli 1960:1–33, esp. 8–11 [text], 67–100, esp. 74–76 [tr.], from five mss., cf. ibid. viii, to which at least mss. Ṭānāsee 52 [incomplete] and 65, EMML 1202, 1568, 2082, 4003, 4875 are now to be added; cf. also Wion in PICES 14, 288f.), ranks among the most important literary witnesses.

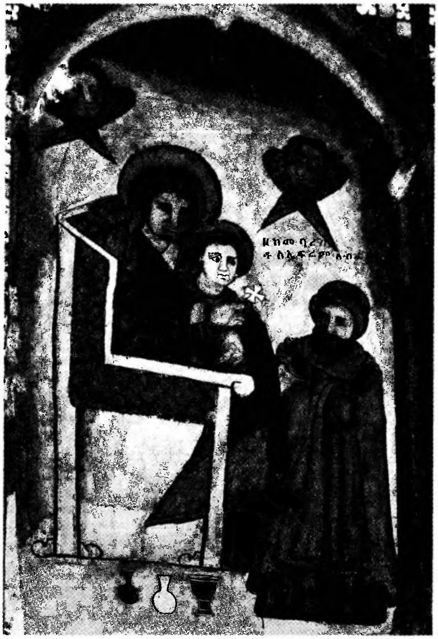
Alessandro Bausi

Ephrem

E. (Ephrem the Syrian, Lat. Ephraem Syrus; Syriac *Aprēm*, Gəʿəz ማር፡ ኤፍሬም፡ ሶርያዊ, *mar Efrem Soryawi*, '*mar* Ephrem the Syrian', b. ca. 306, d. 373) is a major saint of all Christian Churches. He was one of the most productive spiritual writers of his time. Born in upper Mesopotamia at or in the vicinity of Nisibis (today Nuṣaybin), where he lived as ascete, deacon and teacher, he wrote on and taught exegesis and dogmatics and wrote numerous hymns in his native Syriac. He was the main protagonist of his time in the struggle against the dualistic concepts of Marcionism and Manichaeism. When Nisibis was surrendered to the Persians in 363, E. fled to ↗Edessa, where he continued his teaching and writing until his death. The greater part of his original works are preserved in Syriac, some only in translations. Translations of his works, together with countless spurious works, can be found in most languages of ancient and medieval Christianity.



Ephrem in front of St. Mary; cloth mural by *abba* Dästa of Goǧǧam, painted in 1909; Adil Badil, Church of Däbrä Samuʾel; photo 1993, courtesy of Michael Gervers

E. is also venerated in the Ethiopian Orthodox Church. He is commemorated in the ↗*Sənkəssar* on 15 *Ḥamle* (GuiSyn II, 330–33, BudSaint 1116ff.). His biography as given there has only slight correspondence with historical facts. E. appears also as a motif in Ethiopian book-paintings: E. together with Simeon of Amid (Səmʿon Zäʿaməd) asking their teacher Jacob of Nisibis (Yaʿəqob Zänəṣəbin) questions (cf. Hammerschmidt – Jäger 1968:101; Hammerschmidt 1977:34), E. in praise of Mary (cf. Hammerschmidt – Jäger 1968:103ff.; Hammerschmidt 1977:34–38; SixDeu 107), E. being blessed by Mary (mss. EMML 1400, fol. 163 b; 4938, fol. 27a), E. together with Mary, the Holy Child and angels (cf. HamTana I, 193); Mary ascending to Heaven after appearing to E. (e.g., ms. EMML 1762, fol. 136v). A feast for "the Virgin Mary and E. the Syrian" is mentioned in the ↗*Mäwaśəʾt* (cf. HamTana II, 98). E. is even used in a magical context (ms. EMML 628/2).

Ethiopian tradition attributes to E's. authorship of the ↗*Wəddase Maryam*; this is why he is usually depicted standing at the foot of enthroned St. Mary. This is stated, e.g., in the ↗*andəmta* commentaries (Cowley 1980:43f.) or in the ↗*Täʾammərä Maryam* (CerMaria 295ff.). In this context E. is called "the Potter" (**ለብሐዊ**, *läbḥawi*) or the "the Syrian Potter". This attribute is probably due to a confusion with Simeon the Potter (Syr. *qūqāyā*) of Gēšīr (cf. Euringer 1911; Baumstark 1920:42f.; Grohmann 1919:11–18; VelMe 270; Böll 1998:92f.). In this context also an unhistorical meeting between ↗Yared and ↗Cyriacus of Behnesa in Ethiopia is related (ms. EMML 1942, fol. 68v). Other texts under the name of E. in Ethiopic, attested in the mss., are:

- the prayers for Tuesday and Wednesday in the ↗*Wəddase Amlak*, cf. e.g. SixDeu 199;
- a homily on the second Sunday in Lent, EMML 1763 (42), fol. 148v–152v;
- a homily on Maundy Thursday, included in the ↗*Gəbrä ḥəmamat*, e.g. EMML 2140, fol. 66bff.; also separately in EMML 1763 (58), fol. 184v–187r;
- a homily on the Passion of Our Lord and on the Thief on the right hand in other versions of the *Gəbrä ḥəmamat*, e.g., EMML 2868, fol. 161aff. or Manchester, Rylands University 18, III, 3 (as an appendix (cf. Strelcyn 1974:52);
- a homily on Easter Eve, e.g., London, BritLib, Orient. 8192 / 15 (cf. Strelcyn 1978, no. 56);
- a homily on Satan and death in a version of the *Gəbrä ḥəmamat*, e.g., EMML 2868, fol. 158rff.;
- several homilies in *Mäṣḥafä mänäkosat* (↗Monastic literature), ed. Arras 1963, nos. 5, 22f.; no. 22 also in Paris, BN, éth. 125, 3 (ZotBNat 150);
- extracts from homilies on the Virgin Mary and on the Precious Pearl as no. 20 of the ↗*Haymanotä abäw*, e.g., Paris, BN, éth. 111, fol. 27f. (cf. ZotBNat 113) or München, cod. aeth. 35, fol. 40f. (cf. SixBay 59), on its source cf. Grohmann 1919:378;
- a homily on fasting, repentance and prayer, Paris, BN, d'Abbadie 243, I , fol. 1–2;
- a homily on the Transfiguration, EMML 1939–1(4);
- four homilies on the last judgement and on repentance, EMML 1840 (10);
- an evening prayer, Vatican, cod. Vat. aeth 21, fol. 73–76;
- a prayer for learning, e.g., EMML 2116 – (v)1;
- excerpts "on the spiritual life", EMML 930, fol. 132ff.;
- sayings cited in the *Gännätä mänäkosat*, e.g., EMML 19;
- sayings (*nägärä mädḫanit*), Vatican, cod. Vat. aeth. 18, fol. 253–57 (GreTisVat 80).

A story of the prophet Eliah, ascribed to E. in the Arabic tradition, but probably spurious (GrafLit I, 426), is extant as an anonymous text in Ethiopic translation (Paris, BN, éth. 133/1, fol. 1–31, cf. ZotBNat 150).

The authenticity, provenance and transmission of these texts remain to be investigated.

Epidemics

Over the centuries Ethiopia has frequently suffered from E., which have usually been the result of ↗famines. The most serious E. to affect Ethiopia were: smallpox and typhus, both endemic to Ethiopia; cholera (↗Diseases), which came in from the East; and influenza, which killed a large number of people in 1918.

The earliest recorded E. in Ethiopia cannot be identified. Two E., in the 9th and 12th cent., are recorded in the ↗*Sənkəssar*. A third, in the Harär area, was reported in a local chronicle, in 660 H. [1261/62 A.D.]. Other unidentified E. are mentioned in Christian hagiographical writings from the 12th to 14th cent., and also in the chronicles of Emperors Zärᵓa Yaᶜəqob (r. 1434–68), Śärṣä Dəngəl (r. 1563–97) and Susənyos (r. 1607–32). Reports of mainly unidentifiable E. are also reported by Francisco Alvares in the 16th cent. and the Jesuits in the 17th cent. (Pankhurst 1972, 1973).

The first suspected reference to smallpox in Ethiopia appears in the tradition that the disease was introduced into Arabia by Aksumite troops ca. 370 A.D., and perhaps again in 570/71 A.D. Reliable identification of smallpox in Ethiopia was, however, not available until more than a thousand years after these events. The disease is listed as *kufañ* in Hiob Ludolf's Amharic-Latin dictionary of 1698, and E. of *kufañ* are later mentioned in the royal chronicles for 1718 and 1768.

The first European accounts of the disease in Ethiopia were written by James Bruce, who describes an outbreak in 1769/70, which he claims to have treated; and by Nathaniel Pearce in 1811/12. Later E., accompanied by high mortality, were reported in 1838/39, 1854, 1878, 1886 and 1889/90 (Schaller – Kuls 1972:116, Pankhurst 1965).

Cholera, another killer disease, differed from smallpox because it was not native to Ethiopia, but spread in E. originating in the East. The disease, known in Gəᶜəz as *fängəl*, is first mentioned by that name in an Ethiopian chronicle for 1634/35, during the reign of *aṣe* Fasilädäs. Subsequent outbreaks were reported by European travellers, notably in the late 1830s, 1856, 1865 and 1889–91 (Schaller – Kuls 1972:108; Pankhurst 1968).

Typhus, known in Amharic as *nədad*, has long been prevalent in the country, and tended to be associated with dense concentrations of people, in military camps and crowded towns, and in certain instances, prisons. The disease was reported in *aṣe* Tewodros's army in 1866, among Egyptian troops in northern Ethiopia in 1876, and debilitating Mənilək's forces in 1888/89 and 1897. Minor E. of typhus, then generally known in Amharic as *tasbo*, were reported later in 1920, 1927 and 1933. (Schaller – Kuls 1972:105; Pankhurst 1976).

Influenza has been traditionally common in Ethiopia. Only one serious E., however, has been recorded; in 1918, when it formed part of the world wide E. known in Europe at the time as the "Spanish flu" (Schaller – Kuls 1972:119; Pankhurst 1975, 1977).

The diffusion of all four epidemic diseases after World War II was significantly curtailed, largely by the advance of modern medicine. No major post-war epidemics have been reported; and smallpox in particular is believed to have been eradicated in Ethiopia as in the rest of the world.

Richard Pankhurst

Epigraphic South Arabian

Historical and geographical context

The E.S.A. (also Ancient South Arabian) language belongs to the south-western branch of the ↗Semitic language family. Its four main dialects are Sabaic, Minaic, Qatabānic and Ḥaḍramitic, named after the major South Arabian ethnic groups of the 1st millennium B.C. Among these, Sabaic is the dialect known to have existed for the longest period of time and is attested in the largest number of inscriptions. Its core region was the area of Mārib and Ṣirwāḥ. Over time, however, it spread over to the greater part of the highlands. The earliest Sabaic inscriptions appear some time in the 8th cent. B.C., while the first (longer) written documents in Sabaic that can be dated reliably on the basis of synchrony with Assyrian sources go back to the beginning of the 7th cent. B.C. The latest dated inscription is from the year 559 A.D. Sabaic is roughly classified into three periods – Old Sabaic (8th to 3rd cent. B.C.), Middle Sabaic (1st cent. B.C. to the end of the 4th cent. A.D.) and Late Sabaic (end of the 4th to the 6th cent. A.D.). Most inscriptions found so far contain texts in Middle Sabaic from the areas of Mārib and the central Yemenite highlands. This is considered the standard dialect. Its linguistic properties distinguish it clearly both

Inscription on side A of the new ↗Abraha-Stele found in 2002 at Marīb dam, Yemen (s. Nebes 2004); photo courtesy of Deutsches Archäologisches Institut, Berlin

from the idioms of the Old Sabaic and, even if less significantly, from that of the Late Sabaic periods. There also exist dialectal differences among the inscriptions from the Middle Sabaic period. For example, Harami inscriptions show a strong North Arabic influence, while the texts found in the area of ancient Radmān bear traces of a Qatabānic substrate. Dialectal features are also characteristic of the language of ↗Ḥimyar in the southern highlands. They are mainly represented by the body of inscriptions from the Late Sabaic period.

Epigraphic documentation of Minaic, Qatabānic and Ḥaḍramitic spreads from the middle of the 1st millennium B.C., when the Sabaean people were no longer prevailing in South Arabia. The first Minaic inscriptions appear, even though in small numbers, of the same time as the first Sabaic texts, and come from ancient cities along the Wadi Maḏāb, north-west of Mārib. Minaic inscriptions are equally found beyond the borders of South Arabia, for example, in ancient Dedān, today the city of al-ᶜUlā in Saudi Arabia, but also outside the peninsula as a whole: e.g., on the island of Delos and in Egypt – as a result of activities of Minaic merchants far away in the north. The Minaic dialect disappeared towards the end of the 2nd cent. B.C. The Qatabānic dialect spread as far as to the south-west and ↗Bāb al-Mandab in the 4th cent. B.C. With the political end of Qatabān, triggered by the expansion of Sabaᵓ and ↗Ḥaḍramawt at the end of the 2nd cent. A.D., epigraphic documents in Qatabānic ceased to appear. Ḥaḍramitic inscriptions are mainly documented in the ancient sites along the Wadi Ḥaḍramawt and its tributaries and in the capital city of Šabwat, the starting point of the incense route. Ḥaḍramitic inscriptions are also found several hundred kilometres to the east of Šabwat in Samārum, what today is Ḫawr Rūrī near Ṣalāla on the Indian Ocean. At the beginning of the 4th cent. A.D., Ḥaḍramawt was incorporated into Ḥimyar, marking the end of Ḥaḍramitic epigraphy.

In the Horn of Africa, E.S.A. inscriptions can be found in the Təgray highlands north and south-west of Aksum (↗Yəḥa, ↗Ḥawəlti, ↗Mäṭära). They prove the presence of Sabaic emigrants on the African shore of Bāb al-Mandab in the early 7th cent. B.C. (↗DᶜMT). The language of the few reliable sources is typical for the Old Sabaic period, with some influence from the Ethiopic adstrate.

Script and texts

The E.S.A. script consists of 29 graphemes appearing in inscriptions on rock and stone, as well as on metal surfaces. It was used for all the E.S.A. dialects. As a rule, the direction was from right to left; however, bustrophedon (writing direction changing from line to line) is characteristic of Old Sabaic. A typical feature of the

Late Sabaic/monotheistic period is characters in relief. The public character of the inscriptions is responsible for the form and content of the texts. Dedications are the most wide-spread text type, in some they contain complete descriptions of military campaigns. Besides, one can come across construction reports, various legal documents, epitaphs, so-called atonement texts, as well as many inscriptions and graffiti containing only personal names.

In the early 1970s the first inscriptions on wooden sticks were discovered in the Yemen, where an unknown minuscule script was appearing. The ca. three dozen of published documents show that this script, developed from the monumental epigraphic, was used for everyday legal and economic matters.

Central features

1. The E.S.A. alphabet with its 29 letters disposes of the largest grapheme set among the Semitic alphabet scripts. The graphemes are mostly, though not exclusively, used to represent consonants. The graphemes for *w* and *y* are sometimes used for /*ū*/ and /*ī*/; /*ā*/, which can be expressed by *h* as its *mater lectionis* in Ḥaḍramitic, is never written in Sabaic. Along with the laryngals and pharyngals (ʾ, *h* and *ḥ*, ʿ), the "emphatic" consonants *ḍ*, *ṭ*, *ṣ* and *ẓ* are fully represented. Their phonetic realization, however, has not been fully clarified. Besides, E.S.A. possesses three sibilants – s^1, s^2 and s^3 – that etymologically correspond to the proto-Semitic *š*, *ś* and *s*.

2. The formation of the causative, which corresponds to the fourth verbal stem in Arabic, is dialect-specific. In Sabaic the causative is formed by prefixing an *h*-element, in Minaic, Qatabānic and Ḥaḍramitic by the prefix s^1- (cp. Sabaic *h-qny* vs., e.g., Qatabānic s^1*-qny* 'he dedicated'). Corresponding to this are the differences in the resumptive personal pronouns that in Sabaic begin with *h*- (e.g., *hwʾ*, 'he') and in the other dialects with s^1- (e.g., Qatabānic s^1*ww*).

3. Unlike in Arabic, the definite article in E.S.A. appears in postposition to the noun and has the form *-n* or, in Ḥaḍramitic *-hn* (cp. Sabaic *hqnyt-n*, 'the dedication'). The indefinite article *-m* is also attached to the noun in postposition, as in *hqnyt-m*, 'a dedication'.

4. The wooden-sticks inscriptions allow us to restore the paradigm of the suffix conjugation for the second person; the suffix is *-k* for the singular and *-kmw* for the plural. The suffix of the 1st pers. sg. is also *-k*.

5. Sabaic is characterized by two types of prefix conjugation, the simple or short form *yqtl* and the extended form *yqtln*. Defective imperfect graphs of a number of weak roots allow us to reconstruct /*qtVl*/ as the basic stem 0_1 of the prefix conjugation for Sabaic and the other E.S.A. dialects.

6. Contrary to other E.S.A. dialects, Sabaic uses both types of prefix conjugation in the past main clause to represent narrative or progressive action: e.g., *w-bnhw f-ytʾwlnn ʿdy hgrn nʿḍ* ... *w-yhṣr mlkn* ... ('From there they returned to the city of Naʿḍ ... Then the king went ...').

7. All E.S.A. dialects employ the infinitive as a paratactic continuation of a finite verb form, e.g., Sabaic *brʾw w-hwṯrn w-hšqrn bythmw*, 'they built, founded and completed their house'.

Similarities and differences between E.S.A. and Gəʿəz

1. In the basic stem 0_1 of the suffix conjugation of the verbs with the second radical *w* (and *y*) the Sabaic writings *kwn* and *kn* and, respectively, *šym* and *sm*, indicate vocalism with /*o*/ or /*e*/, similarly to Gəʿəz *konä* 'be' and *śemä* 'set'.

2. The initial *-k* of the personal suffix of the 2nd pers. sg./pl. and the 1st pers. sg. in suffix conjugation is in direct correspondence with Gəʿəz.

3. The base of the 0_1 stem in both prefix conjugation types *yqtl* and *yqtln* can be defined in Sabaic (and also in other E.S.A. dialects) as /*qtVl*/ and not /*qättəl*/ according to the Gəʿəz paradigm.

4. The main functions of the prefix conjugation in Sabaic are relative temporal ones (simultaneous ["gleichzeitig"] and posterior ["nachzeitig"] action). Unlike Ethiopic *yəqättəl*, Sabaic *yqtl* and *yqtln* are more often used to express posterior action (including modal usage). Simultaneity, as in the Gəʿəz phrase *ənzä yəqättəl*, has not yet been found in E.S.A. At the same time, the prefix conjugation is never used in Gəʿəz to indicate progressive or narrative action (s. Central features no. 6).

The position of E.S.A. within Semitic languages

Along with Akkadian, Canaanaite, Aramaic, North Arabic and Ethiopic, E.S.A. constitutes a separate language branch within the Semitic group. E.S.A. can neither be considered a historical forerunner of classical Arabic in the north, nor has it a close relationship with the Modern South Arabian. The identical structure of the imperfective base in stem O₁, together with some other shared morphological features allows grouping of E.S.A. together with North Arabic and North-west Semitic into the "Central Semitic" language group (s. Voigt 1987). Specific morphological and syntactical similarities inside this group reveal closer relationships between Sabaic and Canaanaite.

Epiphanios of Salamis

E. (also E. of Cyprus, Gəʿəz: ኤጲፋኒስ Ep̣ifanis, ኤጲፋንዮስ Ep̣ifanyos or ቢፋንዮስ Bifanyos; b. ca. 315, near Eleutheropolis in Judaea, d. 403) was a prominent church author. As a young man he spent a couple of years in an Egyptian monastery and, having returned home, founded ca. 335 a monastery near Eleutheropolis, where he was subsequently archimandrite for ca. 30 years. In 367 he was elected Metropolitan of Cyprus in the seat of Constantia (the ancient Salamis, modern Famagusta, 365–403). He became known as a prosecutor of heresies, especially of the teaching of ↗Origen.

His energy pushed him into conflicts with high officials in other church provinces, as, for instance, with the Patriarch of Antioch Meletius (374), or with the Patriarch of Jerusalem John (394). In 399 he influenced Theophilus, the Patriarch of Alexandria, to condemn Origenism and in 402, on the latter's behalf, he even went to Constantinople to argue against some Origenist monks from Egypt. With no results, he headed back to Cyprus but died at sea in 403. His feast is on 12 May, in Ethiopia 17 *Gənbot* (= 22 May, in accordance with the ↗*Sənkəssar*).

His writings are mostly polemical, in defence of what he regarded to be orthodoxy. This can be seen already in the *Ancoratus* (Ἀγκυρωτός, ca. 374). His most famous work is *The Medicine Chest* (Πανάριον, 374–77), the main ancient heresiological treatise, in which he describes 80 heresies known to him, including pre-Christian philosophical schools and Jewish groups. *On Measures and Weights* (Περὶ μέτρων καὶ στάθμῶν, 382 or 392), preserved only in Syriac, is a learned manual of biblical studies and deals with the measures and weights used in the Bible, the geography of Palestine and the versions of the Old Testament. In the treatise *On the Twelve Gems* (Περὶ τῶν δώδεκα λίθων), preserved in full only in Georgian, E. provides an allegorical explanation of the jewels. He also left *Letters*, preserved among those of Jerome, e.g. Epistle 51, in which E. attacked the pictorial representations in the church. In the Byzantine tradition, several other writings are attributed to him, e.g. the *Physiologus* (↗Fisalgos).

In Ethiopic there are many writings attributed to E., but only few of them are authentic. To this category belongs the translation of the *Ancoratus* (*Mäṣḥafä* ↗*ankäriṭos*, unpublished). The collection of *The Faith of the Fathers* (↗*Haymanotä abäw*), translated from Arabic, contains 13 quotations of which nos. 1–11 and 13 are taken from the *Ancoratus* (መልሐ[ኅ]ቅ, *Mälḥa[ḫ]əq*), whereas no. 12 comes from the treatise *On the 12 Gems*

(መጽሐፍ፡ በእንተ፡ ፲ወ፪፡ አእባን, *Mäṣḥafä bäʾəntä 12 aʾəban*; ed. Weischer 1979a). Two homilies of E. are included in the ↗*Qerəllos* (IV:2, Weischer 1979a:27–47): *On the Faith* (ድርሳን፡ … በእንተ፡ ሃይማኖት, *Dərsan … bäʾəntä haymanot*) which can also be found outside the *Qerəllos* (e.g. in EMML 1763, fol. 209r–12v, 14th cent.); and *On the Trinity* (ድርሳን፡ … በእንተ፡ ሥላሴ፡ ፍክሬ, *Dərsan … bäʾəntä śəllase fəkre*), actually a creed (ed. Weischer 1979a:52–63).

E.'s best-known composition in Ethiopia is the *Anaphora* (no. 9; አኰቴተ፡ ቍርባን፡ ዘቅዱስ፡ ኤጲፋንዮስ, *Akʷätetä qʷərban zäqəddus Epifanyos*; s. ↗Anaphoras; ↗Eucharist) attributed to him. Other attributions are the ↗*Aksimaros* and, as a consequence, also the *Beginning of the Faith* (ጥንተ፡ ሃይማኖት፡ ዘፈከረ፡ አብ፡ ማር፡ ኤጲፋኒስ, *Ṭəntä haymanot zäfäkärä ab mar Epifanis*), since it is regarded as a commentary on the *Aksimaros*, (e.g. in ms. BritLib Orient. 818, fol. 145r–60r).

Another, and anachronistic, attribution is the first anathematism in the *Decree of the 12 Orthodox Bishops after the Deposition of Nestorius* (431), e.g. in ms. BritLib Orient. 744, fol. 166v–68r, furthermore the *Life of Askänafer* (አስከናፍር), the judge of Rome, and the 13 thieves, which is inserted in the ↗*Gädlä sämaʿətat* collection. The author's name is given here in the form "Bifanyos Bishop of Cyprus", as in ms. BritLib Orient. 686, fol. 58r–59v, which reveals that the Vorlage of the *gädl* was probably in Arabic.

Yet another text attributed to E. is a panegyrical homily on the Archangel Michael and king Abraset, which is sometimes part of the ↗*Dərsanä Gäbrəʾel*, e.g. in ms. Kebran 3, ff. 42va–48va; sometimes of the ↗*Dərsanä Mikaʾel*, as in ms. BN 139. The day on which the homily should be read changes from 12 *Ṭərr* to 19 *Yäkkatit* or 19 *Miyazya*.

E. is also quoted in the (*Catena*) *Commentary on the Gospels*, based mostly on ↗John Chrysostom, e.g. ms. EMML 630 (E.'s name is given here as Awfanyos), in the *Commentary on Matthew* (ትርጓሜ፡ ወንጌል, *Tərgʷame wängel*; e.g., ms. BritLib Orient. 736); in an anonymous treatise in Amharic without title, called by Sergew Hable Sellasse *The Mystery of the Trinity* (ms. EMML 635); and in the *Mäṣḥafä* ↗*Ḥawi* (e.g., in ms. BritLib Orient. 778).

The importance of E. is corroborated by the existence of the *Life of E.*, e.g. in ms. EMML 345, fol. 10r–12v (and in Amharic, e.g., in ms. EMML IV, 1315, fol. 153r–56r), composed on the basis of works extant in Ethiopic, such as the *Sənkəssar*, the *Mäṣḥafä ḥawi* and the *Universal History* by ↗Giyorgis Wäldä Amid.

Epistles

The Pauline Epistles

The place of the Pauline Corpus (collective title in Gəʿəz: የቅዱስ፡ ጳውሎስ፡ መጽሐፍ, *Yäqəddus Pawlos mäṣḥaf*, 'Epistles of St. Paul'), as "inspired Word of God" is firmly established in Ethiopian Christian tradition by the fact that the Pauline E. are part and parcel of the Liturgy of the Word. They were translated into Gəʿəz from a Greek Vorlage during the 5th and early 6th cent. (↗Bible). There must be a reading from Paul at every Eucharistic celebration. The list of the canonical books of the Ethiopian Church, as it appears in the *Mäṣḥafä ↗senodos* and in the *↗Fətḥa nägäśt*, attributes to Paul 14 letters (Paulos Tzadua 1968:13). Paul's authorship of these writings is vehemently defended. On various occasions, introductions and commentaries on Paul try to quell doubts about Pauline authorship.

Some important works, translated into Gəʿəz in different periods, draw abundantly from Paul, as *↗Ankäriṭos* of Epiphanius of Salamis (translated most probably during the Aksumite time), the *↗Haymanotä abäw* or the *Dərsan* of ↗Severus of Ašmunayn (17th cent.?). An assessment of the extent to which Paul has been a source of inspiration to Ethiopian literary productions reveals two distinct areas of influence, namely, Liturgy (↗*Qəddase*) and ↗Theology. As just mentioned, the liturgical norms prescribe that there be a reading from Paul at every Eucharistic gathering. Of the four lections from the N.T. to be read during the Liturgy of the Word, Paul is always the first to be proclaimed. The *Mäṣḥafä ↗gəṣṣawe* clearly shows that there are passages taken from the 14 Letters "of Paul". Lections from P.E. form part of the administration of the Sacraments of Initiation and of Marriage. There is a surprising number of readings in the Sacrament of the Anointing of the Sick (↗Unction), namely, Rom 15:1–7; 1 Cor 12:28–13:8; Rom 8:14–21; Gal 2:16–20; Col 3:12–17; Eph 6:1–18. However, in the *↗Gəbrä ḥəmamat*, a bulky 14th cent. book containing readings for the Holy Week, Paul is almost nowhere to be seen. Even though quotations from and allusions to Paul are considerably present through many Patristic writings (e.g. of ↗John Chrysostom), there are only few readings from Paul proper in the *Gəbrä ḥəmamat*. There are portions from 1 Tim 4:9–5:10; 1 Cor 11:23–34 as Maundy Thursday readings; Gal 6:14–17; Phil 2:5–12 for Good Friday; 1 Cor 5:6–13; 15:1–23 for Holy Saturday. There are a few readings from Paul in the *Mäṣḥafä ↗gənzät* (s., e.g., the edition of Asmära 1963 A.M.) to be used in the long funeral services.

As to the *↗Dəggʷa*, the liturgical book of hymns attributed to ↗Yared, the very first impact with it will give the feeling that the Bible is its primary source. Among the N.T. books, the ↗Gospels are the major supplier of concepts and vocabulary, but there is a heavy presence of material adopted from the Pauline Corpus as well. Some of the figures and language of the Pauline E. to Hebrews, especially from chs. 9 and 10, recur very frequently and they are read in a Christological and Mariological light. The following thematically selected passages are examples drawn from the *Mäṣḥafä ↗ziq* (a collection of hymns from various sources including *Dəggʷa*) showing how widespread the influence of the Pauline E. is:

- Christ: "holds everything in his hands" 64, Col 1:17. "Jesus Christ is the sign of peace among men" 104, Eph 2:14. "You are the strength of Your Father, his Firstborn, his Son and his Word" 104, a language which reflects that of Heb 1. Christ is "the Angel of his Counsel" 104: "angel" referred to Christ is based on the Ethiopic version of Heb 12:2. "At the close of the age You (God) sent to us Your Son" 105, Gal 4:4; Heb 1:2. "He was nailed on the cross, we were saved by his cross" 128, Gal 3:14. "He was crucified and suffered for our sake, because of his love for us" 160, Rom 5:6–10. "He became the Firstborn from among the dead" 160, Col 1:18.

- Mary: "You are the Ark, Ark covered with gold which contains the Torah; You are the golden lampstand" 73, Heb 9:2–4.
- Saints: "they completed the race they set for themselves and pursued" 59, 2 Tim 4:7. "They found the vision of the heavenly kingdom which was built for them" 59, based on Heb 11:10. "They faced cold and nakedness; sweat and labour was the price they paid to defeat the devil. They wandered in desert places" 64: reminiscent of Heb 11:34–40. "They are the congregation of the firstborn" 64, Heb 12:23. "Columns of the earth" 64: allusion to Gal 2:9.
- Church: "Formerly You were not a people, now You are" 160, Rom 9:25. "He acquired his church with his blood" 64, Heb 13:12; "and sealed her with his cross" 64, allusion to Heb 13:20.

There is a big number of Pauline quotations in the ↗*Ṣomä dəggʷa*, a section of the *Dəggʷa* used during the Lenten season. They are: Rom 12:9; 14:10; 6:22; 8:39; 9:23; 1 Cor 16:13; 7:29; 2 Cor 8: 1–2; 4:2; Col 1:23; 1:27; 3:1; 3:2; Gal 5:22–23; Eph 1:18; 3:16; 3:8; 4:29; 5:19; 6:17; 1 Thes 2:2; 5:17; 5: 23; 1 Tim 1:15; 4:7; 6:11; Heb 12:6; 4:13; 9:11.

There are references to the Pauline Corpus in other liturgical texts like the *Mäṣḥafä qəddase* and in the various *mälkəʾ*-hymns. In the Anaphora of Our Lady ascribed to Cyriacus of Behnesa (↗Anaphoras), we read: "Jesus Christ ... became man, fulfilled all the law of man except sin ..."; "though He was rich in everything yet He became poor in everything"; "... now this divine bread has been broken and this banquet has been prepared. Let Him who desires come, but first examine yourselves and purify your heart and flesh" (*Mäṣḥafä qəddase* 1945:80, 82). These expressions are culled from Gal 4:4–5; Heb 4:15; 1 Cor 11:28. The Anaphora attributed to St. John Chrysostom falls back on Rom 8:29–30 when it says: "The ones He chose he called; those He called He loved; those He loved He honoured; whom He honoured He justified and the ones He justified them He glorified to be an adornment for his Son" (*Mäṣḥafä qəddase* 1945:182).

Paul's influence was particularly felt in theological works and debates. In theology, the Pauline E. were mainly used in apologetic way. They were seen as a quarry providing *testimonia* to defend traditional positions, especially in the field of ↗Christology. References are frequently made to classical *topoi*, especially when it comes to upholding the tenets related to the Humanity, Divinity and Unity of Jesus Christ. The *Mäṣḥafä* ↗*məśṭir* (14th cent.), the *Fəkkare mäläkot*, *Ḥamärä näfs* and *Märs amin*, three writings belonging to the 16th-17th cent., report verses from Paul that had become items of fierce theological strife. The verses of Rom 8:34 and of Heb 7:25 which speak of "the glorified Christ who intercedes on behalf of mankind", are some of the Pauline passages that have fuelled violent debates. The controversy about Christ's intercession after his enthronement at the right hand of his Father, as indicated by the above Pauline texts, still drags on (for the latest instance s. *abunä* Gäbrəʾel 1990). The *andəmta*-commentary on Heb 7:25 goes as far as emending the text in order to adjust it to the theological position which rejects the notion of Christ interceding on behalf of humans after his glorification. It changes the present form of the verb "He intercedes" into the past "He interceded", claiming that it would be insulting to Christ's present status of glory to maintain that he is still "ministering". The theological conviction is that his salvific work was fully accomplished on the Cross. His prayer "Father, forgive them; for they know not what they do!" (Lk 23:34) has, according to interpreters, an eternal value and makes any need for fresh intercessions by Christ not only pointless but offensive.

Various passages from the Pauline Corpus have been employed in some of the most acrimonious Christological debates in the aftermath of the Jesuit Mission in the 17th cent. Rom 1:3–4; 8:29; Col 1:15–17; Heb 1:3; 1:6; 6:20; 2 Cor 8:9; Phil 2:7 are some of the most common verses used as argumentative weapons by the various factions. Besides, the Pauline Corpus and Hebrews in particular have much influenced the violent discussion on the Unction and Union of Christ (s. the biblical index, Yaqob Beyene 1981: 311, Getatchew Haile 1990:34). Often the parties appeal to the same passage, each trying to stretch it one's own side.

There are passages in the Ethiopic Version of the Pauline Corpus which are peculiar to Ethiopic textual tradition. One example is Rom 9: 22–23, which is used in the theological issues dealing with ↗angels. Pauline E. are employed in the form of quotations and allusions, in hagiographical writings and in literature of a more secular character like the ↗*Kəbrä nägäśt*, or in the royal chronicles (cf., e.g., BlunChr 347, 354, 355, 358, 376). In summary, the influence of Paul’s personality and writings on Ethiopian tradition has been an important one.

The Catholic Epistles

The seven Catholic E. (Gəʿəz ሰባዕቱ፡ መልእክታት, *säbaʿətu mälʾəktat*), i.e. letters of apostles James, first and second Peter, first, second and third John and Jude, were translated into Gəʿəz in the 5th-6th cent., from a Greek *Vorlage* that belonged to the Alexandrian recension. A revision was carried out some time in the 14th–15th cent. on the basis of an Arabic text that was in use in the Coptic Church (Hofmann – Uhlig 1993:32; Uhlig – Maehlum 1993:52). The oldest available witness of the Catholic E. is the celebrated 14th-cent. ms. Milan, Biblioteca Ambrosiana, B 20 inf. (Galbiati 1957:340; Hofmann – Uhlig 1993:13f.). The unique manuscript contains the N.T. texts (except the Gospels) in five languages (Gəʿəz, Syriac, Coptic, Arabic and Armenian); the Catholic E. are the two of Peter, the three of John and those of James and Jude.

A passage from the Epistle of John (መልእክተ፡ ዮሐንስ፡ ሐዋርያ, *Mälʾəktä Yoḥannəs ḥawarya*), 1 Jn 1:1–7, is commonly memorized by those who begin to learn reading after mastery of the ↗*Abugida* and *Hahu* syllabaries, these being the first steps in traditional church ↗education.

In doctrinal works, in devotional material and in the liturgical texts there is a very clear tendency to concentrate quotations and readings on the Epistles of Peter (related to discussions of or expositions on the Passion of Christ and Atonement) and John (Christological issues). In fact, the compendium of doctrinal tracts, ↗*Haymanotä abäw*, abounds in numerous references (later insertions?) to the E. of Peter and John.

In the readings for the Week of Passions (↗*Gəbrä ḥəmamat*), one finds readings from 1 Pet for the eve of Palm Sunday, Palm Sunday itself, for Saturday in the Passion Week and for the night towards Sunday. In the Horologium (↗*Säʿatat*), there are readings from 1 Pet for Monday and Tuesday, from 2 Pet for Wednesday, from 1 Pet for Thursday and Friday and from 1 Jn for Sunday. The references to the E. of Jude seem to be the rarest.

Epistolography

The deplorable state of Ethiopian archives, practically non-existent until the 20th cent., prohibits a thorough study of Ethiopian E. and limits a student of it to scarce evidence found in some chronicles and elsewhere. No doubt, E. must have existed for many centuries in a country with an ancient statehood, which certainly carried on an international and domestic correspondence.

The development of Ethiopian E. depended heavily upon the historical and cultural situation of the country. In Christian Ethiopia, until at least the middle of the 19th cent., the only written language was ↗Gəᶜəz. The Ethiopians also knew well E. as a N.T. literary genre, as is evidenced in the ↗Epistles. This pattern, however, hardly suited any practical needs of secular correspondence. In fact, correspondence was not an everyday matter even for Ethiopian monarchs, who wrote letters on relatively few occasions. In international correspondence (mainly with Patriarchs of Alexandria and Sultans of Egypt) they used ↗Arabic and the writing of these letters was usually entrusted either to Egyptian clerics from the entourage of the Coptic Metropolitan of Ethiopia, or to some local Muslim *qāḍī*. This correspondence followed the norms of Arabic E. of the time, including the use of ↗seals.

It seems that it was precisely the needs of foreign correspondence that were conducive to the appearance of Ethiopian royal seals, because foreign correspondents used their seals instead of a signature. Later, Gəᶜəz inscriptions were also introduced into Ethiopian royal seals for the needs of domestic correspondence, where such seals proved to be fairly practical. Domestic correspondence mainly consisted of a king's orders to his war-lords and governors, sent with special messengers (↗Postal system). Here the vernacular ↗Amharic was more convenient, at least for the purpose of precise understanding of these orders by addressees, and the message was probably articulated in Amharic both to the messenger and by the messenger to the correspondent. However, the messenger was supplied with a piece of parchment with an impression of the royal seal on it. This assured both confidence in his mission and the necessary provisions (↗*Dərgo*) for him *en route*. Thus, immediately after the enthronement of *aṣe* Iyasu I (1682–1707), the royal chancellors "sent a messenger with a seal to every province" (GuidiIohan 62 [text]).

In contrast to the business-like and laconic orders and messages, some other royal letters, which may be better called epistles, were not only verbose, but written with elegance and literary taste in excellent Gəᶜəz. Usually they were filled with religious rhetoric, but pursued quite mundane political and propagandistic ends. Such was an epistle written by *aṣe* Śärṣä Dəngəl (1563–97) to the rebellious *baḥər nägaš* Yəsḥaq (CRHist 57 [text]) and an answer sent by *aṣe* Susənyos (1604–32) to the letter of the Qurban regiment which did not recognize his royal authority. It is remarkable that in this letter Susənyos (or his secretary, to be precise) distinguishes the literary manner of letter-writing from the businesslike and reprimands the soldiers: "This letter of yours is not good, and there are no words that are beautiful and ornamental" (PerChron 87 [text]).

The "Era of the Princes" (↗*Zämänä mäsafənt*) of 1769–1855 brought drastic changes. This period reveals an obvious and rapid decay in the mighty Christian feudal monarchy with its culture, including classical Gəᶜəz literature. However, it was a period of new dynamic developments, marked by the growing use and importance of the Amharic language as a means of written communication for quite practical reasons. The number of independent and semi-independent rulers in the country increased considerably, and so did their correspondence, both local and even foreign. As for the latter, it was carried out as usual in Arabic, but in domestic matters Amharic proved to be more practical; it was preferred also by those correspondents whose mother-tongue was another Ethiopian language, e.g., Təgrəñña.

Thanks to the efforts of Rubenson, rich epistolographic material has been published in the series of *Acta Æthiopica* (s. RubActa), which refers to the *Zämänä mäsafənt* and later periods. There we may see the process of gradual Amharization of Ethiopian correspondence, where Amharic letters were written according to the new pattern based mainly on norms of oral conversational etiquette. Finally, this Amharic trend in Ethiopian E. led to the emergence of genuine Amharic literary works, which in fact had already appeared during the times of *aṣe* Tewodros II (1855–67), but their emergence had been prepared by the epistolographic developments of the *Zämänä mäsafənt*.

The next period (the times of *aṣe* Tewodros II, Yoḥannəs IV [1872–89] and Mənilək II [1889–1913]) was important for the development of Ethiopian E. The process of the "Amharization" of correspondence progressed; Amharic, not Gəᶜəz, became the language usually used in the *incipits* of the letters, e.g. Amh. **የተላከ፡ ከ** ... **ይድረስ፡ ወደ/ከ** ... *yätälakä kä ... yədräs wädä/kä* ..., instead of previously typical Gəᶜəz **ዛቲ፡ ጦመር/መልእክት፡ ዘተፈነወት፡ እምኀበ** ... **ትብጻሕ፡ ኀበ** ... *zatti ṭomär/mälʾəkt zätäfännäwät əmḫabä ... təbṣaḥ ḫabä* ... for 'may [this letter] sent from ... reach ...'. This period is also partly represented in

Acta Æthiopica, but these particular letters have been taken mainly from the archives of European foreign offices and therefore deal mostly with foreign correspondence. For the samples of correspondence with European leaders s., e.g. Bairu Tafla (2000), where structures of E. are well documented. Meanwhile, during this period, a new type of correspondent appeared in Ethiopian E.: this was the missionary-educated Ethiopian who wrote to his teachers. Up to now these letters had not attracted any scholarly attention, though they are available in various missionary archives (both private and official) and offer important insights not only into the history of various missions in Ethiopia, but also into the course of the emergence of modern social thought and the development of westernization in the country. Unfortunately, the later periods of Ethiopian E., important as they are, remain unstudied, with the lack of available sources being the main hindrance. The majority of these letters, available in various archives, are neither described nor mentioned in catalogues (Platonov 1996 being a rare exception), let alone published. And letters still exist in non-governmental archives both in Ethiopia and elsewhere and potentially offer a vast field of research.

Sevir Chernetsov

Ep̣p̣isqop̣p̣os

The term E. (ኤጲስቆጶስ, also ኤጲስ፡ ቆጶስ, 'bishop', from Greek ἐπίσκοπος, 'overseer, bishop') was always clear in the Ethiopic context, even though it was sometimes interchanged or confused with the term ↗*p̣ap̣p̣as*, 'bishop, metropolitan [as head of the ↗Ethiopian Orthodox Täwaḥədo Church]'. E. ranked after the patriarch (*liqä p̣ap̣p̣asat*, in the case of Ethiopia – the head of the ↗Coptic church) and metropolitan or archbishop (*p̣ap̣p̣as*). A wide range of books of ecclesiastical law, translated into Gəʿəz (↗*Qälemənṭos*, ↗*Kidan zäʾəgziʾənä Iyäsus Krəstos*, chs. 11, 54f.; the so-called "Church Order of Hippolytus", ch. 1, and particularly ↗*Fətḥa nägäśt*, ch. 5) expose the idea of the apostolic origin of the episcopal office, the position of the E. within the ecclesiastical hierarchy and his responsibilities towards the Church and the faithful. The episcopal office, however, was established and incorporated into the hierarchy of the Ethiopian Orthodox Täwaḥədo Church only in the 20th cent.

It is assumed, that up to modern times Ethiopia was never properly divided into smaller ecclesiastical provinces, or dioceses. Usually no other bishops were installed, who would have been the suffragans of the ↗*abun*, making him metropolitan, or archbishop in the proper sense of the word. Since its foundation, the Ethiopian Church was formally under the jurisdiction of the Coptic Patriarchate, and the exclusive right of the Egyptian Patriarch to consecrate the *abun*, chosen from Coptic monks, was recognized by the Ethiopians themselves. The absence of local bishops was one of the main formal obstacles to the autocephaly, for a patriarch could be ordained by a sufficient number of bishops only.

There is some vague and scattered evidence that before the 14th cent. the organization of the Ethiopian Church might have been different. One difficulty is that the antique sources speak sometimes indiscriminately of "bishops" with reference to Aksum. Leaving aside the clay lamp with the inscription "Αββ[α Ἰωσὴ]φ ἐπίσκο(πος) (RIÉ 282), found at ↗Adulis but clearly imported from Egypt, Pseudo-Palladius tells about a certain Moses, Bishop of Adulis (s. Monneret de Villard 1947). An old Coptic tradition knows "four bishoprics" in the ecclesiastical province of *Nieksamitis* ("the Aksumites", s. Conti Rossini 1913:394), but their names can hardly be identified. According to the *History of the Patriarchs*, during the tenures of the Coptic Patriarch Gabriel II (1131–46) and *abunä* Mikaʾel, an (unnamed) Ethiopian king requested the Patriarch and the Caliph al-Ḥāfiẓ consecrate more bishops for his kingdom, but his request was refused; the text specifies that there could be not more than seven bishops in both Nubia and Ethiopia.

The Ethiopian sources report of other personalities (at least some of them definitely Ethiopians) bearing the title of E. The E. ʿƎzra, Yərdaʾ

Mikaʾel and Samuʾel are mentioned after *p̣ap̣p̣as abba* Mikaʾel; E. Ḫaräyo is mentioned after *p̣ap̣p̣as abba* Giyorgis in two land charters granted by *nəguś* Lalibäla to the monastery of ↗Däbrä Libanos of Šəmäzana (s. CRDLib 13, 16). Of special interest are authors of the homilies listed in the 14th cent. ms. EMML 1763 (and the relevant group of homiliaries): "blessed and saintly Minas, E. of Aksum", "Tewoflos, E. of Aksum", Ǝlyas, Luləyanos (cp. ibid., *abba Yoḥannəs p̣ap̣p̣as zäʾityopya*), for they are indeed metropolitans, none of whom, however, are attested in other sources (cp. BrakKirche 124).

By the 15th cent., the pattern of the E. office in Ethiopia gets clearer. We know of E. Mikaʾel in a land charter of ↗Däbrä Ḥayq Ǝsṭifanos granted by *aṣe* Zärʾa Yaʿəqob (Taddesse Tamrat 1970:106, n. 101). Among the E. who came from Egypt, accompanying new metropolitans the best known is *abba* Yoḥannəs. He arrived together with metropolitans ↗Gäbrəʾel and Mikaʾel about 1440 (CerMaria 117), he was the author of the Homily in honour of *abba* ↗Gärima (s. Conti Rossini 1898:141f.) and, most probably, of some other works. Later, in 1480/81, *aṣe* ↗Ǝskəndər dispatched a mission to Egypt: according to local Ethiopian sources, it brought back two metropolitans, ↗Yəsḥaq and ↗Marqos, and two E., Mikaʾel and Yoḥannəs (Kur 1972:88), both deemed to be "coadjutor bishops" (s. Tedeschi in: CE, 1015), that is, in principle, without the right of succession; later they were followed by a few other ecclesiastics. A recent enquiry into contemporary Arabic documents of the Coptic Patriarchate has provided important evidence that, when Yəsḥaq died before 1497, he was formally succeeded by Yaʿəqob, his auxiliary metropolitan, and only later by E. Marqos, who had meanwhile become the auxiliary to Yaʿəqob (on this rather complicated but exemplary dossier s. Fiaccadori 2004).

It seems that the most important function of the E. was to assume the responsibilities of the *abun*, e.g., in case of his sudden death or grave illness. Being formally next in rank to the acting metropolitan, the E. was a highly esteemed ecclesiastic, but, unless he was asked to substitute the *abun*, it is not quite clear what his exact rôle in church life was. In most cases E. appears to have been a titular bishop, having no real power or jurisdiction. Otherwise an E. could be an assistant of the officiating metropolitan. However, there are clues that at least in some cases an E. might have acted with the same authority as the *abun*, at least ordaining priests (cp., e.g., CRRicBerhan II, 19f., 154).

Some Ethiopian ecclesiastic circles cherished the idea of independence from the Coptic Patriarchate, a constituent part of which being the division of the immense bishopric of Ethiopia into dioceses, with the episcopal offices occupied by Ethiopians. The vision of the country divided into two dioceses, one under the *abun*-metropolitan, another under the administration of an Ethiopian E., with the right to consecrate priests and ↗*tabots* is described in the early-16th-cent. Vita of *abba* ↗Täklä Haymanot (s. Budge 1905, ch. 96). This, however, had not become a reality even as late as in the 19th cent., for after the death of *abunä* Atnatewos *aṣe* ↗Yoḥannəs IV managed to bring to the country four Egyptian bishops in 1881: metropolitan (*liqä p̣ap̣p̣asat*) *abunä* ↗P̣eṭros and coadjutor bishops (called *p̣ap̣p̣as* in the Chronicle of Yoḥannəs, s. BTafY 153) Matewos (to be the bishop of Šäwa), Marqos (Bägemdər and Səmen), Luqas (Goǧǧam). They were not entitled to consecrate other bishops. After Marqos died in 1882 and Luqas in 1901, their episcopacies remained vacant, and, as in the past, the consecration of clergy for the numerous churches of the vast country was invested in the hands of only two persons.

The situation improved only in 1928, when *ras* Täfäri Mäkʷännən (later ↗Ḫaylä Śəllasse I) undertook energetic efforts and agreed with the Coptic Patriarchate that, apart from the metropolitan, who would be a Copt according to old tradition, five Ethiopians (including *əččäge* Gäbrä Mänfäs Qəddus, s. ↗Säwiros) would be consecrated bishops. After fulfilment of this agreement in 1929, the consecration of Gäbrä Mänfäs Qəddus took place not in Egypt, but in Ethiopia, in January 1930. In January 1931 the responsibilities of the bishops (Säwiros, Abrəham, P̣eṭros, Mikaʾel, Yəsḥaq) and the limits of their dioceses were established (Shenk 1972:74). The reshaping of the Church administration was interrupted in 1935 by the Italian occupation. However, in 1937 a synod, summoned under the auspices of the Italians in the absence of *abunä* Qerəllos, proclaimed Abrəham, bishop of Gondär, archbishop (*p̣ap̣p̣as*) and nominated six new bishops (during the short office of Abrəham a total of 12 bishops were consecrated). In 1939, as *əččäge* Yoḥannəs substituted for the deceased Abrəham (Shenk 1972:148), other new bishops were ordained: Filəppos, secretary to Yoḥannəs, Gorgoryos for Wällo, Atnatewos for Goǧǧam, Matewos for Šäwa, suffragan bishop Qerəllos for Eritrea; in January 1940 suffragan bishop Zäkaryas was ordained for Jerusalem. After the end of the Italian regime, only Filəppos, Matewos, Marqos and Qerəllos received ordination again and remained in the Church (Shenk 1972:191).

Consecrations of the further E.-bishops coincided with the drive of the Ethiopian Church to full independence and took place in July 1948 (↗Basəlyos was ordained for Šäwa, Mika'el for Gondär, Tewoflos for Harär, Yaʿəqob for Wälläga, Timotewos for Sidamo). Having become the first Ethiopian archbishop, on 2 September 1951 Basəlyos consecrated five further bishops: Marqos for Eritrea, Filəppos for Jerusalem, Gorgoryos for Käfa, Tadewos for Illubabor, Gäbrə'el for Wällo. With the consecration of three more bishops (Säwiros for Gämu Gofa, Marqos for Goǧǧam, Luqas for Arusi) on 23 May 1953 and bishop Yoḥannəs to replace the deceased Yəsḥaq, bishop of Təgray, on 27 July 1956 (Shenk 1972: 205f.), the number of bishops increased to 14 (including one for the monastery of ↗Dayr as-Sulṭān in Jerusalem and one for Eritrea) – according to the number of the provinces. On 28 June, 1959, as Basəlyos became the first Ethiopian patriarch (*patriark* or *rə'əsä liqanä pappasat*), he ordained further bishops (all of them being elevated to archbishops). The establishment of dioceses more or less coinciding with administrative limits of the provinces completed the delineation of the territorial administration of the Ethiopian Orthodox Täwaḥədo Church.

ʿƎqa bet

The ʿƎ.b. (**ዕቃ፡ ቤት**, lit. 'storehouse, storeroom', from Amharic *ʿəqa*, 'thing, object' and *bet*, 'house') was a separate hut in a nobleman's household where his ceremonial clothes and valuable domestic utensils were kept under the supervision of a chamberlain (**እልፍኝ፡ አዛዥ**, *əlfəñ azzaž*). In poorer households all this was kept simply in chests which were in charge of the same chamberlain. This way of keeping things was quite practical for everyday noblemen's camp life, which limited the bulk of personal property.

In churches and monasteries the room with the same function, i.e. the sacristy, is also called ʿƎ.b. In it those ecclesiastic items (**ንዋየ፡ ቅድሳት**, *nəwayä qəddəsat*) are kept which are only used during church services, such as sacred vessels, liturgical garments (↗Clothes), umbrellas (↗*Dəbab*), ↗crosses, ↗manuscripts and icons. The Ǝ.b. is an important part of every Ethiopian church. In the early churches, chambers attached to one of the sanctuary's side rooms might have had the function similar to that of the ʿƎ.b. Approximately beginning with the 17th cent., the ʿƎ.b. is separated from the main church building and located north-east of it. In northern Ethiopia the ʿƎ.b. may be a solid one- to three-

Interior of *ʿəqa bet*; Yəḥa, Ǝnda Abba Afṣe Church; photo 2000, courtesy of Michael Gervers storied stone tower, round (as in the church of Ǝnda Śəllase, ↗ʿAdwa) or rectangular (Mädḫane ʿAläm, ʿAdwa). This ʿƎ.b. usually stands within the church precinct, like in the Arbaʿəttu Ǝnsəsa church of ↗Aksum, or it is sometimes built as part of the churchyard wall, as in Abba Liqanos, near Aksum (remains of the same type of ʿƎ.b. are typical for the Ṭana region, e.g., the 17th-cent. ↗Narga Śəllase church). Elsewhere the ʿƎ.b. is a simple round or rectangular hut; it is less solid than the church building and needs frequent reparation, but can be easily rebuilt (cp. Ṭana Qirqos, Daga Ǝsṭifanos). Large churches may have more than one ʿƎ.b. (cp. ↗Aksum Ṣəyon). Being the main treasury of the church or monastery, the ʿƎ.b. is carefully guarded by the sacristan; all non-authorised entries are strictly forbidden.

A sacristan of a church is called *qesä gäbäz* (lit. 'priest [in charge] of the treasure', cp. ↗*Gäbäz*), and that of a monastery, which usually possess much more property and many more items, is called ↗*mäggabi* ('steward', 'administrator').

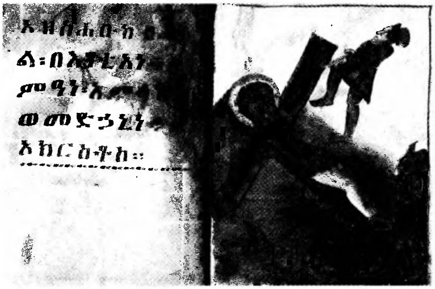
ʿƎqäbänni

ʿƎ. (**ዕቀበኒ**, lit. 'protect me') is the name of a long litany addressed to Jesus, in which every petition begins with the words: **ኦ፡ እግዚእየ፡ ኢየሱስ፡ ክርስቶስ፡ ዕቀበኒ፡ በእንተ** ... (O *əgziʾəyä Iyäsus Krəstos ʿəqäbänni bäʾəntä* ..., 'Oh my Lord Jesus Christ, protect me, for the sake of ...'; Grébaut 1935:427) or similar formula. The text is found in several magic scrolls (SixDeu 433f.) and a number of miscellaneous manuscripts containing anaphoras, prayers, *mälkəʾ*-hymns etc. The earliest of them (ms. Paris, BN Éth. 54) can be dated back to the 16th cent.



Page of text and miniature depicting the Raising of the Cross; ms. *ʿƎqäbänni*; Aksum, treasury of the old cathedral; fol. 3r; late 18th cent.; photo 2000, courtesy of Michael Gervers

In the prayer Jesus Christ is beseeched to give the faithful his protection, first for the sake of the Holy Virgin Mary and Her love, and then for the sake of certain New Testament characters (the Magi, the people who gathered to hear Christ's preaching etc.) and events from Christ's life (ranging from the Nativity to the Resurrection).

The prayer ʿƎ. draws its inspiration from the irresistible prayer of St. Mary in the "Covenant of Mercy" (s. *Sənkəssar* on 16 *Yäkkatit*; s. ↗*Kidanä məḥrät*) stipulated with her son Jesus for her devotees, which runs: "I beg you for my breast which you suckled [...] for my womb which carried you during nine months and five days [...], for my lap on which I held you [...], for my lips which have kissed you [...], for my hand which embraced you [...], to remunerate with the great prize that you have and that 'no one ever saw or heard, no one ever thought could happen' those who give to the needy alms, to the afflicted comfort and make commemoration of me and build churches in my honour".

Some manuscripts are extensively illustrated by full-size miniatures which depict the events of Christ's passion. All presently known examples were exectued after 1850 and represent the so-called second Gondärine style.

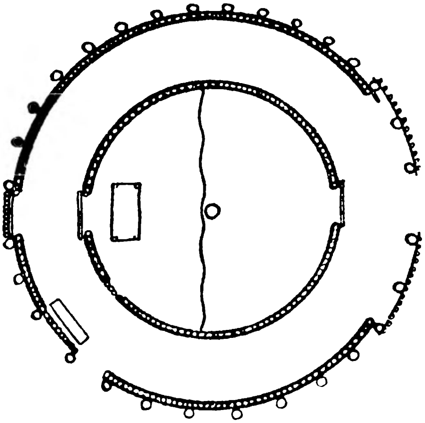
Eqo

E. (also *Heqo* or *Eeqoo*) was an element of the ↗Käfa traditional religion during the time of the kingdom which continues to be followed by a segment of the Käfa population today. Many traditions link the origin of E. to that of the Käfa kingdom itself.



The ground plan of a classical *Eqo* sanctuary; from Bieber 1920

E. is a spirit that dwells in a person belonging to a certain clan. The spirit is passed from generation to generation in that particular clan. The person in whom the E. dwells is known as *allamo* (a kind of priest or spirit medium). There is also a supreme E., referred to as *dooči*, which ranks above all E., and a supreme *allamo*, the *ibeda godo*. To be accepted as legitimate, all lower *allamo* have to be confirmed and then blessed by the supreme *allamo*. All E., including *dooči*, are believed to be spirits in the service of the high god Yeri. The name Yeri is today used by Christians as the name of their god.

The temple of the supreme E. is located close to the palace where the *ibeda godo* serves the king (↗*Tato*). Guided by the supreme E., the supreme *allamo* counsels, consults with and guides the king in important matters, including wars.

Like several other peoples of Käfa origin, inhabitants of the historic ↗Anfillo kingdom also worshipped E. (Bieber 1920:158).

Amanuel Karlo Gano

ʿƎqqub

ʿƎ. (**ዕቁብ**) is a popular traditional credit association, which is widely spread, mainly in the urban and to a certain extent in the rural areas. It has a strong social and economic value since it brings people of common interest together for the main purpose of saving money without going into the ↗banking system. There is disagreement about the origins of ʿƎ., though functionally it is similar to rotating credit associations found in India, South East Asia and elsewhere in Africa, which supports the theory that it was brought to Ethiopia by Indian merchants in the late 19th cent. In contrast, a more frequently quoted theory argues that ʿƎ. developed out of the ↗Gurage "milk–*ʿəqqub*", an association of neighbouring women. Milk is given weekly by all members and accumulated by one member in turn.

ʿƎ. comprise of a specified number of persons (**ዕቁብተኞች**, *ʿəqqubtäññoč*) depending on whether the contributions are made monthly, bi-weekly, or weekly. In practice, however, these individuals represent shares whereby two or more people can pool their resources to make up a full share. This fact allows people from different income brackets to participate. Because of the elasticity in defining a share, the recruitment profile of an ʿƎ. is rather open and unrestricted. Not only can people from different income brackets participate, but most ʿƎ. are open to women, young and old alike, workers from diverse occupations and people from different ethnic groups and religions. On the other hand, there are ʿƎ. which are highly restricted.

ʿƎ. payments are made to a chairperson called a ↗*daňňa* (lit. 'judge') and ʿƎ. is administered by a secretary, both elected from the members of ʿƎ. due to their high integrity, commanding respect and trust of all members. Then they orchestrate the lottery and disperse the fund to the lucky winner. The essential principle involves rotating access to a continually reconstituted fund. The person who receives the fund becomes indebted to all the other members until each participant has received his share. Three additional details are noteworthy. First, highly effective methods evolved to prevent an early recipient absconding with the money and thus failing to repay the other participants. By the 1960s the protocols of ᶜƎ. were sufficiently formalized for the default rate to become exceedingly low. Part of their success was their ubiquitous presence and the growing realization that to default in one ᶜƎ. would severely restrict one's access to another. Second, once all participants received their share, the ᶜƎ. was informally dissolved and a new rotating credit association was initiated. A few large ones have operated in this perpetual state of reconstitution for upwards of 50 years. Third, exceptionally complex credit-extension mechanisms developed so that an early recipient, who did not immediately require the extra money, could lend it out to others at interest. In other words, the luck of the draw enabled an early recipient to become a small-time money lender or facilitated other modes of capital creation.

Ethiopians' attitudes towards savings accounts changed little between the 1920s and the 1970s. Ethiopians preferred the informal savings and credit opportunities of ᶜƎ. over formal banking. Gradually, as the formal sector expanded, ᶜƎ. were no longer viewed as an alternative, but as a complement to formal financial institutions. Since the ↗Revolution ᶜƎ. have spread into all areas of economic life. The Marxist slogan during the *Därg* regime, "man became man due to work", was popularly converted to "man became man due to ᶜƎ.".

Nowadays ᶜƎ. are ubiquitous throughout the rural countryside from border to border; they span the social ladder from poor shoeshine boys to the wealthiest import-exporters; they have been recognized as viable capital-generating mechanisms by both government and NGOs; and they are so much a part of the salaried workplace that they have begun to institutionalize themselves as workers' credit and insurance agencies.

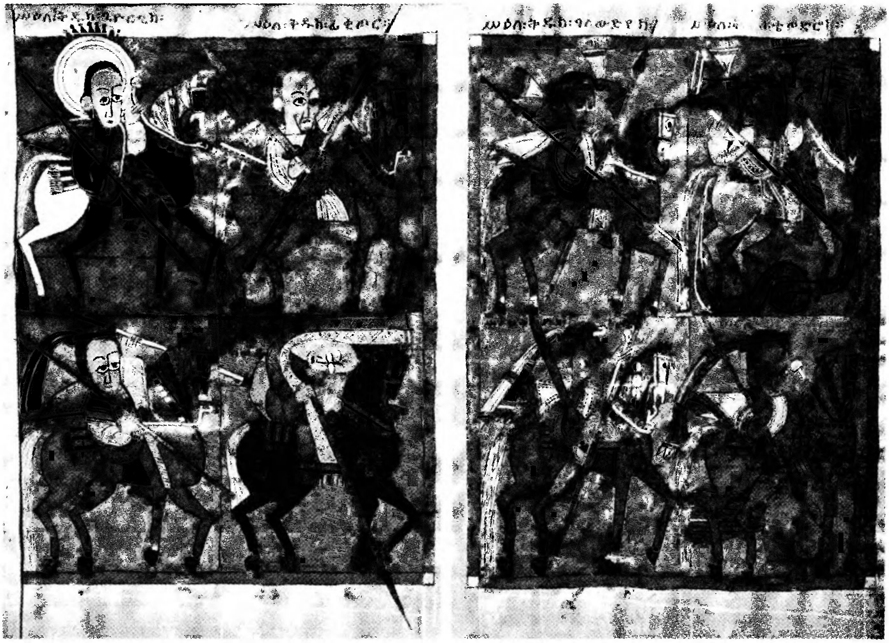
Charles G.H. Schaefer – Amsalu Aklilu

Equestrian saints

In Ethiopian pictorial tradition, the warrior or military saints are invariably represented as mounted knights, or E.s. In the Christian East, the cult of the warrior saints was spread, as it seems, even independently from that of their relics. They were conceived as *milites Christi* or *milites Dei* and *caelestis militia.* This status granted them an important apotropaic function, since they were invoked mainly as protectors against diabolical and human enemies. In Ethiopia, their cult developed under longstanding religious and cultural influence of the ↗Coptic Church, but their special popularity may be accounted for the political situation of the Christian monarchy, constantly involved in military conflicts with its Muslim neighbours. The introduction to Ethiopia in the 14th cent. of the ↗*Gädla sämaᶜətat* may have also played an important role.

The iconography of the E.s. developed in the ↗Byzantine Empire and in the Christian Orient was more or less directly relying upon antique triumphal imagery. The saints were depicted on horseback, but not necessarily wearing military dress. They were armed with sword, shield, spear or lance. A surmounting cross transformed the spear or lance from simple weapons into glorious *vexilla Christi.* Another attribute of the E.s., connected with triumphal iconography, was a crown or a wreath, also recalling the martyrdom of their bearers. The crown could be presented by a divine or angelic hand turning up out of the sky. E.s. were often portrayed in the symbolic scene representing the victory of Good over Evil: i.e., as involved in conflict with a real or fabulous vicious creature or with a wicked person, usually depicted as a misshapen figure with bestial features.

Generally, the Ethiopian artists followed this iconography of E.s. (in particular, the formulas developed in 13th–14th cent. in Coptic ↗Egypt) but many of peculiar local features can also be observed. For instance, from the end of the 15th cent. their richly ornamented horse trappings, weapons and clothes reflect the garments and accessories of Ethiopian nobility. Moreover, the iconographic type of each saint was not strictly defined. The physical features (age, colour of hair) and attributes (garments, weapon, horse's colour, defeated enemy) were not consistently applied by Ethiopian artists. Consequently, it is not always possible to recognize the saint if he is not depicted in a narrative scene or accompanied by an inscribed caption.



The Saints George, Victor, Mercury, Claudius, Theodore, Aboli, Mar Bəḫnam; miniatures from a 15th/16th-cent. Gospel Book; Ṣäwne in Təgray, Church of St. Mary; fol. 32r, 59r; photo 2004, courtesy of Michael Gervers

The apotropaic function of the representations of E.s. is particularly striking in Ethiopia. Their portraits are placed near the entrances to a church and close to the sanctuaries (↗*Mäqdäs*). From the 17th cent. long suites of E.s. appear on the north exterior wall of the *mäqdäs*, i.e., facing the direction considered to be the abode of evil powers. E.s. also entered the pictorial repertory of ↗magic scrolls (e.g., ms. London, BritLib Orient. 12,859, 18th cent.: out of seven figures, only George can be identified, thanks to the inscription). The folded parchments in which each section is decorated with a portrait of a holy rider (e.g., ms. IES 3554, 17th cent.: ↗George [Giyorgis] of Lydda, Theodore [Tewodros], Mercury [↗Märqorewos], Victor [Fiqṭor], Mar Bəḫnam, Basilides [Fasilädäs], Justus [Yusṭos], Eusebius [Awsəbyos], Claudius [↗Gälawdewos], Menas [Minas], Abadir) were not only devotional but also apotropaic objects.

Among the pictures of Ethiopian E.s. three main representational categories can be distinguished: 1) simple portrait of the saint armed with a lance or spear and holding the reins of his horse; 2) saint spearing an enemy; 3) saint according to one of the aforementioned types placed in a narrative scene. All these formulas were applied throughout the centuries until modern times; very generally, it can be said that the narrative scenes appear mostly in old paintings (12th–14th cent.), while the simple portrait was particularly popular in the 16th cent. and the saints fighting with Evil were favoured from the 17th cent.

The oldest known Ethiopian representations of E.s. (four anonymous figures) are preserved in the church of ↗Yəmrəḥannä Krəstos in Lasta and date to the end of the 12th cent. From the late 13th cent. the E.s. are known from ↗Gännätä Maryam: George rescuing the captured youth, and Mercury, accompanied by the cynocephalos, spearing Julian the Apostate; ↗Waša Mikaʾel near Gašäna, Wällo: George punishing the destroyer of his shrine, and Cyriacus (↗Qirqos); Əmäkina Mädḫane ʿAläm: George punishing the destroyer of his shrine, Theodore and snake, Victor, and Mar Bəḫnam; Betä Maryam in ↗Lalibäla: relief on the façade with two confronting, anonymous riders. From the 14th cent. remarkable are the paintings in the churches in ↗Gärʿalta: Harägʷa Mikaʾel (recently destroyed): George rescuing the youth, Theodore and Mercury; Bilbalä Qirqos: Cyriacus; Qorqor Maryam: Theodore and snake. A 14th-cent. *Gädla sämaʿǝtat* in Astit Kidanä Mǝḥrät, Ankobär (ms. EMML 2514) has remarkable miniatures of Mercury and George. From the 15th cent.: in Gärʿalta, Qʷärqʷär Danǝʾel: Mercury, Theodore the Oriental and snake, George; the monastery of ↗Däbrä Ṣǝyon: Claudius; George and snake, Mercury and Julian the Apostate. Psalters, ms. Paris, BN, d'Abbadie 105: George rescuing the youth, Theodore and snake (CRAbb 47f.). Paris, private collection: Mar Bǝḥnam, Theodore; London, collection of R. McCarthy: Theodore, George; two *Gädla sämaʿǝtat*, ↗Däbrä Maryam Qʷäḥayn, Säraye: George; ↗Gäbrä Krǝstos and Theodore, Mar Bǝḥnam. A manuscript with ↗*Täʾammǝrä Maryam*, Oslo/London, the Schøyen collection: Claudius, George, Theodore the Oriental. Processional cross, Addis Ababa, ms. IES no. 6038: George; painting on wood, Addis Abäba, ms. IES no. 4053: Theodore the Oriental; Basilides; Mercury, Aboli; George; Claudius, Lalibäla. Fragment of a manuscript, Munich, Staatliches Museum für Völkerkunde, no. 86–307643: George, Theodore, Victor, Claudius (Mercier 2000:88).

The popularity of each E.s., measured by the number of times they are represented, is variable. Most frequently depicted are George, Theodore and Mercury. These three are also described in the *Apparition of the Virgin Mary at Däbrä Mǝṭmaq* (s. the *Sǝnkǝssar* on 21 *Gǝnbot*, BudSaint 917f.) and it is possible that this text influenced their iconography.

Since three warrior saints bear the name of Theodore (Tewodros) it is not always clear which of them is referred to: Theodore of Rome called Tiron or the Recruit (28 *Yäkkatit*), Theodore the Oriental, called Bänadǝlyos or Mǝśraqawi (12 *Ṭǝrr*), or Theodore the Stratelates (20 *Ḥamle*). Theodore, whoever he may be, is usually represented as a mature, bearded man on a brown horse slaying a snake. The scene recalls one of Theodore Tiron's miracles: the saint with divine help rescued a woman attacked by a snake when she was drawing water from a spring. In another version of the story, the snake was a local menace blocking the road to the saint's place of birth – Euchaïta. Some paintings show T. spearing a figure identified by the inscription as the "king of Qʷǝz" (triptych IES 4792), probably the illustration of a legend about Theodore the Oriental and his victory over a Persian commander.

The age and appearance of Mercury (commemorated on 18 *Mäskäram*) are not strictly defined, but he usually rides a dark or black horse and is armed with a sword. If he receives the sword from an angel, the image portrayed is the vision experienced by his fellow soldier (e.g., Aksum, Ǝnda Iyäsus). Märqorewos is most often depicted slaying Julian the Apostate – a scene which refers to his best-known posthumous miracle and may be complemented by the figures of saints Basil and Liberius who, according to some versions of the story, were witness to the event. The topic about the *cynocephali*, who became Christians, and Theodore's attendants is sometimes also illustrated (e.g., Gännätä Maryam church; ms. Genève, Eth. Mus. no. 21,051).

Ten E.s. forming the so-called Basilides's family, were all acquaintances of general Basilides (Fasilädäs; 11 *Mäskäräm*), brother-in-law of the Roman Emperor Numerianos, and all died as martyrs under Diocletian. The iconography of these saints, with a few exceptions, does not follow clearly defined rules. They bear the standard attributes of the warriors and their defeated enemy is haphazardly chosen. If these adversaries are humans they are represented on the ground, brandishing swords or spears and protecting themselves behind a shield. They sometimes wear Muslim turbans. The representatives of this group usually appear in long suites, which from the 17th cent. decorate the northern exterior wall of the *mäqdäs* in almost every church. We find there Basilides's two sons Eusebius (23 *Yäkkatit*), Macarius (Mäqarǝs; 14 *Mäskäräm*) and two sons of Basilides's second sister: Justus (25 *Ḥamle*) and Abadir (28 *Mäskäräm*). Her third son, Claudius (11 *Sane*), is one of the most popular Ethiopian saints. He is depicted either without distinctive attributes or spearing a centaur, that probably represents a member of the tribe defeated by the saint (legendary Qʷǝz or Beğğa), or the idol to which C. refused to sacrifice.

Claudius's friend Victor (27 *Miyazya*), son of the emperor Numerianus and Basilides's sister, was also popular. He is usually depicted on a dun horse. In some early representations he receives the crown of martyrdom from an angel. The illustration refers to the vision of a maiden mentioned in Victor's Vita. Sometimes a building is included in the scene, typifying either the shrine of the saint or the bathhouse where he was once tortured. Justus's son Aboli (1 *Näḥase*), Basilides's brother Stephen protomartyr (Ǝsṭifanos; 9 *Təqəmt*) and Theodore the Oriental (the son of Basilides's sister) also belong to this group.

The remaining eleven E.s. can be divided into two groups – the saints with relatively well-known legends that influenced their iconography, and a few minor personalities who, as standardised figures, are only appearing in the extensive suites of E.s.

Cyriacus, or better Quiricus (15 *Ṭər*), joined the E.s. at an early stage, but his iconography seems not to have a textual foundation, since, according to the legend, he died the martyr's death as a three years old child, together with his mother St. Julitta (Iyäluṭa). They are also often represented together, from the 17th cent., in a scene of torture on a fiery gridiron.

Menas (15 *Ḫədar*) was a soldier in Phrygia. His body was taken to Egypt and buried in Mareotis near Alexandria. His common portrayal as an adolescent orans flanked by two camels is unknown in Ethiopia, where he is always represented as a middle-aged warrior. This iconography is probably influenced by the descriptions of his frequent apparitions at the shrine, conveyed in the collection of his miracles well known in Ethiopia. A building is sometimes added to early representations of Minas, symbolising his church in Mareotis.

Mar Beḥnam (also Märbəḥnam/Marməḥnam; 14 *Taḫśaś*) is a Syrian saint converted by the anchorite Matthew; he was tortured and put to death together with his sister Sara and 40 attendants. When he is represented spearing a monster, this probably reflects his Vita, which recounts that his conversion took place during a wild beast hunt or refers to his power to chase the evil spirits.

Sisinios (↗Susənyos; 26 *Miyazya*) is venerated as the protector of newly-born children strangled by a female demon – his sister Wərzəlya in Ethiopian tradition. Susənyos is usually depicted spearing her with his lance. This picture appears frequently in magical scrolls.

Gigar (16 *Näḥase*) is known from the legends of the Virgin Mary describing the Flight of the Holy Family to Mount Lebanon. According to this story, Gigar, the governor or judge in Syria was protector of the Holy Family, and on account of this he was tortured by order of Herod and finally beheaded. Gigar is depicted taking revenge on the king, either spearing him or beheading him.

Philoteos (Filatäwos; 16 *Ṭərr*), is represented killing the bull called Maragäd, an idol worshiped in Antioch.

Seldom represented are: the holy physicians Sergius (Särgyus; 10 *Ṭəqəmt*) and Bacchus (Bakos; 4 *Ṭəqəmt*), Sebastian (Səbästyanos; 25 *Ṭərr*) and ↗Gäbrä Krəstos ("the man of God", i.e. St. Alexis, 14 *Ṭəqəmt*; thus, in the pictures he may be given the status of knight).

Also represented as E.s. are the four kings of the ↗Zagʷe dynasty, recognised as saints by the Ethiopian Orthodox Church: ↗Lalibäla, ↗Yəmrəḥannä Krəstos, ↗Näʾakʷəto Läʾab and Harbe or Harbay (e.g., ↗Wəqro Mäsqäl, Säqoṭa). It is also the Archangel Michael, depicted as *archistratigós* or the commander of the heavenly host: so he appears in the frontispiece miniatures of ↗*Dərsanä Mikaʾel*. Finally, ↗Alexander the Great in the guise of a pious king and warrior fighting against supernatural powers and strange people is portrayed as the holy rider, usually ascending to heaven while mounted on his horse Bucephalus. Besides manuscripts, he is represented likewise in magical scrolls (e.g., Paris, Musée des arts d'Afrique et d'Oceanie, ms. no. 82) and in church murals (e.g., Amanuʾel church in Balč̣i).

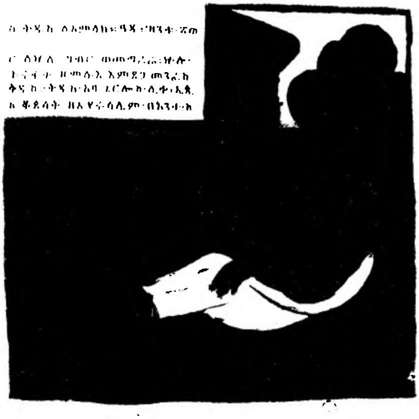
ʿƎrräfta

ʿƎ. (**ዕረፍት**, lit. 'Her falling asleep'), the feast of the Dormition of ↗Mary, is celebrated by the ↗Ethiopian Orthodox Täwaḥədo Church on 21 *Ṭərr* [29 January], whereas the feast of the Assumption of Mary's body to Heaven takes place on 16 *Näḥase* [22 August] (↗*Fəlsäta*). The commemoration of both as unmoveable ↗feasts was enforced by *aṣe* ↗Zärʾa Yaʿəqob, the 15th-cent. patron of the veneration and cult of Mary; accordingly, the celebrations must already have been established by the time he announced the 32/33 annual feasts to be included in the liturgical cycle (↗Calendar) and gave orders to translate the Introductory Rite (*Mäṣḥafä śərʿat*, 'Book of the Rules') of the Miracles of Mary from Arabic into Gəʿəz in 1441 (Getatchew Haile 1992; Heldman 1994:163ff.). The feasts of the Dormition (ʿƎ.) and Assumption (*Fəlsäta*) are part of the five main commemorations of Mary (alongside the *Kidanä Məhrät*, ↗*Lədäta* and *Qəddase Beta*).

The celebration of the Dormition and Assumption as two different feasts is related to the tradition of the ↗Coptic Church, celebrating the Dormition on the 21 *Ṭūba* [29 January] and the Assumption of Mary and apparition of her body to the Apostles on the 16 *Misrā* [22 August]. It dates back to the 6th cent. and originated from a Gnostic legend of St. Mary's death (Daley 2001: 81). Between the Dormition and the Assumption there is a time-span of seven months (206 days); the Assumption is the last celebration of the liturgical year of the Ethiopian Orthodox Church. As the *Sənkəssar* reading for 16 *Näḥase* has it (GuiSyn III, 335–39; BudSaint 1222ff.), the Apostles had to wait fasting for two weeks before Mary appeared in front of them; as a memorial of that, the believers fast for two weeks before the feast of the Assumption. In addition, the feast of Mary's Dormition is commemorated on the 21st day of each month.



Burial of St. Mary; miniature; ms. *Laḥä Dəngəl*; 18th cent.; church in Ǝnda Abba Ḥadära, Tämben; fol. 144r; photo 2002, courtesy of Michael Gervers

Both the Dormition and the Assumption are important themes in Ethiopian iconography. The depictions of the Ascension, rare before the 17th cent., show Mary surrounded by the twelve Apostles (Chojnacki 2000:193) or by the angels (Assunta type). Ethiopian painters were mostly influenced by the narratives for both feasts given in the *Sənkəssar* (21 *Ṭərr* and 16 *Näḥase*). A triptych of the Dormition ascribed to Nicolò ↗Brancaleone (in the collection of the IES, Addis Abäba, previously at the monastery of ↗Getesemane Maryam, Goǧǧam), which could have influenced Ethiopian iconography of the scene, has a legend that reads: "How the Apostles gathered together on the clouds of the sky with the angels when Our Lady Mary went to Heaven" (ChojPaint 293). The scenes of Dormition and Assumption depicting the figure of Christ (the model originating from Byzantine iconography) appear first at the end of the 19th cent.

St. Mary's grave in Gethsemani, at the church of the Tomb of the Virgin Mary (or: of the Assumption) in ↗Jerusalem, is highly venerated by Ethiopians and is still today a place for pilgrimage to them. A small Ethiopian community has been established in this church, with its own altar at which they celebrate their liturgy, since the

15th cent. (CerPal vol. 1, 307–11). There is still an Ethiopian property near the Tomb of Our Lady (Stoffregen-Pedersen 1983:9).

ʿƎräfta lämaryam: Mäṣḥafä ʿəräfta lämaryam

M.ʿə. (**መጽሐፈ፡ ዕረፍታ፡ ለማርያም**, 'The Book of Mary's Dormition') is a work describing the circumstances of the death, or more precisely the "falling asleep" (Gəʿəz *ʿəräft*, Gr. κοίμησις, Lat. *dormitio*) of the Virgin ↗Mary in Jerusalem. The work (*Liber Requiei*) is divided into five chapters ("books"; Arras 1973:1–84). The first tells how Mary receives a book from the hand of a "great angel", who informs Mary of her early departure from the earthly life; the second reports how she went to the Mount of Olives (Däbrä Zäyt), there conversing with her son Jesus Christ; the third describes how the Apostles assembled at her grave; the fourth recounts how the Saviour appears in front of the Apostles and how Mary fell asleep, looking forward to being together again with him; the fifth speaks of the events after the Assumption.

The M.ʿə. is likely to have been translated from Greek in the Aksumite age (Fiaccadori 2003:204). Although the extant manuscripts date from the 15th cent. at least (the earliest one being ms. Vat. Aeth. 268, van Lantschoot 1962:470, and Arras 1973:v [text]), a clue for the more ancient circulation of the text is provided by the homily on the Dormition, 16 *Näḥase* (ms. EMML 2375, fol. 109a–122a) of ↗Rətuʿa Haymanot, who lived before 1424 (Getatchew Haile 1981). In addition to the M.ʿə., the Ethiopian *Transitus Mariae* literature is represented by a substantial number of other Dormition accounts, mostly homilies (cp. ↗*Dərsan*), but also ↗*malkəʾ*.

The M.ʿə. is closely connected with the tradition of the "Book of the Assumption" of St. Mary (s. *Mäṣḥafä* ↗*ʿərgäta lämaryam*). The origin of the Greek, Arabic and Coptic sources of the literature about the Dormition and the Assumption of Mary may be connected with the rejection of the Christological formulations of the Council of Chalcedon. The rejection of the two-nature, one-hypostatis structure of Jesus Christ by the non-Chalcedonians was beneficial to the cult and veneration of Mary, the Mother of God (Daley 2001:72). There is a story of Mary's Dormition called *Astärəʾəyo Maryam* (**ዘአስተርእዮ፡ ዘይትነበብ፡ አመ፡ ፳ወ፩ለጥር**, 'Of the [Feast of] the Apparition, [to be read] on 21 *Ṭərr*'; Arras 1973:85–100; Budge 1933:152–67), which is also given in the reading for 21 *Ṭərr* in the ↗*Sənkəssar*, where John the Evangelist, who was taken "in the spirit" by the cloud from Ephesus, informs the Virgin Mary of her incumbent passing away (CANT no. 151). All Apostles, virgins and angels, and Jesus Christ himself surrounded her at once; and immediately a large number of miracles happened. Mary's soul was taken up into Heaven, wrapped in a cloth of light. The Apostles buried her body in Gethsemane, where it remained for three days. Mary asked her Son that all those who commemorate her and pray in her name should find mercy (cp. *Mäṣḥafä* ↗*kidanä məḥrät*). Mary was then 60 years old (ColSyn IX, 150–57; BudSaint 523–27).

In the homiliary of the Virgin entitled *Dərsanä Maryam*, some different Dormition/Assumption accounts can be found, e.g., in ms. EMML 3873, fol. 35a–40a, homily by a certain *pappas* Yoḥannəs for the Dormition of the Blessed Virgin; fol. 40a–43b (Arras 1974:56–61), anonymous homily on the Assumption, based on the account by John the Evangelist for 16 *Näḥase*; fol. 46a–58a (Chaîne 1909:23–49), anonymous homily on the Assumption for 18 *Näḥase*; fol. 58a–66b, homily of ↗Cyril of Jerusalem on the Assumption for

19 *Näḥase* (Budge 1915:642, Arras 1974:1–33); fol. 66b–76a, homily (by Rətuᶜa Haymanot?) on the Assumption for 20 *Näḥase*; fol. 76a–101a, the Book of the Assumption for 21 *Näḥase*; fol. 108b–109b, homily by ↗Minas, Bishop of Aksum, on the Dormition (and Assumption) of the Blessed Virgin for 21 *Ṭərr* (cp. mss. EMML 1763, 2044, 2461, 3998, 4279, 4355). Among the possible sources – albeit indirectly – was the homily written around 489 by ↗Jacob of Serug, which describes the holy death of Mary and her glorious entry into Heaven, and other similar Syriac texts of the 5th cent. (Daley 2001:80). Further sources could be apocryphal works or early Greek patristic writings about Mary's death and bodily ascension, such as those of John of Thessalonike or of Pseudo-John the Evangelist or of Pseudo-Melito of Sardis (*Liber Transitus Virginis Mariae*), composed prior to the 4th cent. The oldest text narrating the legend of the Dormition/Assumption seems to be the pseudo-Gospel of Bartholomew, probably of the 3rd cent. The *Liber Transitus Virginis Mariae* was condemned, along with several other apocryphal works, in the decree attributed to Pope Gelasius, actually of the 5th/6th cent. for that part (*Decretum de libris canonicis ecclesiasticis et apocryphis*, [Pope Gelasius 1, Epistle 42], in: *Patrologia Latina*, vol. 59, 162).

The liturgical celebration of the Dormition is integrated in the Ethiopian Orthodox calendar (cp. ↗*ᶜƎräfta*). The liturgy for death and burial, here of Coptic origin, retells the legend of Mary's death in a long prayer for the burial-cloth of the corpse. The prayer includes a few details of a Homily on Mary's Dormition by Theodosius, Patriarch of Alexandria, from the year 566 (Dobberahn 1997:882–86).

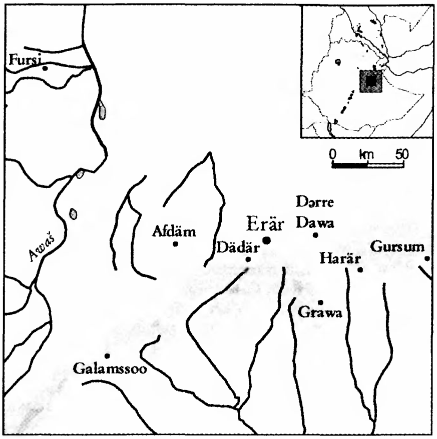
Erär

E. (**ኤሬር**, or **ኤሬር፡ ጎታ** Erär-Gota, from ᶜAfar *errer*, 'change of camels') is a town located at 1,201 m A.S.L. It lies in an oasis at the foot of the Amhar mountains, on a crossing over the alluvial cone of the Erär stream. Originally a station of the Addis Abäba–Djibouti ↗railway (60 km from Dərre Dawa), E. is now a fast-growing town (3,429 inhabitants in 1984 vs. 5,705 in 2000).

In 1886, while travelling from Tağūra, the French traveller Jules ↗Borelli stopped by the well at E. He described the village, located at the crossroads of routes from Tağūra and Zaylaᶜ to Šäwa, as "neutral ground" where ᶜAfar, Oromo and ᶜIssa met.

Ras Täfäri Mäkʷännən (↗Ḫaylä Śəllase I), whilst governor of ↗Harär, had handed over concessions along the railroad to Europeans (among them the writer-adventurer Henry de



↗Monfreid). Under the Italian occupation, E. sheltered a hundred peasants who worked at the plantations of papaw, banana and citrus fruits, the largest of which had belonged to Ḫaylä Śəllase I. The Italians had transformed the Emperor's palace in the vicinity of thermal springs into a hotel, which was frequented till the very eve of the ↗Revolution by the European and Ethiopian middle classes of Dərre Dawa.

The most important projects in E. belonged (till the Revolution) to Ḫaylä Śəllase I and were managed by the Ḫaylä Śəllase Prize Trust. The Revolution nationalized the plantations and integrated them into the para-governmental Corporation for Fruit Sales and Commerce Ethfruit. The new government has announced its intentions to privatize it.

The markets of Dərre Dawa, well connected to E. by a passable road laid over the remains of an old Italian one, and those of Harär offer a significant outlet for E. fruit production.

The small borough which had grown around the small neighbouring railway stop of Gota (7 km from E.) has been gradually absorbed by E.

At the beginning of the 1970s, E. was the capital of the ᶜAdal – ᶜIssa (Ciise) – Gara Guračča *awrağğa*, where ᶜAfar and Somali lived, most of them nomadizing between the foot of Mount Amhar and the ↗Awaš. In 1984 E. was included into Dərre Dawa – ᶜAdal and Gurgura *awrağğa* but continued to belong to the region of Harär. In 1987 it belonged to the region of Dərre Dawa, one of the two Somali autonomous regions. Since 1991 the *wäräda* has joined the zone of Šənəle in Somali *kəlləl*. The separation of the administrative region of Dərre Dawa decreased the tensions in the population, but the *kəlləl* Somali and ᶜAfar continue today to dispute the southern banks of the Awaš as the disturbances from spring 2002 showed.

ᶜƎrgätä Isayyas ↗Isaiah, Ascention of

ᶜƎrgäta lämaryam: Mäṣḥafä ᶜərgäta lämaryam

M.ᶜə. (መጽሐፈ፡ ዕርገት፡ ለማርያም, 'The Book of Mary's Ascension') is a work containing the story of the Ascension of the body of St. ↗Mary (after her Assumption on 16 *Näḥase*, ↗*Fəlsäta*; s. also ↗*ᶜƎräfta*) into Heaven, where she prays until the Last Judgement. The book is in the name of Prochorus (Gəᶜəz: አብሮኮሮስ, Abrokoros), the disciple of John the Evangelist, and reports that the Apostles gathered from all over to be with Mary at her death. Jesus came to receive her soul; she was buried and three days later, while the earth was trembling, her body was taken from her tomb into heaven and translated to Paradise. Furthermore, the M.ᶜə. describes the reception of Mary's body by her Son, who praises it since he dwelled for nine months within it (Arras 1973:85–100).

The sources of the Ethiopic version should be sought for in early Greek (and Coptic) patristic writings and apocryphal literature available in Arabic translation. A homily about the *ᶜƎrgäta*, the corporeal assumption of Mary, is said to be by ↗Cyriacus of Behnesa (*ᶜƎrgäta* for 16 *Näḥase*; Arras 1974:34–55), who wrote several homilies on Mary; his ↗*Laḥa Maryam* was translated from Arabic into Gəᶜəz in the 14th cent. by *abba* ↗Sälama "the Translator". Another frequently quoted homily about Mary's Ascension is one by ↗Cyril of Jerusalem (*Zena ᶜərgäta*, 'Narrative of her Ascension', also for 16 *Näḥase*; Arras 1974:1–33).

The best-known Ethiopic Ascension story is included in the ↗*Sənkəssar* for 16 *Näḥase*, and is to be treated along with the *Mäṣḥafä* ↗*ʿəräfta lämaryam*. In both accounts ↗John the Evangelist plays a major role, being the one who has the vision of St. Mary's death and Ascension from Bethlehem into Heaven, as angels and archangels accompanied her. In the *Sənkəssar* account of the Ascension for 16 *Näḥase* ("On this day took place the Ascension of the body [ዕርገት፡ ሥጋ] of our pure and holy and honourable Lady the Virgin Mary ..."), she appears sitting on the right hand of her Son or, later, upon the Chariot of the Cherubim. The apostle Thomas, not present at the time of her death, was the first one who saw her body out of the grave carried to heaven by the angels. According to the *Sənkəssar*, the Apostles had to wait fasting for two weeks before Mary appeared in front of them: this is supposed to be the origin of the two-week fasting before the Ascension (*ʿƎrgäta* for 21 *Ṭərr*; BudSaint 523–27; GuiSyn IX, 150–57).

In several homilies the Dormition and the Assumption are treated together: e.g., in the Homily by ↗Minas, Bishop of Aksum, "on the Dormition (and Assumption) of the Blessed Virgin" for 21 *Ṭərr* (cp. mss. EMML 1763, 2044, 2461, 3998, 4279, 4355). Likewise, a book called መጽሐፈ፡ ዕረፍታ፡ ወፍልሰታ (*Mäṣḥafä ʿəräfta wäfəlsäta*, 'Book of the Dormition and Assumption') is mentioned in some manuscripts (CerMaria 310); the *Maṣḥafä fəlsäta lämaryam* shares a large amount of material with the M.ʿə. (Chaîne 1962:37). The *Zena lämaryam wäfəlsäta* ('Story of Mary and her Assumption') contains various traditions on Mary and her Ascension (ms. BritLib Orient. 604, fol. 53).

Like the Dormition, Mary's Assumption is not only the subject of a number of homilies, but also of ↗*malkəʾ* and other ↗hymns. The *Mälkəʾa fəlsäta* ('Images of the Assumption'), ascribed to *aṣe* ↗Zärʾa Yaʿəqob (Getatchew Haile in PICES 10, vol. 1, 373), presents a detailed description of the event (Raineri 1989:107).

Eritrea

I. Geography

E. (ኤርትራ, *Erətra*) is situated in the ↗Horn of Africa. It is bordered to the north-east and east by the ↗Red Sea (Lat. *Mare Erythraeum*, whence the name "[Colonia] Eritrea", coined by the Italians in 1890 upon the declaraion of their new colony; cp. also ↗Erythraea), to the west and north-west by the ↗Sudan, to the south by ↗Ethiopia and to the south-east by ↗Djibouti (↗Boundaries). It covers an area of ca. 124,000 km^2 (including the ↗Dahlak archipelago and the ↗Ḥaniš islands). The capital of E. is ↗Asmära.

The largest part of the country is a high plateau with elevations between 1,800 and 3,000 m A.S.L. (↗Geography). The highest point is ↗Amba Soyra (3,018 m A.S.L.). The lowland strip along the Red Sea coast enjoys a hot ↗desert climate. The lowest point is Lake Kullul in the north of the ↗ʿAfar Depression (75 m B.S.L.). The rivers of E. are mainly seasonal, the principal ones being the ↗Gaš, the ↗Barka and the Setit (↗Täkkäze).

II. Peoples and languages

E. has ca. 4,400,000 inhabitants (2004 estimate). The two most widely spread languages are ↗Təgrəñña (mother tongue for ca. 50 % of the population) and ↗Təgre (31 %). Other languages are ↗Sāho, ↗ʿAfar, ↗Beğa, ↗Kunama, ↗Nara, ↗Bilin. Of these, Kunama and Nara belong to the ↗Nilo-Saharan phylum. The other languages are ↗Afro-Asiatic, Təgrəñña and Təgre being ↗Semitic (↗Ethio-Semitic), the rest (Sāho, ʿAfar, Beğa, Bilin) ↗Cushitic. In addition, a Hiğāzī dialect of ↗Arabic is spoken by

Map of the Colonia Eritrea as shown on a 1920s' Italian postcard; from the estate of Lorenz Jensen the ↗Rašāʾida. Some native speakers of ↗Italian are also present. The national languages of E. are Təgrəñña, Standard Arabic and ↗English, used for secondary and University education (↗Languages and peoples).

Officially, E. has nine ethnic groups, some of these composed of subgroups which in the past had considered themselves independent from each other (e.g., ↗Mänsaʾ, ↗Marya).

Most Eritreans confess ↗Christianity (chiefly Orthodox; also Catholic, Protestant) or ↗Islam (predominantly Sunni Muslims). Since 1994, the Eritrean Orthodox Church has been independent from the ↗Ethiopian Orthodox Täwaḥədo Church. The first Patriarch, late *abunä* Filəppos, was anointed in 1998.

III. History

E. started taking its modern shape during the colonial period in the late 19th cent., in particular through colonization by ↗Italy in the 1880s (occupation of Massawa 1885, of Asmära 1889). Until that time, the highland was largely within the influence-domain of the Ethiopian monarchy (↗*Baḥər nägaš*; ↗Märäb Məllaš; ↗*Təgre mäkʷännən*). The coastal areas were partially under Ottoman control after the fall of the ↗Dahlak sultanate (esp. ↗Massawa), partially under independent local *šayḫs* (near Massawa, often being vassals of Ethiopian leaders), whereas the south was in the hands of smaller ᶜAfar principalities (↗Rahayta, ↗Dankali, ↗Áwsa) and the western lowlands were controlled by ↗Beni ᶜAmər clans and Šəmagille groups of the Təgre (s. the sub-article on E.'s pre-colonial history).

The history of E. since the formation of the entity under the Italians can be roughly divided into five phases: (1) the time of Colonia Eritrea (1890–1941, s. the sub-article on E.'s colonial history; s. also ↗Africa Orientale Italiana); (2) the period of the ↗British Military Administration (1941–52); (3) the years of the ↗Ethiopian-Eritrean Federation (1952–62); (4) the time as Ethiopia's 14th province (s. the sub-article on Eritrea in the years 1962–91); (5) E.'s independence.

IV. Government and political system

E. (official denominations **ሃገረ፡ ኤርትራ**, *Hagärä Erətra*; دولة ارتريا, *Dawlat Iritriyā*; State of E.) has been an independent state since 1993 (referendum and acknowledgement of independence from Ethiopia). The present government consists of the legislative (the National Assembly, with 75 members of the PFDJ and 75 popularly elected members), the executive (the president and the cabinet, with 16 ministers) and the judicial (Supreme Court, provincial and district courts) branches. The constitution was ratified by the Constitutional Assembly on 23 May 1997, but most of its provisions have not yet (2005) come into effect.

The country is divided into six zones (*zoba*) which are in turn subdivided into sub-zones (*nəʾus zoba*; s. the sub-article on E.'s administrative division).

V. Economy

The economy of E. is largely based on subsistence ↗agriculture. Traditionally, the inhabitants of the highlands were mostly involved in crop-farming, whereas the pastoral peoples of the lowlands bred cattle. Such a division is still valid. Today, ca. 80 % of the population is involved in agriculture. Lack of a dependable water-supply, aggravated by ↗environmental degradation, hampers development of agriculture, which is only responsible for ca. 20 % of the gross domestic product (GDP purchasing power parity US-$ 1,030 per capita in 2003). Military conflicts of the past decade have contributed to the low growth rate.

E. exports ↗coffee, ↗cotton, fruit, hides and meat and imports machinery, petroleum products, food and manufactured goods. The import volumes (US-$ 500 million in 2001) exceed by far export volumes (US-$ 20 million in 2001). The national currency of E. is the *naqfa* (since 1997; before that E. shared the same currency [↗*bərr*] with Ethiopia).

The road network stretches for ca. 4,000 km (of which 874 km are paved). A (partially reconstructed) railway connected ↗Aq̱ordät and Asmära with ↗Massawa, the main E. seaport (the other one being ↗Asäb).

VI. State symbols

The flag of E. was adopted in December 1995, replacing the UN-created flag of 1952, used by the Provisional Government of E. It consists of three triangles: a red isosceles triangle based on the hoist side, an upper green triangle and a lower blue one. A gold wreath around a gold olive branch is located inside the red triangle.

The coat of arms was designed in 1993. It shows a camel inside a gold wreath, with the words "The State of Eritrea" in English, Təgrəñña and Arabic at the bottom.

The national anthem of E., "*Erətra*, *Erətra*, *Erətra*" by Sälomon Ṣ́äḥaye Bäraḵi (text in

Təgrəñña), Yəsḥaq Abrəham Mäharəzgi and Aron Täklä Täsfaṣəyon (music) was adopted in 1993.

Red.

Pre-Colonial Eritrea

The name E. – after *Mare Eritreum*, the Latin name of the Red Sea, which was in its turn a translation of the Gr. Ἐρυθρὰ θάλαττα (Ionic: Ἐρυθρὴ θάλασσα) – was coined by the Italian imperialists in January 1890 upon the declaration of their new colony. The concept of this entity, a strip of land stretching from the Red Sea coast through the core mountains of the northern Ethiopian plateau and down to eastern Sudan, was somewhat older. The term "Erythräa" was used in German geographical literature of the 1870s (cp. Bairu Tafla in PICES 12, 511). In a political sense, it was already used by the early modern rulers of Egypt, notably by *khedive* ↗Ismāᶜīl *bāšā* (r. 1863–79), who attempted to establish an all-Nile Egyptian empire with its centre at Khartoum. During the 1860s and early 1870s, he renewed Egyptian rule in the Sudan (1865) and occupied the African Red Sea coast and beyond into the Indian Ocean and Harär. At that time the only route between these two spheres of the Egyptian empire passed through ↗Massawa, ↗Kärän, ↗Kassala and Khartoum. Moreover, it was only through this route that a modern railway (planned by Egypt since the 1870s) could ensure good communications with the Sudan. By 1872 the Egyptians had captured this strip and began colonizing it, building a chain of forts and even encouraging European missionaries to settle and develop agriculture there. Safeguarding this vital route, however, also necessitated the conquest of the core highlands of northern Ethiopia, then under the Təgrayan emperor ↗Yoḥannəs IV (r. 1872–89), who was centred in the north.

Prior to this Egyptian enterprise, the territories united by this new concept had little history in common. They were three independent cultural entities with dissimilar historical orientations. The western lowlands, from Bogos to Kassala (↗Barka), was the home of various ethnic groups led by the Təgre-speaking ↗Beni ᶜAmər clans. Though occasionally raided and taxed by the Christian Təgrayans of the highlands, they were no less associated with Sudanese history. As of the 1820s, the Sudanese orientation of the Beni ᶜAmər was solidified by the Mīrġani family (↗*Mīrġanīya*), who successfully worked to convert the Beni ᶜAmər to Islam; this family was based in the new *Ṣūfī* headquarters of the Ḫatmīya in Kassala. The coastal area had entirely different linguistic-ethnic settings and regional orientations. Initially an integral part of Aksumite Ethiopia (with the port of ↗Adulis, today's Zula, as Aksum's commercial centre), the coastal region was occasionally restored as ባሕር፡ ምድር (*Baḥər mədər*; cp. ↗B*aḥər nägaš*), Ethiopia's 'land of the Sea'; one such restoration occurred during the reign of *aṣe* Zärᵓa Yaᶜəqob (r. 1434–68). However, as of the 8th cent. it was predominantly associated with the history of Islam in the Red Sea (s. the Sultanate of ↗Dahlak). Its main centre was the town of Massawa, which, with a local Arab nucleus, was part of the Islamic urban presence along the eastern coast of the whole Horn. Massawa's long history cannot be presented here, but one episode exemplifying its connection to the greater Islamic world was its conquest by the Ottomans (↗Ottoman Empire) during 1557–78. The Ottomans (like their later successors, the modern Egyptians and the Italians) attempted to annex the coastal area to their "Province of Ḥabeš" (↗Ḥabeš eyaleti), along with parts of the Ethiopian highlands, but were defeated. Though they abandoned this enterprise, the Ottomans still considered the western coast of the Red Sea as part of their Islamic empire.

The coastal area was the home of various autonomous groups exposed to Islamic influences. The inner desert between Massawa and ↗Djibouti was inhabited by the ᶜAfar nomadic and independent clansmen, who by the 16th cent. had adopted Islamic rituals. In between these two spheres lay the mountainous areas – ↗Ḥamasen, ↗Säraye and ↗Akkälä Guzay – inhabited by Təgrəñña-speaking Christians who were, from their incipience, an integral part of the Ethiopian world.

This highland territory was part of the heartland of ancient Aksum and the cradle of Ethiopian Christianity and monasticism. It was later the core of Baḥər mədər and a part of Təgray-Təgrəñ, the term describing the lands inhabited by all Təgrəñña speakers. Separated by the River Märäb from the rest of the empire, the region was often called ↗Märäb Məllaš ('beyond the Märäb'). Just like practically every other part of Ethiopia, the history of the Märäb Məllaš also revolved around tensions between the central Ethiopian imperial authority and the local elite, who in turn were torn by internal divisions and rivalries. The core region of the Märäb Məllaš, Ḥamasen, was for centuries led mostly by two rival families from the villages of ↗Hazzäga and ↗Ṣäᶜazzäga. The local elite groups enjoyed relative independence because they were sheltered by the Märäb and at times were able to obtain power from external forces, as well as from the frequent raiding and taxing of local lands. It was all, however, within the rules of Ethiopian culture and tradition.

The 19th-cent. Egyptian attempt to unify these regions and separate them from Ethiopia initiated a "pre-colonial modern history of E." (we shall use here the Ethiopian term Märäb Məllaš to describe events up until 1890). Between 1875 and 1890 four states competed over the territory and left enduring legacies for the various local factions.

First there was an Ethiopian–Egyptian struggle between 1875 and 1884. It began with an Egyptian attempt to invade the Christian highlands which led to their double defeat by the army of Yoḥannəs in ↗Gundät, 16 November 1875, and more disastrously at ↗Guraᶜ, 7–9 March 1876. Having failed, the Egyptians nevertheless remained in the lowlands and Bogos (↗Bilin), entrenched on the Massawa–Kärän–Kassala route and engaged in a war of attrition against the Ethiopians. The Ethiopian Emperor, for his part, was now determined to solidify his hold on the mountainous core of Ḥamasen, Säraye and Akkälä Guzay.

In 1876 *aṣe* Yoḥannəs appointed his general *ras* Alula Ǝngəda, an outsider to the region, as governor of the Märäb Məllaš. Temporarily the former governor *raʾəsi* ↗Wäldä Mikaʾel, with Egyptian backing, regained control of Ḥamasen, until he was imprisoned in 1879. Alula then widened his offensive politics against the Egyptians, raiding their military posts and Bogos. This was ended by the 1884 ↗Hewett Treaty, when the Ethiopians agreed to help the evacuation of Egyptian garrisons, threatened by the Mahdi, from the Sudan, in exchange with Bogos. However, shortly after, in February 1885, the Italians landed in Massawa and started their encroachment inland. In September 1885 Alula collided with the Mahdists at the victorious battle of ↗Kufit, but his plans to occupy Kassala were made impossible due to the threat posed by the Italians. Even if Alula massacred a battalion at ↗Dogᶜali in 1887, followed by a skirmish at Saᶜaṭi in 1888, the expansion could not be stopped, due to Italian strength and to the war with the Mahdists. In 1888 the Ethiopian army retreated over the Märäb and in 1889 the Italians entered ↗Asmära without any fighting.

The fall of the Märäb Məllaš was perhaps Ethiopia's only loss during its conflicts with late 19th-cent. Western imperialism. This loss had far-reaching implications for her 20th cent. developments. The process summarized above has also left enduring legacies for the Eritreans. The links established at this time – between the Muslims of western E., Sudan and Egypt; and between the Muslims of Massawa, the coast and the core of the Middle East – survived the colonial period. They formed the background for the establishment of the ↗Eritrean Liberation Front in the late 1950s, with its ideology of E.'s revolutionary Arabism. Moreover, the resentment of the Ḥamasen local Təgrayan Christian elite against Alula's centralization in the name of Ethiopian Imperial authority survived and was integrated into the nationalistic ethos of the ↗Eritrean People's Liberation Front.

Haggai Erlich

Colonial history of Eritrea

Expansion of Italian dominion

In March 1882, the Italian government acquired legal rights along the south-western Red Sea coast from a shipping company and purchased lands in the surroundings of the harbour of ↗ᶜAsäb and in the nearby islands by concluding agreements with local rulers. In July, ᶜAsäb was declared an Italian colony (↗Colonia di Assab). In February 1885, thanks to British consent, the Italians occupied the port of ↗Massawa, which was under Egyptian control. Following this, the Italians took over the north-western areas of Sämhar and Saḥəl through peaceful means, signing protectorate treaties with the local chiefs. Meanwhile, they expanded southwards by a "divide and conquer" policy, as well as through armed expansion. They were able to conquer Ḥamasen, Säraye, and Akkälä Guzay, availing themselves of the struggle between the ↗Mahdists and Ethiopia and of the rivalries within the Ethiopian empire. Helping *aṣe* Mənilək of Šäwa (the future ↗Mənilək II) to succeed Yoḥannəs on the imperial throne in exchange for his acceptance of Italian sovereignty over the Red Sea possessions (the ↗Italo-Ethiopia Convention [Wəçale Treaty] of May 1889), the Italians seized the northern edge of the Abyssinian plateau and extended their possession in Akkälä Guzay up to the Märäb River, against the conditions in Article 3 which restricted the Italians to the eastern edge of the plateau (RubInd 399ff.). In 1890, they gave this colony the name of "E.", from the ancient Greek name for the Red Sea.

Besides the Christian Təgrəñña-speaking settled agriculturalists in the highland plateau, the northern highland and the western lowlands were mainly inhabited by semi-nomadic Muslim ethno-linguistic groups: the Beni ᶜĀmər, ↗Bilin, ↗Ḥabab, ↗Mänsaᶜ and ↗Marya, as well as by the agro-pastoralists ↗Kunama and ↗Nara; the ↗ᶜAfar and the Sāho pastoral communities inhabited the southern coastal strip and the eastern escarpments of E. The 1893 census roughly estimated the whole population at 191,127.

The Italians set up a bureaucratic colonial administration ruled by military governors and centred in the capital city of Massawa. In 1890/91 they adopted a policy of harsh treatment towards the local *élite*; 12 rebel chiefs and 800 followers were either executed or deported to the prison island of Nokra. This violent repression, which was condemned by a Commission of Enquiry, broke down any further attempt at mass resistance until the first half of the 1890s, when the colonizers began a policy of settlement in the temperate plateau, alienating 314,792 hectares of common native land for landless Italian peasants, following Leopoldo Franchetti's plan. This plan failed because of the native opposition to extensive dispossessions. In December 1894, the uprising, led by *däǧǧazmač* ↗Bahta Ḥagos, opened the way to an Italian attempt to conquer further areas in Təgray. In October 1895 this determined the outbreak of an offensive war against Ethiopia, which Italy claimed to be under its protection according to a misinterpretation of article XVII of the Wəçale Treaty. Under Mənilək's guidance, the Ethiopian army defeated the invaders at ↗Ambalage in December 1895, and later at ᶜAdwa (↗ᶜAdwa, battle of) in March 1896. This impressive event – the biggest defeat of an European army in Africa – left profound traces in Italian colonialism. The wartime policy of wasting money adopted by the military governors in E. (up to 1896, Italy had spent around 500 million lire and lost about 10,000 men) was then relinquished in favour of peaceful-neighbour relations with Ethiopia.

Consolidation of the colony

Following the peace treaty of October 1896, Italy recognized Ethiopia's sovereignity and kept its own colony, trying to define its international frontiers and consolidate the territorial possession. Member of Parliament Ferdinando ↗Martini was appointed civil governor in December 1897 and succeeded in establishing a stable colonial administration, despite the scanty budget. He reduced the influence of the army and shelved the policy of white settlement. Between 1897 and 1908 E. was internally organized in administrative divisions and sub-divisions that were meant to respect the ethno-cultural variety of the communities. The ↗Dahlak islands, the ↗ᶜAfar and the ↗Sämhar areas were united to form the Eastern Division, with Massawa as the provincial capital. The Western Division, administered by ↗Aqordät, was composed of Beni ᶜĀmər, Nara and Kunama lands. The northern edge of Ḥamasen, inhabited by Muslim groups, was joined to ↗Bet Asgäde and ↗ᶜAd Šek lands and ruled from the town of ↗Kärän. The rest of ↗Ḥamasen and ↗Säraye, with Asmära and ᶜAddi Wəgri (Mändäfära) as their respective capitals, kept their administrative features, while the Sāho area was united to Akkälä Guzay and centred in ↗ᶜAddi Q̱äyyəḥ (for more details s. the subarticle below). A hierarchical structure of Italian officials administered each division. The village of ↗Asmära became the new capital of E. in 1898, replacing Massawa that had served as main town since 1885. While the bureaucratic administration was put on a sound basis of territorial centralization, the internal administration underwent only slight changes: the districts were reduced to five in 1931. International treaties and conventions with the neighbouring countries – Ethiopia, the Anglo-Egyptian Sudan and Djibouti – delineated the external frontiers of E. between 1898 and 1908. It took three years of diplomatic negotiations and a financial compensation of 5 million lire to convince, in May 1900, the Ethiopian government to accept a common boundary running along the rivers Märäb, Bäläsa and Muna. The highlanders who shared the same language, faith and multiple elements of material culture were now officially split between southern E. and northern Ethiopia.

Administration of the colony

From 1898, the Italians adopted an indigenous policy that promoted collaboration, awarding privileges to members of the traditional ruling *élite*. The colonizers introduced a hierarchical system of appointed salaried chiefs, supervised by colonial officers, to administer the indigenous populations. These chiefs collected tribute in their districts, maintained law and order through their armed followers and detained the judicial power to settle "collective disputes" regarding civil matters between natives. The Italians did not in fact resort to a uniform jurisdictional order in E. While Italian laws were applied to the colonizers, traditional laws – both Islamic laws and customary rules (↗*Ḥəggi*) – were preserved for the natives, although customary rules in penal matters underwent a deep transformation: many traditional forms of punishment were forbidden because unfitted to the new social reality shaped by colonialism. The administration of justice had four court instances, from native courts up to the governor. The freezing of these bodies of law signified the recognition of the mixed social texture of Eritrean society. The collaboration of the traditional *élite* was politically successful because it minimized the risks of extensive organized resistance and anti-colonial consciousness, so that only isolated acts of resistance took place throughout Italian colonization. The few leaders, such as *däǧǧazmač* ↗Abärra Gəzaw, Muḥammad Nuri and Gäbrä Mädḫən Ḥagos, who sought to prolong resistance, were forced to flee to Ethiopia and never represented a serious menace to colonial rule. Collaboration was easily gained by the non-Təgrəñña speakers who, in pre-colonial times, were raided and pillaged by the highlanders. Colonial pacification, based on a "law and order" policy, instead put an end to these raids and to inter-ethnic hostilities among the various communities. The Italians were mainly committed to maintaining political stability and constantly feared the possibility of an all-Təgrəñña uprising; they therefore tried to break the social ties between the Christian Təgrəñña-speaking groups, using every means at their disposal.

Although the colonial government was officially committed to respecting religious liberty in E., a Catholic Mission challenged the religious authority of the Orthodox Church, even if with little success (↗Catholicism). The Apostolic Prefecture of Erythraea was established in 1894–95, granted to the ↗Capuchins, and became a Vicariate in 1911. They replaced the French ↗Lazarists (↗Vicariate Apostolic of Abyssinia), who had arrived in the region already in the 1850s and were suspected of lacking loyalty. But Eritrean Orthodox conversions remained few, for two main reasons. First, the Italians actively encouraged the spread of Islam in E. in order to achieve the support of their Muslim subjects and to set them against the Orthodox. Secondly, although the Orthodox Church was no longer an economic power in Märäb Məllaš since the Italians confiscated its lands, the social importance of monasteries never faded. In fact, the influence of the Orthodox Church remained strong owing to the proximity of co-religionist Ethiopia, where the Church represented a pillar of the State and the most powerful ideological institution. Təgrəñña speakers from E. and Ethiopians shared the same faith and cultural values and, from the 1920s, the Eritrean Orthodox clergy encouraged the spread of irredentism. In 1929, to counteract this potentially dangerous influence, the Italians abolished the Ethiopian ecclesiastical jurisdiction over E., but this step did not break down the underground links with the empire.

The educational policy for Eritreans was mostly delegated to missionaries, both Catholic and Protestant. The Italians limited the school-system in order to avoid native enlightenment that could jeopardize their rule. Martini denied native access to ↗education and only in 1911 were Eritreans allowed to attend lower elementary education in the few state schools that were meant to produce educated workers for the colonial services. From 1923, government schools were handed over to the Catholic Mission, which became responsible for colonial teaching and for the propagation of Italian culture. The ↗Swedish Evangelical Mission promoted the spread of written literature in vernacular languages and provided pupils with a wider school programme. But in 1932 the colonial government expelled the Swedish missionaries because their educational work fostered pro-Ethiopian political and civic loyalty. Though the reliability of the official figures can only be relative, it can be assumed that the Italians prevented the birth of an Eritrean intelligentsia, as no more than 2 % of the total school-age population gained access to education.

Italian colonists and indigenous populations

The Italian community in E. had slowly increased until the 1930s. In 1934 there were 4,500 Italians (representing 0.76% of the total inhabitants); that number grew to nearly 75,000 in 1939. E. became a colony of settlement. Among the new colonialist settlers there were factory owners and farmers, but the vast majority of the newcomers decided to settle in fast-growing towns like Asmära and Massawa, two modern European-style cities. Therefore, the Italians promoted a similar drift for those Eritreans who were looking for employment. At the end of the 1930s, ca. 20 % of the natives lived in urban centres. They earned low wages and could only aim at subordinate posts in the colonial administration. Compelled to live in "native quarters", they were not allowed to obtain Italian citizenship, to express political views or attend to public matters. Although Eritrean subjects were never treated as equals – as the defence of Italian "prestige" *vis-à-vis* the native corresponded to one of the pillars of the ideology of colonialism – their situation worsened in the Fascist era, when active discrimination was practised. In the late 1930s, a racist campaign produced the discriminatory legislation that prohibited intermarriages and inter-racial cohabitation between Europeans and natives, which had been widespread since the very beginnings of the colonial period because of the demographic imbalance of the Italians in E., who were mainly single men. Thereafter, the colonial government implemented a policy of separation of races along "apartheid" lines. In 1940, the half-castes lost their rights to citizenship and to education because they were declared subjects. The fascist civil police fostered the repressive attitude shown by the colonial administration towards the subjects.

After 1936, E. experienced a positive economic trend. There was a sudden growth of industrial enterprises linked to the exploitation of the empire, especially in the fields of transport, mining, construction and food supplies. The colonial administration fostered this boom, granting credit facilities and licenses to Europeans to promote their investments. At the end of the 1930s, there were 2,198 industrial firms in E. But even in this period the Italians did not secure the colony's self-reliance because they preferred to encourage imports instead of producing the needed goods locally. E. had always been economically dependent on the colonial power (for more details on Eritrean economic development s. ↗Economy).

During Italian rule, the colonial economic policy determined the first labour divisions between the rural and urban sectors. A limited native working class had emerged, between those employed in colonial-infrastructure projects, in farming state lands and in industrial plants. Between 10 and 15% of the able-bodied male population (between 4,000 and 5,000 Eritreans) worked as salaried employees in the productive sector of the economy. Besides the natives employed in the lower positions of the bureaucratic administration – i.e. clerks, interpreters – and those who worked as domestic servants in Italian houses, the largest employer was still the colonial army. From 1936 to 1941, 60,000 Eritrean soldiers served in the whole AOI, about 40% of the male adults. Although some of them deserted during the Ethiopian campaign and participated in the anti-Italian resistance, Eritreans contributed to the colonization of Ethiopia. As a reward, the Italians placed them on top of the colonial hierarchical order and granted them economic privileges.

The collaboration of Eritreans with the colonial system has been explained in terms of the long-lasting political stability. Different communities inhabited the colony, living peacefully side-by-side in a stable administrative framework that did not cancel but subdued the life-style differences between the ethno-linguistic groups, favouring their coexistence. During Italian colonization, the improvement of health conditions, the growth in consumption of goods, the spreading of the market economy and the vanishing of the threat of drought improved the welfare of the natives. A telling consequence was the noticeable demographic growth of the Eritrean population: from 275,000 inhabitants in 1905 to 614,000 in 1935. The Təgrəñña speakers became the largest ethno-linguistic group, constituting 54 % of the total population. Their better socio-economic living standards explained the spread of a feeling of identity distinct from the neighbouring Ethiopians.

A historiographic debate concerning the depth of the economic and political transformation of E. during Italian colonization, fuelled by the ensuing events that set Eritrean nationalists against Ethiopia, has been unfolding for years and is still of burning political relevance (s. Taddia 1986; Ruth Iyob 1995; Tesfatsion Medhanie 1986; Markakis 1987; Jordan Gebre-Medhin 1988). Looking from a different angle, a parallel debate stressing the overall importance of colonialism in the transformation of traditional society has also developed (s. Tekeste Negash 1987; Haggai Erlich 1982). From the 80s, the Eritrean literature of militancy began to assign to Italian colonialism the foundations of the rise of a territorially based civic nationalism, in order to challenge the Ethiopian national historiography, which maintained that E. was historically an integral part of the Ethiopian empire.

Situation after World War II

After Italian involvement in World War II, British forces entered E. from the Anglo-Egyptian Sudan in January 1941 and by April had occupied it (battle of ↗Käräṇ). The Italian East African Empire was then dismantled and a ↗British Military Administration (BMA) took over the colony. The main concern of the British was to preserve the situation in E. in view of post-war decisions about the future of the country. In the 1947 Peace Treaty Italy ceded E. to the four powers, it therefore ceased to be an Italian colony. Thus the "Occupied Enemy Territory Administration" (OETA) was formally replaced by a mandatory administration. A Chief Administrator led the BMA from 1943 to 1949. From 1949 until 1952 E. came under the British Foreign Office's sphere of competence, working together with the ↗United Nations' Commission for E. (1950–52).

In accordance with the British aim to keep law and order in E., between 1944 and 1947 the country was internally re-arranged along ethnic lines into 5 divisions, due to the fusion of the Kärän and Aq̣ordät districts into the new Western Province, as well as to the unification of Massawa and ᶜAsäb into the Red Sea Division. The British did not alter the Italian colonial administrative system and relied on the same local chiefs, leaving them their fiscal and judicial tasks, while Italian laws were kept in force. In fact, the British, who were understaffed, did not immediately dismiss the Italian colonial staff and slowly began to induct native clerks into the administration. The British repealed the discriminative legislation towards Eritreans and provided services for them ranging from public health to employment and freedom of the press. Successful efforts were made in education, widening the levels and the number of schools (up to over 100), where the pupils were taught in Arabic and Təgrəñña. The diffusion of written literature in those two languages began to flourish.

The wartime economic trend allowed E. to become almost self-sufficient, with a fairly satisfactory balance of payments. Agricultural production rose, because the British increased land concessions up to 256,000 of cultivated hectares for an output of 59,000 tons. Industry gave the most impressive results: the already existing concerns were developed and many more were set up to comply with the new – mainly military – requirements. Both skilled Italian manpower and Eritrean labourers were employed and for the very first time the natives were allowed to form trade unions. Meanwhile, the British began to dismantle a large part of the infrastructure built during Italian colonization, in order to gain profits. However, after the post-war crumbling of demand, that boom proved to be short-lived. E.'s agricultural and industrial output was not guarded against foreign competition and soon could not compete with it. Another important factor in this decline was the detailed restrictions imposed by the BMA on manufacturers, business loans, banks' foreign-currency dealings and working licences. The industrial shutdown was followed by large-scale unemployment. Around 10,000 Eritreans were jobless in 1948, angered by the economic hardship and by the strong increase in the cost of living. They began to protest with public demonstrations, asking for the "Eritreanization" of the economy and of the administration.

Following the BMA policies, Eritreans began to acquire some knowledge of public affairs. Since 1941, representatives of the whole Eritrean society set up an anti-colonial patriotic association, ↗*Maḥbär fəqri ḫagär*, to communicate their needs to the BMA. Shortly after, Təgrəñña-speaking urban notables and younger intelligentsia, supported by Ethiopia, began to advocate pro-Ethiopian irredentist feelings and to dominate the association. In 1943, several Muslims and some Christians who inhabited the Eritrean southern and central highland districts left the *Maḥbär* and formed a Separatist Movement to counteract pro-Ethiopian irredentism. The Eritreans mistrusted the British, feeling a deeply rooted embitterment towards the former colonizers. In summer 1946, the bloody incidents in Asmära between pro-Unionists and the Sudan Defence Force, stationed in E. under the BMA's command, fostered the growth of political tension; it also set the start for the attacks against Italian residents by pro-Unionists. In October 1946, the British lifted the ban on political parties.

After the 1947 Peace Treaty with Italy, which stated that the Allies should settle the future status of its pre-fascist African colonies – E., Somalia and Libya – the four allied powers decided to send a Commission of Enquiry to E. with the task of acquainting themselves with the wishes of the inhabitants. Although the relative strength of the political organizations was difficult to ascertain and the system adopted debatable, the following proved to be the most representative Eritrean parties: 1) the Unionist Party, officially registered in February 1947, which came after the *Maḥbär* and was mainly supported by the Tǝgrǝñña speakers of the Ḥamasen region, but also by Muslim aristocrats who counteracted the serf-emancipation movement promoted by the ↗Muslim League (ML); it stood for unconditional union with Ethiopia and was the largest single party in the country (48 % of supporters); 2) the ML was the second largest party of E. (30 %); it mobilized the Muslim communities and demanded independence or, at least, a UN trusteeship; 3) the ↗Liberal Progressive Party, which derived from the Separatist Movement and was composed of Christian highlanders, was sponsored by the BMA to favour the independence of E. together with the Tǝgrǝñña districts of Ethiopia; 4) the Pro-Italy Party, composed of Italians, half-castes and natives who obtained privileges during colonialism (i.e. the members of the Eritrean War Veterans Association) sought the maintenance of Italian political rule in the country.

The interests of the powers – Great Britain, Italy and Ethiopia – involved in E.'s future further complicated the situation. Great Britain, the occupying power, believed that E. could not constitute a viable independent State and, from 1943, was inclined to split the country, assigning the western Muslim-inhabited lowland to the Anglo-Egyptian Sudan and leaving the Christian Tǝgrǝñña-speaking inhabited plateau to Ethiopia. Italy, the former colonial power, tried to prolong her control over E. by the award of a UN trusteeship or calling for the independence of the country; the Italians still living in E. worked to safeguard their interests and privileges, looking for the support of half-castes and veterans. Ethiopia claimed E. by virtue of its rights over the territory – based on historical, geographical, ethnic and economic reasons – and of strategic issues, such as an outlet to the sea for the land-locked empire. According to imperial propaganda, E. and Ethiopia were politically indistinguishable. After Ḫaylä Śǝllase's promise to return the Eritrean lands confiscated by the colonizers to its owners, Eritrean Orthodox clergy became openly involved with the Unionist Party.

The ↗Four Power Commission of Enquiry visited E. from November 1947 to January 1948. The Commission received the platform of political parties and written petitions and interviewed traditional élites, but failed to reach agreement over a unified report. As the Allies were not able to come to an agreement concerning the disposal of E., the question was submitted to the international forum of the UN in 1948. An Anglo-Italian attempt – known as the ↗Bevin-Sforza Plan – to partition E. between Ethiopia and the Anglo-Egyptian Sudan and grant a special status to the densely populated Italian coastal towns of Massawa and ʿAsäb was rejected by the UN General Assembly in May 1949. After that, E. endured a period of political turmoil. To promote the birth of a sovereign nation state, the ML promoted the formation of an Independence Bloc, rallying other parties, such as the Liberal Progressive Party and the New Eritrea Pro-Italy Party. But, despite its numerical majority, the coalition was weakened by its own socio-political heterogeneity. Both the fear of the return of Italy and the Ethiopian assurance concerning respect for Islamic identity (Muslim discrimination in the Empire was well-known) drove many adherents to accept the idea of conditional union with Ethiopia. Meanwhile, economic reasons determined the outbreak of social tension between Muslims and Christians and cleavages among the ethno-linguistic groups of the country. Muslim aristocracy, threatened by the ML's policy for the abolition of serfdom, allied with the Christian nobles to support unionism.

Political propaganda from all sides resulted in plotting and bribery. These reached their climax in 1950, when the UN fact-finding Commission of Enquiry visited E. between February and April. The Commission had to investigate the wishes of the inhabitants and their political maturity for self-government in order to satisfy their welfare. A parallel task was also to envisage broad international interests connected to Ethiopia's political demands. A terrorist campaign, led by organized gangs (↗Šəfta), provoked many casualties amongst anti-Unionists – both Eritreans and Italians – affecting social equilibrium. The UN Commission's hearings and investigations led by ↗Anze Matienzo were not able to shed much light on the Eritreans' political self-consciousness. The representatives of South Africa and Burma recommended the federation of E. with Ethiopia, the Norwegian delegate opted for the annexation to Ethiopia, while those of Pakistan and Guatemala proposed a ten-year UN trusteeship to pave the way for E.'s future independence. All of them also rejected the hypothesis of immediate independence for socio-economic reasons, such as the non-viability of E. and the absence of a cohesive national entity ready for self-government, as the inhabitants were considered politically backward. After lengthy debates and long diplomatic interplay between the powers involved, in December 1950 the UN General Assembly voted the Resolution 390 A (V) to federate E. with Ethiopia as an autonomous entity under the sovereignty of the Ethiopian Crown. Geopolitical international considerations and the USA taking a pro-Ethiopian stand settled the question. After a transitional period, the Federation was put in force in September 1952 (↗Eritrean-Ethiopian Federation).

Federica Guazzini

Eritrea from 1962 to 1991

After the annexation that put an end to the ↗Ethiopian-Eritrean Federation, E. became Ethiopia's 14th province and remained legally in this capacity till May 1991. In practice, however, Eritrean society, which had enjoyed institutions of representative politics, was reluctant to integrate with Imperial Ethiopia. Parts of its leadership had long rejected any affiliation with Ethiopia and others grew resentful of its absolutist system. The whole new period was marked by an active struggle for independence, led first by local Muslim separatists and later by a comprehensive, modern all-Eritrean nationalist movement. The history of this struggle can be divided into two chapters: ↗Ḫaylä Śəllase I years up to 1974 and the time of Mängəśtu Ḫaylä Maryam.

The 1962–74 period was marked by dualities in both the Imperial Ethiopian approach, and the local Eritrean public. In trying to absorb E. into his authoritarian regime, Ḫaylä Śəllase wavered between a policy of full centralization advocated by the Prime Minister ↗Aklilu Habtäwäld and a policy of some administrative flexibility aimed at allowing the continuation of local Eritrean identity within Imperial Ethiopia. This latter policy was pursued by the 1964–70 provincial governor, *ras* ↗ᶜAśratä Kaśa. ᶜAśratä's premise was that most Eritrean Christians would continue to identify with Ethiopia and that general decentralization of the entire Empire would better enable the survival of the Imperial system. On the part of the Eritrean public, indeed, most of the Christian elite, as long as ᶜAśratä was in office, remained at least passively oriented towards Ethiopia. Many Eritrean Christians continued to emigrate to the capital and join the somewhat prosperous Eritrean community in the centre. Quite a number of those Eritreans reached leading positions in the Imperial establishment. On the other hand, already in the 1960s, a good number of Christian youngsters and some veterans of the ↗British Military Administration and of the autonomy periods gave up on this kind of Ethiopianness. Most Muslims never accepted it. Many young members of the Muslim communities, mainly in western E., but also on the coast, joined the ↗Eritrean Liberation Front (E.L.F.), which had been established in 1960 in Cairo. E.'s Muslim rebels implemented guerrilla methods borrowed from the Arab world and adopted Arab revolutionary identity. "The Arabism of the Eritrean people" turned into a slogan reflecting a multi-dimensional connection between the Eritrean struggle in the 1960s and the pan-Arab movements of Nasserism and Baᶜthism in the Middle East. By the end of the decade, however, the Eritreans began splitting. Young Christians could hardly join the pan-Arab cause and Muslims of the coastal zones felt alienated by the western Eritrean-dominated E.L.F. Pan-Arabism lost its momentum and deepening inter-Arab rivalries further fuelled Eritrean disunity. With the establishment of the Christian dominated ↗Eritrean People's Liberation Front (E.P.L.F), the splitting of the Eritrean movement was institutionalized, and in 1972–74 it seemed to reach a dead end. By late 1970, however, the constant warfare in the province also undermined *ras* ᶜAśratä's policy. Following his removal in November 1970, the Ethiopian army was given a free hand by the Emperor to deal with the issue the army's way.

1974, the year of the Ethiopian ↗revolution, saw another round of Ethiopian duality. The *Därg's* (↗Provisional Military Administrative Council) first chairman, Lieutenant-General ↗Aman Mikaʾel Andom, himself an Eritrean, initiated a plan to revive E.'s political identity within a new, pluralist Ethiopia. He was, however, soon defeated by his younger army officers, headed by Major Mängəśtu. After their killing of Aman, on 23 November 1974, revolutionary Ethiopia's policy in E. would not change till 1991. It went on pursuing a military victory over the local movements. The latter, for their part, were revived and strengthened due to the massive recruiting of young Christians, now totally disillusioned of their Ethiopianness. Consequently, as of the second half of the 1970s, the Eritrean movements could claim to be launching a fully-fledged all-Eritrean nationalist struggle, and to be building in the process various compatible infrastructures. Yet, in spite of the common war against the Ethiopian army and in spite of some growing similarities between the rival fronts in social terminology, no Eritrean unity was achieved. After the massive joining of the Christians, the more Marxist E.P.L.F. gradually got stronger than the previously pan-Arab oriented E.L.F. Following futile negotiations and fratricidal battles throughout 1981–84, the E.L.F. was beaten and the E.P.L.F. remained to dominate the Eritreans' revolt. In the second half of the 1980s, as the anti-Mängəśtu struggle in the rest of Ethiopia by other ↗liberation fronts also gained momentum (and after Mängəśtu in early 1987 reached a dead-end, even with the Soviets), the E.P.L.F. scored repeated victories. They culminated in a strategic beating of the Ethiopian army in ↗Afᶜabät in March 1988. Under the growing authoritarian leadership of Isayyas Afäwärqi, the E.P.L.F. went on to ensure E.'s independence following the final collapse of Mängəśtu's regime in May 1991.

The Eritrean struggle with all of its vicissitudes, not only paved the way for the emergence of E. as an independent state (officially declared in 1993). It also made a tremendous impact on the general development of Ethiopia. One major aspect was its contribution to the modernization of Ethiopian politics. As mentioned, twice during the said years the forces in Ethiopia, striving for centralized absolutism, defeated those who, through the Eritrean issue, tried to render the political sphere more flexible and open. E., from this perspective, was a dynamic laboratory of political transformations for the whole region. The adoption from the Arab world and implementation in E. of the "liberation front", as a concept and as a framework for modern guerrilla and modern institutionalized politics, spread, to be followed by most anti-Mängəštu forces in Ethiopia, where during 1975–91 various liberation fronts introduced the first dimensions of modern representative structures in societies hitherto mostly subject to authoritarianism.

Haggai Erlich

Administrative division of Eritrea

In the beginning, 1885, the Egyptian administrative division was kept for the lowlands (*mudiria* ['province'] *di Massaua*, which comprised the whole coast from Qarora, in Ḥabab territory, to ᶜƎdd, in ᶜAfar territory). After the formal declaration of the colony in 1890, the administrative division was reorganized and the following zones, headed by comandanti, created (cp. report on the tributes from ↗Sämhar, 1891, d'Avray 2000:59): Zona della Asmara (the highlands), zona di Cheren (all territories and ethnic groups from – in the west – the Nara, Beni Amər and Bilin to the Marya and Ḥabab in the east, 1894–97, also including the provincia di Cassala), zona Massaua (including Sämhar, Dahlak and Buri, with the capital Massawa) and *zona di Assab*. After Italian troops had advanced south of the Bäläsa-Märäb line, the military Governor ↗Baratieri on 9 July 1895 decreed the zona dell'Agamè (capital Adigrat) and the zona del Tigrè (capital Adua), composed of provincie following local usage, in some cases further divided into circondari (Camera dei Deputati 1895: 134ff.). After the battle of ᶜAdwa, however, both zones had to be given up.

On 29 June 1898 the Governor ↗Martini issued a decree dividing the Colonia Eritrea into four provinces (commissariati regionali), districts (residenze) and sub-districts (vice residenze). The commissario, heading the commissariato, had a military unit under his command; in the administration he was assisted by the Eritrean assistente amministrativo and local interpreters. Eritrean traditional or newly appointed chiefs were responsible to the residenza or, if existing, the vice residenza, and received salaries from them. The first four commissariati were Hamasien (also Amasen), Serae, Oculè-Cusai and Massaua (Martini 1913:51–53). In 1903 three provinces were added, Sahel, Assab and Barca, and later in 1909 Gasc-Setit as an eighth commissariato.

Names and boundaries of the commissariati sometimes changed, responding to local needs and to the Italians' moving further inland. On 4 August 1902 the region Sahel, under the commissariato regionale of Massaua, was established as a separate residenza, with its capital Nacfa (with jurisdiction over the ᶜAd Təmariam, ᶜAd Tawra, ᶜAd Muᶜallim, ᶜAd Šayḫ, Ḥabab, ᶜAd Hasri and Rašayda, d'Avray 2000:142, 288). A short time later this residenza became the core of the new commissariato Sahel (since 1931 called Chéren). When new treaties with Mənilək II led to the recognition of Italian sovereignty over the ↗Kunama in 1902, the commissariato Gasc-Setit was created.

During most of the Eritrean colonial period the eight provinces did not change their shape; especially the three highland provinces Hamasien, Serae and Oculè-Cusai did not after 1898 (however, ↗Akkälä Guzay got its own access to the sea). The provinces were "with the exception of the western lowlands, based on the historical and geographical factors that predate colonialism" (Tekeste Negash 1987:102).

In 1931 the eight provinces were reduced to five (Seraè and Acchelè Guzài becoming the Confine Meridionale, Gasc-Setit and Barka the Bassopiano Occidentale, Assab and Massaua the Bassopiano Orientale, Pollera 1935:289ff.), but not for long – in 1936, e.g., the former commissariato Assab was restored under the name Dancália. The names of the commissariati were now (names of the residenze and vice residenze in brackets): Hamasièn (Asmára), Seraè (Áddi Úgri, vice residenza in Addi Qualà), Acchelè Guzài (Addì Caièh, two vice residenze in Senafè and Aráfali), Bassopiano Orientale (Massáua, vice residenza in Ghínda), Chéren with its capital Chéren (Chéren and Nacfa), Bassopiano Occidentale with its capital Agordàt (Agordàt, Barentù, Tessenèi, the latter with the vice residenze Om Áger) and Dancália with its capital Ássab (Ássab and Thió, the former with vice residenze Sardò and Sifáni).

When on 9 May 1936 ↗Africa Orientale Italiana (AOI) was proclaimed, Təgray administratively became part of the new Governo Eritréa (Guida 33, s. ↗Administrative division of Ethiopia). The five commissariati newly added to E. were: Tigrài Occidentale (Ádua with the vice residenza Mài Cannetà, Axùm, Endà Sellassiè, Ad Darò, Enticciò), Adigràt (Adigràt, Hausièn, Azbì with its vice residenze Agulà and Aù), Macallè (Macallè, Debùb with its vice residenza Aragurè, Quóram with its vice residenze Endà Medáni Alem, and Mài Cèu), Tembièn (Abbì Addì, Samrè, and Avergallè) and the Paesi Galla (Allomatà with the vice residenze Corbettà, Alà, Cercèr and Zobèl).

As the AOI had not been recognized internationally, the ↗British Military Administration after the battle of Kärän in 1941 restored the pre-1936 borders of E., including the six provinces, now called Divisions. Thus ^{c}Asäb once again became part of the Eastern Lowlands Division. A further reduction of the number of provinces to five in 1947 (Kärän and ^{c}Aq̱ordät merged following the ↗Bevin-Sforza Plan to partition E.) was only short-lived and not maintained in the Federation period. The Constitution of E. 1952 does not make explicit mention of the administrative divisions. The six Eritrean provinces within the Eritrean-Ethiopian Federation (*Guide Book of Ethiopia* 1954:390–406) were Ḥamasen (with the capital Aśmära), Akkälä Guzay, Särawe, Məṣṣəwa^{c}, Kärän and ^{c}Aq̱ordät. When elections for the Assembly of E. were held during the Eritrean-Ethiopian Federation (1952, 1956), E. had seven election districts, different from the provincial division: Asmara division, Massawa division and Massawa sub-division, Akeleguzai division, Serae division, Hamassien division, Keren division and Assab division. The most-populated cities Asmära and Massawa thus had their own election districts, with their hinterlands (Ḥamasen, respectively Massawa sub-division, i.e. Sämhar) as seperated districts (for the elections of 1956, s. Tekeste Negash 1997:219f.).

After E. had become the 14th province or Governorate-General (*ṭäqlay gəzat*) of Ethiopia in 1962, three of the the six provinces were split up; from 1964 onwards there were nine provinces (*awraǧǧa*), Ḥamasen, Akkälä Guzay, Särawe, Məṣṣəwa^{c} (later called Sämhar), Kärän (later called Sänhit), ^{c}Aq̱ordät (later called Barka), Saḥəl, ^{c}Asäb (later called Dänkäl) and Täsänäy (later called Gaš Setit). In 1987 Dänkäl was split from the new autonomous region (*yäras gäz akkababi*) Erətra, and merged into a greater ^{c}Afar region, the new autonomous region called ^{c}Asäb. This, however, was soon reversed, when on 26 May 1991 the ↗Eritrean People's Liberation Front occupied ^{c}Asäb port, and E., in its pre-1987 boundaries, was declared de facto independent shortly afterwards. The nine provinces of E. were restored. Under the *awraǧǧas* there were the *nə^{c}us awraǧǧas* (sub-provinces), composed of *wärädas*.

On 9 May 1995 the administrative division was radically reformed; the provinces (or 'zones', Tgn. *zoba*), which until now had largely corresponded to traditional and ethnic boundaries, were redrawn following pure administrative needs. First called only by numbers, starting from 1996 they had names in Təgrəñña: ^{c}Ansäba (capital Kärän); Däbub (Mändäfära), Däbubawi Qäyyəḥ Baḥri, 'Southern Red Sea' (^{c}Asäb); Gaš Barka (^{c}Aq̱ordät); Maʾəkäl, 'Central [province]' (Asmära); Sämenawi Qäyyəḥ Baḥri, 'Northern Red Sea' (Məṣəwwa^{c}). The *zobas* are divided into *nə^{c}us zobas* ('sub-zones') and smaller administrative units.

Wolbert Smidt

Eritrea Daily News

The British Ministry of Information began the publication of the morning daily *L'Informazione* in Asmära on 21 April 1941. Published in English and Italian, it became the E.D.N. on 12 June 1942. On 1 August 1944 the name was changed to *Il Quotidiano Eritreo*. The major paper published by the British Information Services contained world and local news and had an Italian staff. Published articles were received from the British Ministry of Information in London and Cairo. The editorial policy was to present world and local news, to foster goodwill among the local population towards Britain, the democratic way of life and the United Nations, to help maintain public order, to elicit maximum co-operation from the civilian population with the ↗British Military Administration and to help eradicate "reactionary" influences in the education and outlook of the community of ↗Eritrea.

Sales in 1944 stabilized at 14,000 (12,000 Italians and 2,000 British). Newsprint shortages made expanding circulation difficult. By 1949 the circulation had dropped to 6,000; in 1950 it was 6,500 and in 1951 5,400. After the British left, the Ethiopian Ministry of Information took over the journal. The Ethiopian military government closed *Il Quotidiano* in 1977, officially arguing that it had no readers.

Eritrean Assembly

The E.A. (Tgn. ባይቶ, *bayto*, lit. 'Assembly') was the parliamentary assembly of ↗Eritrea, founded by the ↗British Military Administration on the initiative of the UN Commissioner ↗Anze Matienzo at the end of their administration. In the beginning, before the adoption of the Constitution, it also appeared as "Eritrean Constituent Assembly". In the Constitution, Part II (Art. 39–58), it was simply called "Assembly", but in official documents known mostly as "E.A." (in half-official documents it also appears as "Parliament of Eritrea"). As the Constitution, drafted by the UN, was supposed to be adopted by representatives of the Eritrean population, it was necessary to create a local parliament which could discuss and adopt the Constitution (Commissaire des Nations Unies pour l'Erythrée 1952:15).

The first E.A. was constituted following country-wide elections in March 1952, held under *British Administration Electoral Proclamation* (*121*). The procedure of election chosen was adapted to the local realities; in rural areas the representatives were appointed by electoral committees (consisting of local notables), only in the cities of Asmära and Massawa there were direct and secret elections. The E.A. had 66, then 68 members, belonging to the Unionist Party (UP, 32 seats), the Eritrean Democratic Front (19), the ↗Muslim League of the Western Province (MLWP, 15) and, with one seat each, the National Party and the Independent Muslim League (cp. Ruth Iyob 1995:86f.). An alliance between the UP and the MLWP led to the election of ↗Tädla Bayru of the UP as the head of the Eritrean government (Chief Executive) and of ↗ʿAli Mäḥammäd Musa Rädʾay of the MLWP as the E.A.'s president (Speaker).

The draft constitution, proposed by the UN High Commissioner for Eritrea, was discussed by the E.A. starting from May, followed by its adoption in July. A single-chamber system was chosen. When in September the ↗Ethiopian-Eritrean Federation entered into force, the E.A. was already the fully active legislative body of autonomous Eritrea. The government was dominated by the UP, a party which, however, only partially believed in the autonomy. Thus, from the beginning interferences from the Ethiopian state only met unorganized and weak resistance. The crisis reached its first peak in 1955 when Tädla Bayru and ʿAli Rädʾay resigned following a revolt within the E.A. The new Speaker was Idrīs Muḥammad Adam, an Eritrean nationalist, but he was removed in June 1956. The new Chief Executive, elected by the E.A. on 8 August 1955, was *bətwäddäd* ↗Asfəḥa Wäldä Mikaʾel of the UP, simultanously acting as the deputy Imperial Representative to Eritrea.

The factual powerlessness of the E.A., which gradually changed into an acclamation assembly, was especially felt after the second elections (still following the electoral law installed by the British) of September 1956. The new Speaker was the non-Unionist *šayḫ* Ḥamid Fāraǧ Ḥamid (MLWP). But Asfəha, allying himself with the Deputy Speaker *abba* ↗Dəmeṭros Gäbrä Maryam, a Unionist, was able to make the E.A. adopt often unconstitutional, anti-autonomous legislation, such as the replacement of Eritrea's flag, seal and arms by Ethiopia's on 14 November 1958. Protests against the extension of Ethiopian citizenship to all citizens of the Federation, or against the gradual submission of the Eritrean administration under the authority of the Ethiopian government (while juridically the Emperor was only the sovereign over two entities, separate from each other, having two different constitutions), which should have been the task of the Eritrean government or the E.A., was only expressed by relatively powerless, mostly Muslim groups. The elections for the third E.A. took place in August 1960. At that time anti-unionist parties had been dissolved and many of their leaders, like ↗Wäldä Ab Wäldä Maryam, had gone into exile. The Imperial Representative (*əndärase*) in Eritrea, Abiye Abbäbä, had concentrated de-facto executive power in his hands since 1959. These factors decisively contributed to the relatively easy dissolution of the E.A. and of the Federation, declared at the E.A. on 14 November 1962.

The E.A. was founded in a period which had developed a "heightened sense of Tigrinya national consciousness" through the emergence of a number of newspapers and other literary activities (Ullendorff 1985:19) and the coming into existence of political parties since the mid-1940s and of other interest groups. Təgrəñña was thus chosen as the working language of the E.A., while Eritrea's official languages were Arabic and Təgrəñña. Only at the end of a long process of erosion did the E.A. chose Amharic as the official language (9 May 1960).

Eritrean Liberation Front

The E.L.F. (popularly called Arab. *Ǧabḥā*) was the first movement to combine political and military strategies to obtain Eritrean independence. It played a leading role in the history of ↗Eritrea from the early 1960s to the early 1980s. The backbone of the movement initially consisted of ↗Beni ʿAmər clan members from western Eritrea and *Mīrġanīya* Muslims centred in the nearby Sudanese town of Kassala.

Following the establishment of the ↗Ethiopian–Eritrean Federation (1952), when the imperial regime of Ḫaylä Śəllase began neutralizing the autonomous status of Eritrea, many Beni ʿAmər youngsters went to Cairo to obtain higher education and were inspired by the Nasserite Arab–Egyptian revolution. In 1959 they were joined there by two established Eritrean leaders, ↗Ibrāhīm Sulṭān and ↗Idrīs Muḥammad Adim. In July 1960 they announced the establishment of the ELF, with its headquarters in ↗Kassala. The first clash with the Ethiopian authorities in the Beni ʿAmər area (September 1961, headed by ↗Ḥamid Idrīs ʿAwate) heralded the beginning of the military struggle over Eritrea, which lasted until 1991.

The young Eritreans adopted the term "front" whilst in Cairo, from the then successful Algerian Front de Libération Nationale (F.L.N.). The "front" concept served to create an all-Eritrean movement loosely associated with the pan-Arab and anti-colonial struggles. It also served to institutionalize a modern guerrilla organization led by a political apparatus both in Eritrea and abroad. By 1965 the E.L.F. had developed into a fully-fledged modern "front". The leading exiles – notably the two founding members, as well as an Eritrean-born Təgrayan Christian, ↗Wäldä Ab Wäldä Maryam, and a Massawan Muslim, ʿUṯmān Ṣāliḥ Sabī – formed a Foreign Mission tasked with recruiting members, especially in Arab capitals. Five "commands" were established across Eritrea proper (the Arabic term *wilāya* was adopted, as in the F.L.N.), organizing fighters of hitherto rival areas and groups. A ten-man General Command in Kassala controlled action in the field and was in contact with the Foreign Mission. Dominated by the western Eritrean Beni ᶜAmər Muslims, the "front" absorbed fighters from the coastal Muslim areas and the Christian population of the core mountain region. By 1967 their total number was estimated at ca. 2,000.

After this, two key factors caused the E.L.F.'s unity to erode: the rapid growth of the movement and the strategic changes in the Middle East following the Arab defeat of June 1967. In September 1968 the fighters of the three non-Beni ᶜAmər "commands", who resented the western Eritrean domination, formed a Tripartite Union between themselves. When the first E.L.F. general congress was assembled in August 1969, the western "commands" reasserted their hegemony by forming a new 38-member General Command. This move effectively forced delegates of the Tripartite Union out of the picture.

Meanwhile another split had emerged between the General Command and the Foreign Mission. The latter was now dominated by ↗ᶜUṯmān Ṣāliḥ Sabī, who was connected to the Saudis, the Libyans (as of 1969) and the Palestinian Liberation Organization (P.L.O.). The General Command foreign relations, however, were oriented towards the rival Arab camp of the Baᶜth Party regimes of Syria and Iraq. At a P.L.O. camp in Amman (November 1969), ᶜUṯmān Ṣāliḥ Sabī, together with the Christian veteran politician Ḫəruy Tädla Bayru and some other leaders, established a new movement called the Peoples' Liberation Front (P.L.F.). In February 1972 members of the P.L.F. and the Tripartite Union established the ↗Eritrean People's Liberation Front (E.P.L.F.), thus creating a dominant entity in the Eritrean movement which would outlive the E.L.F.

Sometime before the establishment of the E.P.L.F., the E.L.F. had been reorganized. A new general congress in October 1971 confirmed the dismantling of the General Command and its replacement by a Revolutionary Council (R.C.), headed by Idrīs Muḥammad Adam and Ḫəruy Tädla Bayru. The renewed E.L.F.–R.C., though mostly dominated again by western Eritreans, proclaimed itself the only legitimate Eritrean movement. During 1972–74 it devoted a great deal of time to fighting the rival E.P.L.F. and estimates of casualties in this "fratricidal" war were between 2,000–3,000. Thus, in the years prior to the fall of Ḫaylä Śəllase's government, the Eritrean movement missed an opportunity to unite against a confused and increasingly brutal Ethiopian regime.

After the emergence of the *Därg* (↗Provisional Military Administrative Council) regime in Ethiopia and the oppressive measures it took against Eritrea, the number of people within the Eritrean organizations dramatically increased. The total number was estimated at ca. 2,000 in 1973 and grew to ca. 20,000 in late 1975 and ca. 40,000 in 1977. However, the E.L.F.–R.C. (as of 1975 headed by Aḥmad Nāṣir) in spite of its own growth, gradually began losing in its competition with the E.P.L.F. The latter gained more power due to the mass absorption of young Christian Təgrayans who were embittered with Mängəśtu's oppressive centralism. By now the E.L.F.–R.C. was deeply entrenched in its conviction that it was the sole representative of Eritrean nationalism. Its pretension contrasted with the reality: the main arena for the struggle against the Ethiopian forces moved to the Asmära–Kärän and Asmära–Massawa regions, areas controlled by the E.P.L.F. Most of the negotiations between the E.P.L.F. and other Eritrean bodies proved futile; moreover, further divisions arose. In March 1976 ᶜUṯmān Ṣāliḥ Sabī and his P.L.F. exiles broke with the E.P.L.F. and later formed a new E.L.F.–P.L.F. Some military co-ordination, however, was achieved between the E.P.L.F. and the E.L.F. in January 1977, which led to some victories against the Ethiopian army (including the occupation of Kärän in July). But as the two movements were closing on Asmära in November–December, they again proved unable to overcome their rivalry. In early 1978 a newly Soviet-equipped and Cuban-trained Ethiopian army pushed the Eritreans back and E.L.F.–R.C. forces retreated to the western regions. In August 1981 E.L.F.–R.C. forces were severely beaten in a major clash with the E.P.L.F. and throughout the early 1980s many of its fighters gradually defected to the rival front.

The demise and subsequent dismemberment of the E.L.F. in the 1980s stemmed from two discernable processes. First, the western Muslim population could no longer remain the movement's driving force when the Christian Təgrayans of the core regions joined the anti-Ethiopian struggle (mid-1970s). Second, the

E.L.F. had thrived on the pan-Arabism of the 1960s, benefiting from its Arab Middle Eastern support. Consequently, when pan-Arabism was losing ground in the Arab Middle East of the 1970s, the E.L.F. also lost support. Thus, the movement which initiated the modern struggle for Eritrean independence was practically no longer in existence when independence finally materialized.

In spite of this, the historical significance of the E.L.F. cannot be downplayed. In borrowing the "liberation front" concept from the Arab Middle East and in adapting and implementing it in Eritrea, the E.L.F. can be considered the first modern military and political movement in the Ethiopian–Eritrean context. It thus heralded, inspired and served as a model for all other "liberation fronts" that were later to challenge and defeat the authoritarian politics inherited from imperial Ethiopia by its succeeding military dictatorship.

Haggai Erlich

Eritrean Liberation Movement

The E.L.M. (Arab. *Ḥarakat at-Taḥrīr al-Īrītriyā*, Tgn. ማሕበር፡ ሸውዓተ፡ ሓረካ *Maḥbär Šäwʿattä Ḥaräka*, 'Association of Seven Movement'), the first radical clandestine political organization of Eritrea, working for the country's independence, was the response to the unimportance of official Eritrean political parties and organizations and historically the first stage in the development of clandestine politics of protest. Influenced by socialist and nationalist movements in the Arabic world, it was founded in November 1958 by five young Muslim Eritrean exiles in Port Sudan during that phase of the ↗Ethiopian-Eritrean Federation's development, as a result of the erosion of Eritrean autonomy. Their leader Maḥmūd Saʿīd Nawd was a member of the Sudanese Communist Party, a fact which strongly influenced the structure of the E.L.M. (Ruth Iyob 1995:99). A central idea of this mainly urban-based group was secularization, aiming at the reconciliation of Muslims and Christians in Eritrea. Political change was to be reached by civil disobedience and finally by a coup. The ↗coup d'état of 1960, however, came too early to be used by the E.L.M. cells.

The E.L.M. first took hold in the Eritrean lowlands. The structure of this underground organization and the successful trials to overcome religious schisms, however, allowed it to spread quickly also in the highlands, especially in Asmära. Starting from 1959 Saliḥ Aḥmad Iyay, a worker in Kärän, and Yāsīn al-Gade from Asmära organized the first clandestine cells in their cities. Each cell consisted of seven members, every cell member having exclusive contact with another cell, only known to him (and sometimes recruited by him). This decentralized structure made it difficult for the government to counteract. The cells met bi-weekly and every member contributed three percent of his income to the nationalist cause (Ruth Iyob 1995:100).

The appearance of a militant rival organisation, the ↗Eritrean Liberation Front (E.L.F.), in 1961 finally contributed to a shift from civil disobedience to a more radical form of anti-Ethiopian movements. In October 1961 the E.L.M.'s assassination attempt against *abba* ↗Dəmeṭros Gäbrä Maryam of the ↗Eritrean Assembly failed, followed by the arrest of many of its leading members by the Ethiopian security. In 1963 the E.L.M. started to plan an armed struggle. Its structure, however, did not allow any quick communication among the cells, some of which were also already infiltrated by government agents. Other cells had already joined the E.L.F. In 1964 conflicts over the idea of sending an armed group to Eritrea led to the resignation of ↗Wäldä Ab Wäldä Maryam, a member of the leadership in Cairo since 1962. Finally, this group of about 50 fighters (some of them recruited from the Sudan Defence Force) was attacked by the E.L.F. at ʿƎla Ṣaʿəda in Saḥəl in May 1965 and disarmed after heavy casualties. In March the E.L.M. had started a last attempt at civil disobedience, a secondary-school students' strike in Asmära against the annexation of Eritrea, asking, among other things, for a UN-supervised referendum. The strike, however, ended dramatically with mass-arrests. Thereafter the E.L.M. ceased most of its activities. It was dissolved formally in 1970, the last members joining ʿUṯman Ṣāliḥ Sabi's E.L.F.-P.L.F.

Wolbert Smidt

Eritrean People's Liberation Front

The E.P.L.F. (popularly called Arab. *Šaʿabiyya*) was established in 1972 and in the mid-1980s became the principal organization in the Eritrean nationalist movement. It led ↗Eritrea to a military victory over Mängəstu Ḫaylä Maryam's regime (↗Provisional Military Administration Council), and to statehood and independence in 1991 (made official after a referendum in May 1993). Up until the Ethiopian revolution of 1974, the E.P.L.F. was still an organization in the making, a minor rival to the ↗Eritrean Liberation Front (E.L.F.).

When Isayyas Afäwärqi joined the E.L.F. in 1966, he rejected the movement's hegemony and increased his influence in the Kärän–Asmära areas throughout 1970–71. In February 1972 his men joined with other fighters from the Tripartite Union to announce the establishment of the E.P.L.F. (For more relevant information on this process s. the entries on E.L.F. and ↗ʿUṯman Ṣāliḥ Sabi).

Between 1972–74 the new E.P.L.F. engaged in a "fratricidal" war with the E.L.F., while its relations with ʿUṯman Ṣāliḥ Sabī deteriorated. The latter continued to develop his concept of Eritrea's Arabism, which was now rejected by the younger Christians and Muslims in the field. Instead, they focused on Marxist ideology and the idea of Eritrea's uniqueness, which more naturally bridged their own differences. After the rise of the *Därg* and the liquidation of General ↗Aman Mikaʾel Andom (23 November 1974), who adopted a conciliatory approach towards Eritrea, thousands of Christian Təgrayans from Eritrea's highlands joined the E.P.L.F. By that time the new organization had further modified the "front" concept to contain a multifaceted dialogue between the movement and the entire Eritrean population. During the second half of the 1970s, the fast growing E.P.L.F – estimated at 20,000 fighters in 1977 and supported by both the Soviets and other Marxist revolutionaries around the world – developed various institutions in the fields of self-subsidiary economy, education and health, in addition to self-sufficiency in ammunition manufacturing.

After the rise of Mängəstu's regime, when the struggle over Eritrea turned into a full-scale war, the E.P.L.F. grew stronger than the E.L.F. In March 1976 it broke all contact with ʿUṯman Ṣāliḥ Sabī's P.L.F. and came under the undisputed leadership of Isayas. In negotiating with the E.L.F.–R.C., the E.P.L.F. insisted on dictating its seniority. An E.P.L.F. congress in January 1977 countered the E.L.F.–R.C.'s slogan, "Unity before Victory", by adopting the slogan "Revolution before Unity", implying that only an acceptance of its Marxist terminology and sole leadership was acceptable. After a major clash with E.L.F.–R.C. forces in August 1981, which ended in an E.P.L.F. victory, the E.L.F.–R.C. gradually lost its relevance and the E.P.L.F. emerged as the leader of the Eritrean movement. Its understanding of the "liberation front", as a movement that addresses the various needs of society, can be considered an important stage in the political modernization of the entire region. The E.P.L.F.'s Marxist terminology was gradually abandoned after its general congress of April 1987.

Within the new state of Eritrea, the E.P.L.F. was the only legitimate political party, and was renamed as the People's Front for Democracy and Justice.

Eritrean Weekly News

The E.W.N. (Tgn. ናይ፡ ኤርትራ፡ ሰሙናዊ፡ ጋዜጣ, *Nay Erətra sämunawi gazeṭa*) was the first Təgrəñña newspaper, founded in 1942 by the British Information Services shortly after the occupation of Eritrea by the British. It had a weekly circulation of 6,000, limited by a newsprint shortage, and was edited by ↗Wäldä Ab Wäldä Maryam (Johnson 1996:147). In over ten years it had some 520 issues, each of four to six pages of large format (Ullendorff 1985:19).

The E.W.N. is one of the most important sources on the historical period preceding the ↗Ethiopian-Eritrean Federation. In around 1945 it spread the idea of an Eritrean union with Təgray. When the registration of political parties started on the occasion of the cession of the Eritrean colony by Italy in 1947, the E.W.N. played an interesting role. Wäldä Ab, the chief editor, was one of the founders of the Liberal Progressive Party (L.P.P.), advocating Eritrea's independence. But the newspaper acted as a forum for the diverging views of several parties.

The great majority of articles in 1947/48 was written by supporters of the Unionist Party (U.P.), especially by Catholics who had enjoyed superior education and mastered Təgrəñña, e.g., by *abba* Ḫaylu Gäbrä Iyäsus or *abba* ↗Yaᶜəqob Gäbrä Iyäsus (Tekeste Negash 1997:44f.). With the extensive publication of articles in the E.W.N. the U.P. assured a stable basis of support. Additionally the British Military Administration of Eritrea, censoring the newspaper, used the E.W.N. for announcements and the spreading of information, e.g., on its anti-*šəfta* policy, including deliberate misinformation (s. Tekeste Negash 1997:62). The only important publicist of the L.P.P. (which had less support in the population) was the prolific writer Wäldä Ab, whose articles in the E.W.N. are considered as having been very influential in the formation of a modern standard Təgrəñña language (Ullendorff 1985:20).

The flourishing period of steadily growing press freedom and diversity ceased in the beginning of the Federation, when in 1953 the sovereign of the Federation ↗Ḫaylä Śəllase I banned all Eritrean newspapers, except the Unionist Party's *Ethiopia Weekly*.

Erlanger, Carlo Freiherr von

Baron E. (b. 5 September 1872, Niederingelheim, d. 4 September 1904, Salzburg) was a German zoologist, renowned for his ornithological studies. He was the leader of a zoological-botanical expedition crossing the Horn of Africa from the east to the west, accompanied by Oscar Neumann, a zoologist, the physician Ellenbeck, interested in botany, the cartographer Johann Holtermüller and the taxidermist Carl Hildgarth. Encouraged by ↗Ilg, they departed from Hamburg in late 1899, starting the expedition from ↗Zaylaᶜ in January 1900. Their caravan, consisting of more than 100 locals and 120 camels, reached ↗Harär, where they waited for *aṣe* ↗Mənilək II's permission for taking an unusual route southwards Addis Abäba. The permission granted, they could explore ↗Bale and ↗Arsi, following the route to the Muslim holy centre ↗Šayḫ Ḥusayn.

From the capital, the expedition split up. E. went to Lake ↗Abbaya and then to ↗Somalia via ↗Sidamo and ↗Boräna, while Neumann, also reaching Abbaya, went via ↗Gofa, ↗Käfa to ↗Fashoda and ↗Khartoum, Sudan. The results of this fruitful expedition, including the description of new bird species, are documented in a number of scholarly publications and maps. The expedition's success was also a sign for the stabilization of unified Ethiopia, which made travelling more secure (Bairu Tafla 1981:30). After E. the number of ↗expeditions rose considerably. In addition the access of Germans and Austrians to Ethiopia and especially to the court was from now on greatly fascilitated due to E's and the ↗Hall family's good contacts with *aṣe* Mənilək (Zischka 1935:125).

Erythraea

E. was a bimonthly periodical, with the sub-title *Bollettino bimestrale de Gruppo Eritreo del Touring Club Italiano*, published in Asmära at the Tipografia Francescana in 1920. The Touring Club, founded in Milan on 8 November 1894 with the aim of promoting tourism, developing itineraries and publishing maps, was active in Eritrea through the lawyer Giuseppe Latilla, the medical doctors Giovanni Provera and Antonio Tenenti and the engineers Paolo Reviglio and Alberto Chiarottino.

The aim of E. was to make known, promote and encourage tourism in Eritrea. The periodical had a small format and the first copy was issued in January/February 1920. It was not well distributed and its publication stopped with no. 6 of November/December the same year. However, several of the illustrated articles are an interesting source for Eritrean history and historical architecture (e.g., for ↗Ənda Maryam). The name of the journal, in its pseudo-Greek orthography, was taken from German geographical literature of the 1870s (cp. Bairu Tafla, in PICES 12, 511). Originally it meant vaguely the southern Red Sea region and the African shores, but it was later mostly identified with the Colonia Eritrea (with the exception of Leo ↗Frobenius, who developed a wider meaning of this term).

The Touring Club continued to prepare publications, the most important being the guide published in 1929 with 400,00 copies and that of the Africa Orientale Italiana published in 1938 with 490,000 copies under the new name Consociazione Turistica Italiana (*Guida*).

Əšätän

Ə. (**እሻታን**, also Ašätän, Aštän, 3,219 m A.S.L.) is a bulky mountain of volcanic origin in Lasta; it rises south-east of ↗Lalibäla, from where its flat-topped summit is clearly visible. Derivation of the name is unclear, for *əšät* (Amh. 'young grain') has no logical relationship to the mountain. The name may be an adaptation from the Agäw language.

Chapel below Əšätän Maryam; photo 1992, courtesy of Paul B. Henze

The mountain has two still-active early churches: Əšätän Maryam, rock-hewn in a cliff on the north side of the mountain, ca. 50 m below the summit; and Näʾakʷəto Läʾab, in a broad open cave at the base of the mountain on the southern side, by tradition established during the reign of ↗Näʾakʷəto Läʾab, a ruler of the ↗Zagʷe dynasty, who reigned briefly during the first half of the 13th cent. This appears to be supported by the Acts of Näʾakʷəto Läʾab, where the king is reported as having completed the construction of a church called Däbrä Ṣəyon in "the land of Aštän" (Conti Rossini 1943:164, 222).

Both churches have libraries and collections of church paraphernalia, some of them clearly very old. An outstanding piece of art in the possession of Əšätän Maryam is a booklet of miniatures (ca. 17th cent.), painted in a geometric style (ChojPaint 492ff., 521ff.). Both churches have long been accessible over trails from Lalibäla. The new highway from the Lalibäla airport to the town, completed in 1999, now passes within 350 m of Näʾakʷəto Läʾab.

Paul B. Henze

Ǝšäte of Qʷara

Ǝ. (እሸቴ; d. March 1768), son of *abeto* Märqorewos and *wäyzäro* Birutawit, was one of the significant figures in the group, known collectivelly as *Qʷaräññočč*, which supported the reign of his cousin, *ətege* Məntəwwab (↗Bərhan Mogäsa). At different times he held the titles of *assalafi*, *balambaras* and *däğğazmač*. Ǝ. held lands tributary to the Gondär churches, Qaha Iyäsus and ↗Däbrä Ṣäḥay Qʷəsqʷam and to the church of ↗Narga Śəllase, in addition to numerous fiefs. He entered the historical record in February 1742 in connection with an expedition to the Sinnār-Galabbat frontier. Seven years later, in October 1749, he helped suppress a rebellion in the north-western province of ↗Wälqayt. In 1755, on the death of *aṣe* ↗Iyasu II, he played a key role in securing the succession of Iyasu's son, ↗Iyoʾas, acting as intermediary between Məntəwwab, her brother *ras* ↗Wäldä Ləʾul and *ras* ↗Wädağo, ruler of Amhara, as the Queen's main representative. In 1757 he married *wäyzäro* Wälättä Rufaʾel, heir to the so-called *aläqənnät* of ↗Gälawdewos, the son of *ras* Wäldä Gyiorgis. They had at least four children, one of whom, Ḫaylu, was the principal heir. Wälättä Rufaʾel died in October 1762 and was buried at Qʷəsqʷam. During the reign of Iyoʾas, Damot and Agäw Mədər was his principle theatre of action. Ǝ.'s prominence at this time is indicated by the fact that it was he who, in October 1757, arranged for the burial of *wäyzäro* ↗Ǝnkoyye, mother of *ətege* Məntəwwab, at the church of Dämbäzä Śəllase. Ǝ. died in March 1768 in Agäw Mədər in one of the battles which heralded the start of the ↗*Zämänä mäsafənt*. His bones were later translated to the monastery of ↗Waldəbba.

Ǝsato

Ǝ. (እሳቶ), also known as Gudit, Judith and Esther (cp. also ↗Tərdaʾ Gäbäz), is the name of a legendary queen said to have been the conqueror of ↗Aksum.

The story of Ǝ. exists in several versions. She is generally said to have been a resident of Aksum, perhaps a member of the royal family reduced to prostitution. She was tricked by a local priest, who sought to have sexual relations with her. Disgraced and mutilated, she left Ethiopia. She met a Jewish ruler whom she married and convinced to destroy Aksum in revenge for the indignity she had suffered. At this time the ↗Ark of the Covenant was taken from Aksum and hidden.

From a literary point of view the story of Ǝ. can be shown to be built around structural oppositions to the story of the Queen of Sheba (↗Makədda) as found in the ↗*Kəbrä nägäśt*. Historically, the legend seems to have been constructed around a kernel of truth regarding the late 10th-cent. queen of the Banū l-Ham(u)wīya (as the Arabic sources have it), who came to rule on Aksum by killing "the king of the Ethiopians", possibly ↗Dəgnağan – and is however believed to have come from the south, perhaps from ↗Damot or ↗Bale.

Although certainly not the originator of the Ǝ. legend, James ↗Bruce appears most responsible for its dissemination into both scholarly and popular writings (BruNile II, 452f.). According to him, the beautiful Ǝ. set out to destroy Christianity and eliminate the Solomonic line. She massacred the royal house and established a Jewish dynasty that ruled Ethiopia for many generations. Ignazio Guidi claimed she was the queen of the "Banū l-Yahūdiya" and also identified her as Jewish, as did Basset (BassÉt 227) and Rathjens (1921:18–24). Although Conti Rossini (CRStor 285–89) demonstrated that significant reasons exist for rejecting the queen's alleged Jewishness, authors have continued to describe her as a "Falaša" (↗Betä Ǝsraʾel) queen. In keeping with other Arabic and Ethiopic sources – e.g., the *Kitāb aḏ-ḏaḫāʾir wa t-tuḥaf* (‘*Book of the treasures and precious gifts*’) by *qāḍī* ar-Rašīd az-Zubayr, of the second half of the 11th cent., and the ↗*Maṣḥafa məsṭirä sämay wämədr*, which was “revealed” to Baḫayla Mikaʾel before 1450 – she is rather likely to have ruled over, and come from the Sidaama area of ↗Bale (Fiaccadori 1992).

Ǝšätu Č̣ole

Ǝ.Č̣. (**እሸቱ፡ ጮሌ**; b. 11 September 1945, Nagallee, Boräna, d. 18 June 1998, Nairobi) was an outstanding Ethiopian economist. He had his elementary education in Nagallee and his secondary education at the General Wingate Secondary School in Addis Abäba. He then joined Ḫaylä Śəllase I University and graduated in 1966 with a B.A. degree in Economics, earning “Great Distinction” and winning the Chancellor’s Medal. Joining the Department of Economics as Graduate Assistant, he proceeded to do his graduate and post-graduate study in the United States, getting his M.A. from the University of Illinois at Urbana-Champaign in 1968 and his Ph.D. from Syracuse University in 1973.

Ǝ.Č̣. had a distinguished academic career, emerging as one of Ethiopia’s leading economists. He was a dedicated and inspiring teacher and a prolific writer. He occupied the Deanship of the Faculty of Arts from 1974 to 1976. He also served as member of the Editorial Board of the ↗*Journal of Ethiopian Studies* and as one of the two Ethiopian members in the International Organizing Committee of the ↗International Conferences of Ethiopian Studies. From 1983 to 1991, he was Chief Economic Expert at the Institute for the Study of Ethiopian Nationalities. He could be said to have attained the high moment of his professional career as founding member and President of the Ethiopian Economic Association from 1991 to 1994.

Ǝšätu Č̣ole; photo courtesy of the author

Nor was Ǝ.Č̣.’s academic career confined to national bounds. Thus he was Member of the Executive Committee of the Council for the Development of Social Research in Africa (CODESRIA) from 1992 to 1995. He also held various positions in the sub-regional research network, Organization for Social Science Research in Eastern and Southern Africa (OSSREA), serving as Editor of its Journal, *Eastern Africa Social Science Research Review* (1986–90), its Resident Vice-President (1986–90) and its Executive Secretary (1990–92). In 1995 he was Visiting Associate Professor of Public and International Affairs at the Woodrow Wilson School of Public and International Affairs of Princeton University.

In addition to his academic brilliance and professional distinction, Ǝ.Č̣. was a committed nationalist who ardently sought the progress of his country and the improvement of the lot of his fellow Ethiopians. Thus, he played an active role in the student movement. He was President of the Main Campus Student Union in 1965–66. Later, he also served as Secretary of the Ethiopian Teachers’ Association (1969–70) and founding member of the more radical breakaway group, known as “Forum”, which was in the forefront of the struggle against military rule in 1974. The *Därg*, apprehensive of Ǝ.Č̣.’s popularity, put him behind bars for a total period of seven years (1974–75 and 1976–82). Managing to endure the long period of confinement thanks to his high morale and his inexhaustible repertoire of wit, he re-emerged to attain higher distinctions and honours.

Donald Crummey

Esbroeck, Michel van

E. (b. 17 June 1934, Malines, d. 21 November 2003, Louvain-la-Neuve) was a Belgian Orientalist. He studied Classics, Philosophy, History and Philology of the Orient as well as Theology in Brussels, Louvain and Beirut. He joined the Jesuits in 1953 and became involved with the Bollandistes, the Jesuit editorial group of the *Acta sanctorum*. After many different positions and research projects, he became Professor for Philology of the Christian Orient at the University of Munich in 1987 (successor of Julius ↗Aßfalg) and held this post until his retirement in 1999. He was an impressive polyglot in ancient and modern languages and one of the major researchers in the field of Christian Oriental studies. His constant goal was the search for old hagiographic material and other neglected Christian texts. He always stressed the interdependency of Christian oriental literatures. Thus, in his vast research, he time and again touched on Gəʿəz texts and their relationship to those in other languages.

Stefan Weninger

Escarra, Jean

E. (b. 1885, d. 1955), French professor of Commercial Law in Paris and specialist in Oriental law, was the first drafter of the Commercial Code of Ethiopia. After his sudden death, the drafting was continued and completed by Alfred Jauffret.

In the latter part of 1953 E., at the time chairman of the Commission for the codification of a Commercial Code, accepted an invitation from the Imperial Ethiopian Government to draft a Commercial Code and a Maritime Code for the country. He submitted to the Commission the bulk of the texts later promulgated as Books II, IV and V of the Ethiopian Commercial Code. E.'s death in August 1955, interrupted the work on the Commercial Code. It was only several years later that the Imperial Ethiopian Government asked Alfred Jauffret, a professor of Commercial Law at the University of Aix-Marseille in France, to continue the texts of Books I and III. Having accepted this invitation, Jauffret submitted his draft version along with a Final Report on 1 March 1958. The Codification Commission reviewed these drafts in April 1958 and made several amendments to the text of Book I. The Amharic translation of these texts was then submitted to the Parliament which, in early 1960, approved the draft with several amendments. On 5 May 1960 Ḫaylä Śəllase I implemented the text of the Commercial Code with Proclamation No. 166 of 1960, the Code coming into force on 11 September 1960.

In his notes, E. stressed the need to draft a title with general provisions applicable to all forms of business organization and the desirability of co-ordinating the Commercial Code provisions with those in the Civil Code dealing with civil or ordinary partnerships. In January 1955 René David, the expert draftsman of the Civil Code, submitted to the Codification Commission a draft text regulating ordinary partnerships. It is not clear whether E. specifically approved this addition since, on some points, David's draft contradicted views expressed earlier by E. at the meetings of the Sub-Commission and in his own notes on the motifs.

From the strictly legal point of view, E. wished to receive instructions on several aspects of the Ethiopian legal organization, such as the nature of the local laws, their importance and use and the role of the courts. He also inquired about the existence of any kind of commercial laws, case laws, commercial customs or professional practices, contractual practices within the different commercial communities, bills of exchange, current accounts and bankruptcy.

↗Commercial Law

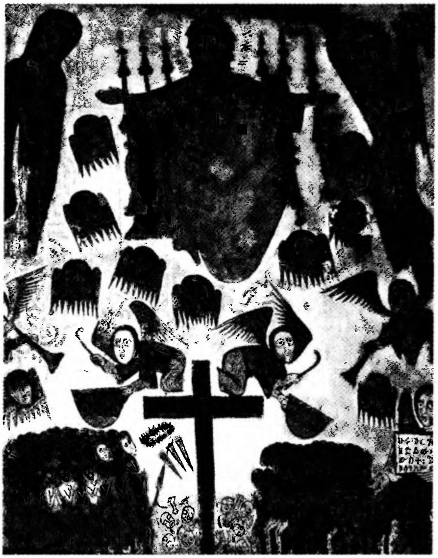
Heinrich Scholler

Eschatology

In its broader sense, E. is the religious doctrine dealing with the "last things" (Gr. τὰ ἔσχατα), namely the after-life of the human being and the end of the earthly world history.

Eschatological views within the ethnic ↗religions of Ethiopia deal mainly with the dwelling-place of the spirits and the way they interfere in the lives of living beings. The ↗Kunama of Eritrea believe that the soul descends into the tomb along with the dead; after the funeral ceremonies and the related sacrifices, the spirit is allowed to leave and to move freely about the earth; only the souls of the righteous can find shelter in their tombs at night, whereas the impious are condemned to remain in the open, and thus they can have a negative influence on the living. The ↗Boorana of southern Ethiopia and northern Kenya still preserve the traditional Oromo religion and believe that the spirits do not wander upon or under the earth; the righteous stay near the highest god ↗*Waaqa*, the impious burn in an eternal fire, and those who were neither good nor bad hang about as shadows. The belief in the end of the world is absent from Ethiopian ethnic religions because of the widespread idea that the highest god, after having created the world, lost any interest in earthly affairs.



Last Judgement; cloth mural; Balči in Sankora, eastern Šäwa, Amanuʾel Church, south wall; second half of the 19th cent.; photo 1993, courtesy of Michael Gervers

In spite of the scarcity of positive data, one can admit that in the first half of the 1st millennium B.C. the religious ideas circulating among the Semitic-speaking communities of the Ethiopian highlands were melting with elements of African substratum, as the Ethiopian conception of ↗kingship seems to prove. The influence of pre-Islamic ↗Arabia can be detected in the observance of sacral sovereignty as reflected in the divine filiation of the Aksumite king (*wäldä Mäḥrəm*, 'the son of ↗Mäḥrəm', to be compared with the titles of the kings of Awsan and Qataban), a belief probably connected with an eschatological role of the monarch. The African substratum can be recognized in the practice of building stelae over the Aksumite tombs, according to an architectural tradition whose cradle has been identified in the Sudanese-Ethiopian borderlands. The meaning of these Aksumite monuments is a matter of debate, but it must be considered that the practice recalls the animistic rite of planting trees over graves, both because the presence of the plant allows the memory of the dead to survive and because its first flourishing of the plant is regarded as a visible sign that the spirit is out from the tomb and free.

The translation of the ↗Bible into Gəᶜəz brought eschatological ideas from the Old Testament into circulation in Ethiopia, namely, those from the major prophets (Isaiah, Jeremiah and Ezekiel) and the Book of Daniel. Within the New Testament the ↗*Revelation of John* was the object of an obvious reverence as the earlist model of Christian prophecy. Yet, the Ethiopian Christian E. was influenced in a decisive and original way by the great works of the Jewish literature of the Second Temple period: the most ancient sections of ↗*Enoch*, the *Fourth Book of* ↗*Ezra* and ↗*Jubilees*, and by some works of early Christian times, such as, the *Ascension of* ↗*Isaiah*, the *Antichrist* of Hyppolitus and the *Shepherd of* ↗*Hermas*. Most probably all these texts, belonging originally to different historical periods and cultural assetts, were translated into Gəᶜəz as parts of a coherent religious creed; both the identity and provenance of the Christian group which brought into Ethiopia the attention over that is still debated. The general matter of these works deals mainly with the imminence of divine intervention for the destruction of the Evil and the establishment of the Reign of God. Polemics against civil institution, either government or state organizations is hereby included, and contributes to the growing of a fundamentalist political theology. The literary form of this eschatological vision is represented by the Jewish-Christian apocalypse, i.e. the revelation a divine messenger gives to a seer about events to take place at the end of time.

In the wake of Coptic tradition, for Ethiopian theologians the journey of the soul after death has different phases, described by examples in the ↗*Qäleməntos* (4:6–14). In the first one, between the end of the earthly life and the Last Judgement, the soul abandons the body and moves to a temporary place, waiting for its destiny to be achieved. The approach of the end of the world is announced by a sequence of fatal events: physical phenomena extraneous to the natural course, the appearance of false prophets and the establishment in Jerusalem of the tyranny of the Antichrist, who will rule the world until Enoch and Elijah will return and denounce the mistakes done by mankind. The beginning of the true end is marked by the descent of Jesus onto earth and is conceived as a succession of three scenes, each announced by a blast of the trumpet. First, the mortal remains shall take again the shape they had before death; then, the souls will leave their temporary places and once and for all will get back to their restored bodies; finally, in the same time, all the dead shall rise again and undergo the judgement of God, by which the sinners are separated from the righteous. In Gəᶜəz, the place of eternal joy is called ኤዶም (*Edom*, 'Eden'), or ገነት (*Gännät*, 'Garden'), both with several Semitic parallels; the dwelling-place of the sinners is called ገሀነም (*Gähännäm*) and ሲኦል (*Siᵓol*), both terms deriving from the Bible.

Like other non-Chalcedonian denominations, the ↗Ethiopian Orthodox Täwaḥədo Church accepts the millenarian doctrine, i.e. the belief in the Second Coming of Christ (↗*Dagəm mäṣᵓatu läkrəstos*). According to the picture drawn by Giyorgis of Sägla (ca. 1424) in his *Mäṣḥafä* ↗*məsṭir*, before the Last Judgement Jesus will descend on earth once again to cancel the reign of the Antichrist, release the souls of the righteous and take them to the one-thousand-year long banquet on Mount Zion (↗*Däbrä Ṣəyon*). During the first half of the 15th cent., particularly in the years of *aṣe* ↗Zärᵓä Yaᶜəqob, this belief became the subject of a theological dispute: the monastic communities of the disciples of ↗Ǝsṭifanos and Zämikaᵓel (↗Mikaᵓelites) rejected the millenarian faith and thus were condemned by the emperor and the metropolitans. The defence of Millenarianism against the spiritualistic objections of such monastic circles was clearly connected to the specific eschatological role traditionally assigned to the Ethiopian emperor. According to a concept going back to the 6th–7th cent., he is the earthly representative of the heavenly king or βασιλεύς, the defender of the Orthodox faith and the head of the troops called to fight against the infidels. In a celebrated prophecy reported in such works like the ↗*Kəbrä nägäśt* (ch. 117) and the *Raᵓəyä Sinoda* (ch. 3), at the end of the history of the World the Byzantine and the Ethiopian rulers shall defeat the enemies of the Christian faith (namely the Jews), then they will meet in Jerusalem, share the earth and rule the world in peace until the coming of the Antichrist.

The dogma of the resurrection of the body also became a matter of a controversy in Ethiopic sources since the 14th cent. at least. The supporters of the anti-materialistic E., as against human corporeity, could base on the *Ascension of Isaiah* (4:16–17): according to this famous apocryphon, the flesh is an integral part of the earthly world, so that they are doomed to dissolve together. Reflections of a debate already existing in the 14th cent. are traceable in the *Christian Romance of ↗Alexander the Great* (ch. 29–30), where a discussion about the resurrection between Alexander and his counsellor Komsat is reported. For this section the author exploited the arguments found in a work written by the 4th-cent. Syriac writer ↗Aphrahat, the treatise *On the Vivification of the Dead*, also known in a Gəʿəz version (ms. Firenze, Biblioteca Laurenziana, Or. 148) under the title **ነገር፡ በእንተ፡ እለ፡ ይክሕዱ፡ ትንሣኤ፡ ምውታን** (*Nägär bäʾəntä əllä yəkəḥədu tənśaʾe məwətan*, 'Treatise on those who deny the resurrection of the dead'). These literary documents seem to be directed against those contemporary theologians who preached the contrast between the material and perishable body of earthly life and the heavenly and imperishable garments (**ልብሳት**, *ləbsat*) the souls shall wear on resurrecting. This gnostic-like attitude was seemingly inherited by the disciples of Zämikaʾel, because it reemerges in the works they composed during the Jesuit mission in Ethiopia (1557–1632; ↗Jesuits). Particularly, the work entitled **መርስ፡ አሚን** (*Märs amin*, 'Safe harbour') deals with the Catholic objections to the Ethiopian practice of circumcising children on the eighth day after their birth (and therefore before ↗Baptism, administered on the fortieth day), because this would prevent an even small part of the body from taking part in the resurrection and in the final salvation. To these statements the Ethiopian author of the treatise opposes the spiritual interpretation of the resurrection, which concerns the baptized as a whole, because the sacrament involves his soul, not his body.

A description of the eternal punishments is contained in the *Apocalypse of ↗Peter*, the 2nd-cent. apocryphon fully transmitted only in the Gəʿəz translation made from a lost Arabic *Vorlage*. The Ethiopic text of this apocalypse did not circulate independently, but was used as the first part of the treatise **ዳግም፡ ምጽአቱ፡ ለክርስቶስ፡ ወትንሣኤ፡ ምውታን** (*Dagəm məṣʾatu läkrəstos wätənśaʾe məwətan*, 'The second coming of Christ and resurrection of the dead'), a part of the eschatological dossier transmitted the mss. Paris, BN Abb. 51 and Ṭānāsee 35 along with the **በእንተ፡ ኵናኔ፡ ኃጥአን** (*Bäʾəntä kʷənnane ḫaṭəʾan*, 'On the judgement of the sinners'). The revelations of Peter to Clement about the eternal punishments, preserved in the *Apocalypse of Peter*, are followed in the first treatise (*Dagəm məṣʾatu läkrəstos*) by a long dialogue between Peter and Jesus. At the end, the Son of God declares that he will intercede with his Father in order to obtain from him salvation for the whole of mankind, including the sinners (with the exception of the ↗Devil and of the demonic beings). This is a radical conception of God's mercy, showing some relations with the E. of the 3rd-cent. Greek writer ↗Origen of Alexandria, and his controversial doctrine of the ἀποκατάστασις. These ideas are corroborated in the second treatise (*Bäʾəntä kʷənnane ḫaṭəʾan*), a new speech, in which Peter is relating to Clement the contents of God's revelations about the same doctrine of the universal restoration, according to eschatological view that seems to be prompted by ancient contacts with Egyptian monastic circles.

A similar conception can be traced in some aspects of the ↗Betä Əsraʾel E., which shares with the Christian view both the millenaristic expectation of the advent and of the mystic King Tewodros (destined to bring to earth the era of peace before the consumption of the world), as well as some basic ideas about the final events. For the Betä Əsraʾel of central importance is the concept of the ↗Sabbath. At the end of times, after the final catastrophes, in spite of the God's judgement rewarding merits and punishing sins, some wicked souls can still receive forgiveness and be saved from eternal damnation only due to their strict observance of Saturday rest. According to the ↗*Təʾəzazä sänbat*, Sabbath, the feminine personification of the Seventh Day, will be standing next to God and obtain from him the redemption for the sinners, who never neglected to commemorate the Creation and to honour the Sabbath as an eschatological symbol of the life to come.

The Islamic view of the final events is grounded on the description in several Qurʾānic passages. The first judgement takes place immediately after the death and an examination within the tomb (Qurʾān 8:50–51; 50:17–18). Destructive natural phenomena will precede the coming of the last day, announced by a blast of trumpet and marked by the annihilation of the world (*fanā*ʾ), the resurrection of the bodies (*qiyāma*) and the universal assembly (*ḥašr*) for the Last Judgement (36:51–54, 77–80; 50:20–23, 41–44). After the evaluation of the earthly deeds (7:8–9) each soul will be sent to paradise or hell, elaborately described by several authors. For Muslims, too, during the last days before the final destruction the earth will be ruled by an eschatological leader (*Mahdī*, 'the guided'), who will restore justice and faith. In the history of the Islamic communities different personalities styled themselves by this title in order to enjoy the political and religious authority. In the Sudan, between 1882 and 1885, Muḥammad Aḥmad b. ʿAbdallāh declared himself Mahdi and led an anti-Egyptian secession movement, which brought about the conquest of Khartoum and the independence of the Sudan up to 1898. After his death in 1885, the political and religious unrest involved some Ethiopian provinces, so that *aṣe* ↗Yoḥannəs IV was forced to face the ↗Mahdist army in the battle of Mäṭämma, where the Emperor himself found death on 11 March 1889.

Escherich, Georg

E. (Amh. ኤሸሪህ; b. 4 January 1870, Schwandorf, d. 26 August 1941) was an adventurous forester who travelled in several East and West African countries. In early 1907 he participated in a hunting-expedition in Ethiopia at the foot of the south-eastern escarpment in Oromo areas. His enterprising character soon led to close contacts to *aṣe* Mənilək II's government and semi-officials like Jakob Hall. He suggested a law to protect wild animals and initiated the introduction of new plants. The Emperor, remembering that Addis Abäba was formerly covered by thick forests, made him return to Ethiopia in 1909 to start plantations in the capital. However, the leadership of Ethiopia was already partially paralyzed due to the Emperor's illness; E., therefore, only experimented on the German Legation's compound, explored regions as far as Lake Rudolph (today Turkana) and submitted – unsuccessfully – forestry plans to the government. His brother Karl, the entomologist and professor in Tharandt near Dresden and Munich, also travelled to the region, publishing notes on Eritrea in 1908 (Lockot I, 63).

Internationally, E.'s presence at the court was understood as a further enforcement of Germany's influence on Ethiopia; for Zintgraff was appointed counsellor, Steinkühler acted as the Emperor's physician and Pinnow was Crown Prince Iyasu's tutor. E.'s publications contain several interesting details on this turbulent period. In Germany, E. became a prominent leader of the right-wing monarchist movement in Bavaria after the fall of the German emperor (as the founder of the militant "Organisation Escherich" or "Orgesch", 1919).

Wolbert Smidt

Esimiphaios ↗Sumyafaᶜ Aśwaᶜ

Əskəndər

Aṣe Ə. (እስክንድር; b. 15 July 1471, d. 1494 [r. 1478–94]) was a son of *aṣe* ↗Bäʾədä Maryam I and one of his wives, *əmmäbet* Romna. Bäʾədä Maryam felt uneasy about the fate of his first-born son at the court, always fraught with plot and conspiracy, and gave the baby to Anbäsa Dawit, an influential governor of ↗Goǧǧam. However, Anbäsa Dawit died shortly afterwards of plague and the Emperor had to take his son back. In 1475, when for security reasons the Emperor sent all his other children to Gänz (↗Gänäzo), Ə. was entrusted to *bitwäddäd* ᶜAmdä Mikaʾel, a mighty warlord whose main task was to cope with Muslim raids at the frontier areas of ↗Wäǧ and ↗Fäṭägar. ᶜAmdä Mikaʾel was on campaign together with Ə. when Bäʾədä Maryam died on 8 November 1478. Naᶜod, a younger brother of Ə., was then proclaimed Emperor. However, ᶜAmdä Mikaʾel returned immediately and had his six-year-old protégé crowned (with the throne name Iyosyas, s. Fiaccadori 2004). It was certainly the mighty *bitwäddäd* who formed the council of regency, which included himself, Romna and *ᶜaqqabe säᶜat* Täsfa Giyorgis (fl. 1478–86, s. Taddesse Tamrat 1970:109ff.). He also established most cordial relations with *əččäge* ↗Märḥa Krəstos.

ᶜAmdä Mikaʾel aspired to stop the growing religious dissent. So he sent a delegation to Egypt which in 1481 brought from Alexandria five Coptic ecclesiastics, among them two bishops (↗Yəsḥaq and ↗Marqos). He wanted also to subjugate ↗ᶜAdal, the main Muslim rival of Christian Ethiopia and to consolidate the central authority, which at that time belonged not so much to the Emperor as to ᶜAmdä Mikaʾel himself. This policy was to encounter wide opposition "when they saw him ruling all Ethiopia on his own" (PerrEsk 339).

Ə. himself refused to remain an ever-"baby-king" and with the help of ᶜAmdä Mikaʾel's opponents he deposed him sometime before 1486. ᶜAmdä Mikaʾel was eventually exiled and secretly executed. This immediately alienated Ə. from ↗Däbrä Libanos, where ᶜAmdä Mikaʾel was not only buried, but also demonstratively canonized. As a result, in the chronicles compiled by the scribes of Däbrä Libanos, Ə.'s reign is described only in its three first years, when relations between Däbrä Libanos and the council of regency were still unclouded. After that, Ə. led the typical life of the itinerant feudal rulers of the time: he built churches (↗Däbrä Məśwaᶜ; Däbrä Məsṭir in Šäwa, s. Kur 1972:90f.; possibly Gännätä Giyorgis in Gəšše, s. DerDom 341), pacified his rebellious vassals and fought ᶜAdal with no success, until he was accidentally killed by the poisonous arrow of a ↗Maya archer in 1494 at the early age of 22. His empire remained in no better state than it was when he had been proclaimed emperor in 1478.

Əskəndər

Alexander Boghossian (b. 1937, Addis Abäba, d. 2003, Washington DC), who called himself Ə. (እስክንድር; or Skunder), was a prominent artist. Son of an Armenian father, Kosreff Boghossian, and an Ethiopian mother, he was awarded an Ethiopian government scholarship to study art in Europe. From 1955–57 he attended three London-based schools: Saint Martin's School, the Central School and the Slade School of Fine

Arts. Following this he spent nine years in Paris (1957–66) where he attended and taught at the École des Beaux Arts and the Académie de la Grande Chaumière.

Whilst in London and Paris, Ǝ. was greatly inspired by African, Latin American and African American artists. The philosophy and art of Négritude, Paul Klee's pictorial symbols and the work of the surrealists also deeply impressed him. From 1966–69, after he had returned to Addis Abäba, Ǝ. taught at the ↗School of Fine Arts, where he has exercized a lasting impact on a generation of young Ethiopian artists. Together with ↗Gäbrä Krəstos Dästa, Ǝ. was a pioneer of Ethiopian modern art and his leaving Ethiopia was a great loss. Many of Ǝ.'s students followed him to Washington DC, where he lectured as an Associate Professor of Painting at Howard University (1969–2000). Ǝ. was the first Ethiopian artist to have his work purchased by the Musée d'Art Moderne, Paris 1963, and the Museum of Modern Art, New York 1965.

Ǝskəndər Dästa

Vice-Admiral Ǝskəndər Dästa as Commodor of the Ethiopian Navy; photo by Bassano, courtesy of the IES (no. 3E1, 799)

Commodore Ǝ.D. (**እስክንድር፡ ደስታ**; b. 6 August 1934, Addis Abäba, d. 23 November 1974, Addis Abäba) was grandson of *aṣe* ↗Ḫaylä Śəllase I, son of *ras* ↗Dästa Dämṭäw and ↗Tänaññä Wärq Ḫaylä Śəllase. He received most of his education in Britain. In 1955, he became deputy commander of the newly formed Ethiopian Imperial Navy under Ḫaylä Śəllase I, who was the commander-in-chief of all the armed forces. Despite his affiliation with the royal family and his reputation as a "vigorous and progressive" commander, Ǝ.D. played, at least on the surface, a comparatively minor role in the Imperial government. Some sources suggest that he was a possible successor to Ḫaylä Śəllase. Others maintain, however, that the Emperor distrusted him and therefore never offered him significant responsibilities in the government. As a result, Ǝ.D. frequently performed minor representational duties such as serving on the International Christian Fellowship's executive committee, attending to Prince Henry the Navigator's celebrations in Lisbon and to a royal wedding in Brussels in 1960. During an armed forces revolt on 25–26 February 1974, Ǝ.D. temporarily fled the main naval base at Massawa and sought refuge in Djibouti. On 23 November 1974 Ǝ.D. was executed by the *Därg* along with 59 other men in what has been known as the "Bloody Saturday" massacre (↗Revolution).

Ǝslam Däḥar

Ǝ.D. (**እስላም፡ ደሐር**; Arab. اسلام دحر, Islām Daḥar, perhaps from Arab. *daḥara* 'to expel') was, according to the ↗*Futūḥ al-Ḥabaša*, son of Kum Däḥar, son-in-law of *aṣe* Ǝskəndər and regent of ↗Wäǧ.

When *aṣe* ↗Ləbnä Dəngəl, pursued by *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī ("Grañ"), fled hastily to Gäbärge (near ↗Zəqwala, s. BasHist 113, no. 1), he was joined by the "patrician" (Ar.: *al-baṭrīq*) Wäsän Sägad, who had come from Wäǧ (Waǧ in the Arabic text). He blamed the "patricians" for having abandoned ↗Damot and wanted to know where Ǝ.D. was. When the latter arrived, Wäsän Sägad asked him to indicate a fortified place in Wäǧ where the Christians could take refuge. Ǝ.D. said they should go down to the market of Wīzǧibya (cp. MarAmdS 219, s. under "Wäge") and stay there. Ǝ.D. promised that he would lead the Christians to a safe place. After two days the Muslims entered the land of ↗Wäräb, in the district of Andāqābṭān (↗Ǝndägäbṭän; s. BasHist 245, no. 3; TadTChurch 117 no. 8; MarAmdS 200, 219). Aḥmad Grañ sent ↗ᶜAbdannāṣir to reconnoitre, but the Christians thought it was the *imām* himself. Ǝ.D. then led the Christians into Wäǧ to a narrow place. A renegade by the name of Ḥaybī told Grañ that there was no place for the Ethiopian Emperor to escape to, neither to ↗Gurage, whose inhabitants were his enemies, nor to ↗Däwaro. But the Muslims did not follow Ḥaybī's advice and returned to Šäwa via Wīz, while ᶜAbdannāṣir moved to pillage and burn the town and monastery of Ǝndägäbṭän.

Some time later, Grañ, while in Wäǧ, ordered *wazīr* Muḥammad to conquer Wäǧ and Gäbärge. The inhabitants did not resist him, but Ǝ.D. and Yonadab, brother-in-law of Ləbnä Dəngəl, refused to embrace Islam and moved to the heights of Gurage. When Grañ pitched camp in a place called Dūǧ, in Wäǧ, the two "patricians" separated. Yonadab went to ↗Angot in order to join the king in Damot, but Ǝ.D., afraid that the land would be destroyed, sent his son to Grañ, accompanied by his son-in-law ᶜAsbo and 13 horsemen. ᶜAsbo, an eloquent and intelligent man, presented Ǝ.D.'s son as a gift to Grañ with the request not to burn their churches and ravage their land. He also asked that they might keep their religion, in which case they would pay the capitation. The *imām* agreed, but told the Christians to repeat after him the Muslim profession of faith. ᶜAsbo repeated the formula "and became a good Muslim". Ǝ.D.'s son was willing to become a Muslim too, but on the condition that Grañ would consider him as his own son. Grañ said that he would do anything for him provided he embraced Islam. The young man, too, repeated the formula, as did the Christian horsemen, upon which they all received a garment (of honour; s. BassHist 364f.).

After Grañ had established himself firmly in Däwaro, he sent *wazīr* Muǧāhid to Wäǧ. Half of the inhabitants refused to embrace Islam and entrenched themselves with 30 "patricians" and their chief Ǝ.D. in the mountains; however, soon they were defeated. Ǝ.D. was captured and put to death, together with many others. The entirety of Wäǧ submitted to the *wazīr*, who sent an envoy to announce the victory to Grañ, whom he found in Ǧurāǧī (Gurage).

Emeri van Donzel

Ǝslam Sägäd

Ras Ǝ.S. (**እስላም፡ ሰገድ**, also known as Ǝslamo, d. 31 March 1531) was a warlord of *aṣe* ↗Ləbnä Dəngəl, who had also granted him the titles of both ↗*ras* and ↗*bitwäddäd*. He was a governor of the important frontier province of ↗Fäṭägar, where his main duty was to repel regular Muslim raids into his province which were undertaken under the banner of ↗*ǧihād*. Ǝ. was quite successful in this, because he knew well the usual tactics of these raiders (well described by ↗Alvarez, s. BeckHuntAlvar 307). At his disposal he had well-armed cavalry guards of his own and Fäṭägar levies who fought bravely to defend their home. The situation changed drastically when in February 1531 the Emperor sent Ǝ.S. instead of his brother-in-law ↗Dägälhan to withstand the main forces of ↗Aḥmad b. Ibrāhīm al-Ġāzī in another area. The levies had no stimulus to fight outside their homeland and Ǝ.'s guards alone could not resist the Muslim well-trained cavalry attack at Ayfärs on 31 March. The levies fled and the cavalry guards died to a man. Ǝ.S. himself was killed by *amīr* Abū Bakr b. Yimāğ Aḥmad (BassHist 202) together with many Ethiopian noblemen.

Ǝslam Sägäd

Azmač Ǝ.S. (**እስላም፡ ሰገድ**, lit. 'the Muslims bowed to him', d. November 1564) is also known under the abbreviated name Ǝslamo. He was a commander of one of the royal regiments of *aṣe* ↗Minas. After the death of the latter, Ǝ.S. refused to accept the enthronement of *aṣe* ↗Śärṣä Dəngəl and intrigued in favour of his own candidate to the throne, *abetohun* ↗Hamälmal, son of Romanä Wärq, *aṣe* Ləbnä Dəngəl's sister. Young Śärṣä Dəngəl was opposed by many at his enthronement, but his enemies lacked unity and soon died one by one in their habitual feuds, Ǝ.S. among them.

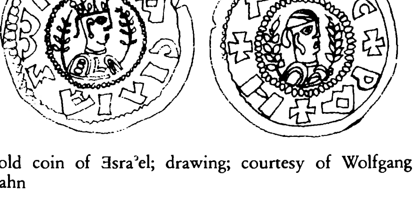
Ǝsraʾel

Ǝ. (**እስራኤል**, or Yəsraʾel, also known as Betä Ǝsraʾel or Zäʾəsraʾel; Gr. ICPAHΛ, i.e. Ἰσραήλ) was a 6th-cent. Christian king of ↗Aksum. A son and probably the immediate successor of ↗Kaleb Ǝllä Aṣbəḥa, who retired to hermitic life around 523/24 or within 529/30 (Fiaccadori 2003:184f., 232f.), he is known from both literary and numismatic sources. The latter are often referred to an early 7th-cent. namesake (s. CRStor 216, 260f.) – with no cogent reason but the difficulty to put the rulers after Kaleb into sequence. In a series of gold coins, most of which from a hoard discovered at ↗Adulis, and in one rare silver example Ǝ. appears on both sides, half-length bust rightwards, wearing a low tiara or a head cloth respectively; his figure is flanked by two stalks and enclosed in an inner beaded circle with cross and Greek legends (pleading as well for a 6th-cent. chronology). The obv. is inscribed: BACIΛỊ AΞϢMI, i.e. *Basilé*[*us*] *Axōmi*[*t*(*ôn*)] 'King of the Aksumites'; on the rev.: *Israēl* (Type 143 in Munro-Hay–Juel-Jensen 1995:254f.). Even rarer examples of copper display the same subject as the obv. of his gold, but labelled in Gəᶜəz: *ngś Ysrʾl* 'King Yəsraʾel'; the rev. shows a cross with flared arms equal in length and a Greek legend all-round (including a small cross) that can be read: *śhl lʾḥzb* or *lʾḥzb śhl* 'mercy to the people' (Mordini 1959:182; Type 144 in Munro-Hay–Juel-Jensen 1995:255f.).

According to the controversial late antique evidence embedded in the ↗*Kəbrä nägäśt* (ch. 117) and further elaborated in local traditions of ↗Däbrä Libanos of Šäwa (CecZeila 370–73), Ǝ. is Kaleb's elder son, the younger one being later *aṣe* ↗Gäbrä Mäsqäl, with whom Ǝ. had a long-sustained conflict that was to culminate in the fight "at the narrow end of the Sea of Liba" (or rather, "of the western region"), alluded to also in other sources (Fiaccadori 1992:73ff., 91). Against an apocalyptic background with marked eschatological overtones, in the *Kəbrä nägäśt* Ǝ. is appointed king of ↗Nağrān and then left in ↗Jerusalem by his father Kaleb, who has chosen to be succeeded by Gäbrä Mäsqäl; at the end, thanks to Kaleb's efforts, the engagement between his two sons is averted: Ǝ. is doomed to be the invisible lord of "the heavenly chariot", while Gäbrä Mäsqäl shall reign visibly over ↗Zion, "upon the throne of his father" (↗Eschatology). More recent stories have it that, as the second son, Ǝ. seized power by force taking advantage of his brother's absence, for Kaleb had abdicated with no designated successor.

Yet, in the more authoritative Life and Miracles of *abba* ↗Libanos or Mäṭ(ṭ)aᶜ, a 14th/15th-cent. product likely to draw on material contemporary to the Saint, two kings are introduced: the iniquitous Zägäbäzä Aksum (var.: Ǝllä Gäbäz) and his pious successor Gäbrä Mäsqäl (Bausi 2003, §§33, 36, 135, 413). The latter is indeed



Gold coin of Ǝsraʾel; drawing; courtesy of Wolfgang Hahn the son of Kaleb who, in accordance with different traditions, ascended the throne either after his father – i.e., in 530/31 at the latest – or after his brother Ǝ., whose tenure seems to have been relatively brief (8 months in the "king lists"). In the narrative of the Vita a few ancient elements relevant to the struggle between the two brothers are apparent, the memory of which was to fade in the progress of time: for such a struggle must have been triggered by Kaleb's abdication and then settled in favour of Gäbrä Mäsqäl (the negative characterization of Ǝllä Gäbäz/Zägäbäz is quite symptomatic).

It is therefore tempting to conclude that Ǝllä Gäbäz might rather be the "royal name" of Ǝ., otherwise unknown in Greek or Ethiopic hagiographies; and Gäbrä Mäsqäl, by way of exclusion, the "Christian name" of ↗W^{c}ZB, 'king of Aksum' and 'son of Ǝllä Aṣbəḥa' in his own inscription from ↗Aksum Ṣəyon cathedral (RIE 192), and probably ruling from 534 to 548 ca. (against MHAksum 89, 93, 187, 194, BrakKirche 108, and Bausi 2003:XXIXf., n. 26–27 [tr.], s. Lusini 2001:522f., and in *StudAeth* 70 n. 17, though Ǝ. is here distinguished from both Ǝllä Gäbäz and W^{c}ZB/Gäbrä Mäsqäl).

Such a logical conclusion should definitely prevent the recurrent identification of Zägäbäzä (or Ǝllä Gäbäz) mentioned in the Life of *abba* Libanos with ↗Ǝllä Gäbäz known from Greek legends (ΑΛΛΑ/ΕΛΛΑ ΓΑΒΑΖΗϹ or ΓΑΒΑΖΝΓ = *n*[*ə*]*g*[*uś*] 'king'?) on Aksumite coins dated to the late 6th or early 7th cent., both persons being possibly encompassed by Ǝllä Gäbäz/Zägäbäz(ä Aksum) of the Ethiopic "king lists", where reference to Betä Ǝsraʾel is also made ("list C", nos. 80, 90).

Gianfranco Fiaccadori

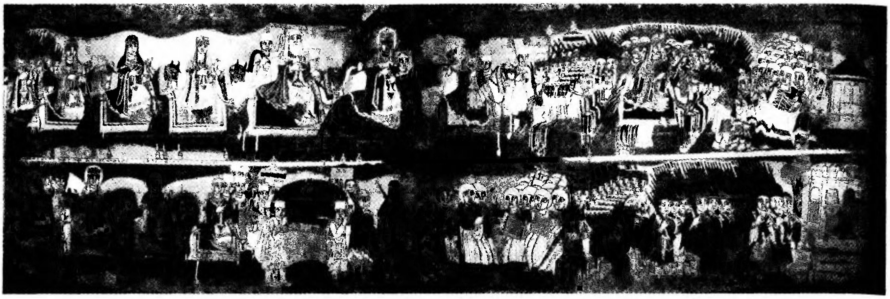
Ǝsṭäzya

Aläqa Ǝ. (**አስጠዝያ**, baptismal name Gäbrä Ǝgziʾabəḥer; b. 1872, Maryam Ḥəmbərti, Ḥamasen, d. 1942, Ḥamasen), was a traditional Ethiopian painter. He received a traditional church education in ↗Däbrä Bizän, Eritrea. After his ordination as deacon, Ǝ. continued his education in ↗*qəne bet* and in ↗*zema bet*. He studied church painting in the same monastery, possibly under the guidance Gäbrä Giyorgis from Goǧǧam.

Since his original intention was to be a monk, Ǝ. served one year as a novice in the monastery of Mäkanä Ḥəywät in Çəq (Tämben), but was never ordained. Yet, he was allowed to stay in the monastery and received a piece of land from its holding. He married a local girl named Wälättä Mikaʾel, with whom he had three children. His son Fəṣṣame also became an ↗*aläqa* and a church painter.

It seems that Ǝ.'s main interest was monumental wall-painting. The murals in the following churches were painted by him:

- in Tämben: Kidanä Məḥrät in Qäqäma; Śəllase in Çəq; Maryam in Mälfa; Qəddus Giyorgis in Ruba Kʷəsa; Gäbrä Mänfäs Qəddus in Mänya, Iyäsus in Gäläbäda;
- in Ǝndärta: Qəddus Yoḥannəs in Qoqolo;



Royal procession towards a church; cloth mural by *aläqa* Ǝsṭäzya; Ruba Kʷəsa, church of St. George, south wall of the *mäqdäs*; 19th/20th cent.; photo 2002, courtesy of Michael Gervers

– in Eritrea: Maryam in ʿAddi K̲ʷala; Maryam in Ḥəmbərti; Täklä Haymanot in Liban; Qəddus Mikaʾel in ʿAddi Räʾəsi;
– in Gondär: Qəddus Giyorgis in Däräsge, Səmen, and Qəddus Giyorgis in Ǧähǧäh, Wägära.

From the documents it appears that he received 400 Maria Theresia thalers for each church, which included the expenses for painting materials. An exception was Çəq, where he charged only 200 thalers for the purchase of materials.

Although Ǝ.'s works have not yet been studied, judging from the paintings which have been recently recorded (Çəq, Ruba Kʷisa) he followed the iconographical programme established for the central churches in the 17th cent., sometimes adding elements which seem to be his own, thus bearing witness to his deep knowledge of biblical texts and theological commentaries (e.g., a fettered ↗Devil falling down in the Crucifixion in Çəq; Jacob's ladder in Ruba Kʷisa).

Ǝ. was a very skilful draftsman who paid great attention to details, quite often rendered with remarkable naturalism. On account of that, a large painting in Ruba Kʷisa depicting a procession attended by *aṣe* ↗Yoḥannəs IV and his civil and ecclesiastical dignitaries could well be considered as an important historical document.

The painter used traditionally prepared paints where dark red, deep yellow, emerald green and dark blue dominate. One of the characteristic features of his style is the careful modelling of the human body, especially the face, with light brown and beige.

Ewa Balicka-Witakowska

Ǝste

Ǝ. (**እስቴ**) is a region east of Lake Ṭana and north of the Abbay in southern Bägemdər, some 40 km south of Däbrä Tabor. The Wanqa River, a tributary of the Abbay, is its most-notable geographical feature. The area hosts a number of churches, many of which were founded some 400–500 years ago, an indication of the era when the indigenous Agäw population was Christianized. Ǝ. has long been famed for the production of religious ↗manuscripts. Local scribes, many working in a district known as Andəbet, are still producing quantities of manuscripts by traditional methods. The region is perhaps the last locale in the northern highlands where significant production still occurs at the turn of the 21st cent. A.D.

In the past, Ǝ. was also prominent in economic and military affairs. It was a station on the long-distance trade routes that ran from the southern highlands across Goǧǧam to Lake Ṭana and Gondär. From at least the time of *aṣe* Susənyos (r. 1607–32), Ǝ. was a campsite on the line of march from Lake Ṭana to Amhara and Goǧǧam. Iyasu I (r. 1682–1706) especially favoured it as a staging-ground for campaigns into Oromo lands across the Abbay and the Bäšəlo.

Under the imperial administration of the mid-20th cent., Ǝ. was a *wäräda* in Däbrä Tabor *awraǧǧa* in the Province of Bägemdər and Səmen. Today, a small village bears this name.

LaVerle B. Berry

Esteves Pereira, Francisco Maria

E.P. (b. 9 August 1854, Miranda do Douro, d. 9 December 1924, Lisbon) was a renowned Portuguese scholar who gave important contributions to ↗Ethiopian studies. He formed as a military engineer, graduating in 1882. He joined the Portuguese Army in 1875, serving as an officer since 1883, and reaching the grade of major in 1904. Placed on the reserve list in 1916, he became an official of the Avis and Santiago knightly orders, and was later a member of the Academy of Sciences, Lisbon, and of the Portuguese and French Geographical Societies. As a student and through self-learning he aquired a wide knowledge of Latin, Greek and Sanskrit as well as Hebrew, Arabic and Gəʿəz, thus devouting his entire life to Oriental Studies, with special attention over Ethiopia and related matters – on various aspects of which he wrote significantly. In this connection, he was in touch with, and highly considered by, such outstanDing European scholars as ↗Basset, Conti Rossini, ↗Gallina, ↗Goldschmidt (with whom he also collaborated), ↗Guidi, ↗Littmann, ↗Mondon-Vidailhet and ↗Perruchon. In Basset's words (1892:8), E.P. "restored, or rather created Ethiopian studies in Portugal". as a matter of fact, his scholarly achievements went far beyond the scope of his native country – in which, as an Orientalist, he was somewhat isolated, with almost no success for Ethiopian studies.

His researches also focused on Portuguese tradition and history of science and technical lore (s., e.g., his essay on the astronomical calculation by Pedro Nunes, Esteves Pereira 1912), more often seen with reference to the Ethiopian milieu. Yet, in spite of such a vast range of interests and competences, he always looked at his scholarhip as at a private leisure; and this may well explain why he left no students.

In some 25 years of assiduous work, he edited, translated and annotated a number of biblical (↗Bible), hagiographic (↗Hagiography) and historical (↗Historiography) texts in Gəʿəz. His versions are extremely cautious and literal, the original terms being directly introduced whenever conveying a pregnant or specifical meaning. Most of his editions, especially of the royal chronicles, with accurate commentaries (e.g., that of ↗Susənyos [PerChron]), are still standard reference works in Ethiopian studies. Eight out of the ten publications he issued by 1897 deal with Ethiopian literature and culture – which earned him the Star of Honour by ↗Mənilək II, awarded to him in that year. He bequeathed his important personal library, specialized in literature, languages and history of Ethiopia, Syria, Armenia, India and the Arab world, to the Portuguese Academy of Sciences.

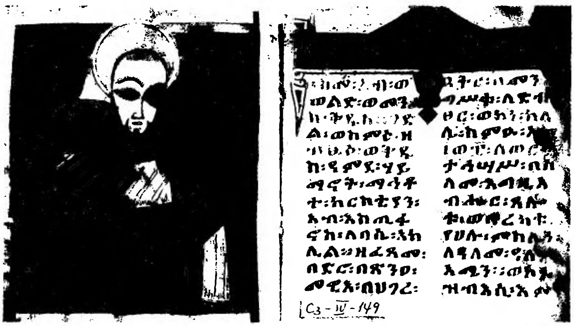
Ǝsṭifanos

Ǝ. (**እስጢፋኖስ**; b. ca. 1397/98, ʿAgamä, Təgray, d. 18 *Taḫśaś* 1437 A.M. [15 December 1444 A.D.], Wazerma) was a saint and the leader of the 15th–16th cent. religious movement of ↗Stephanites.

According to his hagiography, Ǝ. was born to a family of local chiefs of Mar(ä)wa, not far from Aksum, and named Hadgä Anbäsa. His father Bərhanä Mäsqäl died before his birth, and his mother Sara sent the boy to his uncle, the chief of Zəqlay and Gəfmela. Ǝ. spent his childhood as a shepherd, overcoming his relatives's objections to his intention to lead a pious life. At the age of 19, he was ordained deacon by *abunä* ↗Bärtälomewos, and soon entered the monastery of *abba* Samuʾel (possibly, ↗Samuʾel of Qʷoyäṣa, s. Beylot 1981:30, n. 38). Ǝ. worked hard for the monastery, also serving as scribe and teacher of novices. However, he was much disappointed with the traditional way of monastic life: the abbot did not properly oversee the spiritual life of the monks, some of whom having rather a lax behaviour, and some other following more narrow rules, yet only "on account of their vanity". Ǝ. distinguished himself by his extreme obduracy; he received revelations and "won his flesh"; soon, his ideas were followed by other monks. All this generated tension, but at the age of 30 (ca. 1427–28) Ǝ. was ordained priest by *abunä* ↗Bärtälomewos, who approved of both his ascetic practices and theological views. After several quarrels and strives with senior monks, Ǝ. and his followers were exluded from communion, and eventually expelled. So, they established themselves in Wägära. In mid-1428, Ǝ. was called by Samuʾel to reconcile: yet, immediately after returning, he was thrown into a dungeon and only accidentally set free.

The group led by Ǝ. (with ↗Gäbrä Krəstos as his closest assistant) settled then near the ↗Täkkäze, where an exemplary monastic organization was established. Ǝ. acted as its head, teaching and giving spiritual guidance; the monks were divided into self-sufficient units (12 members each), with one elected "administrator" (*qäwami*), responsible for all material works, and two "overseers", in charge for the spiritual matters. Everyday life – e.g., the amount of food and clothes for each monk – was strictly regulated. The main principles were the complete independency from the outside world, unity and equality in everything; it was prohibited to accumulate any good or accept gifts. Products exceeding one-day needs were to be distributed among the poor. Besides, Ǝ. struggled to abolish any practice of "sorcery"; in keeping with the ↗*Senodos*, he also propagated the celebration of two ↗Sabbath-days. Ǝ.'s radical teaching was to raise conflicts in other monastic communities. His enemies attempted to accuse Ǝ. before the "governors of the country", but could not win the case. As the *nəguś* was invoked during the litigation, Ǝ. rebuked by calling upon the absolute superiority of the word of the "heavenly King". He and his followers were sent to the royal court. However, the verdict, given in the presence of the Emperor (probably, *aṣe* ↗Täklä Maryam, 1430-33) and the Metropolitan (according to the Vita, *abunä* ↗Mikaʾel, who reached Ethiopia, however, not before 1438), was largely in favour of Ǝ. and his teaching – including the definition of the ↗Trinity and the two Sabbaths.

The fortunes of Ǝ. and his disciples changed with *aṣe* ↗Zärʾa Yaʿəqob's rise to power. Ǝ. was again summoned to the court. He refused to join other monks and priests in judgements over civil matters; he easily thwarted old accusations of his



Miniature and front page from ms. *Gädlä Ǝsṭifanos*; Gundä Gunde (Mordini 146); fols. 4v–5r; first half of the 16th cent.; photo 2002, courtesy of Michael Gervers enemies, but rejected the proposal of the Emperor to renounce to one of the Sabbath-days. Angered at Ə.'s bold speeches, the Emperor had him flogged; later though, Ə. was released and sent back to his place. In the meantime, the situation of the Stephanite congregation was deteriorating, due to its isolation from other monastic communities or even the latter's open animosity.

On the occasion of his second appearance at court in January 1444, Ə. was accused, among other things, of rejecting the veneration of the Cross (↗*Mäsqäl*) and the doctrine of ↗Däbrä Ṣəyon, of disrespecting ↗Eucharist and the Marian feasts (this most likely referring to Ə.'s general disapproval of exaggerations in this matter). Besides, Ə. refused to prostrate in front of the Emperor, maintaining that, according to the Scriptures, "prostration" (*sägid*) is becoming to God alone, whereas "blessing and prayers" are indeed fitting for kings. He was tortured and, after months of detention, released – by then sick and disabled. In the meanwhile, supported by local governors, his opponents had been chasing his disciples in Təgray. Ə. was summoned to several other meetings, but did not give in. Finally, he was imprisoned in Wazerma where he died. His disciples vainly strived for receiving permission to bury him in Təgray. Instead, Zärʾa Yaʿəqob had his corpse sent to Ṣakara, in ↗Däwaro: here it was placed near a Muslim grave and burnt in front of local people on 4 April 1447.

Ə.'s movement continued long after his death with a number of his successors (like ↗Abäkäräzun, whose Vita has further details on the life of Ə., ↗Gäbrä Mäsiḥ etc.) and the monastery of ↗Gundä Gunde serving as its most important centre. Ə.'s Vita, a document of great importance, possibly of the late 15th cent., is extant in at least two mss. of Gundä Gunde (both recorded by Mordini 1954:50, nos. 103 and 146, the second, the one copied for Conti Rossini [StrANL 88, no. 24] and photographed by Schneider, being usually referred to), but its scholarly edition is still missing.

Steven Kaplan – Denis Nosnitsin

Əsṭifanos

Afä nəguś Ə. (**እስጢፋኖስ**; d. 1922) was one of the few learned officials of the ↗Mənilək II era. He was small in size and physically frail, but he exercised an immense influence both in political and ecclesiastical affairs.

The exact place and date of his birth are unknown. Ə. started his career as a clerk in the court of *wäyzäro* ↗Bafäna from where he was transferred to the service of *nəguś* Mənilək in the late 1870s. He seems to have continued more or less the same occupation in the 1980s, as he is not mentioned among the significant officials. After the fall from office of *liqä kahənat* (later *nəburä əd*) Admasu in 1893, Ə. was raised to the position of *liqä kahənat* of the state and head of the ↗Däbrä Ṣəge Qəddus Uraʾel church of Addis Abäba. In addition, he was appointed *qäññ wämbär* ('judge of the right') in 1907 and was assigned to assist *afä nəguś* ↗Näsibu who was ageing and ailing. He succeeded him as chief justice after Näsibu's death in the next year.

Under *ləǧ* ↗Iyasu, Ə. was replaced by Ṭəlahun as *afä nəguś* and by *nəburä əd* Admasu as *liqä kahənat*. He thus threw his lot with the opponents of *ləǧ* Iyasu in 1916. He was reinstated to his former offices by the new government headed by ↗Zäwditu, which he retained until his death. He died of illness and was buried at the Uraʾel church cemetery in Addis Abäba.

Bairu Tafla

ᶜƎṭan ↗Incense

ᶜƎṭanä mogär

The ᶜƎ.m. (**ዕጣነ፡ ሞገር**, lit. 'Throwing of the incense') is one of eleven poetic modes of the ↗*qəne*-hymns which, together with the ↗*kəbr yəᶜəti*, is performed by the ↗*däbtära* during the Divine Liturgy, precisely at the moment of the Communion (↗Eucharist), extolling the sacrifice of Christ.

The length of the ᶜƎ.m. depends on the melody through which it is performed. If the Divine Liturgy is celebrated in ↗*gəʿəz* mode, which happens mainly during the penitential period, the ᶜƎ.m. is also sung in *gəʿəz* mode; in this case the ᶜƎ.m. scores seven verses (*bet*). But when the Divine Liturgy is celebrated in ↗*ʿəzəl*, the *däbtäras* compose the ᶜƎ.m. with eleven verses; the last five verses of the ᶜƎ.m. (if it is chanted in *ʿəzəl* mode) or the three last verses (if it is chanted in *gəʿəz* mode) are both called *aśärä nəguś* (**አሠረ፡ ንጉሥ**). Thus, the ᶜƎ.m., be it sung in *gəʿəz* or *ʿəzəl* mode, is a compound of two strophes that may have the same rhythm, but with different content or reference.

The first strophe, i.e. the ᶜƎ.m., has always religious content and the second strophe is called *aśärä nəguś* or *aśärä nägaśi*, which is traditionally interpreted as: a) "the desire, the path, the job of the king" or b) "he has bound the king". The *aśärä nəguś* usually refers to the worldly life: in fact it has the aim to praise the king, to thank him when he is considered to be ruling well, or correct his bad conduct using a good manner, or castigate him. Finally, it may also deal with the historical events or current situation of the country. The ᶜƎ.m. is not necessarily always followed by the *aśärä nəguś*, whilst the *aśärä nəguś* cannot be on its own without the preceding ᶜƎ.m. The ᶜƎ.m. is the completion or the "seal" of the prayer and for this reason it is performed at the end of the Divine Liturgy.

According to some *qəne* scholars, the ᶜƎ.m. symbolizes prayers that rise up to the presence of God like incense (Ps 140[141]:2). Another different point of view maintains that this *qəne* mode is the replacement of the ancient practice of incensing towards the cross, which was performed at the end of the Divine Liturgy.

Habtemichael Kidane

Ǝtege

Ǝ. (**እቴጌ**, others forms: *ətey, ite, əteyye, iteyye, əte, ətäge*) was a title designating the coronated spouse of an emperor. The title was different from that of a female sovereign ruling in her own right, i.e. *nəgəśtä nägäśtat* (↗*Nəguś*).

According to the book of the court regulations and rituals, the ↗*Śərʿatä mängəśt*, Ǝ. sat on the right-hand side of the emperor's throne on a minor throne. She also had the right to precede the court taking place in her own apartments.

It seems that the title was introduced to the court to substitute the ↗*bäʿaltiḥat*, which disappeared with ↗Ǝleni. In history, there were recorded cases of women reigning with the title of Ǝ. already after the death of the husband, like ↗Bərhan Mogäsa, who acted as a regent during the reign of her son ↗Iyasu II and her grand-son, ↗Iyoas.

According to the tradition the Ǝ. was crowned three days after the emperor. The first time when the ceremony took place simultaneously was during *aṣe* Mənilək II's and ↗Ṭaytu Bəṭul's coronation.

Ethiopia

I. Geography

The state of E. (ኢትዮጵያ, *Ityop̣ya*, from Gr. ↗Aithiopía; on the history of the term s. also ↗Orbis Aethiopicus; officially Federal Democratic Republic of Ethiopia) is situated in the Horn of Africa, bordered in the north and north-east by ↗Eritrea, in the east by ↗Djibouti and ↗Somalia, in the south by ↗Kenya and in the west and south-west by the ↗Sudan. Since Eritrea's independence E. has been a land-locked power (↗Boundaries). It covers an area of ca. 1,106,000 km², stretching from 2°30' N to 15°N and from 33°E to 48°E. The capital of E. is ↗Addis Abäba.

One-third of the area of the country is a high plateau with elevations between ca. 1,800 to 3,000 m A.S.L., some mountains reaching over 4,000 m A.S.L. 80 % of the total population is settled on the highlands. The main mass of the East African tableland, of which E.'s highlands are part, is composed of metamorphic Archaean rocks (↗Geology). Elevation is generally highest just before the point of descent to the ↗Rift Valley, splitting the highland plateau into two. The highest peaks lie in the ↗Səmen and ↗Goǧǧam areas (e.g., Ras Dašän in Səmen, 4,620 m A.S.L.). The ↗ᶜAfar Depression (Danakil) in the north-east presents the other end of the elevation range of the country, with ground levels reaching below 115 m B.S.L.

Numerous river-beds cut through the highland plateaus. Most of the rivers take north-western direction flowing towards the Nile, including E.'s main water arteries, the ↗Täkkäze in the north, the ↗Baro in the south and, most notably, the ↗Abbay (Blue ↗Nile), which takes its source in Goǧǧam ca. 100 km south of Lake ↗Ṭana and runs, after passing the lake, westwards in a large circle, thus bringing its waters to a large part of the central highlands. Of the rivers running eastwards, the ↗Awaš in the north-east of the country is the most important one. The south is generally drier, the ↗Omo river and the lakes (↗Zʷay, ↗Šala, ↗Abyata, ↗Abbaya) being the main sources of life-bringing water for the people (↗Geography).

The ↗climate is generally temperate on the plateau and dry and hot in the lowlands. In Addis Abäba, which ranges from 2,200 to 2,600 m A.S.L., maximum temperature is 26°C and minimum 4°C, typical for the ↗*wäyna däga* zone (1,800–2,400 m A.S.L.). The other main ↗ecological zones present in E. are the ↗*däga* (above 2,400 m A.S.L.) and the ↗*qʷälla* (below 1,800 m A.S.L.). The lowlands being arid (up to ↗desert and semi-desert in ᶜAfar), the highlands group together 4/5 of the population on 2/3 of the territory. *Bäräha* (below 500 m A.S.L.) and *wərč̣* (above 3,200 m A.S.L.) are not inhabited (↗Ecological zones).

Due to the huge climatic range, flora and fauna in E. vary considerably across the country (↗Animals; ↗Plants). Valleys and lowlands are rich in vegetation, whereas the plateaux are comparatively bare and are scarcely covered with trees and bushes, partially as a result of human influence and deforestation (only 3% of the entire area of the country is covered by ↗forests). The state of E. tries to protect its natural resources by establishing ↗National parks.

II. Peoples and languages

E. has ca. 71,066,000 inhabitants (2004 CSA estimate; 1994 census 53,130,779) and is marked by a large and diverse array of ethnic groups and languages (↗Languages and peoples).

According to different sources, from 70 to 90 languages are spoken in E., which belong to two language phyla – ↗Afro-Asiatic (represented by ↗Semitic, ↗Cushitic and ↗Omotic families) and ↗Nilo-Saharan. ↗Cushitic languages are spoken by ca. 49.8 % of the population. Of these, ↗Oromiffa is spoken by about 31 % of the population, followed by ↗Somali (6 %). Semitic languages are represented by the ↗Ethio-Semitic family, ↗Amharic and ↗Təgrəñña being the most important. The *lingua franca* and the official working-language of the government is Amharic, spoken as the first (33 %) or second language by the majority of the population. Regional working-languages are, e.g., Amharic, Somali, Təgrəñña, ↗ᶜAfar, ↗Harari and Oromiffa; together with Amharic, ↗English is the language of secondary and higher education. Omotic speakers constitute around 7.5 % of the population (↗Wälaytta being the biggest language), and Nilo-Saharan speakers number under 1 %. The lasting situation of language contact, especially between Cushitic and Ethio-Semitic speakers, possibly led to the theory of the ↗Ethiopian Language Area.

In terms of ethnic composition, the ↗Oromo people, the ↗Amhara and the ↗Təgrəñña speakers make up for ca. 80 % of the population, but all together there live over 80 ethnic groups, some of them counting just a few hundred members. The number of members of an ethnic group may differ from the number of speakers of the corresponding language (e.g., only 17% of the ↗Argobba people speak Argobba). Several ethnic groups have no languages of their own (e.g., the ↗Wäyṭo speak Amharic as their mother-tongue).

The peopling of E. has been a complex process, spanning more than six millennia and shaped by numerous migrations. Agäw-speaking and Omotic-speaking groups were perhaps the most ancient populations settled in the highlands, with some Nilo-Saharan groups in the southern border areas. Several waves of migrations of (South-)Semitic-speaking peoples from the Arabian peninsula eventually led to their fusion with the Cushitic speakers and to the emergence of the first state-formations. Apart from the influence from ↗Arabia (in the first millennium B.C. at the latest), the ethnogenesis in E. received its greatest impulses through wars and invasions, most importantly the spreading of Semitic speakers from the north across the highlands into the southern regions starting with Aksumite times, the Agäw migration in the 13th cent., the *ǧihād* of ↗Aḥmad b. Ibrāhīm al-Ġāzī ("Grañ") in the 16th cent., the Oromo expansion during the 16th–19th cent. and the expansion of the Ethiopian State, in particular during the second half of the 19th cent. (↗Population history). The less-noticeable but not-less-important process of constant interaction, assimilation and dissimilation has been also playing an important role in the process of formation of the Ethiopian nation. Nationalistic and independence movements in today's E. keep reshaping the country's ethnic dynamics.

The former state religion of E. is represented by the ↗Ethiopian Orthodox Täwaḥədo Church (50.6 % of the population in 1994; CSA 1998). Other Christian denominations include ↗Protestantism (10.1 %) and ↗Catholicism (0.9 %). Muslims (32.7 % in 1994) have a growing share in the society (↗Islam). The remaining population adheres to, among others, traditional ↗religions (ca. 5 %) or ↗Judaism (↗Betä Ǝsraʾel).

III. History

The origins of the state of E. are traditionally traced back to the ancient Aksumite empire (↗Aksum). After the decline of Aksum, a period of decentralization followed, while the legacy of the Christian empire is believed to have passed to the ↗Zagʷe royal dynasty. Since the 13th cent., the ↗Solomonic dynasty (↗Yəkunno Amlak) has been in power. The development was not smooth, and periods of strong centralized power were followed by times of strong local autonomy (e.g., ↗*Zämänä mäsafənt*; cp. the sub-entry on ↗Ethiopian history for an approach to ↗periodization).

As a modern state, E. was created in the course of the second half of the 19th cent. It emerged out of processes of reforms and conflicts within the ancient state (with the core being ↗Təgray, ↗Goǧǧam, ↗Bägəmdər, ↗Amhara, ↗Wällo and ↗Šäwa) and through an important territorial expansion, especially under ↗Tewodros II and ↗Yoḥannəs IV. Neighbouring kingdoms (e.g., ↗Käfa, ↗Wälaytta, ↗Ǝnnarya), principalities (e.g., ↗Gibe states) or sultanates (e.g., ↗Ǻwsa) and acephalous societies or petty tribal principalities in the south (like ↗Anfillo, ↗Kambaata, ↗Kara and many others) were included mostly through the expansion of the kingdom of Šäwa under *nəguś* Mənilək (later Emperor ↗Mənilək II).

Christianity, the ancient state religion, slowly lost its position of absolute dominance, whilst important Muslim areas, with the holy city and former emirate of ↗Harär as a prominent example, played an increasingly important role. Former non-Christian, non-Muslim areas witness today the rise of Evangelical Protestantism (↗Missions) and Islamization. While being very diversified internally, the modern state by different means has tried to develop a somewhat unified appearance, at least in its political symbolism and in its legal system (↗Law) since the 1940s, after the Italian occupation (↗Africa Orientale Italiana).

Modern E. has undergone radical changes through the reform of ↗feudalism and the establishment of a centralized Imperial state under ↗Ḫaylä Śəllase I (↗Constitutions) and further reforms, especially after the 1974 ↗Revolution and after 1991. The traditional hierarchical, sometimes authoritarian, system of governance also continues to mark the society deeply. Local, highly participatory elements of self-governance have also in many cases remained valid (cp. ↗*Gadaa*) and are, to some degree, recognized by the modern federal state.

IV. Government and political system

The present ↗Constitution of the Federal Democratic Republic of Ethiopia (ኢትዮጵያ፡ ፌዴራላዊ፡ ዲሞክራሲያዊ፡ ሪፓብሊክ, *Ityoṗya federalawi dimokrasiyawi ripablik*) was adopted in December 1994 and the government was installed in August

Administrative division of Ethiopia during the late reign of Ḫaylä Śəllase I; from Last 1962

1995. The executive branch of the government is represented by the President (chief of state, elected by the House of People's Representatives), the Prime Minister (head of government) and the Council of Ministers (cabinet selected by the Prime Minister and approved by the House of People's Representatives). The legislative branch is represented by a bi-cameral parliament comprising the House of Federation (117 members elected by state assemblies for five years) and the House of People's Representatives (548 members elected directly by popular vote for the term of five years). The judicial branch is formed by the Federal Supreme Court (↗Law and judiciary).

The political system of E. had a long development (↗Government). In historical times, Ethiopia was a tributary state (↗Feudalism), built on a landed nobility (↗Aristocracy) living on the produce of the peasants. Until the 17th cent., there was no hereditary nobility having a right to certain positions; even later succession also depended on personal merits.

E. (until 1974: የኢትዮጵያ፡ ንጉሠ፡ ነገሥት፡ መንግሥት, *Yä'ityopya nəgusä nägäśt mängəst*) acquired its modern shape under *aṣe* MəniləkII, who needed a centralized administration to manage his newly (re-)conquered southern lands. He entrusted his local administration, particularly in the newly conquered areas, to a personal deputy, an ↗*əndärase*, a system which was financed through land rights (↗land tenure). Formally, the system of noblemen controlling the peasants was the same for the traditional north and for the newly incorporated south, but the new rulers did not have any blood relationship, nor felt any accountability to the peasants. They reached and kept their positions through force of arms, the reason for which they were locally called ↗*näfṭäñña*, 'gun-man' rather than nobility or aristocracy (↗*č̣äwa*).

↗Ḫaylä Śəllase I took up the challenge to build a modern structure of government. With him, government remained a function of the Emperor, a rule sanctioned by God's Grace and, hence, not based on the will of the people or on a "social contract" (↗Kingship, divine). But a reigning government also evolved. Thus, he granted his country a Constitution in 1931, which he revised in 1955 – not ratified, though, by a sovereign election.

Centred around the person of the Emperor, government was built on the nobility, but gave room for individuals from the southern peoples, as well as a few persons from the nascent intellectual "Amharized" elites (i.e. the ↗*balabbat*). There were no political parties or other expressions of public political opinion, as politics was the domain of the Emperor solely: he appointed ministers and constituted a cabinet. However, his government was not a dictatorship. The Emperor's power was limited by God's will – as the Emperor understood it. Additionally, the Constitution of 1955 established a parliament with elected deputies, but the membership was in practice limited to the nobility, in particular to the class of land owners: to be eligible as a candidate, a certain value of land-holding had to be documented, or twice the amount in movable property.

The system remained in function till the Revolution of 1974. The power in E. (**የኢትዮጵያ፡ ሕዝባዊ፡ ዲሞክራሲያዊ፡ ሪፓብሊክ**, *Yäʾityop̣ya ḥəzbawi dimokrasiyawi ripablik*, People's Democratic Republic of Ethiopia) went over to the ↗Provisional Military Administrative Council – until in May 1991 a new overthrow followed, led by the Ethiopian People's Revolutionary Democratic Front (EPRDF). In July 1991, the EPRDF, together with the Oromo Liberation Front (OLF) and other ↗Liberation movements, established the Transitional Government of E. In 1992 the OLF withdrew from the government, followed in March 1993 by the Southern Ethiopia People's Democratic Coalition. In the course of the same process, the ↗Eritrean People's Liberation Front (EPLF) assumed control of Eritrea and established a provisional government there. In 1993, Eritrea's independence was recognized by the government of E.

E. is divided today into nine regional states (*kəlləl*): ʿAfar, Amara, Beni Šangul-Gumuz, Gambella, Harari, Oromiyaa, Soomaali, the Southern Nations, Nationalities and Peoples' Region (*Dəbub həzbočč bəher bəherägäbočč*) and Təgray. Additionally, there are two cities that are not subject to regional governments (*yäʾastädadär akkababi*), Addis Abäba and ↗Dərre Dawa. This division replaced in 1991 the older ↗Administrative division with its traditional provinces.

V. Economy

The Ethiopian ↗economy over the past half century was marked by numerous attempts by succeeding governments to carry out a structural transformation, e.g., by land reform (1975) and, rather unsuccessfully, hastening the pace of industrialization (↗Industry). Basic features of the economy, however, largely remained the same as they had been for the past centuries.

Throughout its recorded history, E. has been essentially rural and based on substinence ↗agriculture, including both crop- and animal-farming, with local markets used to exchange the surplus products. The agricultural development in E. has been rendered difficult through periodic droughts and ↗famines, ↗environmental degradation (mainly due to overgrazing, deforestation and overpopulation) and poorly developed infrastructure. Today, the economy of E. is still based on the two – slightly commercialized – farming types, which together account for over 50 % of gross domestic product (GDP purchasing power parity US-$ 800 per capita in 2003). Industry has the share of ca. 11 %, the services account for 37 %. 4/5 of the population are employed in and live from agriculture, 90 % of exports are formed by agricultural products. In spite of a drastic increase in population, these values have changed little over the past 50 years – neither have the earnings per capita: while in 1954 it was 277 ↗*bərr* (the national ↗currency), in 2000 it was estimated at 273 *bərr*.

Of the crops, ↗coffee accounts for ca. 60 % of the country's foreign-exchange earnings and provides livelihood for over one-fourth of the entire population. ↗*Č̣at* and pulses are also exported. The other cultivated ↗plants (↗*ṭef* and other millets, ↗sorghum, ↗barley etc.) and nearly all domestic ↗animals are farmed for substinence and inland consumption.

Gold and marble are mined in E.; potash, natural gas, iron ore and possibly oil await development (↗Minerals). Foreign ↗investment in the mining sector began in the 1990s.

The road-network in E. counts (estimation 2000) ca. 24,000 km. Addis Abäba is connected to Djibouti by a ↗railway. ↗Ethiopian Airlines connect most administrative centres of the country, in addition to serving dozens of international destinations. The foreign trade is difficult in landlocked E. Prior to the outbreak of the 1998–2000 Ethio-Eritrean conflict, E. used the seaports of ↗Asäb (90 %) and ↗Massawa, now it has to rely on the ports of Djibouti (90 %) and Port Sudan.

VI. State symbols

The Ethiopian ↗State symbols have come a long way since they were first introduced, partially in the 19th cent., as each change in political system brought about changes in the state symbols.

The current official flag of E. was adopted on 6 February 1996. This tri-colour can boast of a more-than-1,000-year-long history. It has three equal horizontal bands of green (top), yellow and red with a yellow pentagram and single yellow rays emanating from the angles between the points on a light blue disk centred on the three bands. The colours of E.'s flag have so often been adopted by other African countries upon independence that they became known as the pan-African colours.

This blue disk with the yellow pentagram from the national flag is in fact the country's official coat of arms.

The national anthem, adopted in 1992, is *Wädäfit gäsgəši wədd ənnate Ityopya* ('March forward, Dear Mother Ethiopia'). It was written by Däräğe Mälʾaku Mängäša (text) and Sälomon Lulu Mətəkku (music).

VII. Art

The peoples of E. have a rich and varying culture that finds its expression in everyday life (particular ways of celebrating ↗feasts, preparing ↗food and ↗drinks etc.) and, above all, in their artistic traditions.

The visual arts may be divided into ↗architecture, ↗painting, sculpture and useful arts (↗Handicrafts), including ↗pottery, ↗weaving, metalworking (↗Blacksmiths, ↗Crosses, ↗Goldsmiths, ↗Jewellery), ↗basketry and wood-working.

Vernacular domestic architecture (↗Houses) generally hardly survives the generation for whom it was built, even if constructed of stone, so that the history of architecture usually focuses on ↗church buildings and palaces or residences of the elite. Since ↗Aksumite times (↗Aksum Ṣəyon) till the late middle ages, churches were of rectangular (basilican) plan (e.g., ↗Däbrä Damo, ↗rock-hewn churches of, e.g., ↗Lalibäla). From the 15th cent. onward, churches of round plan, similar in type to dwelling houses, began to dominate the ecclesiastical architectural landscape. During the 16th–17th cent., Portuguese influences (↗Jesuits, ↗Portugal, relations with) redefined the face of civil architecture (↗Gondär).

The earliest examples of ↗painting on the territory of E. is rock-art, e.g., in the Sidamo or Harär area. The bulk of Ethiopian pictorial tradition is to be sought in Christian highland wall-paintings (earliest examples dating back to the 13th cent.) and manuscript illuminations (from the 11th cent. onward).

Sculpture is rare in E.; in Christian tradition only reliefs are known. An independent tradition of carved stone monoliths (↗Stelae; ↗Megalithic culture), datable to the 11th–13th cent., has been documented in the areas of Šäwa and Sidamo, some with a funerary function (↗Graves). The forms vary from simple phallic monoliths to steles carved with abstract designs or abstract human figures in relief and to steles sculpted as simple three-dimensional anthropomorphic figures (e.g., ↗Konso sculptures).

There are oral and written literatures in many of E.'s languages (e.g., ↗Gəʿəz literature, ↗Amharic literature, ↗Oromo literature, ↗Somali literature).

Among performing arts, ↗music has had a long history on the territory of E. ↗Theatre was only introduced in the 20th cent.

Red.

Ethiopia – history and periodization

By the 13th cent. "E." had become a leading term by which the elites, who dominated the kingdom ruled by a dynasty claiming descent from ↗Solomon and Sheba (↗Makədda), defined their country. Thus, the history of "E." is inevitably tied up with the Solomonic kingdom. The following periodization sees the history of "E." and north-east Africa, the larger region within which it was embedded, in terms of oscillations between periods of dispersed political authority, on the one hand, and the assertion of centralising authority on the other. In the oscillations from one state to the other factors both endogenous and exogenous to the region were at work.

Foundational

The immediate pre-history of the region saw the establishment of pastoralism and agriculture as modes of livelihood, probably no later than 2,000 B.C. (Phillipson 1993). By this time the principal language groups – Cushitic, Semitic, Omotic and Sudanic – must all have been present. The earliest agricultural societies were most probably Cushitic in speech. Equally foundational were a widespread set of beliefs, the emergence of which is impossible to date: beliefs in a pre-eminent sky-god, in spirit possession; in the evil eye, and the special powers of the serpent, as well as the use of spiritual calendars and of sacred groves, and the practices of pilgrimage, animal sacrifice and food taboos (LevWax).

Dispersed Political Authority: Period I (mid-1st millenium B.C. to turn of the era)

Major developments, resting on the productivity of local agriculture, occurred on the northern highlands in the middle of the 1st millennium B.C. Towns appeared, as well as a number of ritual centres. Cultural parallels with contemporary South Arabia, not least inscriptions in Sabean, a Semitic language and script, indicate a dominant Semitic culture. While the kingdom of ↗Dᶜ MT may have briefly enjoyed broad sway, the characteristic form of political organization was the autonomous town or city state. The culture of dominance exhibited in this period, persisted well into the next period, with the gods of South Arabia prevailing into the 4th cent. A.D. (Fattovich in: PICES 10; Michels in: PICES 9; Phillipson 1998:111–14).

Imperial Authority: Period I (Aksum, 1st to 7th cent. A.D.)

The first assertion of a wider political authority in the Horn came with the rise to dominance in the first cent. A.D. of ↗Aksum (Michels in: PICES 9; MHAksum; Phillipson 1998; SerHist). Aksum was at its peak between the 3rd and 7th cent. A.D. Its armies ranged into the Nile Valley, across the Red Sea into South Arabia and southwards across the Täkäzze. Following the conversion of King ↗ᶜEzana to Christianity in the third quarter of the 4th cent. Christianity and political authority in the highlands were inextricably linked. Ethnically, while the dominant culture of Aksum was Semitic in language, the subjects of the state also spoke Cushitic and Sudanic languages. Aksum's continuing influence in later periods of history may be seen in: the use of its language, Gəᶜəz, for literature and in the liturgy; the Christian Church (↗Christianity) as molder of elite and popular consciousness alike; and in the language of political authority.

Dispersed Political Authority: Period II (8th cent. A.D. to 1270)

The rise of Islam in the lands on the opposite side of the Red Sea in the middle decades of the 7th cent. led to the eclipse and decline of Aksum, not least through Aksum's losing control of the trade of the Red Sea. With the decline of Aksum political authority dispersed throughout the region. Local peoples contributing to Aksum's eclipse include the ↗Beğa to the north, the ↗Wälqayt to the south-west, and, if one interpretation is correct (TadTchurch 38f.), the ↗Damot in the south, whose impact crystallizes around the figure of Gudit (↗Ǝsato), and devastating attacks in the early 10th cent. We know little of these traditions, associated primarily with Cushitic peoples, until we see them again in the 14th cent. through the prism of the Solomonic kingdom. Meanwhile, the legacy of Aksum passed to the ↗Zagʷe, an Agäw dynasty, who ruled from what is now Lasta. Their authority seems to have been limited to the northern plateau, although extending down well into what was to become Wällo. An increasingly important source of authority, religious, political and civic, was ↗Islam, which from about the 10th cent. onwards developed a political tradition, as a chain of Muslim states pushed its way from ↗Zaylaᶜ into the lands of the middle Awaš. By the 13th cent., the sultanate of ↗Ifat was established in the Šäwan highlands. Ifat was to be a major concern of the second iteration of imperial rule, which was launched with the emergence, in 1270, of the Solomonic dynasty (TadTChurch).

Imperial Authority: Period II (1270–1527)

The kingdom ruled by the self-proclaimed Solomonic dynasty was definitive for our understanding of "E." as an historical entity (TadTChurch). It was the product of the long, slow southward movement of Christianity and Semitic speech, a movement which produced a new people, the Amhara, largely converted Agäws. The tradition that the rulers of the first imperial order were descended from Solomon and the Queen of Sheba developed after their demise. In practical terms it meant that political legitimacy and Semitic language and culture were inextricably connected.

Although the Solomonics claimed a direct connection to Aksum, the relationship between the two must have been more uncertain. Nevertheless, the Solomonics did inherit, in Gəᶜəz, a language and culture of rule, the royal title of *nəgušä nägäšt*, and a Christian Church.

Regional dominance was established by vigorous military expansion under ᶜAmdä Ṣəyon I (r. 1314–44) and his successors. The strengthening of Christian power in the western highlands meant a relative weakening of the Muslim states of the Rift Valley and the eastern highlands, where ↗ᶜAdal now rose to prominence. Solomonic dominance reached deep down the Rift Valley and into the southern highlands. Many of the peoples of historic Šäwa and what are now Goǧǧam and Bägemdər converted to Orthodox Christianity (TadTChurch; KapMon). Christianity was also deeply impressed upon the peoples of the south-west and internalised into aspects of their cultures (Lange 1982).

The apogee of the Solomonic state was reached under Zärʾa Yaᶜəqob (r. 1434–68). Its political reach was at its greatest. Zärʾa Yaᶜəqob completed a rapprochement between church and state, which set an enduring model. Here, then, is historic E.: an empire ruled by a Christian dynasty, sustained by a Christian peasantry, but with a population heterogeneous in language, religion, and mode of livelihood, rooted in the western highlands and exercising domination over much of the Rift Valley, the eastern highlands and into the south-west highlands.

Dispersed Political Authority: Period III (16th to 19th cent.)

Solomonic rule depended on a delicate balance, which was profoundly disturbed in 1527 by an assertion of Muslim power under ↗Aḥmad b. Ibrāhīm al-Ġāzī ("Grañ", Abir 1980, ch. 4; Merid Wolde Aregay 1971, chs. 1, 2); as a consequence, a new era of dispersed political authority ushered. Grañ established a short-lived Sultanate of Ḥabaša, which ended with his death in 1543.

Muslim resurgence was followed by Cushitic resurgence. In the 1540s the Oromo people began a long process of migration into and settlement of the eastern highlands, the middle Rift Valley, Šäwa, Amhara (which eventually became Wällo), Damot and all the territories westward as far as the edge of the plateau bordering the Sudan in what became Wälläga (MHasOr; Negaso Gidada 1984). This brought a permanent linguistic, cultural and political transformation of these regions. The Christian empire was reduced to a rump north of the Abbay.

Following cultural revival in the 17th and earlier 18th cent., the Christian empire collapsed entirely in the later 18th cent. (CrumLand, chs. 4, 5, 7). Muslim political authority in the eastern highlands was increasingly restricted to the town of ↗Harär. Elsewhere, political initiative passed to the Oromo, who, in the 17th and 18th cent., went through a process of regional diversification and social and political transformation. In many areas they adopted plow-agriculture; in others ↗*ənsät* cultivation. They became Muslim in the eastern highlands, in Wällo and the south-west. In parts of the northern highlands, in Goǧǧam and Bägemdər they became Orthodox Christians, and by the middle of the 18th cent. they entered the politics of the remnant Christian empire (LevWax 21–28). In Wällo they laid the foundations for the emergence in the later 18th cent. of a cluster of principalities (Hussein Ahmed 2001) and in the south-west in the late 18th and early 19th cent. they created the kingdoms of ↗Ǧimma, ↗Geeraa, ↗Guummaa, ↗Gomma, and ↗Limmu Ǝnnarya (MHasOr, ch. 3).

Meanwhile, older political traditions of south-west E. re-asserted themselves in Wälaytta and in the Omotic-speaking kingdom of ↗Käfa. Relations between and among these very different political structures was restless, sometimes violent, and never reached an equilibrium, but was also mediated by trade, which flowed across the region, by diplomacy and marriage alliances.

The Modern Period: Imperial vs. Dispersed Authority (mid-1870s onwards)

Beginning with the later 19th cent. the region entered a period in which the tension between imperial and dispersed authority was continuous with significant changes in the balance of local power visible on a scale of decades, rather than centuries. At least three major sub-periods are evident: 1870s–ca. 1910; 1910s–44; 1944–74.

The Neo-Solomonic State: Stage I (1870s-ca. 1910)

The 19th cent. brought a rapidly changing external world, which in the last three decades of the cent. pressed ever more heavily (RubInd). Throughout the region rulers responded in their own ways. For example, new Oromo authorities emerged in what was to become east and western Wälläga (*moti* ↗Ǧootee Tulluu). The decisive moment, heralding a new era in regional political history, came in the years between the successful rejection in 1875–76 of the Egyptian invasion (↗Egyptian-Ethiopian War) by Yoḥannəs IV (r. 1872–89) and the Battle of ↗Əmbabo in 1882. Yoḥannəs converted his victories into the re-establishment of monarchical hegemony. This, in turn, released powerful expansionist forces, which built to an early climax at Əmbabo, resolving in favor of the latter Goǧǧame and Šäwan rivalry to control the south-west. Thereafter, ↗Mənilək II's armies marched to and beyond the previous limits of Solomonic sway (Marcus 1975).

A revived neo-Solomonic monarchy was firmly in place, successfully surviving the challenge of Italian invasion in 1896 (↗ʿAdwa, Battle of) and guaranteeing the country's passage to the 20th cent. as an independent empire (BZHist). E. was once again dominant over much of the region, this time through the suppression and/or incorporation of all other political authorities and rivalled, not by such authorities, but by European imperial powers now in occupation of all the surrounding territory. Yoḥannəs and his successor, Mənilək (r. 1889–1913), left the challenge of negotiating a world dominated by European colonialism and forces of modernity to their successors.

Indigenous Authority Contested (1910s–40s)

The years following Mənilək's incapacitation, ca. 1910, were perilous, at best. Britain (↗United Kingdom of Great Britain and Northern Ireland, relations with the), France (↗France, relations with) and Italy (↗Italy, relations with) controlled the entire coastlands of the region, the colony of ↗Eritrea in the north, and, in ↗British Somaliland, the North-east Frontier District of Kenya, and ↗Italian Somaliland, a considerable portion of the lands historically used by the Somali. The powers negotiated treaties with E. which gave them extra-territorial jurisdiction and, in the deeply uncertain years following the death of Mənilək in 1913, intervened decisively in Ethiopia's internal politics, forcing, in 1916, the overthrow of Mənilək's successor, *ləǧ* ↗Iyasu, and easing the path to power of Täfäri Mäkʷännən, crowned, in 1930, as ↗Ḫaylä Śəllase I.

Imperial intervention climaxed in October 1935 with the Italian invasion of E., which ushered in almost a decade of European imperial rule over the region, and the ephemeral political unification of most of Northeast Africa. While formally, Italian conquest brought E. within the orbit of European imperialism, the Italians failed to establish themselves throughout their newly-subjugated territories. They never overcame resistance in many parts of the country and found themselves increasingly confined to the towns. They did invest substantially in infrastructure and pursued policies designed to expand agricultural production, but such fruits as these developments bore were turned, ultimately, to the re-establishment of centralized Ethiopian authority.

Nonetheless, the expulsion of Italy, in 1941, did not lead to the immediate restoration of Ethiopian independence neither to the emergence of other forms of indigenous political authority, but to continued imperial domination of Northeast Africa through the agency of a ↗British Military Administration. While Ḫaylä Śəllase, restored to his throne in 1941, immediately began the centralization and modernization of the country's state structures, his sovereignty was compromised by control by the British, who did not begin to withdraw until 1944, with the signing of an Anglo-Ethiopian Treaty, which recognized Ethiopian sovereignty. E. did not fully recover the boundaries negotiated by Mənilək until 1954 when the British relinquished the last of the Ethiopian-claimed territories in the ↗Ogaden.

The Neo-Solomonic State: Stage II (1940s–74)

In spite of British dominance, on his restoration in 1941 Ḫaylä Śəllase embarked on an ambitious program to reform governmental administration. Since the 1920s as regent *ras* Täfäri Mäkʷännən, and then as crowned monarch, from 1930 to his overthrow in 1974, Ḫaylä Śəllase seized the role of modernizer, one to which he was ambiguously committed (Marcus 1987). Ever of central importance to him was his personal autocracy (Markakis 1974, ClapHS). The forces of autocracy and modernization coursed unevenly through the decades of his greatest impact, the later 1940s and the 1950s. The 1960s saw a slow waning of his powers and a transformation of the region, which brought new and alternative forms of political authority (Gebru Tareke 1991). European imperial rule gave way to indigenous rule—in the Sudan in 1956; in the Somalilands in 1960 (Lewis 1965); and in Kenya in 1963 – exposing E. to the challenges of 20th cent. popular nationalism and of social revolution and laying the groundwork for yet another transformation in regional power relations.

Donald Crummey

Ethiopia Mirror

The E.M. was a quarterly magazine in English published by the Ministry of Information. The first issue, which came out in September 1961, was printed at the Commercial Printing Press in Addis Abäba and sold for 1.50 *bərr* a copy. The name of the editor was not specified until the October-December 1965 issue, where the name of Oscar Rampone appeared. In the November 1972 issue Yäwändwässän T. Marqos became the editor, ᶜAläm Public Relations became the publishers by special appointment of the Ministry of Information. The format and contents of the magazine were altered, its price was reduced to 1.25 *bərr* and its size also changed beginning with this issue. This time it was printed at the Artistic Printing Press in Addis Abäba.

The Preface to the maiden issue states that the E.M. "... will endeavour to illustrate the traditions, customs, arts, events, and all the manifold aspects of Ethiopia", being its "faithful mirror".

The "E.M.'s Competitions", held on various occasions, seem to be among the ways of achieving the aims of the magazine. One of them, organized in collaboration with Ḫaylä Śəllase I Theatre, was a popular-song contest to encourage musicians and contribute towards the improvement of the standard of Ethiopian folk songs. An amateur photo competition was held in co-operation with the Visual Department of the Ministry of Information.

The E.M. had columns entitled "Our Country", "Our People", "Our Children", "Our Fauna" etc., all well illustrated. The range of articles in the E.M. was large, cp., e.g., articles by Ṣäggaye Däbalqe on music, folk-songs and dances, by Osram and MacPhearson on the painter Afäwärq Täkle, by Murray on art in general, by Nägaš Gäbrä Maryam on the problem of the bachelor, book reviews and interviews with and biographies of prominent persons. There were also efforts to describe traditional religious feasts, ancient monuments, pilgrimages and society events such as fashion shows and beauty contests.

It must be noted that since the September 1972 issue the magazine, that had been largely pictorial at the start, was transformed, as stated in the editorial, to "a balanced blend of both pictorial and editorial coverage, with emphasis on the latter". The last issue of this useful source for research into the imperial era is that of July 1974.

Ethiopia Observer

E.O. is a "Journal of Independent Opinion, Economics, History and the Arts" that first came out in December 1956 under the editorship of Sylvia ↗Pankhurst. It was published in Britain and Ethiopia and its price was 1 *bərr*. The cover illustration was Afäwärq Täkle's portrait of *fitawrari* ᶜAbdullāhi Mursal, "Sultan of Shekash in the Ogaden, Member of Parliament for the Ogaden in the Ethiopian Chamber of Deputies". The editorial of this maiden issue states that E.O. came to replace ↗*New Times and Ethiopian News* and that the journal's mission was to mirror every facet of Ethiopia's renaissance.

The issues covered in the journal range from history to economics (land tenure, population, agriculture, fishery, industry, trade, transport and communications and budget), from foreign affairs to health and education, from African affairs to community development, law and constitution, among other topics.

The special issues on topics such as the languages of Ethiopia, education, Ethiopia's Five-Year Plan, Eritrea, Ethiopian patriots, Ethiopian history and geography and the Addis Abäba African Summit Conference (with full text of all speeches, the charter and resolution) give an in-depth and broad coverage of the issues involved.

In the area of art, culture and literature there are valuable English translations of Gəʿəz chronicles (↗Zärʾa Yaʿəqob, ↗Bäʿəda Maryam, etc.), Amharic fiction (the novels of ↗Afäwärq Gäbrä Iyäsus and *ras* Ǝmməru Ḫaylä Śəllase, plays by ↗Mängəśtu Lämma, Ṣäggaye Gäbrä Mädḫən, a short story by Assäfa Liban), of valuable Amharic documents relating to the traditional system of land tenure and taxation.

Ethiopian literature in English is represented by the poetry of Solomon Däressa and Ṣäggaye Gäbrä Mädḫən, a short story by Ašänafi Käbbädä, an article about the patriot martyr *abunä* Peṭros in Ethiopian theatre and numerous articles on Ethiopian art and poetry.

E.O. is certainly a valuable source for studies and comments made on the early art of three renowned Ethiopian artists, Gäbrä Krəstos Dästa, Afäwärq Täkle and ↗Ǝskəndər, and for the works of Bərhanä Mähari, Mäḥammäd Ali and the sculptor Alämayyähu Bəzunäh.

There is an index by Chris Prouty Rosenfeld to the first ten years of E.O. by author's name, a subject index and an index of titles; another one by Zännäbu covers vols. 1–16. The last issue of the Journal was vol. 16, no. 4, 1974.

The Ethiopia Star

The E.S., a short-lived weekly (1941), was Ethiopia's first English-language newspaper. Produced by the British Military Administration in Addis Abäba, the publication, as stated in its first issue of 19 October, sought to "give readers of British and other nationalities articles on the progress of the war and international affairs generally", as well as studies "by local experts on Ethiopian matters". Besides articles on British military victories in Ethiopia and elsewhere, the paper carried the text of an important telegram to Winston Churchill from *aṣe* ↗Ḫaylä Śəllase I, pressing the British Government to sign a Treaty recognising Ethiopia's independence. The paper also published the text of two of the Emperor's speeches; an account of pre-war Addis Abäba by the English prelate A. C. Matthew; translated extracts from a report by the Italian fascist Arconovaldo Bonaccorsi condemning corruption in the former Italian empire; and a little-known interview with the Ethiopian Patriot *wäyzäro* ↗Šäwaräggäd Gädle. The penultimate issue, of 7 December, announced, prematurely, that British troops were "to leave Ethiopia" forthwith, while the last issue, of 14 December, provided documentation on the allied capture of Gondär.

With the signing of the first Anglo-Ethiopian Agreement, on 31 January of the following year, the purpose of the paper, which was read mainly by the British officers in Addis Ababa and a few other foreigners, came to an end. Copies can be consulted at the British Library newspaper division in London, and at the IES library in Addis Abäba.

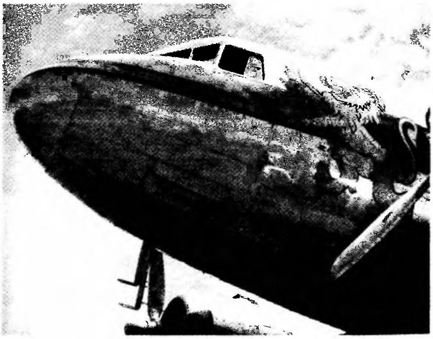
Ethiopian Airlines

E.A. was established in 1945, as a result of an agreement signed on 8 September between the Ethiopian Government and the American airline company, Transcontinental and Western Airlines (later known as Transworld Airlines, TWA). The charter officially setting up the airline, Ethiopian Air Lines Inc., was proclaimed on 21 December. Scheduled passenger service was inaugurated

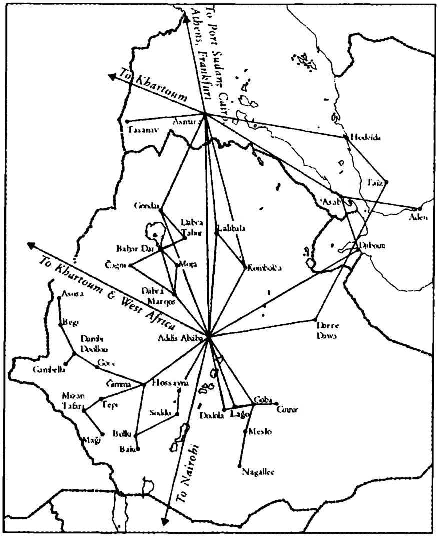


Airplane of Ethiopian Airlines in the 1960's; photo courtesy of the IES on 8 April 1946 when a Douglas C-47 aircraft made the flight from Addis Abäba to Cairo in ten hours.

For over a decade, both domestic and international flights were served primarily by the indomitable C-47 aircraft, DC-3 in its relatively more luxurious passenger edition. Leftovers from World War II, these aircraft remained the trademark of the airline's domestic service until replaced some four decades later by the ATR-40. Thanks to the pilots' ingenuity and its own remarkable adaptability to Ethiopian conditions, it played an indispensable role, not only in transporting passengers and cargo, but also in integrating hitherto inaccessible places to the centre. For its international service, the airline acquired progressively more sophisticated aircraft, like the four-engined propeller aircraft Douglas DC-6, in 1958 and entering the jet age in 1962 with the purchase of two Boeing 720-B's. The acquisition of a wide-bodied aircraft, in the shape of the Boeing 767, in June 1984 marked the climax of its aircraft development.

At the same time, the history of the airline was marked by steady expansion and diversification of routes, both in its domestic and international service. Landmarks in the latter category were extension of the service to Athens and Frankfurt, inauguration of the first trans-African flight in 1960 (the year, appropriately enough, of African independence), the first flight to Beijing by an African carrier in 1973 and its first transatlantic passenger flight (to Newark, New Jersey) in 1998. Until 1962 the airline operated its flights from an airfield in south-west Addis Abäba left over by the Italians, now known as the Old Airport. In that year, it moved to its current premises at Bole.

The history of the airline was also characterized by a relentless struggle for Ethiopianization. In the initial years, both management and flight operations were dominated by Americans. Landmarks in the steady advance in Ethiopian control of both spheres were the checking-out of the first Ethiopian captain, Captain Alämayyähu Abbäbä, in 1957 and the appointment of the first Ethiopian general manager, Colonel Səmret Mədhane, in 1971. In the technical services as well, Ethiopians gradually took over from non-Ethiopian personnel. This process of Ethiopianization was assisted by the airline's training programmes, which subsequently came to serve, not only Ethiopia, but also other African countries.



Ethiopian air route system in 1962; after the map of the Imperial Ethiopian Mapping and Geography Institute

Nevertheless, the history of the airline has not been one of unadulterated success. Following the outbreak of the Ethiopian revolution, the airline went through a period of grave crisis. This did not change until 1980, when the government, putting an end to the political interference that had contributed to the crisis, appointed a new general manager, Captain Mohammed Ahmed, and gave him a free hand in the management of the airline. Again, after the change of regime in 1991, government interference brought the airline to the brink of collapse. This has now been reversed in large measure after the appointment of a veteran, *ato* Bəsrat Nəgatu.

Ethiopian argots

Some particular social groups within different communities of Ethiopia use characteristic language varieties, known as A., in order to prevent the outsiders from understanding their conversation. The existence of different A. in the Amharic speaking communities became known over the recent time: A. of the ↗merchants, of the ↗*azmari*-minstrels (s. also ↗Ənzata) and of people possessed by the *zar*-spirit (↗Possession cults), as well as an A. of a women's secret society, *mʷəyät*, in the Gogot- and Čaha-speaking regions of ↗Gurage (s. Leslau 1964a; 1964b; 1964c). Some A. of Addis Abäba are discussed by Bender and Teshome Demmisse (1983) and Aregga Hailemichael (1996). Further on, an A. of ↗Wäyṭo, "the hippopotamus hunters", living on the shores of Lake Ṭana (whose everyday language is Amharic) was collected by Marcel ↗Griaule (s. Cohen 1939:360–71). As to some other ↗marginalized groups in Ethiopia, s. Freeman – Pankhurst (2003); an A. of a Somali "low cast" of hunters was described by Cerulli (1926). The usage of A. or other special languages, ranging from A. to slang (e.g., **የራዳ፡ ቋንቋ**, *yarada qʷanqʷa*, the well-known 'language of Arada', Addis Abäba) is wide-spread and, as an important linguistic and social feature, deserves closer attention of researchers. Some principles of the first four mentioned A. are exposed below.

The A. use various procedures for the transformation of the original root of the standard language (the features mentioned below do not necessarily occur in all the A.). One of the principles is augmentation of the root through repetition of a radical or of the whole root or through addition of a consonant. A radical is repeated in the A. of the *mʷəyät*, e.g., *kinanna*, 'prevent' (Gogot: *känna-m*; cp. Soddo *källa-m*, Amh. *källa*), and of the *azmari* A., e.g., *ananba*, 'tear' (Amh.: *ənba*), *däsäsna mossäñ*, 'I am pleased' (Amh.: *däss aläññ*). Reduplication of a biradical root with addition of *n* occurs in the *azmari* A.: *sərənsər*, 'grass' (Amh.: *sar*); *fərənfər*, 'fruit' (Amh.: *fəre*).

The root can be also augmented by adding of a new element. Thus, in the *azmari* A., one finds *qärädda*, 'draw water' (Amh.: *qädda*), *bälännäṭä*, 'exceed' (Amh.: *bälläṭä*). In the A. of the *mʷəyät*, the following examples can be found: *fʷägäš*, 'cow' (from Amh. *goš*, 'buffalo'), *č̣äwaga*, 'price' (Amh.: *waga*), *gʷamməst*, 'five' (Amh.: *amməst*).

Suffixation is another device used in forming the words of A. The suffix *-it* (the feminine suffix in Amharic) occurs in the A. of the people possessed by *zar* as qualifier suffix, e.g., *č̣arit*, 'hen' (lit. 'that which scratches'), *läblabit*, 'pepper' (lit. 'that which burns'), *läslasit*, 'bread' (lit. 'that which is smooth').

The suffix *-o*, that occurs in Amharic, e.g., for the expression of abstracts and in the names of plants, is found in the *azmari* A. without having, however, a special meaning. Cf. *kärso*, 'belly' (Gəʿəz, Amh.: *kärs*), *sitto*, 'woman' (Amh.: *set*), *wərabʷo*, 'hyena' (Səlṭi, Wälläne: *wärabä*).

The A. of the *mʷəyät* also has suffixes, such as *-yä*, *-ya* and others, which do not seem to have a definite value in the standard language, e.g., *bərrəyä*, 'fowl' (from the root *brr*, 'fly'), *säbäyä*, 'man' (Gogot: *säb*).

Palatalization is widely used in the *mʷəyät*-A. of Gogot: *šərämma*, 'hear' (Gogot: *sämma*; note also the augmented *r*), *šəräddäbä*, 'insult' (Gogot: *säddäbä-m*), *yägräžža*, 'slave' (from Gogot *gäzza-m*, 'possess'), *č̣ərabbäṭä*, 'seize' (Amh.: *č̣äbbäṭä*).

In the A. of the *zar*-possession cult the labial *m* may be substituted for any consonant, as in *mänzäb*, 'money' for Amh. *gänzäb*. The labial *w* is substituted for any consonant in the *azmari* A., e.g., in *wämmärä*, 'add' (Amh.: *č̣ämmärä*), *wäkkärä*, 'be drunk' (Amh.: *säkkärä*).

The dental *t* is substituted for *h* in the *azmari* A., in *atun*, 'now' (Amh.: *ahun*), *tullu*, 'all' (Amh.: *hullu*), and in the merchants' A. in *yətiyäw*, 'this' (Amh.: *yəh*).

Substitution of homorganic sounds is likewise employed in the root formation of *mʷəyät*-A.: one liquid for another, as in *wənannädä*, 'go down' (from the root *wrd*), *täsrabbätä*, 'take leave' (Gogot: *täsnabbätä*), or one labial for another labial as in *ač̣fäč̣č̣äfä*, 'sing' (from *ač̣bač̣č̣äbä*).

Metathesis occurs in the *azmari* A., e.g., in bisyllable roots *ṭawwa*, 'go out' (Amh.: *wäṭṭa*), *tama*, 'evening' (Amh.: *mata*), *čəbba*, 'alone' (Amh.: *bəčča*). In trisyllabic roots any of the radicals can change places: e.g., 1–2–3 can become 2–1–3 as in Amh. *wäddäqä*, 'fall' becoming *däwwäqä*, or it can become 3–1–2, as in Amh. *(tä)qäbbälä*, 'receive' becoming *(tä)läqqʷäbä*.

Besides the phonetic changes, various types of semantic changes, such as generalization and metaphor, take place in A. Thus, in the A. of the *zar*-cults, 'drink' is *č̣alləṭ* (cp. Amh. *č̣älläṭä*, 'drink to the last drop'); in the *azmari* A., 'master, king' is *urus* (cp. Har. *urūs*, 'head'); in the merchants' A. 'brother, companion' is *mäntiya* (cp. Amh. *mänta*, 'twin').

Some meanings are expressed in a paraphrastic way. In this procedure, a new term is created by a combination of roots already used in the A.

Thus, in the A. of the people possessed by the *zar*-spirit 'water' is *yäbäräha ṭäǧ* (lit. 'mead of the desert'), 'door' is *ç̣älläma ayfäre* (lit. 'that which does not fear darkness'). In the A. of the *mʷəyät*, 'calf' is expressed by *kuččəf fʷägäš* (lit. 'small cow'), 'egg' is *yäbərrəyä yiwräç̣ç̣əbʷä* (lit. 'that from which a hen comes out'), 'jackal' is *ahlelwä yiräṭ* (lit. 'who eats goats'), 'moon' is *yägussariya iǧrammə*ʾ (lit. 'the disc of the night'). In the A. of the *mʷəyät*, 'ear' is *yəššəramma* (lit. 'that with which one hears'), 'headrest' is *yuradəʾəbbʷä* (lit. 'that on which one sleeps').

Nearly every A. has loanwords depending on the nature of the A. and its geographic position. Thus, e.g., the merchants' A. borrows lexemes from ↗Arabic and ↗Harari. The A. of the *zar*-possessed people has a lot of Arabic and Oromo loanwords. The A. of the *mʷəyät* has loanwords from various Gurage dialects. The *azmari* A. borrows from various South and North Ethio-Semitic languages, from Cushitic languages, and from Arabic.

Wolf Leslau

Ethiopian Bible Society ↗British and Foreign Bible Society

Ethiopian Dynasty

E.D. is the name given by the 4th-cent.-B.C. Alexandrian historian Manetho (1940:166–69) referring to those rulers that, coming from Nubia, conquered Egypt ca. 713 B.C. and ruled it until 663 B.C. Manetho's E.D. has thus no relation with the modern Ethiopian dynasties. The old designation of "Ethiopians" referred basically to the dark skin of the Nubian people and stressed the particularities of the Nubian rulers as a different ethnic group: accentuated brachycephalism, low forehead, swollen cheeks and strong chin. To avoid any confusion with modern Ethiopian history, the most recent historians refer today to this 25th Egyptian dynasty with the term "Cushitic", from the Biblical name of ↗Kush in Nubia. Their rulers bear the Nubian names of Shabaka (r. 713–01 B.C.), Shabataka (r. 701–690 B.C.), Taharka (690–64 B.C.) and Tanoutamon (664–56 B.C.), their big necropolis of El Kurru and Nouri being found near the "holy mountain" of Ǧebel Barkal, near the 4th Nile Cataract and within the modern area of Meroë (Sudan).

Ethiopian-Eritrean Federation

UN Commission and approval of a Constitution

After World War II, the disposal of ↗Eritrea proved to be a fairly problematic question. The Allies failed to reach an agreement and in 1948 passed the matter on to the United Nations, where the divergent interests and claims of neighbouring ↗Ethiopia, of the former colonial power – Italy – and of the administering power – Great Britain – clashed. Following long diplomatic negotiations, the United Nations General Assembly considered that the Eritreans were not yet politically mature for self-government and in December 1950 voted to federate Eritrea with Ethiopia as "an autonomous unit under the sovereignty of the Ethiopian crown" (Resolution 390A, V, later known as the "Federal Act").

In February 1951, a UN Commissioner, the Bolivian delegate Eduardo ↗Anze Matienzo, went to Eritrea to assist in the implementation of the E.E.F. (Amh.: *Yäʾityopyanna Ertəra fädäräšən*, Tgn: *Fädäräšən nay Ityopyan Ertəran*). Anze Matienzo soon realized that he was in an awkward situation because of the disagreements concerning the interpretation of the Federal Resolution, which was foreign to the Eritrean and Ethiopian conception of political power. The Ethiopian monarchy interpreted the Resolution as a formula that would allow the incorporation of Eritrea into Ethiopia. On the Eritrean side, the political parties accepted the UN resolution but disagreed about the real significance of the federation. The Unionists, who had campaigned for a complete union between

Eritrea and Ethiopia, were close to the Ethiopian standpoint. By contrast, the Eritrean Democratic Front (EDF), led by ↗Ibrāhīm Sulṭān, rallied the former adherents of the Independence Bloc and was eager to protect the autonomy granted to Eritrea by the UN Resolution.

The federal settlement reflected these conflicting pressures as well as the imbalance of power between Ethiopia and Eritrea. Moreover, the reasons quoted in the Resolution's preface in support of the federation – "the wishes and welfare of the inhabitants", "the interests of peace and security in East Africa" and "the rights and claims of Ethiopia" – clashed. Above all, the Resolution did not envisage autonomous and distinct institutions, both Eritrean and Ethiopian governments being entrusted with regulating their own relationship. The only organ with advisory powers on common affairs – the ↗Imperial Federal Council – was actually powerless. Thus, the Ethiopian government acted in practice as the Federal government.

According to the Eritrean Constitution, Eritrea was a sovereign unit with distinct territory, citizenship, official languages (Təgrəñña and Arabic), flag, seals and arms and a democratic form of government, on the principle of the separation of powers and their effective exercise by the people. In the field of domestic affairs, the Eritrean government possessed legislative powers (which lay in the ↗Eritrean Assembly), executive powers (the Chief Executive and his Cabinet) and judicial powers (a hierarchic judicial system entrusted to the Chief Justice of the Supreme Court, held by a former British colonial servant). The Eritrean government's jurisdiction included budget, taxation, health, education, administration and police. The British administering power had outlined the framework of this administrative system during the transition period. Political parties, trade unions, human rights, freedom of press and speech were recognized in the Constitution, whose liberal-democratic principles put Eritrea well in advance of the Imperial Ethiopian absolutist establishment. The jurisdiction of the Federal Government included foreign affairs, defence, currency and finance, foreign and interstate commerce, and communications. Entrusted with the power of maintaining the federation's integrity, the Federal Government had also to impose uniform taxes to bear the costs of the federal services. ↗Andärgaččäw Mäsay, son-in-law of the Ethiopian Emperor, became the Representative of the Crown in Eritrea. He was the *trait d'union* between ↗Ḫaylä Śəllase I and the Eritreans and was granted the right to empower the Eritrean Chief Executive elected by the Eritrean Assembly. The Chief Executive was responsible for the maintenance of public order and for the direction of public services and was also entrusted with the power of proposing laws to the Assembly.

The Eritrean Assembly and the Constitution

The Eritrean Assembly was formed in March 1952. On 10 July 1952, the Eritrean Assembly adopted the Constitution, which incorporated the Federal Act, and by September the Ethiopian government had ratified both the Constitution and the Federal Act. On 15 September 1952 the administering power transferred its powers to the Federal Government.

However, since the beginning, the Federal Act was encroached upon, both by Ethiopian and Eritrean authorities. The government of Addis Abäba began to regulate common federal matters and staffed the Federal departments – such as police, army, air force, telecommunications and transport – with Ethiopian citizens, leaving minor decision tasks to Eritreans. The Ethiopian flag was imposed on the Federation and Eritreans were regarded as Ethiopian nationals. At his arrival in Asmära, Andärgaččäw Mäsay declared his lack of confidence on the federation's viability. Meanwhile, the Ethiopian military presence in Eritrea increased and the United States' right to use military installations in the country was officially recognized.

Political destabilization in Eritrea

The destabilizing impact of these measures on Eritrean internal politics was worsened by the short political democratic apprenticeship of the Eritrean leaders. Since the beginning, institutional relations between Eritrean legislative and executive powers proved to be difficult, as the Assembly denounced the authoritarian direction taken by the Chief Executive. In 1953 ↗Tädla Bayru directed an intimidation campaign against his political opponents, such as ↗Abräha Täsämma and ↗Wäldä Ab Wäldä Maryam, resorting to arbitrary incarceration and shooting. The Unionist Party (UP) supported Tädla Bayru, as the majority of the adherents, still campaigning for complete union with Ethiopia, were given the preference in public offices.

Dissatisfaction grew amongst EDF's members, especially in the Western province, a region that had demanded independence since the 1940s, and it was further fuelled by the worsening of socio-economic conditions. An inefficient economic policy by the government determined burdensome taxation and an increase in the cost of living. Although the free movements of goods and persons had been stated in the Federal Act, custom duties were soon raised by Addis Abäba on bilateral exchanges, which amounted to ca. 25 % of Eritrean imports/exports. While Federal and Eritrean Governments shared the former Italian state properties in Eritrea, Italian citizens regained all the rights, properties and interests legally acquired before the war. Moreover, renewal or *ex-novo* granting of titles of concessions – in the fields of industry, mining, agriculture and transport – to foreign citizens was witnessed with ill-concealed discomfort by the Eritreans. They felt that the wealth of their country was being deliberately undermined by Ethiopian intervention.

In autumn 1953, opposition movements recovered strength. The Moslem League (ML) was restored and soon its members organized public protests in order to defend the Eritrean Constitution and to protect their interests as Moslems. Around 1953, Eritrean uneasiness was also witnessed outside the Assembly, with several strikes and general unrest among the dock-workers. The Chief Executive suppressed the freedom of press and of assembly guaranteed by the Federal Act. Opposition newspapers were closed down. In February 1954 the ML representatives sent a memorandum protest to Ḫaylä Śəllase and to the UN and, in May, they presented two motions to the Assembly. Eritrean public opinion was divided, not necessarily along ethnic lines, while internal quarrels tore the opposition: Ibrāhīm Sulṭān himself was driven away from ML leadership because he was suspected of being, out of his own ambitions, too close to the Unionist milieu. The political offensive of the ML parliamentary members was successful in undermining the prestige of Tädla Bayru, who was now criticized even by his own party.

The revival of ↗*šəfta* banditism sapped public order in the Eritrean highlands while civil disobedience spread in the Western Province. In an official speech at the Eritrean Assembly in March 1955, Andärgaččäw Mäsay insisted on the concept that Eritrea was politically indistinguishable from Ethiopia, thus embittering the frictions between the Assembly and the Chief Executive. The clash then involved President ᶜAli Rädʾay, whom the Assembly wanted to remove in order to bring down Tädla Bayru. In July the latter resorted again to the suspension of the parliamentary session for a period longer than that allowed by the Constitution. The Eritrean opposition turned to the Emperor. Ḫaylä Śəllase rejected as unconstitutional the suspension of the Assembly and forced both Tädla Bayru and ᶜAli Rädʾay to resign. The fervent Unionist *bitwäddäd* ↗Asfəḥa Wäldä Mikaʾel, vice-representative of the Crown in Eritrea, replaced Tädla Bayru without renouncing to his former office. The Assembly elected as its president an EDF representative, *šayḫ* Saᶜīd ↗Idrīs Muḥammad Adim. From then on, the demarcation of spheres of authority between the Eritrean and the Ethiopian government was completely disregarded and Addis Abäba constantly interfered in the policy of the Cabinet, which was composed of fervent Unionists who accelerated the Federation's dismantling. ML members of the Assembly challenged any attempts to undermine Eritrean rights in the Federation by submitting to Ḫaylä Śəllase a detailed memorandum protest. The UP succeeded, however, in splitting the ML and weakened the opposition with a negative vote of confidence to the president of the Assembly.

In September 1956, the elections for the Eritrean Assembly took place in a tense atmosphere, with police harassment over anti-Unionists and suspicions of corruption and irregularities. As a result, the UP emerged stronger, electing 32 out of 68 seats. As civic rights were infringed, dissension continued to grow in the country. Ethiopia was suspected of financing political *šəfta*-ism in order to demonstrate that Eritrea was almost ungovernable. But *šəfta*-ism was also fed by the economic decline the country had been experiencing since 1945. Although the Italian community dropped from 17,000 in 1952 to around 7,000 in 1962, Italian manufacturing concerns and agricultural concessions still held a dominant position in the Eritrean economy. To avoid double taxation, they relocated many industries in Ethiopia, thus sharpening Eritrean unemployment. Despite their economic failure, the Unionists strikingly dominated Eritrea. Meanwhile, the Emperor never ceased to lobby the Assembly to erode Eritrean autonomy and in November 1956 he spoke of the reintegration of Eritrea into the

Ethiopian motherland. By then, even ML leaders had dropped any hopes of survival for the federation. In October 1957 Wäldä Ab Wäldä Maryam and Muḥammad ᶜUmar Qadi applied to the UN, accusing the Ethiopian authorities of connivance with the Eritrean government for the gradual infringement of the Federal Act. In reply, the federal authorities imprisoned Muḥammad ᶜUmar Qadi together with other outstanding Moslem personalities and brutally suppressed the strikes and peaceful mass demonstrations staged throughout Eritrea.

Weakening of Eritrea's autonomy

In 1958, the Chief Executive inflicted a serious blow on Eritrea's autonomy, imposing the Ethiopian Penal Code, the flag and the Ethiopian taxation system, thus depriving Eritrea of its own political symbols (State symbols). Meanwhile, Brigadier General ᶜAbiy Abbäbä was appointed the Emperor's Representative in the country. Opposition also lost ground, as the political repression forced many of its outstanding personalities to flee. Three clandestine political organizations were set up by these exiles in Egypt: the ↗Eritrean Liberation Movement (ELM), led by Wäldä Ab Wäldä Maryam, was active inside Eritrea; Idrīs Muḥammad Adim formed the ↗Eritrean Liberation Front (ELF) in July 1960, while Ibrāhīm Sulṭān set up the United Party of Eritrea Democratic Front. At first, their efforts were aimed at gaining UN attention. As legal recourse to international order failed, because of the Emperor's skilful Cold War power politics, these movements turned to armed subversion, thanks also to the support of Somalia and of Middle Eastern countries.

In May 1960 Ethiopian rule over Eritrea was officially stressed when the Eritrean Assembly voted to rename the "Eritrean Government" as "Eritrean Administration under Ḫaylä Śəllase, Emperor of Ethiopia". But strikes by the workers and popular protests revealed that Eritreans frustration with economic unrest was acquiring a clear anti-Ethiopian political character which was also mining the confidence in the Assembly. In summer 1961 a small band led by Idrīs ᶜAwate in north-west Eritrea paved the way to the armed struggle inside the country. Following the May 1962 peaceful student demonstrations for Eritrean freedom and the discovery of an anti-Ethiopian plot, Ḫaylä Śəllase went to Eritrea in July to prepare annexation into Ethiopia, mobilizing the troops. On 15 November, the Eritrean Assembly voted the dissolution of the Federation and the incorporation of Eritrea into the Ethiopian Empire. The following day, the Emperor formally repealed the Federal Act and declared Eritrea "wholly integrated" into the Empire, as its 14th province.

Ethiopian Evangelical Church Mekane Yesus

The E.E.C.M.Y. (**ወንጌላዊት፡ መካነ፡ የሱስ፡ ቤተ፡ ክርስቲያን፡ ኢትዮጵያ**, *Wängelawit Mäkanä Yäsus Betä Krəstiyan Ityop̣ya*), the first registered Protestant Church in Ethiopia, has been a member of the Lutheran World Federation since 1959, of the All-Africa Council of Churches since 1973 and of the World Council of Churches since 1979. The E.E.C.M.Y. is a well-established Protestant Church which counted in 2003 over 4,000,000 members, who mainly live in the western, southern and central parts of the country, i.e. in areas which were forcibly incorporated into the Ethiopian empire by *aṣe* ↗Mənilək II.

The E.E.C.M.Y. has several roots: on the one hand, it is the result of renewal and Bible-reading movements within the Ethiopian Orthodox Church; on the other hand, the outcome of Lutheran and Presbyterian mission activities.

The earliest Protestant teaching in Ethiopia dates back to the German doctor, lawyer and theologian Peter ↗Heyling, who lived and worked in Gondär as advisor to *aṣe* ↗Fasilädäs in 1635–52. His Bible teachings in the Amharic vernacular were well received also by the Orthodox priests and they and later followers formed a brotherhood with the aim of promoting Scriptural knowledge in the vernacular. This movement, at times strongly surpressed, survived and some of the adherents later influenced the formation of the E.E.C.M.Y.

Another Bible-readers movement started at ↗Ṣäᶜazzäga in Ḥamasen in Eritrea. Around 1860 a deacon of St. George church found in a niche of the church an Amharic copy of the Holy Scriptures, which most probably had been distributed by the pioneers of the ↗Church Missionary Society. The priests and deacons diligently studied the Bible, were deeply touched by the contents and passed their knowledge on to others. They also sent pioneers to Ǧimma and Wälläga; and the beginning of the Evangelical congregation at Boǧǧi in Wälläga (1898) is the result of their efforts.

Another root of today's E.E.C.M.Y. goes back to European and American ↗missions. The first mission that could undertake more permanent work in Ethiopia was the ↗Swedish Evangelical Mission. Their expatriate missionaries arrived in Eritrea in 1866, in Addis Abäba in 1904 and in Neqemte in 1923, while national missionaries had been sent to Ethiopia earlier. Thomas ↗Lambie from the American Presbyterian Mission had entered Ethiopia from the Sudan in 1919 and started medical work in Dambi Dolloo and Addis Abäba. In 1928 the German ↗Hermannsburger Mission started its activities in Addis Abäba, Wälläga and Illubabor.

Due to the Italian occupation and World War II, most of the missionaries had to leave the country, yet the evangelical work continued and even expanded thanks to the efforts of Ethiopian believers, voluntary evangelists, teachers and national pastors (↗Dafaa Ǧammoo).

On 27 August 1944, *aṣe* ↗Ḥaylä Śəllase I issued Decree no. 3,11, distinguishing between "Ethiopian Church areas" and "open areas", which stated: "In open areas, Missions may teach and preach the Christian Faith of their own denomination without restriction". After the war, the Norwegian Lutheran Mission started work in Ethiopia, as did the American Lutheran Mission, the ↗Danish Ethiopian Mission, the ↗Finnish Evangelical Lutheran Mission and the Norwegian Missionary Society. This missions usually opened schools and clinics on their stations, in some places also Bible schools. The evangelistic outreach was undertaken mainly by national evangelists and volunteers.

Several congregations that had come into existence in western and southern Ethiopia, comprising more than 20 different ethnic groups, united and in 1959 the E.E.C.M.Y. was constituted. The name **መካነ፡ የሱስ** (*Mäkanä Yäsus*, lit. 'Place of Jesus'), originally given to a new church in Addis Abäba, was then accepted as the name for the nation-wide Evangelical Church. The estimated membership at that time was 25,000, but ten years later already it had grown to 103,578. By 1970 all activities and institutions of the Lutheran missions were integrated into the E.E.C.M.Y. and it became an important factor in society.

During its history the leaders and the believers of the E.E.C.M.Y. had to face strong opposition and harassment from local authorities and Orthodox Church circles at different times and in different places. The General Secretary was killed by the *Därg* in 1979. In spite of all this, the E.E.C.M.Y. survived and grew steadily.

The E.E.C.M.Y. has to be noted also for its holistic approach. Proclamation of the Gospel and human development belong together. The church runs schools, clinics, hospitals, appropriate technology centres, literacy campaigns, literature and radio programmes, as well as theological training centres, Bible-schools, counselling facilities and outreach campaigns. During the famines of the last decades, it performed extensive relief work in close co-operation with the ↗Ethiopian Orthodox Täwaḥədo and Catholic Churches.

One characteristic of the E.E.C.M.Y. is its emphasis on lay involvement. For 34 years after its being constituted, even the Presidents of the Church were not ordained ministers. By 2003 there existed 5,368 established congregations and 3,253 preaching posts (by 2000 – 4,789 and 2,483 respectively). The number of pastors was 1,150, while that of volunteers amounted to 304,275.

The Ethiopian Herald

The E.H. was a government ↗newspaper. It was published weekly in English by the Ethiopian Press Department, in Addis Abäba, and was sold for 25 Ethiopian cents. The first editor was Ian H. Simpson, an Englishman, who remained in office until 12 February 1944 (Yacob Wolde-Maryam 2003:84). The maiden issue of 3 July 1943 announced that it was the first newspaper published in a foreign language in the country and issuing mainly "articles on some aspects of the political and social life of the country". It also indicated that discussing Ethiopia's relations with other member countries of the UN, and pointing out that its welfare is closely related with that of other states is part of its mission.

The E.H. became a daily starting from 29 December 1958 and its price was reduced to 10 cents. The name of the editor was not mentioned but sources indicate it was David A. ↗Talbot, an African-American, who would have been editor-in-chief from 1945 to 1960 (Yacob Wolde-Maryam 2003:72). Its circulation in some of the major provincial cities and towns began improving.

Political activities covered included international news, and prominent local issues. Essays and reports on African unity, African brotherhood and anti-colonial struggle were dominant especially during the 1960s, and more so after the mid-1960s. Writings on domestic issues focused on economic development and reports on social services like hospitals, roads, schools, bridges were plenty. The E.H. also had a cultural scope, with announcement of lectures, publications, exhibitions, dramatic performances and film shows. Essays on African literature appeared as well as on foreign writers, like Shaw, Dante, Shakespeare, Steinbeck, Pushkin, Churchill, Mollière. Critical opinions, commentaries, reviews, art news, and articles on Ethiopian painting, literature, drama, traditional music and dance appeared quite frequently especially starting in the mid 1960s.

Research on Ethiopian literature and art will benefit from the essays written by or on personalities like Bäʿalu Gərma, Mängəśtu Lämma, Ṣäggaye Gäbrä Mädḥən, Gərmaččäw Täklä Hawaryat, Abbe Gubäñña, Stephen Wright, Ḫaylu Gäbrä Yoḥannəs, Ṣäggaye Däbalqe, Täsfaye Gässäsä, Rita Pankhurst, Daññaččäw Wärqu, Ǝskəndər Boghossian, Gäbrä Krəstos Dästa, Ṭəlahun Gässäsä, Awlaččäw Däğäne, Zännäbäčč Taddässä, Täsfaye Gäbre and many others.

Fekade Azeze

Ethiopian Language Academy

The first mention of an Ethiopian Academy dates back to *Nägarit gazeṭa* issued in 1942 (Amsalu Aklilu 1982:11). In the order it was spelt that "the Ministry of Education and Fine Arts shall in accordance with the law establish an academy for promotion of research in languages and Fine Arts". Following, the Ministry made several attempts and reached the decision to establish a "Royal Academy". The Academy was to constitute Language and Literature Council, the Fine Arts Council, and the Science and Technology Council.

Later on, by the new government order no. 79, in June 1972, the general reference "languages" in the provision of 1942 *Nägarit gazeṭa* was dropped out and replaced by the National Academy of the Amharic Language with its own council (Academy of Ethiopian languages 1986: 2). The purposes of the Academy were spelt out as: (1) to foster the growth of the Amharic language and (2) to encourage the development of its literature (*Nägarit gazeṭa* 1972, in McNab 1984: 719). The council, which gave guidance to full-time researchers at the Academy, was constituted from scholars of high calibre in different fields of specializations: linguistics, law, art, literature, sociology, natural sciences and engineering.

Later on, although it had not been officially ratified, the council renamed the National Amharic Language Academy as the Academy of Ethiopian Languages at its plenary session of 1979 during the communist regime. The council members served in one of the four sub-committees according to their interest and training: lexicography, linguistics, terminology and literature (oral and Gəᶜəz), which were also linked to the respective departments of research (Amsalu Aklilu 1982:12f.). Thus, the Academy had been responsible for the (socio-)linguistic description and standardization of the Ethiopian languages for two decades and integrated with ↗Addis Ababa University in 1997 with more or less similar purposes (*Zena Ləssan* 1999:1).

Among other achievements of the Academy are: modification of the Ethiopic writing systems (although this has not been put to use officially); publication of three books of proverbs of three Ethiopian languages; collecting, annotating and publication of two volumes of Gəᶜəz poetry; preparation of two professional dictionaries; publication of an extensive English–Amharic dictionary of science and technology terms; publication of various professional articles in series of 14 volumes of *Zena Ləssan* (Gərma Zännäbä 1999 31f.).

Kebede Hordofa Janko

Ethiopian Language Area

Background

Earlier specialists working in north east Africa noted that there were some characteristics shared by languages of the area, Charles A. ↗Ferguson was the first to propose Ethiopia as an explicit language area (in BendLang 63–76). Areal classification is one of the three generally recognized internal classification frameworks used for languages, the two others being genetic and typological. As Ferguson (1976:63f.) put it, a language area is such that "[the languages] tend to share a number of features which, taken together, distinguish them from any other geographically defined group of languages in the world". The causative mechanism of language areas is diffusion through "borrowings" and multilingualism. Thus, areal and genetic classifications are historical, while typological classification can be ahistorical (e.g. tonal vs. non-tonal).

The Ferguson Features

Ferguson's original insight regarding Ethiopia was supported by eight phonological and eighteen grammatical features, outlined briefly here (for more details and specific examples, s. Ferguson in BendLang; s. ↗Amharic, ↗Bärta, ↗Gəᶜəz, ↗Oromo, ↗Təgrəñña, ↗Wällamo). The phonological [P] features are: P1: /f/ replaces /p/ as the counterpart of /b/ in the phonemic inventory of the language; P2: there is a class of palatal consonants (typically *č*, *ǧ*, *š*, *č̣*, *ñ*) which occur as phonemes and which also replace dental /alveolars in at least one major word class by a phonological process; P3: there is a distinctive series of ejective consonants, typically *p̣*, *ṭ*, *ṣ*, *č̣*, *q*; P4: there is a post-alveolar, often retroflex consonant, often implosive, represented here by /ɗ/; P5: there are distinctive pharyngeal fricatives /ɦ/ and /ᶜ/; P6: lengthened (geminate) consonants are distinctive lexically and are also produced by at least one grammatical process in a major word class; P7: there are one or more central vowels, typically a lowered backed high front vowel (represented herein by /ɪ/ and a lowered backed mid vowel /ɛ/ ; P8: there is a cluster-breaking vowel, usually one of the central vowels, which prevents the occurrence of clusters of more than two consonants.

The grammatical [G] features are: G1: SOV is the basic word order; G2: subordinate clauses precede main clauses; G3: there are high-frequency subordinate verbs meaning 'doing something' or 'having done something'; two forms may occur; they are called "gerund" by Ferguson, but they are more accurately referred to as "converbs"; G4: postpositions; sometimes these occur with preposed antecedents; G5: "quoting clauses" using the verb 'to say' as an auxiliary; G6: compound verbs with 'to say' as an auxiliary; G7: specially formed negative copula, not in the pattern of usual verbal negatives; G8: singular of modified noun is used with numerals and quantity words; G9: possessive suffixes; G10: masculine/ feminine is marked in 1st pers. sg. and 2nd pers. sg. of pronouns and verbs; G11: there is a prefix conjugation with 2nd pers. masc. sg. and 3rd pers. fem. sg. both being marked by *t*-; G12: many words (especially verbs) are formed as consonantal roots which carry the basic lexical meaning and inserted vowel patterns with grammatical meaning; G13: intensives formed by a process of (re-) duplication; G14: "broken" plurals formed by changes in vocalic pattern; G15: formal distinction between independent and subordinate verbs in the imperfective; G16: sporadic use of fem. sg. forms for plural; G17: suppletive or irregular imperative of the verb 'come'; usually the only or one of a few irregular imperatives in the language; G18: some nouns have plural or collective as basic and a singulative affix is needed to form the singular.

Evaluation

In Bender (1997; 2003) it is shown that the above features are really only partially characteristic and apply mainly to the Afrasian languages of Ethiopia and in fact of a broader Northeast African Area (NEA) of Afrasian languages.

The indigenous languages of Ethiopia and its border zone belong to the ↗Semitic, ↗Cushitic, and ↗Omotic families of Afrasian and to the ↗Nilo-Saharan Phylum. Ferguson's sample included five Ethio-Semitic (E-S) languages (Gəʿəz, ↗Təgre, Təgrəñña, Amharic, ↗Čaha) plus ↗Arabic, seven Cushitic languages (↗Beǧa, ↗Awŋi, ↗ʿAfar, Galla [=↗Oromiffa], ↗Somali, ↗Hadiyya and ↗Sidama), but only three Omotic languages (Wällamo [=↗Wälaytta], Ǧanǧäro [↗Yäm], and ↗Käfa) and one Nilo-Saharan language (Añuak [↗Añwaa]). Both Omotic and Nilo-Saharan need better representation.

Half of the phonological features are not very apposite: P2 (palatal consonants) and P6 (geminates) are typological features, too widespread to be useful. P5 (pharyngeals) is too limited, occurring in northern E-S and missing even in the vernacular Arabic of the area. P8 (cluster-breaking vowel) is often vacuous or untestable because consonant clusters are rare. Only P1, 3, 4, 7 are idiosyncratic enough to be useful.

No language in Ferguson's chart (BendLang 69) is positive on all eight phonological features; best are Təgre and Təgrəñña, scoring positively on all but P4. P1 ("f for p") has extended to Nilo-Saharan languages, including Nubian, ↗Kunama, ↗Nara, ↗Kʷama, and Gule, through E-S and Arabic influence. P3 (existence of ejectives) applies to ↗Bärta, ↗Meʾen, ↗Koman, and ↗Gumuz: it is possible that this is a result of NEA influence in Bärta and Meʾen, but original in Koman and Gumuz. P4 (implosive ɗ) is lacking in Ethio-Semitic languages as well as non-Afrasian languages of the area (except possibly for Bärta).

Most of the grammatical features are not very useful. Several are implicational universals following from the basic Subject-Object-Verb order: G2, 3, 4, 9 (s. Greenberg 1966). Two others (G13 and 18) are too typological. Three (G10, 11 partially and 16) depend on grammatical gender of explicitly Afrasian nature. Three others, G11, 12 and 14, are also Afrasian, especially Semitic, idiosyncracies. Feature G7 seems a good choice but it turns out in practice to be too complicated for precise definition. Several (G5, 6 and 15) are promising as areal features, but require for checking better grammars than are sometimes available for languages of the area. The remaining three features (G1, 8 and 17) are fairly idiosyncratic and easy to check.

No language has all 18 features in Ferguson's chart (BendLang 75); Amharic, Təgrəñña, and Čaha, all E-S languages, score positively on all but one (Amharic lacks G14, Təgrəñña lacks G15, and Čaha lacks G16 and is indicated as unknown on G8). All but G3 and G9 are almost universal in the Afrasian languages of the NEA. The most non-conforming Afrasian language is Gə^{c}əz, which became extinct about 1,200 years ago, suggesting that the source of the features is outside E-S and fairly recent in the area. Bender describes as having five tone levels. However, this is dubious since tonal systems are highly typological and the historical mechanism for formation of such an area across the African Sahel is obscure.

One must be cautious in using "language area" as an explanatory concept. The use of this concept to explain geolinguistics is no less problematical than the genetic model. In the present case, much more work and work of a more sophisticated nature is needed, e.g. delving into syntacto-semantic features and lexical diffusion alongside the diffusion of areal features. A combination of genetic, areal, and typological studies is needed to unravel the complexities of Ethiopian language history.

Ethiopian Manuscript Microfilm Library

The EMML (now renamed Hill Museum and Manuscript Library) was originally a joint project between the ↗Ethiopian Orthodox Täwaḥədo Church (EOTC) central administration in Addis Abäba, the Hill Monastic Manuscript Library (HMML) in Saint John's University (Collegeville, Minnesota) and the Divinity School in Vanderbilt University (Nashville, Tennessee).

Envisioned initially by *abunä* ↗Tewoflos in 1971, the EMML made its first steps through the engagement of Walter Harrelson from Vanderbilt University and Julian Plante, Director of the HMML. An office was opened in Addis Abäba, with Taddäsä Tamrat appointed as its first Director. He was soon replaced by ↗Sərgəw Hablä Śəllase, who, helped by a Committee composed of native scholars and two Americans, served the project with great dedication until 1978. Proper microfilming started in 1973, with the contract given to University Microfilms International (Ann Arbor, Michigan), that would keep the original microfilms and distribute copies to the EOTC, the ↗Institute of Ethiopian Studies (IES), the Addis Abäba EMML office and the HMML. The project was fully financed by funds raised by HMML in the United States, the two major sources being the U.S. government's National Endowment for Humanities and the Ford Foundation.

The work progressed smoothly until the ↗Revolution in 1974. Sərgəw Hablä Śəllase was henceforth forced to resign and hand over the EMML office to the newly created Ministry of Sports and Culture. The military socialist government nationalized the project, objecting to its relationship with an "imperialist country". A second wave of upheaval took place in 1991 before the microfilming was extended from Šäwa to the regions with strongest literary tradition, such as Gondär, Goǧǧam, Təgray and Eritrea. There are hopes of resuming the joint project, which was suspended in 1987.

The manuscripts preserved by the EMML came from church libraries, monasteries, private individuals, souvenir shops and bazaars. Besides technical problems to access to some monasteries and the mistrust of some manuscripts' owners (even the collections from the ↗National Library and the IES could only be partially filmed) the project had to determine which manuscripts and which particular collections should be filmed. The decision to microfilm entire collections resulted, for instance, in having a huge collection of service books, such as the Psalter, Missal and Funeral Rituals.

Despite all the difficulties encountered, the EMML has fulfilled its goals. Some old manuscripts can nowadays only be consulted in the microfilm version since the originals have already been lost. Furthermore, the work with the microfilmed collections has produced significant contributions to the study of the history of Christianity and of the Ethiopian Church and State. Many of these texts have been edited and the series of catalogues, prepared jointly or separately by William F. Macomber and Getatchew Haile (EMML I–X), have been reviewed favourably. Of about 8,000 manuscripts on microfilm, close to 5,000 have been catalogued and the descriptions published in ten volumes (1975–91). The 11th volume, with descriptions of an additional 1,000 manuscripts is in preparation for print. A project to put the whole catalogue online is already underway (s. the Library's web site *http://www.hmml.org*).

Getatchew Haile

Ethiopian Orthodox (Täwaḥədo) Church

History from ancient times till the second half of the 19th cent.

Origins and early history

Despite some confusion in terminology, the literary, epigraphic and numismatic evidence leaves little doubt about how ↗Christianity came to Ethiopia. During the late-Roman era, traders and fortune-hunters from the Middle East must have frequented ↗Adulis, the importance of which as an emporium had been recorded quite soon (↗Historical Geography). Some of the voyagers were certainly Christians; they may have settled in Adulis and Aksum and made the locals acquainted with their faith long before it became Aksum's official religion.

↗Rufinus of Aquileia, the 4th-cent. historian, records the most plausible story about the rise of Christianity in Aksum thanks to the activity of Frumentius (*abba* ↗Sälama Käśate Bərhan) from Tyros, supported then by ↗Athanasius of Alexandria, by whom he was ordained bishop and returned to "India" (i.e., Ethiopia; s. Eusebios of Caesarea 1844, 478–80).

Historically, the elevation of Christianity to the state religion of Aksum happened during the reign of ↗ʿEzana. As no contemporary internal documents testifying Frumentius's activities in Ethiopia have yet been discovered, the story of Ethiopia's first bishop as transmitted by tradition and summarized in the ↗*Sənkəssar* may be a conflation of what has been preserved in internal traditions of Rufinus's account and of the story of another bishop of a different time called *abba* Sälama (s. also Conti Rossini 1922; cp. Getatchew Haile 1979). If Frumentius met Christians in Aksum, there must have been such communities in Adulis, which had a bishop (↗*Eppisqoppos*) at about this time (SerHist 110), and in other cities as well.

While the origins of Ethiopian Christianity are well documented by Greek and Latin sources, there is no reliable evidence for the subsequent development and organization of the Aksumite Church. It can be assumed that, after an initial period in which Greek might have been the language of the church service, during the next two centuries basic service-books, including the ↗Psalter, must have been translated into ↗Gəʿəz, to be followed by the translation of the entire ↗Bible, some patristic works, hagiographies and books of ecclesiastical ↗law. Church tradition places the activities of ↗Yared, inventor of Ethiopian church ↗music, in the 6th cent. The arrival of the ↗Nine Saints from the ↗Byzantine Empire is traditionally placed in the late 5th–early 6th cent.; it is supposed to be an important event having empowered the Church. The Nine Saints are traditionally credited with the introduction of ↗monasticism (the translation of the *Monastic Rules* of ↗Pachomius in the same period cannot be coincidental). According to hagiography, *abba* Mäṭaʿ (↗Libanos), as he came to Aksum, met there a certain *abba* Adḫani, who was already a monk. Church tradition identifies sites where each of the Nine Saints founded his monastic community; ↗Däbrä Damo of *abunä* ↗Zämikaʾel Arägawi, one of the oldest monasteries of Ethiopia, remained one of the most-important sanctuaries of the nation throughout the centuries.

The early-6th-cent. traveller ↗Cosmas Indicopleustes, whether directly or indirectly acquainted with the Red Sea area, reports that in Ethiopia and Aksum, as in Persia and the bordering countries, there were "innumerable churches with bishops, large Christian communities and many martyrs and hermit monks" (Wolska-Conus 1968, vol. 1, 504f.). The strength of Christianity and the Church in Aksum at this time is evidenced by the fact that in the 6th cent. King ↗Kaleb, acting as an ally of the ↗Byzantine Empire, had the resources and will to undertake a large-scale punitive expedition to Ḥimyar against ↗Yūsuf Asʾar Yaṯʾar, the persecutor of ↗Nağrān.

From the available sources it is possible to conclude that in 6th-cent. Ethiopia the Church was flourishing. These conditions contributed to the development of the unique Ethiopian Christian culture, extensive ↗Gəʿəz literature being one of its most remarkable results. The state seems to have supported or directly conducted missionary activities: e.g., traditions relate that the late-Aksumite King ↗Dəgnağan sent out a group of 150 clergymen on a mission to Christianize the Amhara in the south and south-west (Conti Rossini 1904:23).

The Zagʷe era

Aksum's significance as the capital ended in about the 9th-10th cent. at the latest. One of the circumstances which caused its fall was most probably a revolt of a non-Christian ethnic group (cp. ↗Ǝsato), which inflicted enormous damage on the Church, including the destruction of the first church in Aksum (s. ↗Aksum Ṣəyon). But the new rulers did not hold power for long. A Christian dynasty, commonly referred to as ↗Zagʷe, took power in about 1137, making Adäfa or Roḥa (↗Lalibäla) in Lasta its centre. The Zagʷe kings, being devout Christians, constructed ↗rock-hewn churches in their home province of Lasta, which became their lasting monumental legacy. Another important religious centre was still the ancient monastery of ↗Däbrä Libanos of Ham (Šəmäzana). Some other spiritual leaders, however, did not recognize this "usurper dynasty" and built a powerful anti-Zagʷe opposition.

The Solomonic Dynasty (13th–19th cent.)

In 1270 the Zagʷe were overthrown by ↗Yəkunno Amlak from ↗Amhara, who claimed to be a descendant of the Aksumite royal family. He "re-established" the ↗Solomonic dynasty. Tradition maintains that the Church played a significant role in his enthronement; it is known that Yəkunno Amlak gained the support of *abunä* ↗Iyäsus Moʾa, the head of ↗Däbrä Ḥayq Ǝsṭifanos in Amhara. Some sources describe him also as a close relative of *abunä* ↗Täklä Haymanot, the founder of ↗Däbrä Libanos of Šäwa; later traditions argued that Yəkunno Amlak rewarded one or another institution with the revenue from "one third of the land of the country".

The period during which Yəkunno Amlak's dynasty controlled the throne produced the most memorable period in Ethiopian Church history. The Emperor's heirs propagated the idea that Ethiopian Christians were Israelites, people chosen by God because they had accepted Christ as the expected Messiah, whereas the Jews rejected him. The religious self-consciousness of Ethiopians was formed and set apart from that of other Christian peoples by two foundational legends (both contained in the ↗*Kəbrä nägäśt*). The first of these claimed that the royal family descended from ↗Mənilək I, son of the biblical King Solomon and the Queen of Sheba (↗Makədda); the second, that Ethiopian Christians were the descendants of the first-born Israelites who accompanied Mənilək from ↗Jerusalem, taking the ↗Ark of the Covenant with them, and settled in Ethiopia.

The Church was one of the beneficiaries of the legends and flourished under the protection of the Christian monarchs, the defenders of the Orthodox faith. The Coptic metropolitans and their entourages, as well as Ethiopians who had visited monasteries in Egypt and the Holy Land, brought Arabic religious books that fostered in turn the development of Gəʿəz literature. The monastery of Däbrä Ḥayq Ǝsṭifanos and the clergy of the royal camp took the lead in translating such works into Gəʿəz. The literary production grew during the period from *aṣe* Dawit II (1382-1413) to the first half of the 16th cent., marked by the activities of Metropolitan *abba* ↗Sälama the "Translator", the author of the anonymous ↗Rətuʿa Haymanot, *abba* Giyorgis of Gasəčča, *aṣe* ↗Zärʾa Yaʿəqob, *abba* ↗Baḥrəy and many others.

Controversies

The teaching of the Ethiopian Orthodox Church (E.O.C.), later (in the second half of the 19th cent.) to become the Ethiopian Orthodox Täwaḥədo Church (E.O.T.C., **የኢትዮጵያ፡ ኦርቶዶክስ፡ ተዋሕዶ፡ ቤተ፡ ክርስቲያን**, *Yäʾityoṗya ortodoks täwaḥədo betä krəstiyan*), cannot be asserted from its outset – in the Aksumite age – on the ground of the extant evidence. However, in Solomonic time the basis of the E.O.C. theological teaching was clearly defined and persisted without great changes (↗Theology). Following the ↗Coptic Church, the E.O.C acknowledged the first three ecumenical councils and their decisions: ↗Nicaea (325), ↗Ephesus (341), and Constantinople (381). It rejected the Council of ↗Chalcedon (451), which recognized and identified two natures in Jesus Christ after the union, and all subsequent councils. For the E.O.C., Jesus Christ is one person, the Word Incarnate; He is perfect man and perfect God (later, the term ↗*täwaḥədo* in the Church's official name emphasized its ancient belief in the existence, in Christ, of humanity and divinity in unity). he is one person out of (not in) two natures. As a result, the E.O.C. considers as heretics both ↗Eutychius and ↗Nestorius. Yet the theological position of the E.O.C. as it appeared in the 20th cent. was the outcome of a long development. The entire medieval period of Ethiopian history is characterized by opposition movements that took as their cause, among others, theological issues. Sometimes a controversy was limited to a small circle of the educated ecclesiastics, but sometimes it was of larger scale and posed a real danger for the unity of the Church. However, the unity was never overrun, being supported by the devotion and energy of the Ethiopian emperors and their subjects, as well as by the shared cultural features, common religious consciousness and self-definition of their subjects.

The earliest controversy about the excessive veneration of the Cross and the icon of St. ↗Mary is reported to have happened in the time of the late 13th cent. *aṣe* ↗Yagbəʾ Ṣəyon (s. Conti Rossini 1904a:12ff.). It is not clear what happened to the dissidents, but nothing was heard about this issue for well over 100 years. From the second half of the 14th cent. onwards the sources abound in information on the controversies and disputes within the Church.

The most serious challenge came from the side of the Ewosṭatean movement (↗Ewosṭateans). In the 14th cent. *abunä* ↗Ewosṭatewos defended the observance of Saturday as a holy day like Sunday (↗Sabbath), referring to the *Mäṣḥafä* ↗*senodos*; from his Acts it is unclear whether Ewosṭatewos fought to introduce a hitherto-unknown practice or defended an ancient one. The initiative to reject the observance of Saturday as a "Jewish" practice might have come from the Metropolitan and his entourage. Ewosṭatewos left the country, presumably in search of support; his followers in Ethiopia were persecuted. However, after a period of clemency under *aṣe* Dawit II, they regrouped, severed their relations with the Metropolitan and were close to establishing a separate "Church" run by laymen. ↗Däbrä Bizän and its daughter monasteries in Ḥamasen became centres of the Ewosṭatean monastic congregation. In 1450 *aṣe* Zärʾa Yaʿəqob summoned a Church council at ↗Däbrä Məṭmaq, which – unusually – solved the problem by giving in to the demands of the dissidents (CRRicBerhan II, 145–53; TadTChurch 230f.). The Emperor himself favoured the observance of the Sabbath rest on Saturday. The Ewosṭateans were granted lands and were asked to evangelize the neighbouring regions (s. Conti Rossini 1923:452ff.); in their turn, they agreed to accept Holy Orders from the metropolitans.

During the reign of *aṣe* Yəsḥaq (1413-30), another issue became divisive when the monk ↗Ǝsṭifanos of Däbrä Qoyyäṣa (Təgray) raised his voice against many features of the monastic life, traditionally established in Ethiopia, as contradicting the original rules laid down by the Fathers of monasticism. Securing permission from Metropolitan ↗Bärtälomewos, Ǝsṭifanos began to oppose practices that he considered lax (e.g., many monks did not completely cut their connection with the world and some monasteries accumulated wealth and land possessions). His teaching was followed by many other monks (s. Taddesse Tamrat 1966; Getatchew Haile 1983). Heads of the established monasteries tried to accuse Ǝsṭifanos of violating the established tradition, but *aṣe* ↗Yəsḥaq decided in his favour. As Zärʾa Yaʿəqob ascended the throne, he was initially sympathetic to Ǝsṭifanos's cause, but gradually changed his position. Ǝsṭifanos did not accept any compromise; he and his followers refused to bow to the Emperor, maintaining that bowing was worshipping and it was prescribed only for the Father, the Son and the Holy Spirit. Ǝsṭifanos died in prison; the movement was suppressed and later did not go beyond a very limited local scale (s. ↗Gundä Gunde).

There were also other conflicts, which arose mostly in the more-educated circles close to the courts of the emperor and metropolitan. E.g., *aṣe* Zärʾa Yaʿəqob had to deal with scholars who questioned the canonicity of certain scriptures from which he drew evidence against those who challenged his teachings: the Books of ↗Jubilees, ↗Enoch, the Maccabees, *Mäṣḥafä* ↗*kidan zäʾəgziʾənä Iyäsus Krəstos* and ↗*Didəsqəlya* (s. Wendt, in: PICES 1, 140; Getatchew Haile 1982: 193; cp. the *Mäṣḥafä* ↗*senodos*, which was never challenged by any of the dissident scholars).

A group of theologians (Zämikaʾel, Gämalyal, Aṣqa; s. ↗Mikaʾelities), developed theological views that were in conflict with those of the Emperor, who was always the spokesman of the Church. They disapproved of the Emperor's obsession with the undue reverence of St. Mary, opposed the imposition of so many Marian feasts to be observed and objected to teaching that observing these feasts exonerated a sinner who had committed heinous crimes.

Diverse opinions on how to reconcile the concept of God's unity and the Trinity are reported to have existed since at least the late 14th cent. (s. ↗Trinity). When *abunä* Bärtälomewos arrived in Ethiopia in 1398/99, a delegation of the Ethiopian clergy questioned his views on the matter (CRRicBerhan II, 126). The next metropolitans, ↗Gäbrəʾel and Mikaʾel, had to answer the same questions (*ibid.*, 131ff.). Some of the ↗Anaphoras seem to have been composed to emphasize the official position of the Orthodox Church. The imagery finally accepted as canonical was three suns (e.g., the three persons of the Trinity) and one light coming from them, representing the one divinity.

Another controversy surrounded the concept that God has an image and at the same time is unlimited and invisible. The Bible speaks about God's ear, eye, and hand (e.g., Ps. 17:6; 43:15; 10:12), but it also states that he is spirit (e.g., 2 Cor 3:17). Zärʾa Yaʿəqob maintained that God has an image that looks like that of man (Getatchew Haile 1983:150). But Zämikaʾel, Gämalyal and Aṣqa disagreed, maintaining that God has no image. However, the Emperor's statement in favour of the "Father in a perfect image of the man", which probably reflects also the common clergy's understanding of the issue, became the official Church position and prevailed (CRRicBerhan II, 128f.). In murals and manuscript illuminations, three elderly persons represented the Trinity.

These "court-centred" opposition groups did not tend to unite with the regional opposition movements. The concepts of the Mikaʾelites had no common points with the "heresies" of which the Stephanites were accused. However, it is worth considering that the heresies might not have originated without the influence of foreign theological thought. The 13th-cent. renewal of the relationship with the Coptic Church activated the process of revision of Biblical texts and re-consideration of the status of some apocryphal works (cp. ↗*Ascension of Isaiah*). Besides, there are hints that the monastic opposition groups looked to foreign ecclesiastical authorities as an alternative to the Ethiopian Church hierarchy (e.g., some of the followers of Ǝsṭifanos, like ↗Ǝzra, are reported to have sought for holy orders outside Ethiopia).

Practice and Ritual

One can assume that some time in the early 16th cent. the rite of the E.O.C., striking its roots in the Church practice of the Aksumite period, took its final shape. It included ↗Circumcision on the eighth day after birth and ↗Baptism (well structured and presumably followed in every church), if a boy, on his 40th day, and if a girl, on her 80th, the ritual for the confirmation with *meron*-chrism being conjoined with that of Baptism. The other Sacraments are Confession, ↗Ordination, ↗Unction and ↗Matrimony. According to the ↗Canon law of the E.O.C. a church marriage cannot be dissolved, but a second marriage may be permitted (and divorce in case of adultery). The serving priest (unless he is a monk) must be married, but in the case that he marries a second time (e.g., after the death of his spouse), he has to give up his ordination and his church service.

The funeral ritual (↗Burial; ↗Funerals; ↗*Fətḥat*), with special procedures and texts for men, women, boys, girls, bishops, priests etc., was established through the *Mäṣḥafä* ↗*gənzät*. The ritual of the canonical Day and Night Hours (*Mäṣḥafä* ↗*säʿatat*) was established at least in the time of *aṣe* Zärʾa Yaʿəqob, but perhaps earlier, already in the 14th cent.

It is not known if the ↗*tabot* was already used in Aksumite times; in the later period, the ritual for the establishment of an individual church was focused on the consecrating of the *tabot*, not the ↗church buildings. In the course of time, the Divine Liturgy (s. ↗*Qəddase*), with large parts chanted, was developed into a lengthy and richly elaborated ritual. The Anaphora of the Apostles, the most frequently used, and the Anaphora of Our Lord seem to be the oldest elements of the Ethiopian liturgy (now there are at least 14 ↗Anaphoras for the celebration of the ↗Eucharist for the different occasions). In most of the churches and monasteries the Liturgy is usually celebrated on Sundays and on days of Church celebrations. A distinctive feature of the Liturgy was the "sacred dancing" (and ↗*qəne*-poetry) performed by the ↗*däbtära*. Apart from the ↗Psalter and scriptural Odes, beautiful ↗hymns were an important structural element of both the Canonical Hours and the Divine Liturgy during the entire liturgical year. The division of the liturgical year into four ecclesiastical periods was set up with the establishment of the ↗Calendar (which completed also the order of ↗Feasts and ↗Fasting periods), in particular during the reign of Zärʾa Yaʿəqob.

The veneration of the ↗saints, commemorated on the anniversary of their death, was usually centred on the respective monasteries. There were apparently no official procedures for canonization (however, they could stand behind the creation or revision of such works as ↗*Ǝgziʾabəḥer nägśä* and *Sənkəssar*). While most of the saints remained locally commemorated, only a few of them enjoyed nation-wide veneration.

The 16th-cent. Muslim wars

The population of the Ethiopian empire was culturally and religiously diverse. As the Church was identified with, and seen as a beneficiary of, the Christian monarchy, every non-Orthodox Christian revolt against the government was directed against the Church as well. The Church institutions must have been targeted by the Fäläša (↗Betä Ǝsraʾel) revolts during the reigns of ʿAmdä Ṣəyon I, Zärʾa Yaʿəqob and other emperors (Wajnberg 1936:56-59; PerrZarY 97f.); churches and monasteries were raided by Muslims (**ተንበላት** *tänbälat*, **እስላማዊ** *əslamawi* or sometimes **አረሚ** *arämi* in Ethiopic sources) and other non-Christians; besides, they were the usual victims of frequent wars, internal conflicts, feuds and banditry (↗*Šəfta*).

The most devastating conflict took place in 1527–43. The onslaught was led by *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī ("Grañ"). He took control of ↗ʿAdal by overthrowing the local ruler under the rationale that he had allowed himself to be held subordinate to a Christian ruler. In the course of his campaign Grañ received the help of Arab soldiers and arms from the Ottoman Turks (↗Ottoman Empire). After his victory at ↗Šəmbəra Kʷəre, on 23 March 1529, Grañ's army overran the country within a few months. *Aṣe* ↗Ləbnä Dəngəl's forces disintegrated. One of the highest ecclesiastics of the Empire, *ʿaqqabe säʿat* ↗Nägadä Iyäsus, accompanied Ləbnä Dəngəl on his desperate flight, but was captured and killed in 1535. The Emperor himself died in 1540, having taken refuge at Däbrä Damo.

The loss to the Church's cultural heritage during those years was incalculable. Christians were forced to embrace the invaders' faith, being otherwise put to death. Monasteries and churches were looted and burned down, this resulting in the destruction of valuable collections of old manuscripts. The clergy tried to save their *tabots* and books, burying them in the ground or hiding them in caves. The monks of Däbrä Ḥayq Ǝsṭifanos saved their monastery church from demolition, for the Muslims agreed to take everything made of gold instead of destroying it, but Däbrä Libanos of Šäwa, another major sanctuary of the Empire, was burned down. As the main church of the monastery was set ablaze, many monks decided to share its fate and hurled themselves into the fire.

Notwithstanding his victories, Aḥmad Grañ failed to subdue the Highlands. With the help of the Portuguese, Grañ was killed, the Muslim forces were dispersed and retreated in 1543. The Christian victory was preceded by the symbolical renewal of the state-and-church relationship which took place at the meeting of *aṣe* ↗Gälawdewos and *əč̣č̣äge* ↗Yoḥannəs in Šəme, in 1541, both having just taken up their offices (Ricci 1969-70:183). Gälawdewos retook the country. The E.O.C. started to regain its footing, the process being accompanied by the swift re-building of the churches (cp. ↗Tädbäbä Maryam) and re-conversion of the population. The death of Gälawdewos in the battle with ↗Nūr b. Muǧāhid (*əč̣č̣äge* Yoḥannəs also died there) did not change the situation and the Church's revival continued under *aṣe* ↗Śärṣä Dəngəl, until the ↗Oromo profoundly altered both the political situation and the ethnic and religious composition of the Empire.

The Jesuit challenge and the Gondärine kingdom

The contacts with the Portuguese resulted in the demand that the Ethiopian Church submit to the Pope of Rome. The ↗Jesuits claimed that the Ethiopian Church harboured the monophysitism heresy of ↗Eutychius and taught Judaic practices. The Orthodox Church responded with the *Confessio* written by *aṣe* Gälawdewos (Ullendorff 1987:156f.). Some Ethiopian sources suggest that Gälawdewos, probably not willing to alienate the Portuguese or fearing the Islamic pressure, was sympathetic to the Catholic demands (s. DombrChr 47f.); in fact, he merely assigned them a site where they could practice and teach their faith (s. ↗Fəremona).

In the second half of the 16th cent. the State and Church had to face the consequences of the ↗Oromo migrations, which lasted until the 18th cent. The growing Oromo pressure, repeated Islamic raids from the east and, beginning in 1557 when the Ottomans took ↗Massawa, also from the north-east, forced the monarchs to move the political centre of the Empire to the surroundings of the Lake Ṭana region. The clergy of many churches took their *tabot*s and followed the rulers. This created, especially during the reign of *aṣe* Śärṣä Dəngəl (1563–97), an assembly of the "doctors of the Church" (*liqawənt*; s. Conti Rossini 1893:805). During this period the ecclesiastics (first of all those affiliated to the royal court) made significant progress in creating original works and translating Arabic literature. Christianity took root in neighbouring regions, spreading along with the Emperor's military expeditions (cp. ↗Goǧǧam).

Śärṣä Dəngəl's successors again sought help from the Catholics. When the Jesuit Pedro ↗Paez promised military assistance, the emperors "were so desperate that they did not even ask whether he could deliver it" (Merid Wolde Aregay 1998: 43). Whether convinced by Catholic evangelism or simply left with no choice by the political situation in the country, *aṣe* Zädəngəl (1604–05) began acquiescing to Catholic demands. *Aṣe* Susənyos (1607–32) officially embraced Catholicism and installed, in 1625, the Portuguese bishop Afonso ↗Mendez as Patriarch of the Ethiopian Church.

The attempt to introduce Catholicism failed. Countless Orthodox Christians, including Metropolitan *abunä* ↗Səmᶜon, were martyred by the Emperor's army. Susənyos's demand that all Christians be rebaptized, that the clergy be reordained, and that the Church follow the Latin rite, thereby abandoning their ancient traditions, resulted in unprecedented popular uprisings and prolonged pro-Orthodox rebellions of the local elites in some regions (e.g., in Lasta). Facing fierce resistance, Susənyos abandoned his plans, distanced himself from the Catholics and abdicated in favour of his son Fasilädäs, who immediately declared the restoration of the Orthodox Alexandrian faith. The foreigners were either executed (together with the local followers of the Catholic faith, s., e.g., *ras* ↗Səᶜəlä Krəstos) or expelled; most of the native converts came back to Orthodoxy. This traumatic experience resulted in the long-time rupture of contacts with the Latin Church. Moreover, *aṣe* Fasilädäs (1632–67), fearing that the Catholics would return with a military force, sought closer a relationship with his Islamic neighbours (DonMurad 4–38). It would, however, be a misunderstanding to see in these strategic schemes an intention to embrace Islam.

The subsequent period of the ↗Gondärine kingdom witnessed further controversies within the Ethiopian Church. The principal issue was the unction of Christ, raised as a Christological issue for the first time during the reign of Susənyos (PerChron 216, 237f.; Getatchew 1990: vii). The question was what unction or anointment meant to Christ (e.g. Acts 10:38; Ps 44 [45]: 7). As the Son of God, did Christ need, as other men do, to be anointed to receive the spiritual authority of priesthood, kingship and prophesy? The problem dominated theological debates and divided the ecclesiastics throughout the country into three groups. The "Unctionists" (↗*Qəbat*), particularly strong in Goǧǧam, believed that Jesus Christ became the natural Son of God by the unction of the Holy Spirit. The followers of the *Ṣägga* or "Grace" doctrine (↗*Yäṣägga ləǧ*) believed in "Three Births" (↗*Sost lədät*) and maintained that Christ became the Son of God by grace (i.e., by adoption) at either conception or baptism, which they called a third birth, when he was declared Son of God by the Holy Spirit (they dominated in Gondär and Šäwa). The "Unionists" – *Täwaḥədo* or ↗*Karra* (dominating in Təgray) – taught that Christ became the natural son of God when his divinity was united with his humanity at conception. The *Täwaḥədo* refused, adamantly, the formula "the Father is the anointer, the Son the anointed and the Holy Spirit the ointment" (↗Christology). The division also split the monastic movement – between the rivalling monastic "houses" of Täklä Haymanot, followers of the *Sost lədät*, with their centre in ↗Azäzo, Gondär, and of Ewosṭatewos (*Qəbat*), with their centre, e.g., in ↗Däbrä Wärq, Goǧǧam.

The Church's formal integrity was preserved through both the emperor's power to solve theological controversies and his refusal to allow any faction to establish an independent Church. Generally, the only way for a group to prevail in religious controversies was to win the emperor over to its side, that entailing the official declaration of the faith according to the doctrine of the victorious party (s. Yacob Beyene 1981; Guidi 1893:597-606). The competing groups of ecclesiastics took an active part in the political struggle, supporting rival regional parties. This struggle resulted in such outrageous events as the killing of *aṣe* ↗Iyasu I or the massacre of hundreds of monks of "the house of Täklä Haymanot" in 1720 under *aṣe* ↗Dawit III. At the same time, there were periods of remarkable stability and the time of the Gondärine kingdom witnessed an unprecedented flourishing of Christian culture.

The Era of the Princes

The epoch commonly known as "The Era of the Princes" (1769–1855; ↗*Zämänä mäsafənt*) brought no new tendencies. The emperors from *aṣe* ↗Täklä Haymanot (1769–77) to the rise of *däǧǧazmač* Kaśa (the future *aṣe* ↗Tewodros II) in 1855 were little more than symbols of a monarchy. Real political power was divided between the ambitious governors or princes of the provinces. The situation deteriorated to the point that the frustrated *abunä* ↗Yosab excommunicated "all the Christians so that they may not take Communion nor come to church" (Conti Rossini 1917:799); he later lifted his excommunication after concluding it would do more harm than good.

Due to the political situation of the period, the institutions of the Church were left without protection. E.g., *ras* Gugsa from Yäǧǧu, whose adherence to Christianity was only a political convenience, sacked churches in Dämbiya and Gaba. Another prince from the same family destroyed the monasteries of Saga, Zoramba and Goraf and sacked the church of Lədäta, built by *aṣe* ↗Yosṭos (Conti Rossini 1917:789). When the Metropolitan died, they sacked his residence, looting the objects which had been kept there since the time of Fasilädäs.

The decline of the Gondärine kingdom was seen in connection with the incapability of the Church to achieve internal unity and numerous examples of the loose morale and low educational standard of the clergy. However, the elite members of the clergy were deeply frustrated by the involvement of the Church in political struggles at the cost of its primarily religious tasks. Many were worried at the encroachment of "non-Orthodox" cultural elements and customs from the "pagan" Oromo, Muslims and Betä Ǝsraʾel, especially in Gondär (despite the "separation" policy attempted already by *aṣe* ↗Yoḥannəs I in 1668). Remarkably, were Orthodox ecclesiastics to hold on the idea of a strong Christian state and hope for its restitution.

In a time of deep crisis of both Church and State, still another challenge to the former came from foreign ↗missions, which were permitted by local rulers to stay and proselytize, thus becoming a part of internal Ethiopian politics. As one Protestant missionary recorded, they "dreamt to destroy the house [i.e., the E.O.C.] and build it anew", that is, to build it according to European "architecture and design" (ArEvang 187). With that intent, the missionaries ridiculed Church traditions. When the missionary Samuel ↗Gobat came to Gondär in 1830, the Orthodox accepted him as a man of God, not knowing that he equated their faith with the teachings of the Islamic prophet (s. Gobat 1834:159). Later, the Catholic missionaries were accused by Orthodox ecclesiastics of attempting to win their converts from among Orthodox Christians rather than from among the non-Christian population. However, it took some time before the E.O.C. was to properly respond to this challenge.

The Era of the Princes came to a close with the rise of *aṣe* Tewodros II. He – the then *däǧǧazmač* Kaśa – began his reign by resolving the divide between the two theological groups (the school of "Two Births", or *Täwaḥədo*, and the school of "Three Births", *Sost lədät* or *Ṣägga*), imposing the formula proposed by the new Metropolitan *abunä* ↗Sälama and dismissing the statements of the respective ecclesiastics, that their interpretations are based on the "faith of their fathers". This solution was not based on a broad consensus and the controversy lasted till the council of ↗Boru Meda in 1878. Tewodros's attempts to "discipline" the clergy and implement the policy of "secularization" initially found some sympathy among the populace, but soon caused a deep alienation between the Church and the monarch, which contributed to the fall of the latter.

Getatchew Haile

History from the second half of the 19th cent. to 1959

After the death of Tewodros II and the short reign of ↗Täklä Giyorgis II, *aṣe* ↗Yoḥannəs IV inherited a weak and divided empire. Seeking a remedy in religious nationalism, he adopted the principle of "one faith in one country". Even though his actual religious policy (of which only the repressive aspect is frequently stressed) was rather complex, it is a matter of fact that he considered religious differences and European missionary activities in Ethiopia as a serious threat, both to his own sovereignty, and to the independence of the country. In 1878 the council at ↗Boru Meda was summoned, the last Church council of this kind. It passed a resolution condemning the *Sost lədät* and, as an additional, but very important issue, on the status of the cult of the Virgin Mary in Christian worship (with a change in the liturgical statement "worshipping her with her Son is meet" into "worshipping her Son and bowing before her are meet"). After the death of *abunä* Sälama, there was no metropolitan in the country, but Yoḥannəs acquired a letter from the Coptic Patriarch in which the teaching proclaimed at the council was recognized as official and binding. His aim was to secure harmony within the E.O.C. and also to facilitate the conversion of the entire population of Ethiopia. The latter appeared crucial to the Emperor in view of the growing external and internal Muslim danger from ↗Egypt (the occupation of Bogos and Harär), the lords of Wällo, and later from the ↗Mahdists. His methods ranged from promises to secure a convert's position and elevate him (*ras* ↗Mikael of Wällo), if he was a member of the local elite, to direct pressure; "Christians, Muslims and pagans were given two, three, and five years respectively to confirm" (Marcus 1975:38). An attempt was made to ban such "non-Christian" practices as smoking. This policy was followed by some of Yoḥannəs's subjects – *ras* Adal Täsämma (↗Täklä Haymanot of Goğğam) and Mənilək of Šäwa.

Intending to animate the evangelistical efforts of the E.O.C. – by now formally E.O.T.C. – and strengthen its administration, *aṣe* Yoḥannəs IV succeeded in 1881 in obtaining four Coptic bishops from Egypt at once – a unique achievement for Ethiopia, which had usually received only one bishop at a time. One of these four bishops, *abunä* ↗Peṭros, was appointed Metropolitan, *abunä* ↗Matewos was sent to *nəguś* Mənilək of Šäwa, *abunä* Luqas was sent to Goğğam and *abunä* Yoḥannəs to Bägemdər.

After the death of *aṣe* Yoḥannəs in 1889 at Mätämma, *aṣe* Mənilək, eager to consolidate his authority and to centralize the administrative system of the state, changed the entire religious policy. He was realistic enough not to enforce Christian faith upon all the population of his growing Empire, but cared mostly about the unity of the Church. Mənilək's principle was "one Church under one Metropolitan". The hierarchy of the Coptic bishops brought by Yoḥannəs was altered: bishop Matewos was made Metropolitan instead of Peṭros. The centre of religious life of the country shifted again to the south, to the old monasteries and churches favoured by the rulers of the Šäwan dynasty, the dominant position among them soon being assumed by Däbrä Libanos.

Apart from ecclesiastical matters, Mənilək succeeded in obtaining Matewos's cooperation in Ethiopian internal politics. It was precisely

Matewos who was now responsible for bringing Coptic teachers for the first modern Ethiopian school (which remained under the control of the Church; s. ↗Mənilək II Secondary School), acting as *de facto* minister of education and also taking part in several important diplomatic missions. Formally Matewos was not Mənilək's subject, but he served him loyally and only in rare cases did his loyalty to the Coptic Patriarchate prevail over his loyalty towards the Ethiopian monarch. After Mənilək became paralysed in 1909, Matewos's power grew considerably (in his later years he brought under his control the important office of the ↗*liqä kahənat*), but he acted in favour of *ləǧ* ↗Iyasu, Mənilək's official heir, safeguarding Mənilək's succession edict and against the interference of Empress ↗Ṭaytu. However, during the ↗Coup d'état of 1916 (s. EAE, vol. 5) Matewos changed his position and withdrew his support, which was decisive for Iyasu's overthrow.

During this period, the E.O.T.C. and its clergy envisaged a number of new challenges, but there were a few qualitative changes. The Metropolitan's office was permanently established in Addis Abäba, where many new churches were built. The spread of Christianity in the conquered southern territories was intense, but it went with no systematic program and followed mostly traditional manner, through the dispersal of the settlers from the north (cp. ↗*čäwa*; ↗*näfṭäñña*). Initially, new churches were built mostly for them (cp. ↗*Kätäma*). Conversion became obligatory for local non-Amhara elites if they intended to be incorporated into the ruling system of the empire, with their leading role recognized (cp. ↗*balabbat*). This was accompanied by an intensive process of cultural assimilation and resulted in the conversion of large numbers of people; at the same time, because it was considered as a part of imperial policy, this evangelization encountered fierce resistance in many places.

The history of the E.O.T.C. from the late 1920s till the revolution of 1974 was shaped by the figure of ↗Ḫaylä Śəllase I. Already in the 1920s he (then *ras* Täfäri Mäkʷännən) demonstrated his concern about church reforms. The Church Constitution of 16 September 1926 expanded the authority of the *əččäge* and established the Holy Synod. In 1928 Täfäri was elevated to *nəguś* in the absence of the Metropolitan. It was clear to the new Ethiopian political leader that modernizing monarchy needed a loyal Metropolitan chosen among the Emperor's subjects (the idea having been already expressed several years before, along with criticism of *abunä* Matewos) and that the formal hegemony of the Coptic Church should end. In 1926 the Coptic Patriarch was approached with a request that authority should be delegated to the new Metropolitan to consecrate bishops, but it was only in 1929, after careful negotiations, that a new Coptic metropolitan, Cyril (*abunä* ↗Qerəllos), was appointed and five Ethiopian monks were ordained diocesan bishops. Further movement to autochephaly was hindered by the opposition on the part of Ethiopian traditionalists and the Coptic Patriarchate.

The next several years saw cautious attempts at reforms. In 1930, *ras* Täfäri Mäkʷännən's coronation was a purely traditional religious ceremony. The role of the E.O.T.C. was not defined in the ↗Constitution of 1931, but the *abun* put his signature to it. In January 1931 the regulations concerning the dioceses and the incomes of the bishops were issued. Already before the coronation, the decree of 21 July 1930 obliged local governors to build churches. A land-law of 19 September 1930 made provisions concerning church lands also. It was followed by other decrees concerning both the particular church institutions (e.g., March 1932 on Addis ʿAläm) and the entire country (April 1933 on ↗*täzkar*).

The reforms were interrupted by the ↗Italian war of 1935–36 and the occupation. The clergy (especially the members of the ↗Ethiopian Patriotic Association) rallied the people to resist. But the main Ethiopian forces were quickly defeated and Ḫaylä Śəllase left the country, accompanied by some high-ranking ecclesiastics (it was decided that *abunä* Qerəllos should stay). On 9 May 1936 the establishment of the ↗Africa Orientale Italiana (AOI) was proclaimed. Initially, the policy of terror against the E.O.T.C. was promoted by Governor-General ↗Graziani (until his withdrawal in November 1937). Eradicating any resistance from the side of the clergy, Italians welcomed those expressing loyalty. Many ecclesiastics submitted and welcomed the Italians (including the *abun*, who was later accused by the Ethiopians of being too collaborative) and even acted against the ↗Resistance movement. It was clear, however, that in many cases this submission was not sincere and was aimed at saving lifes and privileges and sparing church institutions from destruction. In fact many ecclesiastics joined the Resistance fighters or helped them by acting as "undercover agents" (የውስጥ፡ አርበኞች, *yäwəsṭ arbäññočč*).

Repression against the E.O.T.C. did not stop during the occupation. The best-known case was the extermination of hundreds of monks of Däbrä Libanos on 20 May 1937 for allegedly sheltering those who had made an attempt on ↗Graziani's life (↗Abrəha Däboč̣; ↗Mogäs Asgädom). Less known are the reprisals against ↗Maḫbärä Śəllase, ↗Zəqʷala, ↗Däbrä Mäwiʾ, St. Michael church in Addis Abäba (in 1946, at the Paris Peace Conference, it was even claimed that up to 2,000 churches were destroyed during the occupation). On 1 July 1936 the Italians executed *abunä* Ṗeṭros, and in October, *abunä* Mikaʾel, who refused to collaborate with them.

The AOI administration understood well the monarchic and patriotic nature of the E.O.T.C. In order to counterbalance its influence, the Italians proclaimed "freedom of religion" (the decree of 18 June 1936) and promoted other confessions, particularly Islam, trying to sharpen confessional and ethnic differences. At the same time, the Italians were cautious enough to keep the traditional economic foundation of the E.O.T.C. largely untouched. New churches were built, many others were repaired and received subsidies (Däbrä Libanos was also re-established some time in 1938 or 1939). Some high ecclesiastics got salaries; the celebration of the Christian ↗feasts was respected and attended by the members of the Italian administration.

The Italians wanted to sever the ties between the E.O.T.C. and the Coptic Patriarchate. In spite of heavy pressure, *abunä* Qerəllos refused to collaborate and was sent to Italy to meet the members of the Fasicst government (also ↗Mussolini), from where he retired to Cairo in self-imposed exile. Taking advantage of this, the Italians convened an ecclesiastical assembly which elevated the old Bishop Abrəham to archbishop; on 1 December 1937 the Ethiopian Church was proclaimed independent. In December 1938 the Coptic Synod and Patriarch John XIV excommunicated Abrəham and those consecrated by him.

Abrəham died in July 1939 and *əč̣č̣äge* (previously *nəburä əd*) Yoḥannəs was made patriarch. On 28 June 1940 a new Constitution was issued for the Ethiopian Church, but the time for its implementation was running out. Meanwhile *əč̣č̣äge* Gäbrä Giyorgis (the future Patriarch *abunä* ↗Basəlyos) was living in exile in Jerusalem, dispatching from there priests to minister to the Christians in exile, including the community in Bath (England), where Emperor Ḫaylä Śəllase I lived. Epistles were sent to Ethiopia to encourage the Resistance fighters, who in the meantime made substantial gains and undermined Italian rule. Goǧǧam appeared to be the most difficult area for the occupiers, where entire districts were under the patriots' control; Goǧǧami clergy had boycotted the appointment of *abunä* Abrəham.

In June 1940 Italy entered ↗World War II. On 20 January 1941, *əč̣č̣äge* Gäbrä Giyorgis joined Ḫaylä Śəllase who, accompanied by a small Ethiopian unit, crossed into Goǧǧam from the Sudan, while British forces engaged the Italians from three directions. The Emperor travelled via ↗Däbrä Marqos and on 5 May entered Addis Ababa.

After the Liberation, Ḫaylä Śəllase granted pardon to the priests-collaborators. They and those ordained under the Italians, with the exception of a few cases, were allowed to minister. *Abunä* Qerəllos was permitted to return and he resumed his duties in 1942. While the Coptic Church sought to re-establish the former dependency of the E.O.T.C., it was clear that the relations between the two Churches should be redefined. It was also obvious that the Emperor and the Ethiopian government would not accept the autochephaly created under the Italians. Consequently, the process had to be reinitiated.

In 1942 the Coptic Synod lifted the previous excommunication. In the ensuing period of difficult negotiations, nationalist sentiments in Ethiopia grew and the pressure on the Coptic Patriarchate increased. In June 1945, the Coptic Synod rejected the Ethiopian requests for autonomy. In response, in November 1945, the newly elected Ethiopian Ecclesiastical Council demanded immediate autocephaly, but Ḫaylä Śəllase and the imperial government appealed to their subjects to exercise patience. A new Ethiopian mission brought to Cairo Ḫaylä Śəllase's personal letter that the Ethiopian demands should be met, in order to maintain in the future good relations between the two Churches. In July 1948 it was agreed that Ethiopian monks might be appointed as bishops during the lifetime of *abunä* Qerəllos and, upon his death, an Ethiopian metropolitan might be consecrated. Immediately thereafter, five monks (among them Basəlyos and *abunä* ↗Tewoflos, also a future patriarch), who had already been elected in January, were consecrated bishops in Cairo.

After the death of *abunä* Qerəllos on 22 October 1950, in January 1951 Basəlyos was elected by the council of ecclesiastics and government officials for further elevation. In Cairo, on 14 January, the Coptic Patriarch Yosab consecrated Basəlyos as the first Ethiopian archbishop. On 28 June 1959, in the presence of Ḫaylä Śəllase and President Ǧamāl ᶜAbd an-Nāṣir, the Coptic Patriarch Cyril VI elevated Basəlyos as the first Ethiopian patriarch. The event marked the beginning of a new autocephalous era in the history of the E.O.C.T.

Sevir Chernetsov

History from 1959 to 1974

From the time after the Liberation, especially from the obtaining of complete autocephaly of the Church, which took place in 1959, the reform of the structure of the Church was brought forward, being promoted by the initiatives and will of the Emperor himself (the outline of these reforms had already been prepared before 1935). Different evaluations have been given to this complex process, the main outcome of which was the centralization of the church administration: it is a matter of fact that the structure of the E.O.T.C. changed very much during the first two decades after the end of the Italian occupation. It is believed that the Emperor profited much from the post-war conditions of the country: the absence of a strong opposition to the innovations and consolidation of his personal political power (in particular after the complete withdrawal of the British Military Administration in the 1950s).

The first official document concerning the E.O.T.C., issued soon after the Emperor's return to Ethiopia on 10 March 1942, was the "Regulations for the Administration of the Church" (*Nägarit Gazeṭa*, 30 November, 1942). The document stipulated that church lands should pay tax at the same rate as secular lands; the collected tax (paid in cash) was to be transferred to the central treasury of the E.O.T.C. and be used for the E.O.T.C. needs (these regulations were amended by the 1944 and 1947 Proclamations: e.g., lands were exempted from the taxation). The officials of the Central Treasury were to be appointed by the Ecclesiastical Council and approved by the Emperor. The local churches were obliged to report about their incomes to the Central Treasury. The ordinary matters of Church administration were left to the responsibility of the Ecclesiastical Council; the number of the clergy assigned to the churches was fixed and the jurisdiction of the Church was limited to spiritual matters alone.

The regulations of the 1940s provided the base for a new system of Church government, through the offices of the Patriarchate and Holy Synod, which took its more-or-less final shape in the early 1960s. At that time the number (14) and the borders of the dioceses were brought into correspondence with those of the provinces, so that the church administrative structures were built out in parallel to those of the imperial administration. The extension and the modernization of Church government continued afterwards (e.g., with the creation of the important Administrative Board and the Office of its Director in 1969). Considerable progress was made in the establishment of the Church educational institutions and the launching of the social activities.

Of crucial importance was the end of the long isolation of the E.O.T.C., which was happening along with the growing recognition and respect that the imperial government (and, above all, the Emperor personally) enjoyed on the international scene. In 1948 the Ethiopian delegation, led by *abunä* ↗Tewoflos and *blatta* ↗Märsəᶜe Ḥazän Wäldä Qirqos, participated at the founding-assembly of the World Council of Churches (WCC) in Amsterdam (in 1972 the annual assembly was hosted in Addis Abäba); the E.O.T.C. was regularly represented at the All Africa Conference of Churches (AACC) since its beginning in 1963 at Kampala. The relations with the Eastern Orthodox Churches were given a new impetus as the Ethiopian delegation attended the 1961 Pan-Orthodox Conference at Rhodes. In 1960s there was an exchange of high-ranking delegations with the Greek, Rumanian and Russian Orthodox Churches; the good relations with the Oriental Orthodox Churches were strengthened also by co-operation in other fields (the ties with the Indian Malankara Church were particularly remarkable). Of special importance was the conference of the (five) Oriental Orthodox Churches organized by Ḫaylä Śəllase in 1965 (it was followed by the establishment of the Standing Committee and a secretariat in Addis Abäba). However, since the late 1960s these activities were increasingly hindered by financial difficulties.

As to the non-Orthodox Churches, the Emperor, who never gave the slightest occasion to doubt his Orthodox identity, encouraged the activities of the Catholic and Protestant missionaries in 1941; the decree of 1944 opened also Orthodox areas for the missionary medical and educational services. Attempting to promote the dialogue with the Catholics, Ḫaylä Śəllase visited the Vatican and Pope Paul VI in 1970. Yet, in Ethiopia, the relationship between the Orthodox community and missions or new religious movements, being generally good, occasionally became tense (in particular in the late 1960s); the conflict situations ranged from the Orthodox activists blaming the missions for the undermining of the Orthodox community to the governmental persecutions of religious movements too different from the official Church (such as the 1971 persecution of the Pentecostals).

The modernization of the E.O.T.C., with a clear tendency to centralization, was accompanied by difficulties and problems. Quite the contrary to the top of the E.O.T.C. hierarchy, the organization of the local churches and monasteries, retaining much of their old nature, varied considerably from one region to another. In spite of the Patriarchate's measures, many of them remained semi-autonomous; consequently, the distribution of properties and lands among the local church institutions remained very uneven. The co-operation between the Patriarchate and the dioceses was not always smooth. The implementation of the Patriarchate's decrees encountered considerable local opposition, that additionally fuelled the old tensions and regionalist movements in which the local clergy played against the measures of central Church and secular government. E.g., in the 1940s the Goǧǧami clergy refused to accept the new regulations; the same matter caused a large delegation of Goǧǧami priests to come to the Emperor in 1964, and, finally, contributed to the 1968 popular uprising in Goǧǧam.

Though the top of the E.O.T.C. hierarchy was successfully integrated into Ḫaylä Śəllase's state machinery, the administration of the E.O.T.C. could not work effectively. The modern Church government required an educated personnel that was lacking. Understanding the need to introduce into the E.O.T.C. modern, theological education, Ḫaylä Śəllase personally initiated the establishment of the Theological School of the Holy Trinity in 1944 and this was followed by the opening of some other modern institutions, run with the help of other Oriental Orthodox Churches. Yet after some years of relatively successful work, there appeared problems: on the one side, the graduates of this and other Church theological institutions were not eager to occupy less-prestigious positions in the E.O.T.C.; on the other side, the Church hierarchy was reluctant to accept educated people with modern attitudes. Later, the situation in the field of Church ↗education was reflected in the serious conflict around the Theological School (since 1962 a faculty of the Ḫaylä Śəllase I University; s. ↗Holy Trinity Theological College), which was temporarily closed in 1973.

The complex relations between the Church and State during that period still wait for their evaluation; it is clear that, as in the past, the Church provided the ideological foundation for the monarchy, but it was not the institution through which the Emperor could implement his actual politics. In theperiod 1942–60 the support of the Church for the monarchy and for the Emperor personally was beyond any doubt. The E.O.T.C. backed the imperial politics concerning Eritrea; the Church in Eritrea was committed to union with Ethiopia and co-operated with the Unionist Party (*↗Maḥbär fəqri hagär*); the churchmen played an important role in the abolition of the ↗Ethiopian-Eritrean Federation (cp. ↗Dəmeṭros Gäbrä Maryam). The loyalty of the E.O.T.C. was proved by the ↗Coup d'état of 1960 (s. EAE, vol. 5), when the clerics and Patriarch Basəlyos excommunicated the rebels (some of whom, e.g., ↗Gärmame Nəway, were known for their radical anti-clerical views).

Instead of the modernizing politics adopted by the Emperor and the gradual spread of modern education, the influence of the E.O.T.C. remained immense. However, on the political scene the influence of the ecclesiastics (though many of them were delegated into the imperial government) did not take the form of organized lobbying of Church interests. As a matter of fact, while being frequently described as a major landowners of the country, the E.O.T.C. as an institution did not accumulate any substantial wealth. Moreover, the centralization of the Church administration resulted in its subordination to the State. The Emperor pursued a deliberate policy of control over the Church, with the purpose of depriving it of any political power. This meant that, first, any attempt of Church reform was limited by the personality of Ḫaylä Śəllase and, second, the crisis of the monarchy, which was obvious in the early 1970s, resulted in a deep crisis of the Church.

In 1968 the Emperor's decree authorized the Ministry of Finance to collect church taxes and transfer then to the Church, but this solution did not work out properly and in the 1970 the E.O.T.C. announced that it had extreme financial difficulties (at the same time, reportedly, up to 20 % of the Church budget was consumed by the Patriarchate). The E.O.T.C. saw itself endangered from the side of the missionary churches, which, being more capable of adapting to the contemporary needs of the people and getting substantial financial support from outside, were making gains in Ethiopia. The E.O.T.C. became object of growing criticism from the side of different opposition groups (joined also by Orthodox activists, s., e.g., ↗Haymanotä Abäw) accused of being a stagnant and passive institution. There was deep division and growing tension between the high ranks of the hierarchy and the Church and its clergy at the "grass-roots" level. The mounting problems and resentments found an outcome in the events of the Revolution of 1974, when – quite the opposite to 1960 – the clergy remained remarkably indifferent to the deposition of Ḫaylä Śəllase. The clergy joined the mass uprising when they went on demonstration against Patriarch Tewoflos. The Revolution led to a dramatic change of the E.O.T.C.'s formal position within the Ethiopian state.

Church organization in history

For Ethiopia, the Church has been as much a national institution as the monarchy and the two have been intertwined. The state was called መንግሥት፡ መሲሓዊት (*mängəśt mäsiḥawit*, 'Christian [lit. Messianic] Kingdom'). The emperor was de facto the head of the Church and presided over Church councils dealing with religious matters. The clergymen argued in defence of their theological positions, but in case of disagreement the emperor's word usually sealed the official position of the Church.

In the Middle Ages the ecclesiastics, especially monks, were the only educated social group, monasteries and churches being the only centres of education. Consequently, in religious and political matters, where other qualities than military skills were needed, the monarch was frequently assisted by the ecclesiastics: be it sufficient here to recall that the emperor's secretary and chronicler, ↗*ṣäḥafe tə'əzaz*, was usually recruited from amongst the monastic clergy. Of particular importance were the so-called *kahənatä däbtära* (lit. 'clergy of the tent, or tabernacle'), i.e., the priests of the royal-camp church. They were known for their high education and piety (the famous ↗Giyorgis of Gassəč̣č̣a, e.g., was one of them); and it is generally assumed that they resided near the emperor. Pursuing his policy of centralization, *aṣe* ↗Zär'a Yaᶜəqob gathered capable ecclesiastics from churches and monasteries, installing them in the civil administration. Since the 15th cent. heads of at least some monasteries and churches were always at the side of the emperor; others were frequently summoned from their places in the provinces whenever their service was needed.

It is perhaps due to the relative weakness of its organization that the E.O.C. was only partially successful in its campaigns against magical practices, inherited from ancient autochthonous religions. The most furious one took place under *aṣe* Zär'a Yaᶜəqob, who mercilessly persecuted both those suspected of being fortune-tellers, soothsayers and sorcerers, and those accused of consulting them (CRRicBerhan I, 23f., 114f.); he kept condemning magic and its adepts in his writings (cp. Getatchew Haile 1991:66-77; s. ↗*Ṭomarä təsbə'ət*). However, he had little success.

The nominal head of the Church was the Coptic patriarch; he chose an Egyptian monk and ordained him a metropolitan for Ethiopia. In Ethiopia the power and influence of such a metropolitan were usually rather limited and his primary task was to ordain priests and deacons and consecrate *tabots*. The *abun*'s position was undermined by the fact that the substantial sum of money necessary for obtaining a metropolitan from Egypt was provided by the emperors, who also covered the costs of metropolitans' living while in tenure in Ethiopia. Some ecclesiastical offices acquired much influence and used to substitute for the metropolitan in internal church matters: these was, first of all, the *nəburä əd* of Aksum, the *ʿaqqabe säʿat* of Däbrä Ḥayq Ǝsṭifanos and, somewhat later, the *əč̣č̣äge* of Däbrä Libanos (who was considered to be the head of all the Ethiopian monasteries).

Generally, churches and monasteries used to have a high degree of independence and relied heavily on their local basis rather than on the head of the E.O.C. In the course of the history, many of them assumed important political and cultural roles; at different times some of them flourished, being favoured by the monarchs or nobility, but then declined and even disappeared. In particular, Ethiopian monasticism is characterized by a high degree of independence from the metropolitan, the head of the Church hierarchy. The formal acceptance of the metropolitan's highest authority was expressed through the receiving of Holy Orders (and consecration of the *tabot*) that required the personal presence of the candidates or representatives of the different monastic institutions. Besides, the usual situation was that the metropolitans normally had few possibilities to intervene in internal matters of monasteries and local churches or impose on them any obligations; at the same time, however, they were not due to provide them with regular support.

It is believed that, historically, the E.O.C. did not have a central administration until it became autocephalous in the 20th cent. The issue, in fact, has not been investigated in detail yet. While this assumption is particularly relevant for the churches (↗Churches and church administration), the monastic communities had a better organization; in this respect, should be recalled the attempts of the 14th-cent. *abunä* ↗Yaʿəqob. He intended to build a monastic administration in the (mostly central and southern) provinces of the empire for their co-ordinated Evangelization. At some periods the monastic congregations of Täklä Haymanot and Ewosṭatewos consisted of a substantial number of communities under the central (both religious and administrative) authority – and they were particularly known for their effective internal administration.

The supervision of the serving clergy was in the hands of the *liqä kahənat.* For the 15th – early 16th cent. there are scattered reports about other *nəburanä əd* or *mämhəran*, who, usually residing in major monasteries, must have represented the highest ecclesiastical authority in different provinces. In urgent cases, these officials obtained support and protection from the monarchs (or from the local authorities, which tended to the alliance with the local – not imposed – church institutions). At the same time, the emperors frequently intervened in Church issues, appointing their candidates to important Church offices and even deposing and appointing heads of the important monasteries.

The emperor or the members of the aristocracy were frequent patrons of new churches and new monasteries, but it was not an uncontrolled process. Any church or monastery, built either by the emperor or by the community, had to provide a grant of land to support its clergy. The clergy, who could come from anywhere in the country, would include, at a minimum, its head (*↗Aläqa*), "administrator" (*↗Gäbäz*), head of the church cantors (*↗Märigeta*) and archdeacon (*liqä diyaqonat*; *↗diyaqon*). Churches within a province would have had a *liqä kahənat.* The land-grant was divided among the clergy according to the position each was supposed to hold. The "founding" group that came from around the country were known as *təkl* (lit. 'planted', 'installed'). When members of this group died, their descendants were entitled to their property. If an inheritor was unable to provide service to the church, because he or she was an absentee, untrained or was female, he or she was entitled to hire another to perform the service.

Church organization today

Legal status

Under Ḫaylä Śəllase I, the legal status of the E.O.T.C. within the Ethiopian (Christian) state was clearly fixed and implied in the Revised Constitution of Ethiopia of 1955 (chs. 126-27), the Civil Code, the Penal Code and the Commercial Code. According to these documents, the E.O.T.C. was "the established Church supported by the State". The Church was not separated from the State. The State granted assistance to the Church in many forms. The Church organization and secular administration were to be governed by law. The Emperor was acknowledged as the protector of the Church and the "Defender of the Orthodox Faith".

After the ↗Revolution of 1974, under the *Därg*, notwithstanding the switch of the official ideology to Marxism-Leninism, neither could the influence of the E.O.T.C. be brought down, nor could its role in the society be drastically diminished. Though the E.O.T.C. suffered substantial losses, many churches were built during the *Därg*-period. In fact, the E.O.T.C. had to cooperate with the Revolutionary government. In 1975 and until 1977 the government intervened in the affairs of the E.O.T.C. by appointing a provisional committee of archbishops, senior churchmen and civil servants in order to arbitrate in the dispute between two factions, the former patriarchal administration and the pro-change group. The co-operation between Church and State continues until today, even though according to the 1994 Constitution (art. 27) Church and State were separated.

Internal structure

In the time of the Patriarch *abunä* Basəlyos the governing body of the E.O.T.C. became the Holy Synod under the leadership of the Patriarch for religious affairs, and the Administrative Board for secular affairs. The Holy Synod's decisions were implemented by the archbishops in each diocese through different administrative units such as youth and education, church treasury, and mission work. The Central Secretariat or Church Office (*betä kahənat*) was led by the Chief Executive or Administrator General, appointed by the Emperor.

Another important reform was the creation of parish councils; the Regulations of the Parish Administration Council (or Parish Council) of the E.O.T.C. were issued by the Holy Synod in 1972. This parish council was established as a body under each diocesan administration. Its purpose, powers and duties, composition, financial and property administration and structure (Diocesan Council, General Assembly, etc.) were printed in the first issue of *Qalä ʿAwadi* (October 25, 1972; it became the name of both the Parish Regulation and the E.O.T.C. official gazette). The purpose of the parish council was proclaimed as giving spiritual services, establishing schools, expanding the Christian faith, rendering social services, improving the administration of the parish churches, maintaining and developing Church property and carrying out any other activities related to the Church within its parish (cf. art. 5). It had to co-operate with government and private institutions to achieve its purposes (cf. art. 6). The parish council was supposed to have an administrative council, an administrator, a chief clerk and other necessary staff (art. 7). The *Qalä ʿAwadi* was revised in 1978 and, for the last time, in 1999, with some minor internal changes (e.g., the set or names of the chart), without affecting the main content and objectives: "... to strengthen the unity and organization of the Church".

Through a stratified organization, the parish-council system bound parishes to the Patriarchate. The council of a parish church (↗*Aṭbiya*) became the basic unit, with a general council composed of clergy and a large proportion of laity members (including women). The members were to meet in order to hear reports of the parish activities, to pass new decisions and to approve the parish budget. An executive council was composed of an equal number of elected clergy and laymen and youth representatives. The general and the executive councils were chaired by the administrator of the parish church, who put into effect all the decisions of the executive council, with an elected lay person as vice-chairman. The next council was organized on the sub-district-(*wäräda*)level in a similar way. With the new administrative redivision of the country in 1991 the *wäräda* unit had been abolished.

The district (*awrağğa*) Parish Council became another representative body. It was composed of an equal number of elected clergy and laity from each *wäräda* or then parish council, with its proper executive council (chaired by the *liqä kahənat*). The next was the Diocesan (ሀገረ፡ ስብከት, *hagärä səbkät*) Parish Council organized on the administrative regional basis. The E.O.T.C. Parish Council General Assembly was to be composed of the Patriarch as chairman, all members of the Holy Synod (that is, all diocesan bishops and archbishops), the General Administrator of the E.O.T.C. as general secretary, heads of the Patriarchate departments, the executive Secretary of the Development and

Inter-Church Aid Commission (DICAC), and an equal number of clergy- and laymen – men, women, youth – from each diocese. This assured the widest possible direct participation for the laity in running the affairs of the Church along with the clergy.

In 1974 the Parish Council Department was opened at the Patriarchate. It worked effectively in 1981 (*Tənsaʾe*, May-August 1982, 4) when the Parish Council began to be organized at all levels (cp. *The Gospel of Development* 2, 1980, 43–46).

As for the parish administrative council, it was gradually accepted by the hierarchy and finally, with the consent of the Holy Synod, it was integrated into the (new) E.O.T.C. administrative structure. In June 1983 the long-awaited first National Church Assembly (**አጠቃላይ፡ የሰበካ፡ መንፈሳዊ፡ ጉባኤ**, *aṭṭäqalay yäsäbäka mänfäsawi gubaʾe*), or General Assembly, was established by the joint effort of the Holy Synod and of the new E.O.T.C. administration. In 1984, in the second General Assembly, the diocesan reports show that a large amount of work was completed and considerable progress was achieved in the parish council programmes.

According to the statistics of the E.O.T.C., in 2000, there were 32,537 local parish churches (excluding those of the ↗Diaspora), including "higher churches" (*↗Däbr*), rural churches (*↗Gäṭär*) and monasteries (*↗Gädäm*); about 364,765 clergy (priests, deacons), teachers, cantors (*↗Däbtära*) and lay church workers. In 2001 the Church was divided into 38 dioceses, sub-divided into districts. In 2002 there were 46 archbishops and bishops as members of the Holy Synod. The Holy Synod meets twice a year; under the chairmanship of the Patriarch, it decides on the doctrinal positions of the Church and other subjects. The Permanent Synod (with the Patriarch, the Holy Synod Secretary, the General Secretary and three Bishops by turn every three months) can discuss urgent matters.

Since the late 1970s, the organization of the E.O.T.C. departments has remained more or less the same, with the exception that some units or departments have become "organizations" or "centres". In 2002 there were ten departments in the E.O.T.C.: the Parish Council Department working for the organization of parish councils on local and district level all over Ethiopia; the Evangelical and Missionary Department; the Education Department (for traditional and modern schools, the Clergy training Centres [since 1972], Saint Paul's Theological School and the ↗Holy Trinity Theological College); the Ecclesiastical Affairs Department; the Monastic Affairs Department; the Sunday School Department (since 1973); the Administration, Finance and Budget Departments; the Registration and Preservation of the Ecclesiastical Treasury Department; the Planning and Development Department. There were also Child and Family Affairs Organizations, dealing with orphans and destitute children and a Rental House and Building Management Organization. Besides, an Ecclesiastical Vestment Production and Distribution Centre, a Centre for Ecclesiastical Objects of the Kullubi Gabriel Monastery (↗Qulləbi Gäbrəʾel), dealing with the gifts from the pilgrims, and the Gofa Technical Training Centre were established.

The Scholars' Council (**የሊቃውንት፡ ጉባኤ**, *yäliqawənt gubaʾe*) was established to revise translations of Gəʿəz books and check the doctrine. The Ecclesiastical Court became responsible for theological, sacramental and ecclesiastical affairs; the task of the Legal Service was to represent the E.O.T.C. in the courts.

Financial situation and income

The 1942 Church Regulations included important stipulations about money of the Church, taxes, fiefs and income. In accordance with it, a special fund for the administration of the E.O.T.C., with all the tax on Church land and other sources, was established in the State Treasury. The patriarch, the archbishops and bishops, as well as some priests, received a salary. The nobility and faithful made donations. In 1972 the Regulations of the Parish Council stipulated that all funds of the parish church should be deposited in a bank in the name of the parish church (*Qalä ʿAwadi*, November 25, 1972, no. 11/5). After the Revolution, in 1975 the Church properties, land and buildings were confiscated.

It was thought that through the Parish Council organization the E.O.T.C. would be made as self-sufficient as possible, with the help of the parishioners' fees and the rest paid by the E.O.T.C. central treasury. However, salaries for the bishops and the functionaries were paid by the government until 1991. Through the parish councils (at local and national levels) the income of the E.O.T.C. was allowed to run the parishes, to pay the priests etc. After 1991 some of the Church properties (other than land), were given back, and, consequently, the new Department for Rental Houses and Buildings management was established. This and the contributions of parishes are now the main sources of the Church income. In 2002, most of the clergy salaries were paid by the Church income; in the countryside priests still earn their living by farming.

It is still customary for the faithful to give offerings to the churches or monasteries on festivals; on baptisms, weddings and funerals; on prayers of commemoration of the dead (*täzkar*); and on meetings of ↗*maḫbär* associations.

Social activity

From the mid 1960s, the E.O.T.C. began to be involved in development programmes: among the first departments was the educational one with its sections (for traditional education and establishment of modern schools). Through the Parish Council system, bishops and clergy were to be directly involved in the development work. Besides, every church association (↗*Maḫbär*; ↗*sänbate*) had to conduct social activities helping the poor and needy.

In 1965 the Inter-Church Aid (ICA) was started with the collaboration of the World Council of Churches (WCC). In 1972 it became the Development and Inter-Church Aid Commission (DICAC), established as a Church organization involved in development, training and relief activities. After 1974 the focus was directed to relief work (followed by rehabilitation programmes since 1986), training the clergy and organizing Sunday schools. In 1994 the diocesan and the integrated development programmes were established, with most of the financial help coming from ecumenical Christian partners and some humanitarian organizations. Rehabilitation programmes include focusing on health, education, agriculture, afforestation, water-works, grinding-mills, income-generating/food for work, and orphanages.

Today the E.O.T.C. newspapers, magazines and publications are: *Tənsaʾe* ('Resurrection'), *Maʿədot* ('Passover'), *Zena Betä Krəstiyan* ('The News of the [Ethiopian Orthodox] Church') and *Ləssanä Täwaḥədo* ('The Voice of the Täwaḥədo [Church]'), previously called *Dəmṣä Täwaḥədo* ('The Voice of Täwaḥədo [Church]'). For development, there is *The Gospel of Development*, now *The Voice of Development* and for Sunday schools *Fälägä Ṭəbäb* ('The River of Wisdom'). The E.O.T.C. has its own printing press (↗*Tənsaʾe zägubaʾe*). Before the Revolution of 1974 preaching was done through the Lutheran Radio Voice of the Gospel (opened in 1963; cp. ↗Broadcasting) and the national Radio Ethiopia. Both Church radio programmes were abolished after the Revolution. Today occasional special TV and radio programmes are given on festivals.

Educational and missionary activity

Under the auspices and with the support of the E.O.T.C., traditional Church education remains vital in Ethiopia, maintaining instruction in traditional subjects, from reading, church music (↗*Dəggʷa*; ↗*Zema*) and sacred dances (↗*Aqʷaqʷam*), Liturgy (↗*Qəddase*), poetry (↗*Qəne*), to scriptural studies and commentaries on the sacred texts (↗*Andəmta*, ↗*Exegesis*, ↗*Tərgʷame*).

The Theological School of the Holy Trinity, first opened in 1944, was established as the Holy Trinity Theological College in 1961 and in 1962 it became a Department of Ḫaylä Śəllase I University; some modern schools were also opened. Under the *Därg* the Theological College was closed from 1974, then re-opened in 1994. Then theological education continued to be given in the Theological School of St. Paul in Kolfe (one of the sites of the Clergy Training Centre and a place for higher traditional education). Some modern schools were also opened; a famous and popular school is that of Mädḫane ʿAläm in Səddəst Kilo, Addis Abäba.

Since 1972 the most important educational programmes have been the clergy training-centres. In 1963 the E.O.T.C. founded a mission for fellowship, education and propagation of Orthodox Christianity in Ethiopia. Since 2000 E.O.T.C. Gospel-spreading councils inner mission teams have been established in order the better to respond to foreign proselytism. The E.O.T.C. is also engaged in external missionary activities.

Mission and Diaspora
